National Association of Real Estate Boards Opposes Veterans' Provisions of Housing Bill, H. R. 6659

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1957

Mr. TEAGUE of Texas. Mr. Speaker, on April 6, 1957, I received a letter from the National Association of Real Estate Boards opposing the authorization of a veterans' preference program in FHA. The National Association of Real Estate Boards has expressed the fear that an FHA veterans' preference program in Federal Housing Administration would not be actuarially and economically sound and would distort the fundamental purpose of Federal Housing Administration.

The letter dated April 6, 1957, from the National Association of Real Estate Boards follows:

NATIONAL ASSOCIATION OF
REAL ESTATE BOARDS,
Washington, D. C., April 6, 1957.

Re FHA-veterans' preference program.

Hon. OLIN E. TEAGUE,
Chairman, Committee on Veterans' Affairs, House of Representatives, Washington, D. C.

DEAR MR. TEAGUE: I am enclosing herewith a copy of a press release of the National Association of Real Estate Boards which reflects the official position of our organization with respect to the housing bill recently approved by the House Banking and Currency Committee.

Your attention is respectfully invited to that part of the release which expresses opposition to the special veterans' preference program recommended by the House Banking and Currency Committee as part of the FHA mortgage insurance system.

The realtors' Washington committee was influenced in arriving at its decision in opposition to the proposed FHA-veterans' program by the following considerations:

In our opinion the only justification for a veterans' home-loan program, such as that provided by the Servicemen's Readjustment Act of 1944, is to assist the veteran in making his readjustment to civilian life. The dislocation of wartime service resulted in certain disadvantages to the returning veteran in matters such as education, housing, employment, etc. The Congress decreed that the Servicemen's Readjustment Act would be the medium through which this assistance or readjustment was to be brought about. The act of 1944 has served well this purpose.

With respect to housing, an extension of the program for World War II veterans, whether it be through the act of 1944 or the FHA system, can be justified only on the basis of the need for further readjustment for these World War II veterans most of whom left the service 10 and 11 years ago. We respectfully submit that the readjustment factors which motivated the original 1944 act no longer obtain for the veterans of World War II.

Also, we submit that were the readjustment requirements not met, that the only proper medium through which readjustment in housing matters should continue is the Veterans' Administration administering laws shaped by the deliberations of the committees of the Congress having jurisdiction over veterans' legislation.

The veterans' home-loan program is a benefit program and the philosophy underlying its functions is distinct from that underlying the FHA mortgage insurance system. The latter is essentially an actuarially and economically sound mortgage insurance system. It should not be distorted to serve a purpose fundamentally alien to it, i. e., veterans' readjustment to civilian life.

However, the veterans' home-loan guaranty-program has pointed the way toward a more liberal conception of home financing. The Congress, rather than creating a veterans' program with more liberal terms than those provided nonveterans, should set itself to the task of shaping a liberal FHA program for all the American people. A preference in downpayment requirements for World War II veterans under FHA is unnecessary when one comprehends the absence of the readjustment factors which motivated the 1944 act. It must be emphasized that these World War II veterans for many years now have reached and enjoyed income levels higher than nonveterans of the same age brackets.

We have not mentioned the Korean veterans in this letter because the Servicemen's Readjustment Act for this group continues until 1965. For this group the present relative scarcity in mortgage money results at most in a temporary deferral of home acquisition.

We strongly urge that the House Veterans' Affairs Committee conduct a hearing at an early date to determine the committee's position with respect to a legislative provision which is clearly one of its own jurisdiction. Realizing your personal views on this subject, we are hopeful that you will undertake an amendment to the housing bill which would reject the FHA-veterans section and substitute a liberal homeownership program for all our people.

Should you schedule a public hearing on this subject, we would greatly appreciate an opportunity to appear and testify.

With kindest personal regards, I am,
Sincerely yours,
JOHN C. WILLIAMSON, *Director.*

The Cheyenne River Rehabilitation Program

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1957

Mr. BERRY. Mr. Speaker, under unanimous consent, I insert in the CONGRESSIONAL RECORD the editorial in the May 1 issue of the Mobridge (S. Dak.) Tribune, which gives some of the picture of the value of the Cheyenne River rehabilitation program.

Since Congress established this program as something of a pilot plant or testing grounds for a new program which is administered by the tribe itself, I am sure the following editorial will be of interest:

SUPERINTENDENT SPEAKS ON REHAB

The series of articles published in the Minneapolis Tribune by Carl T. Rowan, The First Are Last, has caused considerable comment throughout the West River area relative to many of the problems encountered by the Indian people.

Noralf Nesset, superintendent of the Cheyenne agency, who is in a position to be intimately acquainted with the rehabilitation

program as it affects both the Indian and the community, believes that although Rowan may have highlighted some of the negative aspects it is well that the unfavorable features be brought to light.

On the other hand, Nesset pointed out in his monthly news bulletin progress of a people must be conditioned by a positive approach.

Nesset criticized the articles for omitting the forward-looking programs in operation within the Indian Bureau. At Cheyenne River, for instance, the future of a boy or girl completing high school can be very bright, depending to a great extent upon that individual's ability or initiative. Under the tribal rehabilitation program, a student can select a college of his choice where he can get his expenses paid to complete a college education. If the person does not have a high-school education, he may qualify for a grant to take vocational training where his expenses while attending the trade school will be paid. All that is required in the above two programs is that the individual maintain passing grades and that his conduct conform with accepted standards.

In the field of education the Bureau of Indian Affairs has inaugurated many programs that are several years ahead of public schools. Their qualifications for teachers greatly exceed the requirements in the average public school with a 4-year college degree needed to teach in the Indian Service. Recognition of this fact has resulted in the Cheyenne River Boarding School being admitted to membership in the North Central Association of Colleges and Secondary Schools recently.

"The well-rounded program of our present school curriculum stresses not only a strong academic program, but offers an excellent guidance program, practical training in the vocational fields, encourages development in social behavior, and continually emphasizes the adjustments needed in the cultural aspects of living in a dominantly white society," Nesset brought out. "Education in its broad phases is undoubtedly the answer to correcting the many undesirable conditions reported by Rowan. However, education is a slow process and involves not only the Indian people but the entire community, county, and State in which the Indian people reside," he concluded.

"The general public," he warned, "cannot just shrug its shoulders and say the Indian is a Government responsibility. It must actively offer assistance to the development of a people who are its first citizens but have been redelegated, as Rowan points out, to its last consideration."

The Public Power Issue Again

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica (Calif.) Evening Outlook of Wednesday, May 1, 1957:

THE PUBLIC POWER ISSUE AGAIN

In the hue and cry over cutting the Eisenhower budget, little attention has been paid to the program of some congressional Democrats to give the Federal Government the sole right to develop atomic power for peacetime uses. At present, under the power policies of the Eisenhower administration, the Federal Government is helping private industry to build atomic power plants. The Democrats, led by Representative CLARENCE CANNON of Missouri, chairman of the powerful House Appropriations Committee, want to stop this policy and substitute a direct Government program, which would use Federal funds to build atomic energy plants and keep them under Federal ownership and operation.

If Democrats like Representative CANNON could prevent private industry from ever building atomic energy plants, the Federal Government would someday hold a monopoly over atomic power for all uses.

However, the chairman of the Atomic Energy Commission, Lewis L. Strauss, is not in sympathy with this objective and has consistently held out for the development of atomic power for peacetime uses by private industry. Representative CANNON criticizes the Strauss plan, declaring that our leadership in atomic power is threatened by the very slow development taking place, as compared with that in Great Britain and Russia. He wants the Government to spend $400 million to build several reactors at Government installations, contending that this will give us world leadership.

A more needless appropriation would be hard to imagine. This country is doing all right in developing atomic energy for peacetime uses, as fast as is economically feasible. Our situation is not like that of Britain, which has hitherto depended on a backward and hopelessly pampered coal industry, and which is seeking desperately to develop atomic power as her best hope of modernizing her entire industrial plant to meet world competition. In this country we are under no such urgency, but it is safe to predict that rising fuel and labor costs will sooner or later force private industry to turn to atomic energy for power, and when that day arrives, its development will be far more rapid through private enterprise than would be the case under Government ownership. Unless we want state socialism in this country, we had better not listen to the siren song of Representative CANNON and his kind.

If Not Needed, Breckinridge Should Be Sold

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "If Not Needed, Breckinridge Should Be Sold," which appeared in the May 1, 1957, issue of the Courier-Journal, of Louisville, Ky.

The editorial is as follows:

IF NOT NEEDED, BRECKINRIDGE SHOULD BE SOLD

The Army, like other branches of the Armed Forces, has a tough problem on its hands in the case of its deactivated camps. There are dozens of these camps scattered across the country, like Camp Breckinridge here in Kentucky, eating up maintenance money and serving no immediate purpose. Yet the Armed Forces are reluctant to get rid of them, and it is easy to see why.

Right now these camps are only a burden on the Army's limited budget, since it costs money even to keep a deactivated camp. But in the event of a national emergency requiring rapid expansion of the Armed Forces, these deactivated camps would perform an invaluable service as reception centers through which incoming troops could be routed to training camps or active units. And the cost of maintaining these camps now is piddling compared to the cost of building new camps from scratch, as might be necessary if the deactivated camps were turned back for civilian use.

THE ARMY OF THE FUTURE

Yet there are reasons for believing that a great many of these deactivated camps can now be safely abandoned. The reorganization of Army combat units to meet the demands of atomic warfare indicates clearly that the Army of the future will be relatively small compared to the Army of 1941–45. It will depend more heavily on organized professional units or trained reserves, with less emphasis on recruited, raw manpower, and will have less need, therefore, for many large reception centers and training camps.

These facts lend logical support to the repeated requests from the people of Union County that Camp Breckenridge either be used or abandoned. In use, the camp is the source of considerable business for the people of the area. But deactivated it is a drag on the county's economy. It is not productive. Its huge acreage is removed from county tax rolls. And the land can be used neither for industry nor farming. Naturally, the people would like to see it returned to civilian use and possible productivity if the Army does not have reasonable expectations of using it.

STRONG CASE CAN BE MADE

And they have good reasons for their publicly stated doubts that the camp will ever again be essential for rapid expansion of the Army. The Kentucky area, they point out, has reception-center facilities at Fort Knox and Fort Campbell that could be used in the event of an emergency, and the general area contains several other deactivated camps that could be opened in case of necessity.

We would not presume to tell the Army how it should use its various installations, or to second-guess its future needs for emergency facilities. We do suggest that a strong case can be made for closing Camp Breckinridge and handing it back to civilian use. And unless the Army can make a stronger case for its continuance, we think it should be closed.

Ocean Travelers Save Time by Changing Planes in Boston

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article on overseas travel:

OCEAN TRAVELERS SAVE TIME BY CHANGING PLANES IN BOSTON

Why should inbound transatlantic passengers traveling to points beyond Boston transplane here for the south and west rather than go on to Idlewild Airport in New York?

James O'Brien, chief customs inspector at Boston airport has this answer:

"Inbound planes generally arrive here in the early morning hours. The planes, generally are on the ground an hour for public health and immigration clearance and refueling. The flight to Idlewild takes from 50 minutes to 2 hours, depending upon weather and air traffic.

"Once at Idlewild, it takes a passenger from 1 to 3 hours to go through Government agency clearances. Another hour is consumed in traveling by bus to LaGuardia for domestic flights. Sometimes a passenger wastes as much as 7 hours in the New York area alone.

"At Boston, once we get the baggage, we can clear a planeload—the average is 75 persons per plane—in 40 minutes. It takes only a few minutes more to walk to the domestic area and only a few minutes more to board a flight out of here. Why go to New York?"

New Albany, Ind.

EXTENSION OF REMARKS
OF

HON. WINFIELD K. DENTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. DENTON. Mr. Speaker, in the April 20, 1957, issue of the Saturday Evening Post there appeared an article by Jerome Ellison, entitled "Relief for Strangled Cities."

This article describes the courage and resoluteness by which Mayor C. Pralle Erni, of New Albany, Ind., dealt with a problem which is confronting many cities in this country. Mayor Erni is one of the most able, conscientious, and dedicated city executives in the United States, and I believe that this description of the way in which he solved this problem will be of interest to citizens and civic leaders everywhere.

Under permission to extend my remarks, I am very pleased to include the article mentioned:

RELIEF FOR STRANGLED CITIES—A TOWN THAT DOUBLED ITS SIZE OVERNIGHT UNDER A UNIQUE INDIANA LAW SHOWS HOW TAX-STARVED MUNICIPALITIES CAN PROVIDE FOR SERVICE-HUNGRY CITIZENS

(By Jerome Ellison)

Down on a scenic bend of the Ohio River, along the stretch where Indiana nudges Kentucky, there's a town called New Albany, until last year known chiefly for its romantic memories of steamboat days. Its mayor is a 6-foot 2-inch, 240-pound ex-football player named C. Pralle—pronounced "prawl"—Erni. Today, because of the mayor's bold use of a new State law to help cash-starved cities, New Albany is watched by city fathers in distant places. Perhaps, they think, the town and its scrappy head man can show them the way to municipal solvency.

The mayor himself has little doubt of the matter. After a giant beech tree toppled during a storm last autumn and cleft his house neatly in two—at a point a few feet from where he was sleeping—he figures he must have been spared for something, and it must have been for this.

"This" refers to one of the most spectacular municipal annexation moves of the decade. New Albany, in a single action of its city council, doubled its size, taxable property, and revenue potential—and astonishingly, left almost everybody happy about it.

That the world should be interested is not surprising. Everywhere city administrators are trapped between embattled fringe dwellers fighting "encroachment" of growing towns and beleaguered cities asked to render more service for less tax. American cities have been struggling, since World War II, to crack their shells and grow. In 1955 more than 500 cities with over 5,000 population—1 out of every 5 in the land—annexed an average of 0.7 square mile each. The trend spans the Nation—annexing cities included Fairfield, Ala., and Mankato, Minn.; Cranford, N. J., and Redwood City, Calif.

To come to grips with this and other city problems, the Council of State Governments has instituted a metropolitan areas study. The director of research for this study, John C. Bollens, says annexation problems are largely unsolved. He queried the 180 cities which in 1955 annexed more than a quarter of a square mile, concerning conditions on their boundaries. It was found that in only one-third of the cases was water supply satisfactory in the bordering territory. Sewage disposal was adequate in only about 1 case in 10. Less than a fifth of the fringe areas had sufficient service in garbage disposal, zoning, fire protection, street maintenance, drainage and police protection. Four-fifths of the areas annexed will not pay their way in the immediate future; the benefits will be felt in better management and sanitation for the whole area.

Three out of five cities, however, are still struggling against outmoded law and private custom to achieve needed expansion. The proceedings of the American Society of Planning Officials contain the flat statement that "most States do not have laws which permit normal expansion of cities." Last year's assembly of 1,300 members of the Municipal Finance Officers Association was told that boundary restrictions constituted a "prime barrier to the solution of many local financial problems."

So it's small wonder that Indiana's new boundary-busting statute drew nationwide attention. In the first few weeks after the new law was passed, inquiries were received from 46 States, a dozen cities and 3 overseas lands. The mail brings a stream of inquiries as to how it's working out, and the shining example of how it works is the aforementioned river town, New Albany.

"Something had to happen, that's certain," says New Albany's mayor. "Before the annexation, our situation was getting desperate." In income of its citizens, New Albany ranked in the bottom fourth of cities over 15,000, in a State which stands close to the United States average. With a "taxable per capita" figure of $775, it was the poorest city in its size class. Things were getting worse, not better. Between 1930 and 1950, while Indiana's population was growing 21 percent and the Nation's increased 23 percent, New Albany grew only 13 percent, while its taxable property diminished 1 percent. Downtown blight was gnawing further into the tax base, with parking lots spotting the shopping area where stores used to be.

Meanwhile there were ever more demands on the city's services. Fire runs and police coverage were furnished on a grudging good-will basis to fringe-area citizens who weren't paying taxes for them. Outlying garbage-removal contractors were using city streets and dumps without kicking in for the city kitty. The sewer-building program was so far behind that the mayor had to endure a stomach-turning session with health officers at the State capitol on the subject of raw sewage in local streams and ditches. City buildings were in such disrepair that this reporter, on his first visit, mistook the city hall for a partly abandoned warehouse. Transfer of pupils from the country schools to city schools was an increasing trend. Though out-of-district parents paid tuition, they paid it only while their child was in attendance, while the whole principle of free public education depends upon tax support at all times. In sum, the city was probably going to need a lot more money than it could get.

The only solution Pralle Erni could see would be to take in the fringe area, which was properly a part of the social and industrial city, and let it share the tax load. But this was an almost quixotic notion. The archaic Indiana law made it so easy to block annexations of territory to cities that almost none had taken place in the State for two decades.

Meanwhile, events were shaping up at Indiana's capital that were to produce important changes. State Senator John Van Ness, of Valparaiso, had asked the Indiana Economic Council to study the annexation problem and come up with new proposals. The council, under its director, John Melett, and State planning engineer, T. W. Schulenberg, produced a bill which if made into law, would break up the logjam. With a readiness that surprised almost everyone, the 1955 legislature passed it.

Mayor Erni was quick to see in the new statute exactly the weapon he had been needing. He seized it and he pounced

In order to appreciate his strategy—and to shed light on a problem nearly universal with growing cities—we'll inquire as to why a new law was necessary.

The thing that annoyed Van Ness—and city planners and subdividers all over the State—was that under the old law "one or more persons" could convert an annexation attempt into such a legal stalemate that in the language of the economic council's report, "everybody concerned became thoroughly frustrated."

Usually, the mere threat of court action was enough to forestall needed annexations. The New Albany affair of 1948 was typical. In that year, one segment of the fringe area had announced plans to set itself up as a separate village. Mayor Erni and his council saw at once that if this happened, the city's planned growth would be blocked. Acting promptly, they let it be known that they would annex the area at their next meeting.

On the appointed night the hall was jammed. A room meant to seat 150 was packed with 250 sit-patters and 150 standees, with an overflow crowd of 100 hotheaded citizens outside. Names were called; broad, unsupported statements made; tempers ran high in a hot 3-hour meeting. One Horatius after another stepped out on the bridge to throw back the invaders with the charge that the city "just wanted more taxes, but had nothing to give for them." The mayor was accused—by a citizen who hadn't heard that he'd just reduced his own salary—of wanting the new land just so that he could get his pay raised, as head of a larger city, from $4,500 to $5,500. In the end, the city council bulled it through and passed the annexation 6 to 1. But feeling was so intense that the council knew they couldn't carry out the annexation without going to court. So a 2-year truce was agreed upon—you don't incorporate and we won't annex.

Cities all over the State were similarly straitjacketed. It was, the economic council reported tartly, utter nonsense. The council conceded that "while there is no doubt that the individual in the fringe area has certain rights," no one should assume that "those rights deserve absolute protection irrespective of the needs of the community."

The keynote of the council's report was that "demands for municipal services grow with the whole area, not in proportion to the city's population alone." Traffic, recreation, schools, police, fire protection, sanitation, zoning, planning, and public health are matters concerning the entire metropolitan community. "For several decades," the report went on, "the cities of Indiana have been lagging behind their suburban counterparts. Dozens of large cities are surrounded by new developments—residential, commercial, and industrial—but most efforts to take in those areas have been defeated. Herein lies the paradox. Cities

are growing, but their boundaries cannot be changed."

Did other States have similar problems? A study revealed that several States, notably those granting home-rule charters to their cities, allowed annexation without recourse by residents on the land. This had led to abuses. Certain Texas cities had posted their limits far out on open prairies. At the other extreme were States allowing annexation only by popular vote in the annexed area. Everywhere, the States were beginning to feel a need for change. Some of them—notably Michigan, Virginia, California—had set up commissions to study the problem.

The Indiana Economic Council laid down six principles, several of them borrowed from Virginia court opinions, that may prove to be a Magna Carta for cramped cities:

1. Every annexation should be in the long-term best interest of the city and of the territory annexed.

2. The annexed area should be urban in character, an economic and social part of the city.

3. The terms must be fair.

4. The city shall be able to provide municipal services in a reasonable time after annexation.

5. If the area is undeveloped, it should be needed for the future development of the city.

6. The annexation must form a compact area abutting the city.

The new Indiana bill proposed that annexation be made possible by simple majority action of a city council. Instead of "one or more," it would require "a majority of the freeholders, or freeholders of 75 percent of the land, whichever is the lesser number" to remonstrate. There was to be no legal dallying. Courts were required to rule on remonstrances within 60 days as to their sufficiency, and without delay as to whether they were sustained or denied. The measure passed the legislature hands down. And Pralle Erni, who had been in close touch, serving a term as president of the Indiana Municipal League, was ready to try it out.

Though he had known many a good fight in his day, the 60-year-old New Albany mayor was not a man you would pick to become an outstanding battler for a prorgessive cause. Conservative in demeanor, bulging in contour, he looks a little like an oversize, clean-shaven, slightly out-of-sorts Saint Nicholas. Erni was born in the 1890's at Eighth and Spring Streets, New Albany, where the old family house still stands. His father was a physician, director of a cement company, and a member of the city council.

C. Pralle Erni went to Indiana University—where he played football in 1914 and 1915—as a premedical student; then changed his mind and switched to geology. He joined the Navy in 1916, was first a pilot, then engineering officer, and was discharged in 1919. He knocked around the oil fields of the Southwest for a time, learning the principles of canny investment. Ultimately he opened an office as geological consutlant in Cleveland, but never gave anything other than New Albany, Ind., as his permanent home address.

Erni's first adventure in politics was as campaign manager for an up-and-coming congressional aspirant named Sherman Minton in 1920. Minton got licked, but made such a good showing that his manager, as a reward, was allowed to run for State representative. That was the year of the Harding Republican landslide, and ever since then Erni has considered 13 a lucky number. He won by 13 votes, was assigned seat No. 13, and was 1 of 13 Democrats in the State house of representatives.

In 1937 New Albany was flooded, and Erni threw himself into the fight, finally victorious, to build the great Ohio River flood wall. Minton went on and up in Democratic politics, and then to the Supreme Court of the United States. Judge Minton, after retiring for medical reasons, has lately returned to New Albany; Erni recently went up to Indianapolis to help dedicate a bust of him for the State capitol.

It was in 1947 that Erni, finding himself the owner of a local hotel—now run by nephew Joe Erni—and content with his investments, first decided to run for mayor. For a Democrat, in a county which normally turns in a Republican plurality of around 1,000, there was a certain political hazard.

New Albany had fallen on evil days of brawling and gangsters. Just the year before, the local chamber of commerce secretary had been knifed for suggesting a clean-up of gambling. The incumbent mayor, deeply involved, had committed suicide. Erni campaigned on a platform of economy and clean government. He won his first term by 33 votes, a second term in 1951 by 400 votes, a third term in 1955 by 1,700 votes. He married during his first term; his wife died—a tragedy that left a deep mark—during his third.

Whatever favor Erni may have acquired locally he needed during the annexation scrap. Though his prestige is unquestioned, his local reputation is a study in contradictions. Some, insisting he's short-tempered and vindictive, tell about the time he had 2 eminently respectable coal merchants thrown into jail and held there all 1 long night. Discussing the incident with the mayor, this writer noted no vindictiveness. "They'd been operating overweight trucks on city streets," the mayor said matter-of-factly.

Erni sometimes displays a most unpoliticianlike disinterest in the limelight. It took this reporter 3 trips to New Albany to nail down 1 good interview. Though the mayor is a Moose, an Eagle, a Presbyterian, and a member of Red Men, and the American Legion, he's seldom seen at their functions. As voters, local Republican businessmen jump party fences to run up Erni's pluralities. As chamber of commerce members, many of the same men are irked with him for turning down their pet project, a measure to invest $20,000 in professional, areawide planning. When the proposal hit a 3-to-3 tie in city council (1 member being absent), Erni, exercising the mayor's right to vote in ties, killed it on economy grounds.

The mayor's obsession with economy is legendary. A story is told of a councilman who, infected by the mayor's thrifty zeal, called for a cut in the fee of the town clock winder from the 1900 scale of $50 dollars a year to $25. Citing downtown shabbiness and litter, citizens have suggested that economy isn't everything, but the mayor continues to trim. Street repairs are paid for out of parking-meter pennies. Erni's fury at the coal trucks was roused by the fact that they broke up the pavement and it cost money to fix it. On the other hand, he's locally famous for private generosity, and once made the city an interest-free advance of $13,000—lucky 13—to get its Ohio flood-wall financing over the hump.

About the only point everybody agrees on is that Pralle Erni has grown accustomed to having his own way. "If there's one thing the mayor hates and despises," a friend of long standing told me, "it's opposition."

In the annexation move he was to find plenty, some of it deep-rooted in the city's history. Incorporated in 1813—lucky—New Albany's first fame was supplied by its boats. Here were built some of the great river boats of history and legend—*The Glendy Burke*, set to song by Stephen Foster, and the mighty *Robert E. Lee*, most famous of all the river steamboats, which steamed upriver from New Orleans to St. Louis in a breath-taking 3 days, 18 hours, 14 minutes, a record still unbroken. John B. Ford, whose name survives in *Libbey-Owens-Ford*, in 1867 produced the first usable plate glass in New Albany and installed it in a local tailor shop. Boat-building ended with the railroad era and the glass industry moved out, but others came in. A big plywood factory was opened in 1901. One of the pioneer prefab-housing firms hung out its shingle during the 1930's. Furniture, clothing, fertilizer, and machinery plants sprang up.

These factories all stood outside the city limits. Together they normally hired 6,000 people and paid out $23 million a year in wages. A group of electric companies, attracted by cheap barge coal and plentiful water, was erecting a huge new $50 million generating plant on the river nearby. Owners of some of these establishments had enjoyed freedom from city taxes for half a century. How would they react to being asked, for the first time, to pay up?

By now Erni knew the importance of preparing the ground. He sounded out the chamber of commerce and the big electric company. Both came through with unexpectedly warm support. He approached representatives of the Silver Hills-Crestview Civic Association, representing the community's largest and most influential suburban areas. The fringe-area population had grown and its sanitation had deteriorated since 1948. Erni's arguments for annexation looked better now than they ever had before. The mayor reached a point where he thought it feasible for the council to act.

It was a daring, almost radical ordinance that the New Albany city council passed one steaming day in mid-July 1956. In one stroke it more than doubled the city's area, from 4.5 square miles to 10.9. It hiked the population from 32,000 to 40,000. Assessed valuation—somewhat less than a third of actual value—was boosted from $25 million to $34 million, with $15 million more to come when they finished the electric plant. All the sensitive areas were taken in, including aristocratic Silver Hills and suburban Slate Run Road, the plywood, fertilizer, prefab, and machinery factories and the new generating plant.

Some of these interests the mayor had already sought out and persuaded, but Erni had been too long in politics not to know the difference between a promise made and a promise kept. Besides, important elements remained uncommitted. The law allowed 30 days for objectors, if there were any, to proclaim their intention and test their strength.

Opposition was in action within 48 hours. A folder titled "Information on Annexation" was in circulation throughout the fringe area. It denied the wisdom of annexation and questioned the integrity of those who endorsed it. The circular was accompanied by a remonstrance-petition form and a plea that property owners sign it, which they were doing by the score. Why annex to gain fire, sanitary, school, and library services, it asked? Most fire policies provided for paying for runs outside the city limits. As for sewers, what assurance was there that the city would ever get around to extending them, and besides, weren't septic tanks just as good? City authorities might gobble up school taxes for years and not provide new facilities. The same for garbage collection; and to annex in order to use the library was silly, when a nonresident card could be had for $2.

Erni promptly took over the mike at the local radio station and went on the air. Fire runs for fees are not the rights of citizens, he thundered, but courtesies extended by city taxpayers. Such courtesies, and others, like use of the library and access to the city dump, could be withdrawn for a cause, such as economy. Unless the city built trunk sewers for the fringes, it would only be a matter of time until the State board of health would compel property own-

ers to build both sewers and disposal plants, and pay for them. To build disposal facilities for the whole area, as part of one city, was by far the most satisfactory way. And be not misled about the school situation, Erni admonished. Of course, consolidation of city and outlying school districts would not in itself provide new space. But it would make for more efficient use of the old. New classroom space was scheduled for completion within the year, he said, and entire new schools could be had, with annexation, in 3 years. Finally, annexed property owners, through city zoning regulations, would have protection against some unregulated and possibly noxious enterprise starting up next door. The immediate tax rise after annexation would not be great. The total tax burden in the long run would be less with annexation. "Don't sign that petition!" Erni roared. "If you've already signed it, have your name removed! Stand by your city! Protect her future!"

The pith of his talk was boiled down to fifteen questions and answers, which were printed in the papers and distributed as handbills. Forms were provided for canceling remonstrance signatures.

Erni now went after the authors of the remonstrance manifesto. The opposition's circular was traced to a duplicating machine in a certain company. Erni wrote to the company's president, asking if it was corporation policy to oppose the annexation. The president replied that it was not, and Erni made the letter public. This wiped out the last pocket of real resistance. Signatures on the remonstrance petition began to be expunged faster than they were added. On the thirtieth day the annexation became law. In the fierce competition among cities to attract new industry, the historic river town had suddenly become a formidable contender. Besides fuel, water, and skill, it could offer a tax rate made lower by being shared by all who used the city.

If complaints were to come, one would expect them from those destined to receive the largest tax bill—the corporate owners of the big new powerplant. Here, events exactly reversed the usual pattern. Both before and after the annexation, the electric power people were, in a quiet way, boosters of the idea. Their representatives are willing to let it be understood that this was due to unsullied community spirit, and surely there was an element of that. But anyone could see that, sooner or later, property near the city was going to be taxed by some future or existing unit of local government. Economical New Albany was the better 'ole.

The strangest twist of all, perhaps, was what happened to residential fringe dwellers' taxes. Everybody was ready to accept something of a rise, in view of the additional services. They may actually be lower. The overall city tax rate—civil city tax, school tax, county tax, township tax, library tax, State tax—is expected to be $4.90—last year: $4.68—as compared with the $5.50 a hundred township taxes before the annexation. Even with a sharp hike, property owners would be better off than anywhere else in the State, taxwise. The average per capita local tax in the State's 535 cities and towns is $26.98; New Albany's is $14.17.

Other annexations indicate that the freeze on city growth is over in Indiana. Princeton, Kokomo, Bloomington, Bedford, Shelbyville, and Fort Wayne have all taken on new bits of territory without notable strife. Though the hand of the cities is stronger, remonstrance can still be successful. Terre Haute tried to take in adjacent Harrison Township last summer, and there was vigorous opposition. Remonstrators failed to muster sufficient signatures, appealed, and the case is still in court. Industries around Lafayette have so far resisted annexation, substituting, in place of taxes, a program of paying for city services on contract.

Though still cautious, somewhat fearful of city councils' tendencies toward indiscriminate tax grabbing, industry's early response to the new law has been one of reserved hospitality. There's a general acceptance that wherever one goes one must pay one's freight, and that the only question is: What's a fair share? On the side of the States, the voices of the supreme courts of Kentucky and—in almost the same words—Arkansas ring ever louder: "Who goes to live, produce or operate in territory adjacent to a city does so at his peril, for it is the nature of cities to grow."

Mayor Erni sums up his advice in 13 lucky words: "Do it big. If you try to do it piecemeal, you are licked."

Address by Senor Pedro Gual Villalbí

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the more important portions of an address of Senor Pedro Gual-Villalbí, president of the National Economic Council of Spain, who was appointed Minister without portfolio in the general Spanish Cabinet reorganization of February 25, 1957. The address was delivered in Barcelona on March 11, 1957.

Sénor Gual divided the development of the Spanish economy since the end of the Civil War in 1939 into three stages. The first he described as a period of recovery from the war; the second, from about 1950 to the present, he characterized as one of economic expansion:

We started on the road to industrialization; we began to set up plans for the mechanization of agriculture. INI (the National Institute of Industry), which was one of the essential factors in our productive economy, was established. There was a multiplication of economic and social bodies which were administered as autonomous groups, even though many of them obtained their principal resources from the Spanish Government budget. Meanwhile private initiative was not excessively inhibited, and the number of firms and activities multiplied, thus contributing to expansion. With an economy of scarce resources, with a negative balance of trade * * * the only thing that could be done in order to effect an expansionist policy was to increase the volume of money and credit. But expansion of money and credit is inflation, and inflation has an impact on the foreign value and the purchasing power of currency, that is, on prices. And although we had an inflation which could be called moderate and to some extent controlled, we could not avoid the unfavorable consequences of an inflationary process.

I do not criticize this expansionist policy; much less do I justify it. I condone it for two reasons: First, because it was natural for us to allow ourselves to be impressed and led astray by the theories brilliantly presented by the most authoritative economists, as well as by the shining accomplishments achieved in some countries. * * *

But these expansionary processes, especially when based on artificial resources, must come to an end. Inevitably something happens which stops the expansion. In our case, it has been a combination of circumstances; first, the poor crops, and the freezes which completed the disintegration of our trade balance by depriving us of our main exports. At the same time our industrial exports were also declining because countries to which we had been able to export during World War II and postwar were becoming industrialized and were on the way to normality. The independence of Morocco also obliged us to dispose of funds and to adopt measures to protect our economic interests in our enclaves. Internally, the implementation of a wage policy was obviously the cause of certain disturbances.

This combination of circumstances, and others less apparent, were as a clarion call or alert signaling the necessity of a change in economic policy. Thus began the third phase, now prevailing.

This new economic policy is forcibly characterized by moderation and selection. In economics, as in everything else, it is impossible to run at full speed forever; it is necessary from time to time to stop for a breather, or at least to reduce speed. * * * We have perhaps been running too fast and now you will see, by reading between the lines of the recent ministerial statement, a policy of moderation and discrimination.

This does not mean that we are going to apply the brakes violently to the economy, much less that we are going to back up. We are merely going to slow down the pace. We are going to do so to harmonize our economy with our actual resources. You all realize that there are disparities: The growth and multiplication of productive activity is not in accord with our power resources; stoppages are bound to appear, implying sudden paralyzation of our activities. Similarly, we have increased purchasing power, but without a parallel supply of goods it is eliminated by the rise in prices.

The obvious disparity between power and raw material resources and our industrial establishment now calls for a slower pace just as the movement for the increase of the people's purchasing power has now to proceed at a slower rate in order to maintain equilibrium.

Now is the time. The important objective is equilibrium and discrimination. The Government contemplates an investment policy which will channel investments to the most productive applications, by keeping a sharp watch on production, not controlling it, but advising it, so that production will be oriented toward the most vital sector. The Government is trying to devote substantial attention to the problem of the supply of raw materials, keeping in mind, of course, the supply of consumer goods needed to sustain the people. We want to maintain the purchasing power of our currency. In sum, to build up an economic policy of balance and discrimination. This should be done with the calm which confidence and conviction gives, with the slowness which I would say is advisable when one wants firm and secure decisions.

* * * * *

During the expansionary phase, as usually happens, to cover an excessive demand, obsolete machinery and equipment are called into use and are of some service. Similarly, new elements, some improvised, some of doubtful value, enter the business field. Hastily built structures are put up, mixing healthy economic elements with others improvised, even questionable; attracted by the business boom, which fill the economic atmosphere with doubtful and delicate characteristics.

Because they lead to confusion, it is necessary to put an end to this dangerous state of affairs; a pruning operation is called for. Pruning is always less impressive than harvesting, but it is necessary in order to assure the harvesting of future crops. * * * At this time it is necessary in Spain to pull down hastily built structures, to exercise discrimination, and to look toward the establish-

ment of economic equilibrium, which implies an evident sacrifice for some, those who have entered the world of business and now will find themselves eliminated. These people will speak ill of our situation, and will naturally feel the hurt which they suffer; but we will run a great risk if a methodical, conscientious, even scientific pruning operation is not undertaken by the administration with the appropriate advice of its economic bodies.

* * * * *

I repeat that Spain is not suffering a serious illness. Spain is experiencing a difficult juncture * * * our sickness is not organic, because it does not affect the social and economic structure of Spain; it is purely functional, nonchronic, temporary. Our productive machine is intact and even expanding. There are some disturbances in the market mechanism, but they are easily soluble. We might say that our economy is in a slight dip * * * the first thing for us to do is to give our will and conviction to the desire of overcoming this difficulty.

* * * * *

One of the present problems of greatest apparent concern is the monetary problem, the problem of our currency, which is naturally related to monetary theory and policy. Sometimes complete freedom entails capital flight which aggravates the difficulty * * *. Several months ago there was a drop in the international value of the peseta, which gave rise to the hysteria which generally accompanies sudden changes. I was then asked, and since becoming Minister I am asked with greater insistence, if the Government is going to devalue the peseta. * * * I wish to speak clearly on this matter.

* * * * *

The Government does not consider it necessary to devaluate but the question arises as to whether we will keep the present exchange rate system. * * * We are still using a system of multiple-exchange rates, which is a flexible monetary system used for well-meaning objectives of economic policy with discriminatory purposes through which certain imports can be favored, certain exports fostered, etc. If at the present time it is advisable to continue this policy is a matter to be determined by the Government.

What would the rate of exchange be? I would say that it is in the mind of the Government and in my own, that our present intention is to revitalize our economy, cure if necessary, purify it, whatever is necessary to speed up the rhythm of our productive structive * * *. We wish to give the impression domestically and internationally that our objective is to win confidence by means of a fair and carefully considered policy, of an increase of our wealth, and of a good administration * * *. Then our natural and logical aspiration is * * * the revaluation of the peseta, achieved by means of a "hygienization" of the economy.

Democrats' Statistical Nonsense

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. DEROUNIAN. Mr. Speaker, I submit for the RECORD an editorial which appears in today's New York Times, exposing for what it is some of the misinformation being spread by the advisory council of the Democratic National Committee under the guise of facts:

STATISTICS AND NONSENSE

If we were to sum up in one sentence our reaction to the declaration on the economic policies of the Eisenhower administration just issued by the Advisory Council of the Democratic National Committee, then we would have to put it this way:

"Rarely, if ever, has any presumably responsible group issued a formal statement of comparable length containing so many accusations ranging from the unsubstantiated and unprovable through the dubious to the untrue and the ridiculous."

The council places itself in a thoroughly untenable position before it has completed its first short paragraph. For it starts out with these two unbelievable generalizations: (1) "Today * * * our fiscal affairs are approaching a crisis," and (2) "the rich are getting richer and the poor are getting poorer."

That paragraph, regrettably, sets the tone for most of what is to follow.

From that point the council goes on to declare, without offering the slightest shadow of proof, that small increases in wages are [being] used as excuses for large increases in prices and that these increases in prices are reflected in a steadily increasing cost of living, which has reached new alltime highs in each of the last 5 months. There are quite a number of other accusations, but since all of them are cut from the same bolt of cloth we shall confine ourselves to commenting briefly on the foregoing typically irresponsible allegations.

To begin with, what does the council mean when it says the country is approaching a fiscal crisis? Does the fact that there are differences of opinion as to whether the budget is too large, not too large, or not large enough—differences that will be found among individuals of both parties—indicate something critically wrong with the present situation? And would the Nation's finances be strengthened by unbalancing the budget and returning to a policy of cheap money and tax relief for favored groups, which seems to be what the council is backhandedly proposing as an alternative if it is proposing anything at all?

The fact is that, while the proposed Federal budget for the coming year is a very large budget, it rests on the largest and most productive economy in the Nation's history. For 2 years, moreover, we have balanced our Federal expenditures by receipts with something to spare, and we are now apparently headed toward a third successive balanced budget. That is as many times as the budget was balanced in the entire preceding 25 years. Moreover, it was accomplished under an administration that gave the Nation, 2 years back, the biggest tax reduction in history.

Has big business been using small wage increases as an excuse to exploit the public through higher prices? Why doesn't the council tell us just what has happened to wages under the Eisenhower administration? Why doesn't it give the public the figures that are easily available that show hourly earnings in manufacturing up from $1.67 in 1952 to $2.05 at the present time? Or average weekly earnings that have risen from $67.97 in 1952 to $82 today, an increase in a little more than 4 years of roughly 21 percent?

As to the nonsensical observation that the rich are getting richer and the poor are getting poorer, the fact is that 69.8 percent of the national income in 1956 went to wage and salary earners, and only 9.8 percent to those who derive their income from interest, rent, and dividends.

The statement that the cost of living has reached new highs now each month for 5 months is merely an up-dated version of that popular statistical hoax as it was employed in the election campaign last year. Obviously, once the cost of living figure reached a new postwar high a few months ago, any further increases meant another new high. But who is responsible for the fact that living costs reached their present plateau? Consumer prices have risen, since 1946, all told, from roughly 78 to almost 119, or 41 points. But 37 of those points were accounted for before Mr. Eisenhower came to office, only 4 since the end of 1952. In other words, talk about new highs for the cost of living is neither more nor less than an attempt to confuse the fact that while the costs of living rose 47.5 percent under Mr. Truman in the 7 years 1946–52, their rise during the nearly 4½ years of Mr. Eisenhower's administration has been 3½ percent.

The Gradual Weakening of NATO

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. HOLIFIELD. Mr. Speaker, many of us are viewing with great concern the gradual weakening of NATO and the spread of neutralism among the free nations, particularly those located in the European theater.

The economic plight of our great ally in the past two World Wars, Great Britain, has resulted in the announcement on April 12 that she was cutting her armed forces in hafl, would in a very few years terminate the draft and would sharply reduce her armament production. We can expect other members of NATO to follow suit. We are faced with the temptation to do likewise and relax our present strong military position. This might involve the withdrawal of forces and the relinquishing of valuable overseas military bases and at this point Mr. Speaker, under unanimous consent, I ask to have printed in the Appendix of the RECORD an editorial from a Los Angeles paper, the Mirror News. This editorial was written by Editor Virgil Pinkley who, in addition to being a great editor, is a world traveler and distinguished news commentator on the radio.

OVERSEAS BASES ESSENTIAL—RED EFFORTS AGAINST NATO—MOSCOW'S BLACKMAILING—SCANDINAVIA STANDS FIRM

(By Virgil Pinkley)

Trying to get America out of oversea bases continues to be a prime objective of Russia.

In addition, we face related problems on Okinawa and in the Philippines. Further, Moscow is trying to frighten and blackmail Norway and Denmark on the issue of guided missile bases as was demonstrated this week.

Moscow reasons quite logically that if United States forces ever left foreign bases we probably never would return short of another global war. It would take months and years and fantastic expense to reoccupy these bases if they were not in our hands. Our withdrawal would cut lines of communications and supply and eliminate our vast depots.

For 7 years the Kremlin has striven mightily to break up NATO because Red military leaders look upon this entire organization in Scandinavia, Western Europe, Italy, Iberia, the Mediterranean, Greece, and Turkey as one gigantic American-Western Allies base. This area swinging around Russia like an arc

to the west and south contains thousands of air, naval, and rocket or missile bases. From them could come nuclear weapons of retaliation. It would be virtually impossible for the Soviets to knock out all these bases even in enormous surprise attacks. Weather alone would dictate otherwise.

STRONG POINTS FEARED BY RUSS

Moscow fears and respects these strong points we and our allies hold and man. Most of them were brought into being by the military grabs and aggressive power politics played by the Soviets during the closing phases of the last war and the years immediately following. The capture, suppression, and occupation of the slave states behind the Iron Curtain made free nations understand the peril of ruthless communism used to the hilt by the Russians in a modern and terrible form of imperialism.

The Soviets would love to get us out of European bases and then induce us to leave ones now occupied in Britain, Spain, north Africa, Saudi Arabia, and Iceland. If this happened, Europe, the Mediterranean, Africa, and the Middle East would lie helpless before the might of Russia's massed and mobilized 171 Red army divisions, the world's largest jet air force of more than 20,000 planes, a frightening submarine fleet of more than 500, a mighty arsenal of nuclear weapons and power politics.

These Red forces would be operating on interior lines of communication. The Kremlin could mass divisions and planes along a frontier and makes demands in political, economic, military, and even territorial fields.

What would stand before the rulers of the Kremlin? In most instances little or nothing. America in that event would lie between the Atlantic and the Pacific. We could not stave off Russian aerial and guided missile attacks if they were launched against us. We now know the hard way through experience that no nation, especially a large power with world trade and responsibilities, can be isolated or go it alone.

GIVING UP BASES RANK FOLLY

The most costly mistake we could make for our security and that of much of the world would be to abandon these overseas bases. It would be rank folly and utter stupidity.

Even in these days of strategic air forces, nuclear bombs, and warheads and intercontinental rockets or missiles, we need these overseas bases. They are paramount. Their being is the strongest possible brake on overt military action by the men who rule the Communist world from behind the walls of the Kremlin. Our strong points in foreign lands are like NATO—instruments of defense and for security. If we are forced into war, they can become powerful offensive springboards enabling full use of our growing inventory of military hardware.

If any administration or Congress proposed to eliminate these bases or cut down on their maintenance, the public should raise an outcry which continued until common sense returned to Washington. There is no likelihood of any such action now or in the immediate future. In view of the Russian deeds in Hungary and the Middle East, the menace we have faced continues.

This past week, Premier Bulganin sent strongly worded and blunt communications to the Prime Ministers of Norway and Denmark, threatening all kinds of dire results if guided-missile bases are established on the territory of either sovereign nation. Neither of these fine, brave, little countries has reacted in a frightened way. Each is a stanch member of NATO and has airbases which can be used by NATO. Further, naval forces of the North Atlantic Treaty Organization have maneuvered in their territorial waters and off their coasts.

DENMARK, NORWAY STAND FAST

It was the act of a brave, courageous nation, ruled by the principles of justice for Russia, with its 220 million population, to try and scare 4,500,000 Danes and 3,500,000 Norwegians. Moscow knows, as does the world, that Norway and Denmark have no aggressive military aspirations. Each country is devoutly democratic and dedicated to working for peace. There are only limited military forces in these Scandinavian nations, whereas Russia has the world's largest military machine mobilized. This is not to say that the Soviet juggernaut is necessarily the best or that Russia and the slave states could outproduce the free world.

The Kremlin keeps reminding Norway that there are 120 miles of frontier between Russia and that country. Also, that Soviet jet bombers could reach Copenhagen in less than 30 minutes.

Despite the huffing and puffing of the big Red bear, our friends and allies in Denmark and Norway are standing fast. Their adherence to NATO is greater today than ever.

When the world situation is considered from almost any aspect, it is obvious that our overseas bases are essential. They must be held at all costs now and for a long, long time to come.

Polish Constitution Day

SPEECH
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. BYRNE of Pennsylvania. Mr. Speaker, at this time we join the Polish-Americans throughout the country in celebrating the 166th anniversary of Constitution Day. We look back at the brief period of freedom which the Polish people experienced under the Constitution of 1791 and we look forward to the day when they will again know individual liberty.

A limited monarchy was established in the spring of 1791 along with a biennial parliament and religious toleration. The old class distinctions that helped make life so difficult for the poorer people of the land were abolished. It looked like the dawn of a new day for Poland when she would join the growing ranks of democracies. But that same year a Russian army marched into Poland and erased all these advances. And it was not until the end of the First World War that Poland regained true independence and again began to control her own destiny. Hitler's invasion in 1939 put an end to this. The Soviet Red Army merely replaced it with another harsh rule by a foreign dictator.

Since the workers' revolt at Poznan last summer and the October uprising, the Polish people and the entire free world have regained hope that Poland may soon be free. But our optimism over the new liberties that appear to have been extended to the people and Gomulka's attempt at Polish independence should be tempered with realism. There is still strong Soviet influence over the Polish Government that has signed an agreement permitting the continued stationing of the Red army on Polish soil. Likewise, Poland remains a member of the Soviet-dominated Warsaw Pact. Besides this, the Gomulka government is a Communist government and its ability to continue to resist Soviet pressure is not at all certain. The future of Polish independence and liberty for the individual is truly perilous. The United States should, therefore, seek to strengthen the forces of freedom in Poland in every appropriate way, in order that it may move further away from Soviet Communist control.

It is my fondest hope that May 3 will soon be celebrated in Poland with the same freedom and independence as we enjoy here in the United States of America.

The Integrity of the Budget

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Washington Post of May 7, 1957]

THE INTEGRITY OF THE BUDGET

(By Walter Lippmann)

After the President returned from his Easter holiday in Augusta, the White House made it known that he will now campaign for his budget. It will be hard work. For while many a President has had to fight for his budget, President Eisenhower is in a specially difficult position.

He has to defend a budget which his principal financial adviser and he himself have discredited. It is this attack by the administration itself on the administration's budget which has unloosed the popular demand for big cuts in the expenditures. The President has now to reverse, or at least to arrest, a very strong tide of public opinion. He will probably consider himself fortunate if he can hold the cutting below $3 billion.

The President's position is weak because the integrity of the budget which he transmitted to Congress in January has been irreparably damaged by Secretary Humphrey, by Under Secretary Burgess, by the President's own hesitation, by the open opposition of Mr. KNOWLAND. Except for a handful of Eisenhower Republicans, all of them uncertain as to whether President Eisenhower is really with them, the President's budget has no active defenders.

It is not because the budget is so bad or because it imposes an intolerable burden on the taxpayers. The budget is quite consistent with the pledges in the platform on which the President was reelected last autumn. The items for foreign aid are no more than a part of the bill for the foreign policy which the country approved when it reelected Eisenhower. But a serious thing has happened. It is that the administration has destroyed confidence in the country that the budget has been competently and responsibly prepared.

The budget law fixes upon the President the responsibility for deciding what estimated expenditures and proposed appropriations are necessary in his judgment for the support of the Government. The prin-

ciple of the law lies in the words "necessary in his judgment." The law assumes, quite correctly, that the Chief Executive is in a better position than is anyone else, anyone in Congress, for example, to judge what funds are necessary for the conduct of the Government and the carrying out of the laws which Congress has enacted.

This does not mean that the President's determination of the amounts is final. It is not final. The last word is with Congress. But it does mean that in making a final decision, Congress shall have before it—so that it can act responsibly—the best judgment of the executive branch of the Government.

In the handling of the budget, the administration has violated the spirit and the intent, if not the letter, of the budget law. It has sent to Congress a budget which the Treasury has denounced as too big by several billion dollars. Thus Congress and the country have been told by the President's principal financial advisers that they should not trust what is supposed to be the President's budget—that Congress and the country shall not believe that all the funds are "necessary" which the President's budget says are necessary.

This has meant a breakdown of the Presidential budget system, and from this breakdown stems the rebellion which threatens not only the President's legislative program but also his foreign policy.

Senator LYNDON JOHNSON told the Senate last week that "the American people are giving us a clear and firm mandate to cut the administration's budget. Anyone who doubts that statement can have his doubts resolved quickly by traveling through his home State." There is no doubt that the popular mandate to cut the budget is strong. But is it also a clear mandate? How can it be clear when there is no one, literally no one, who is now in a position to explain the budget expertly and responsibly?

The budget, as Senator JOHNSON remarked later on in his speech, is 1,125 pages in length. It took a year to prepare it. Four hundred persons worked on it. It cost, just to prepare the budget document itself, $4 million. Having been completed, and as soon as it was transmitted, the document was discredited by the Secretary of the Treasury and irresolutely defended by the President. There can be no clear mandate under these conditions. There is instead the great loss of confidence in the budget which has encouraged everyone to attack any activity of the Government which for one reason or other he does not approve of.

How is confidence in the integrity of the budget to be restored? Not, we may be sure, by the usual generalities about peace and progress. There is no easy way to restore confidence, and at bottom everything depends upon whether the President has now acquired the convictions about his own budget which he did not have 3 months ago.

For unless the President has convictions that he has a sound budget—be it the present budget or a new one proposed in its place—the country will not have confidence in the budget, and every debatable item will be in jeopardy.

The Public Debt

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. McCORMACK. Mr. Speaker, I recently wrote the Director of the Legislative Reference Service of the Library of Congress requesting information as to our gross public debt, and the interest paid thereon during the past several years.

Under date of April 22, 1957, I received a memorandum from the Legislative Reference Service in connection with the public debt interest paid and computed interest rate from 1949–57, which I herewith include in my extension of remarks.

The information follows:

Gross public debt, interest paid and computed interest rate, 1949–57

[Dollar amounts in millions]

Fiscal year ending June 30, except as indicated	Total gross debt (at end of period)	Interest on public debt (during period)	Computed annual rate of interest on marketable issues (at end of period)			
			Bills	Certificates	Notes	Treasury bonds
1949	$252,770	($5,339)	1.176	1.225	1.375	2.313
1949 (January–June)		2,922				
1950	257,357	5,750	1.187	1.163	1.344	2.322
1951	255,222	5,613	1.569	1.875	1.390	2.327
1952	259,105	5,859	1.711	1.875	1.560	2.317
1952 (as of Dec. 31)	267,391	[1] 2,966	1.915	1.897	1.755	2.320
Total, January 1949–December 1952		23,110				
1953 (as of June 30)	266,071	[2] 3,542	2.254	2.319	1.754	2.342
1954	271,260	6,382	.843	1.928	1.838	2.440
1955	274,374	6,370	1.539	1.173	1.846	2.480
1956	272,751	6,787	2.654	2.625	2.075	2.485
1957 (Mar. 31)	274,999	4,011	3.261	3.320	2.380	2.482
Total January 1953–March 1957		27,092				

[1] July–December.
[2] January–June.

The Camel's Nose Under the School Tent

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. GWINN. Mr. Speaker, no one has done a better job exposing the twisted and unreliable facts that have been spread for 25 years favoring Federal aid to education than Roger A. Freeman, whose article follows.

Mr. Freeman was formerly research director of the Education Committee of the United States Commission on Intergovernmental Relations.

Since most of our information in favor of Federal aid to education comes from the Federal Government itself—it is the source of figures, propaganda, publicity on a nationwide scale—it is important that we hear from responsible research personnel who know the contrary facts favoring the States and the people as the responsible source of education.

The article follows:

THE CAMEL'S NOSE UNDER THE SCHOOL TENT

(By Roger A. Freeman)

(Mr. Freeman, formerly research director of the Education Committee of the United States Commission on Intergovernmental Relations, was one of the committee of four assigned by the Committee for the Whole House Conference on Education to prepare an advance factual report on school finance and Federal aid. This article is condensed from an address before the Civic Federation, Chicago, October 31, 1956.)

The crisis in educational accomplishments in the United States has been observed by many persons. President Harold W. Dodds, of Princeton University, for instance, has said: "High-school graduates no longer have as firm a grasp on the basic three R's—with all that they imply—as they had a quarter century ago."

Three out of every four freshmen entering the University of Nebraska in the fall of 1955 were not prepared for regular college English courses.

Rudolph Flesch's Why Johnny Can't Read remained on the best-seller list for 37 weeks.

History has become a thing of the past in many public schools; geography, an unknown and uninhabited territory.

U. S. News & World Report relates: "Many students [in European countries, including Russia] at 16 have acquired an education that compares with that of an American college graduate of 20 or 22 years."

The educational testing service at Princeton found that 71 percent of a group of prospective teachers of elementary arithmetic have a long-standing hatred of the subject. They drop it in high school as soon as allowed, avoid it in college, and return to teach another generation to detest it.

In the past 5 years, engineering degrees fell to less than half in the United States while the Soviet Union was doubling its output of engineers.

Many see this crisis as due only to a lack of funds. And they feel that this can be cured by Federal aid.

FIVE FALLACIES

The case for more finances for the public schools is commonly based on five beliefs:

1. The schools are being discriminated against in the allocation of public funds.

The fact is that education has for many years been the largest item of public expenditure in the United States, next to national defense. Comprising about one-third of all State and local government expenditures, it is gaining on the other public services. Between 1900 and 1955 public school enrollment doubled, but school costs in price-adjusted dollars increased more than 12 times. The plain fact is that school funds have consistently risen faster than enrollment and are continuing to do so. The schools are not being discriminated against.

2. The schools are now receiving a smaller share of the national income than they used to.

The fact is that expenditures for public education in 1955 were 3.8 percent of the

national income—4.6 percent, if we leave out war-connected expenditures—as compared with 1.5 percent in 1900. The United States spends not only more money but also a larger share of the national income on education than any other country of record, according to the World Survey of Education by the United Nations.

3. The shortages of teachers and classrooms are getting worse and the schools are falling behind.

The fact is that the number of teachers in the public schools has consistently risen faster than the number of pupils. The teacher-pupil ratio has been:
teacher-pupil ratio has been 1:36.7 in 1900, 1:30.1 in 1930, 1:26.9 in 1955.

Much of the teacher shortage is due to inefficient use of the available teachers. We have tended to limit rather than extend the services of good teachers, in contrast to other professions. Despite the declining financial rewards of a college education as compared with the manual trades over recent decades, teaching has been doing better than other professions in attracting candidates; and last year only 1.2 percent of teachers in public schools left to accept other employment.

As to classrooms, there are many serious shortages all over the Nation, but they can and will be met if we will avoid waiting for Santa Claus or Uncle Sam to provide them.

4. The schools are being managed efficiently and are giving the most education for every dollar—but they are not getting enough dollars.

Since we are investing more money in education than in any other public undertaking except national defense, we should seek the cause of unfavorable results in how the money is being spent rather than in the amount we are spending. Dr. Clarence H. Faust, president of the Fund for the Advancement of Education, recently said that, as compared to the need for buildings and teachers and money for expenses, our school system "needs even more to find ways of making better and more effective use of its resources for the major purposes of education." Many communities are not willing to tax themselves more heavily for what today's schools are giving their children, yet nonpublic schools—despite their tuition charges—have been expanding three times faster than public-school enrollment.

5. The States and communities lack the fiscal capacity to take care of the school needs. Federal aid is necessary to provide adequate school support.

The fact is that there is no Federal aid except that taken from within the borders of the 48 States. The Education Committee of the President's Commission on Intergovernmental Relations found no State economically unable to support an adequate school system, and concluded that Federal aid is not necessary either for current operating expenses for public schools or for capital expenditures for new school facilities. At the White House Conference on Education, the advance factual report of the committee of four on school finance and Federal aid was altered before it was laid before the participants, with some of the questions changed in such a manner as to make it difficult to vote against Federal aid. Yet the 1,800 conference participants found that no State represented has a demonstrated financial incapacity to build the schools it will need during the next 5 years. Though the citizens of even the low-income States are not anxious to receive Federal school aid, the Governor of prosperous New York pronounced in favor of Federal aid.

It appears that the sponsors of Federal aid have far more in mind than the $400-million-a-year initial program proposed. Their real purpose is to get a foot in the door, to get the principle of Federal responsibility for the schools established, and then prove in subsequent years that the amounts were far too small. Beardsley Ruml has already proposed that the Federal Government contribute $3½ billion or more a year to the schools.

REGULATION ACCOMPANIES SUBSIDY

It would be naive to assume that the Federal Government would spend several billion dollars a year for any purpose and have nothing to say on how the money is to be spent. Sooner or later Federal administrators would suggest that schools conform to their ideas of how they should be organized and administered. This is what has happened in all other major Federal grant-in-aid programs, as the amounts increased. History teaches that political power inevitably follows the power over the purse.

Judicial opinion has already been expressed on this point, as a matter of fact. The United States Supreme Court, in 1942, proclaimed:

"It is hardly lack of due process for the Government to regulate that which it subsidizes." [1]

A FATEFUL STEP

Federal aid in even small amounts, then, is but the first and fateful step in the nationalization of the public schools. And the dominant philosophy among these school administrators is just the opposite of improvement in educational standards and a restoration of learning in the schools. Instead, it is less emphasis on teaching the basic skills and more hours devoted to the social graces.

E. Smythe Gambrell, as president of the American Bar Association, last year declared his belief that Federal aid to the public schools could ultimately bring the destruction of freedom in this country; that it would be nothing short of a national calamity for the public schools to become dependent upon Federal aid.

President Eisenhower, while the head of Columbia University, once said about the proposal for Federal aid for schools: "Unless we are careful, even the great and necessary educational processes in our country will become yet another vehicle by which the believers in paternalism, if not outright socialism, will gain still additional power for the Central Government. * * * Very frankly, I firmly believe that the army of persons who urge greater and greater centralization of authority and greater and greater dependence upon the Federal Treasury are really more dangerous to our form of government than any external threat that can possibly be arrayed against us. I realize that many of the people urging such practices attempt to surround their particular proposal with fancied safeguards to protect the future freedom of the individual. My own conviction is that the very fact that they feel the need to surround their proposal with legal safeguards is in itself a cogent argument for the defeat of the proposal."

Again, in 1956, President Eisenhower warned of "the growth of a swollen bureaucratic monster government in Washington, in whose shadow our State and local governments will ultimately wither and die."

So while we hasten to attempt to cure the educational plight we are now in, we must not in our concern about a competitive race with Russia take steps making tragic prophecy of Abraham Lincoln's warning that "if this country is ever destroyed, it will be from within." What we must guard against is perhaps not so much the Soviets as our own tendency to yield to expediency instead of facing up to problems.

[1] U. S. Supreme Court, *Wickard* v. *Filburn* (317 U. S. 111, p. 131, October 1942).

Murray Should Stay

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which was printed in the magazine America in their issue of May 1957.

As it becomes known throughout our Nation that there apparently is no intention on the part of the President to reappoint Mr. Thomas E. Murray to the Atomic Energy Commission there is a growing wave of concern.

The fact that his 7 years of valuable service to the American people is being ignored and brushed aside, the fact that his great devotion to the welfare of humanity as shown by the high moral and spiritual content of his public statements is shocking to the sensibilities of our people.

The editorial follows:

MURRAY SHOULD STAY

We feel sure that President Eisenhower, despite the apparent abruptness of his remark at an April 17 news conference, is not going to brush aside the extraordinary written appeal of 11 of the 18 members of the Joint Congressional Committee on Atomic Energy. These legislators asked the President to reappoint Thomas E. Murray to the Atomic Energy Commission when his term expires June 30. The President told a reporter he had not seen the letter and that executive appointments were his responsibility. No one will quarrel with the President on that, but if in the exercise of that responsibility he fails to give very serious thought to Mr. Murray's reappointment, somebody has evidently failed to brief him on a matter of immense concern to the Nation in the tortured realm of nuclear affairs. This review goes along with the estimate of Representative JOHN W. MCCORMACK, House Democratic leader, who said April 18 that there would be "joy and happiness in the Kremlin" if the President fails to keep Mr. Murray in the AEC. Indeed the Kremlin must recognize the cogency of Mr. Murray's constant plea for rational nuclear defense. We have enough big bombs, he says. Prepare rather for the needs of Soviet-inspired limited war, where we shall have to defend ourselves and our allies with a stockpile of small atomic tactical weapons.

What lies behind the seeming coldness of the President to Mr. Murray's reappointment? Warren Unna, AEC reporter for the Washington Post, gives some of the background in a May Atlantic article, "Dissension in the AEC." He writes:

"Although Murray is anxious to remain on the Commission, few people in Washington think that President Eisenhower will reappoint him to another 5-year term, or that [Adm. Lewis L.] Strauss [AEC Chairman] would tolerate it even if the President should get such a notion. Murray has been the only Commissioner to speak out whenever he is persuaded something alien to the public interest is going on behind the AEC's secrecy-protected doors."

Reporter Unna concludes that "once dissenter Murray passes from the atomic scene, the healthy give-and-take in determining AEC policy will pass with him."

If there was ever a time when give-and-take was needed in the crucial area of United States plans for nuclear defense and deterrence, it is now. Policies for the defense of the free world against Soviet aggression are doomed to be worked out in a charged atmosphere of propaganda, economic pressures, and worldwide fear of nuclear hazards. Typical of the dark clouds of uncertainty which loom over all discussions of the H-bomb are the openly contradictory estimates of the dangers of radiation issued in late April by missionary Albert Schweitzer and AEC chemist Willard F. Libby. People want to know where the truth lies. They will be a lot more likely to find out if Thomas E. Murray is on the Atomic Energy Commission.

Mr. Murray may or may not be reappointed when his term expires this June. If he is, we can confidently expect him to continue the profound public statements he has regularly issued. (See Morality and Security—The Forgotten Equation in America, December 1, 1956, pp. 258–262.) If he fails of reappointment, he has left one final summary of his balanced, nonpartisan thinking on atomic matters in the May 6 issue of Life magazine. In our opinion this essay makes more sense than anything we have yet read on our contemporary nuclear dilemma. Its author should stay on the Commission. This is no partisan plea. Like the Life article, it just makes sense.

Mentally Retarded Children

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1957

Mr. WRIGHT. Mr. Speaker, under previously granted leave to extend my remarks, I include two extremely thought-provoking articles written by Blair Justice, of the Fort Worth Star-Telegram.

These articles appeared as part of a series on the subject of mentally retarded children. In these particular installments, Mr. Justice writes with deep insight of the effect produced by mental retardation upon the parents and families of these afflicted children.

The articles follow:

THE TRAINABLE—V: RETARDATION—IT HITS HOPES FOR THE CHILDREN FIRST, THEN COME PARENTS

(By Blair Justice)

"Death and illness, the average persons expects—no one, I guess, ever expects mental retardation of their child."

These are the words of Mrs. Herman Jones, whose husband is an Austin attorney. The Joneses didn't expect retardation of their child, but they got it.

It happened to their family just as it has happened to many other well-educated, unsuspecting people—people who are productive in society and had hopes their children would be, too.

"We went through the business of wondering what we had done to cause such a thing to happen," said Mrs. Jones.

"You see, it strikes you at about every vulnerable spot. It hits your hopes for your children, first, and your hopes for your husband and yourself. It hits your pride and it consumes emotional and physical energies and financial resources.

"It reflects itself in your other children who get the idea that they, too, are inferior. It makes you wonder what caused this to happen."

NORMAL DAUGHTER

The Joneses' retarded child is named Harris. He is 11 years old and now is in the Austin State School. The couple have a normal daughter, age 16.

"I wasn't aware of my child's mental deficiency," Mrs. Jones said, "until he was about 6 years old. I'd spent the previous years thinking of Harris as cerebral palsied—getting accustomed to the fact that he would never handle himself physically as other children, but having hopes that with determination, medical skill and prayers he could live a life not too different from a boy who had had polio. Except, of course, his speech was affected. Even that, I thought, would come eventually."

Mrs. Jones took Harris, after a long series of doctors, to a specialist in neurology and psychiatry. He told her that Harris would never grow beyond a mental age of 3 years.

"Later, I told my husband and he didn't say anything. He just looked at me straight."

Harris was being treated then at the Cerebral Palsy Center in Austin, which Mrs. Jones helped organize. The doctors at the center told her they didn't think the boy would benefit from further treatment there.

"Then," she said, "I had a visiting teacher from the Austin public schools come to our house and she was a sweet, understanding woman and we were straightforward with one another except we didn't touch upon the business of could he learn and could he retain what he learned—not for a long while."

SHUT OUT OTHER CHILD

And all this time there was the other child, the normal daughter.

"From the time I knew Harris was handicapped," Mrs. Jones stated, "almost until the time he went to the Austin State School, I shut her out.

"It was a ridiculous thing and I was aware of it, but I had no control. The one child needed help so desperately and I was convinced that time would run out so my energies were channeled, thrust, poured out on him. * * * We had gone to the Kabat-Kaiser Institute for Neuro-Muscular Diseases in Washington for 3 months and were supposed to return for several months of every year, but the exchequer dried up."

And all the time there was the need to keep going, to smile and talk with people, to go through the acts of living.

"Our house," she said, "was one to which few people ever came. You could almost cut the gloom. My daughter brought no one home because the children at school said, 'Your brother can't talk or walk or do anything.'

MISERABLE MEAL

"Once my sister and her husband came from Houston and brought a couple who had been in the University of Texas with all of us. They ate with us.

"I was cook, feeder of Harris, and hostess. It was a miserable meal because, try as my guests did, they couldn't keep their glassily horrified eyes off my child."

And all the time there was the helpless child and his silence.

"Here was a child," the mother said, "a part of one's being and spirit and there was no way of communicating—no way that this child and you could ever talk about anything, or differ, or know what was in the other's mind. And it would always be so.

"Then there was always the idea that stayed with me by day and woke me in the morning. What will happen to this child in case I died first? It was a persistent, eating idea and the memory of it even now will pull my nerves to the surface.

"And it is a universal, unceasing thought of parents of mentally retarded children. One by one, they tick off their relatives on their fingers and one by one, the parent realizes that probably none would care for a mentally retarded child.

"IT'S BONDAGE

"It is bondage."

This is one mother's story. It could have come from any of a hundred others. Mrs. Jones was not selected for the purpose of focusing attention on her and her family's problem—the problem, in essence, is the same in many families of the retarded. She was picked because she is a former newspaper reporter and she can describe what it is like to have a retarded child.

In the next story there will be others who also will help describe to those more fortunate what it is like.

And still there is the question: Why is it important to know?

THE TRAINABLE—VI: FOR EVERY MENTALLY RETARDED PERSON, LIVES OF 10 OTHERS ARE AFFECTED

(By Blair Justice)

"Patricia Ann was a very attractive baby and appeared outwardly normal at birth."

This is the way it begins in many families; this is the way it began for the George A. Parkers. Parker is a Fort Worth attorney, and this is his story:

"She was small and her slow mental development seemed almost in keeping with her physical progress."

The couple were concerned about their baby—this was their first—so they visited their family doctor.

"He allayed our fears with comments that children progressed at different rates and that there was no real cause for concern."

EXAMINATION SUGGESTED

But the worry recurred.

"By the time she was 3 years old, she had fallen behind to the extent that we were definitely concerned.

"Our family doctor recommended she be examined by a child specialist in whom he had great confidence and we obtained an appointment.

"In the meantime we started reading books on mental retardation."

The specialist diagnosed Patricia Ann as definitely retarded.

"He stated he knew nothing that could be done to restore her to normalcy and recommended that we consider private or public institutional care."

But the Parkers, as is natural with parents in such distress, could not accept the doctor's statement or his recommendation.

"The statement that medical science had not progressed to the point where it could cure the apparent injury to the brain just could not be accepted," Parker said.

DIAGNOSIS CONFIRMED

So the couple took Patricia Ann to Johns Hopkins Hospital in Baltimore, to the children's clinic there.

"If any help could be found, this was said to be the place."

But the original diagnosis was confirmed and there was nothing that could be done.

"No operation was recommended, no special medicines. She was condemned to mental retardation."

The Parkers went home and "our feeling of frustration seemed unbearable. We prayed; our close friends and relatives also prayed.

"We devoted a great deal of time to working with the child; we avoided social engagements and stayed to ourselves pretty much."

When Patricia Ann was 7, the Parkers enrolled her in a small private school for the retarded "in a beautiful country setting in Virginia."

"She is happy and comfortable, she is well taken care of and we feel we've done the best we can for her and for the rest of our family."

TWO NORMAL CHILDREN

Patricia Ann is now 18. The Parkers, who moved here from Washington, have a normal 13-year-old-son, John, and a normal 5-year-old daughter, Deborah Gay. The family lives at 2548 Walsh Court.

Although Patricia Ann is too old to qualify for any special classes in the public schools the legislature might provide, Parker has been active in support of the bill. He is president of the Fort Worth Council for Retarded Children.

Parents of the retarded—of which the Fort Worth Council is primarily composed—say they don't want sympathy for themselves. They want help for their children.

But the children are not all who are involved in the problem of retardation.

"* * * for every mentally retarded person the lives of 10 other people are affected," says the Board for Texas Hospitals and Special Schools.

NO HELP FOR OTHERS

No one is proposing that help, in the form of direct aid or financial support, be given the 10 other people affected by each case of retardation. But these people, authorities say, must be understood just as their children must be if the whole problem of retardation is to be helped.

Some self-styled realists discount the trainable bill before the legislature simply as a product of "pressure from parents, who are emotional about the subject."

The same critics, who say their view is detached and objective, ask:

"What would these classes be worth when you compare all the time and money put into them with the small amount of return you can expect from these children? The trainable will never be able to contribute."

Most authorities admit this is true. But, they ask, what about the return society loses from parents whose productivity is lowered by anxiety over the lack of opportunities for their retarded child?

GREATEST PROBLEM

"In terms of the total number of persons affected, the cost to society in care and loss of productivity and in terms of lifelong suffering to individuals and their families, mental retardation is one of the greatest single public health and social problems in the United States."

This also is from the hospitals and special schools board. It applies not only to the children but to parents and all affected.

Many of these parents are people of high intelligence and great potential. Their emotions and feelings are real, not only to them, but to society, which can be the loser as much as they.

But can classes for the trainable help, both the child and his parents?

In the next stories there will be before-and-after pictures of specific children who have been in these classes, classes that do not receive school allotments from the State.

Veterans' Administration Opposes Veterans' Provisions of Housing Bill, H. R. 6659

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1957

Mr. TEAGUE of Texas. Mr. Speaker, since the House Banking and Currency Committee did not hold hearings on H. R. 6659, the Veterans' Administration was not afforded an opportunity to comment on the specific provisions of the bill. In order that the views of that agency could be known as to those provisions of H. R. 6659 which specifically affect programs under the jurisdiction of the Veterans' Affairs Committee and administered by the Veterans' Administration, I have requested the Veterans' Administration to file a report on those portions of H. R. 6659 affecting veterans. The report of the Veterans' Administration is included herewith. The Veterans' Administration has stated that it is strongly opposed to the proposed veterans' preference program and the diversion of national service life insurance funds into FHA veterans' housing mortgages.

The report of the Veterans' Administration on H. R. 6659 follows:

VETERANS' ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR
OF VETERANS' AFFAIRS,
Washington, D. C., April 17, 1957.

Hon. OLIN E. TEAGUE,
Chairman, Committee on Veterans' Affairs, House of Representatives, Washington, D. C.

DEAR MR. TEAGUE: This will refer to your request of April 9, 1957, for the comments of the Veterans' Administration on H. R. 6659, 85th Congress, a bill to extend and amend laws relating to the provision and improvement of housing, to improve the availability of mortgage credit, and for other purposes. H. R. 6659, which was reported by the Committee on Banking and Currency on April 8, 1957, would be cited as the "Housing Act of 1957."

The provisions of this bill which would directly affect the operations of the Veterans' Administration are indicated in the analysis which is attached hereto and made a part of this report. In brief, this measure would (a) establish a new veterans' preference program under the jurisdiction of the Federal Housing Administration for the purpose of insuring home loans on liberal terms to persons eligible under the Servicemen's Readjustment Act for loan benefits but who have not heretofore obtained a home or farmhouse loan, (b) provide additional funds to the Federal National Mortgage Association for secondary market operations and special assistance purchases, (c) authorize the investment of not over $1 billion of the national service life insurance fund in FHA veterans' mortgages secured by property in areas of private capital shortage, (d) extend the voluntary home mortgage credit program for approximately 2 years, and (e) direct the Federal Housing Administration and Veterans' Administratoin to control discounts on FHA-insured, and VA-guaranteed, mortgages, respectively.

With reference to the proposed FHA veterans' preference program, it should first be noted that no benefits would be afforded veterans thereunder which could not be provided simply by increasing the interest rate on GI guaranteed and direct loans under the Servicemen's Readjustment Act, from 4½ to 5 percent. Thus, in the final analysis, it would appear that the proposed FHA veterans' preference program is merely an indirect method of increasing the interest rate on veterans' loans. If the interest rate on GI loans were to be increased to 5 percent, as recommended by the administration, such loans would become competitive with FHA loans in the mortgage market and thereby enable veterans to obtain 5-percent loan financing while effectively retaining the protections afforded by the Servicemen's Readjustment Act and the implementing regulations of the Veterans' Administration.

A very basic policy consideration is raised by the proposed FHA veterans' preference program as to whether veterans' benefits should be concentrated in one agency, or scattered among a number of agencies. The legislative background of the Servicemen's Readjustment Act shows that there were those who urged that certain of the proposed benefits contained therein should be administered by other agencies. However, by placing all the basic programs of the act in the Veterans' Administration, the Congress adhered to the well-established policy of unifying veterans' benefits in a single agency. The Congress also recognized that the various basic programs under the Servicemen's Readjustment Act were so interrelated, with a common objective, as to require that they all be administered together.

These principles are believed to be as applicable today as when the Servicemen's Readjustment Act was enacted, and no sound reason is observed for now making an exception of the loan-guaranty provisions of the act, by placing outside of the jurisdiction of the Veterans' Administration a home-loan program intended to afford preferential treatment to veterans. It is believed desirable that an activity concerned with the investments of millions of veterans be administered by an agency which is necessarily alert to developments affecting their particular welfare, rather than by an agency which is responsible for a program of financial assistance for the general population.

Under the bill the Veterans' Administration would prepare certificates of eligibility for veterans desiring to obtain a loan under the FHA provisions, would maintain a staff to process the cases in which veterans do manage to obtain 4½-percent loans for guaranty, and would operate the direct loan program. It is apparent that the creation of 2 veterans' loan programs instead of 1 would present administrative difficulties and produce a divided administration which runs counter to the purpose of the Servicemen's Readjustment Act to provide efficient, and prompt but sympathetic service to veterans through unified direction of activities.

In addition to the extra expense involved in the maintenance of separate staffs within the FHA and VA for veterans' loan purposes, it should be pointed out that no saving to the Government could be anticipated by the administration of a veterans' loan program by FHA rather than VA.

Apart from considerations of basic administrative policy and economy, there is also for consideration the fact that, since very few veterans' 4½-percent guaranty loans would be made, the consequence of the FHA veterans' preference proposal is a dilution of the benefits now available. For example, downpayments on veterans' loans under the proposal, although one-half of that prescribed for nonveterans, would be substantially in excess of the maximum downpayments now required by Veterans' Administration regulations. In addition, it should be noted that there is no assured protection under the proposed veterans' program against the charging of sales prices which are in excess of the property's market value. Under the FHA system there is no sales-price limitation. The FHA limit is on the amount of the loan, with the buyer paying the difference between the sales price and the loan maximum in cash. It is natural for builders to endeavor to price their property at a level which would reimburse them for all costs involved, including discounts. Although under the bill the FHA Commissioner may establish a maximum sales price, this authority is discretionary only. Under the Servicemen's Readjustment Act, a veteran may not pay more than the reasonable value of the property.

Among other considerations incident to the disparity between the advantages afforded by the Servicemen's Readjustment Act and those under the proposed veterans' preference program are the special pro-

cedures afforded to temporarily distressed mortgagors and the restoration of entitlement where property secured by loans has been taken from the mortgagor through no fault of his own (through condemnation proceedings, for example). It should also be noted that the payment of defaulted claims in cash under the Servicemen's Readjustment Act is a substantial inducement for lenders to enter into the Veterans' Administration loan-guaranty program. Payments of claims in debentures as proposed would undoubtedly deter some lenders from making loans to veterans who otherwise would do so.

In a report to your committee dated January 23, 1957, on H. R. 21, 85th Congress, the Veterans' Administration stated its opposition to the investment of a portion of the national service life-insurance fund in veterans' mortgages. The comments of the Veterans' Administration with respect to that measure are equally applicable to the provisions of section 205 of the subject bill which is similar in purpose. The mentioned report, which has been reproduced as Committee Print No. 10, is enclosed herewith for the convenience of the committee. It should also be noted that the requirement that the national service life-insurance fund be invested in mortgages on property located in geographic areas of serious private capital shortage within reasonable discount limits necessitates a distinction between reasonable and unreasonable discounts for mortgages originating on various terms, under various conditions, and in various geographic areas. Such a distinction, which would be required in connection with section 503 of the bill providing for the control of discounts, would be very difficult to draw in any case, but it would be almost impossible to determine with any degree of fairness what is a "reasonable" discount on 4½-percent loans in a market involving FHA housing loans bearing a 5-percent interest rate. In this connection the attention of the committee is again called to the Veterans' Administration report to the committee on H. R. 21, which included an analysis of a proposal in section 2 of the bill to control discounts.

The Veterans' Administration would have no objection to the provision in section 502 of the bill extending the voluntary home-mortgage credit program until July 31, 1959. It is noted that the Administration recommended a 3-year extension for this program.

For the foregoing reasons the Veterans' Administration is strongly opposed to the proposed veterans' preference program and the diversion of national service life-insurance funds into FHA veterans' housing mortgages.

Advice has been received from the Bureau of the Budget that there would be no objection to the submission of this report to the committee.

Sincerely yours,

H. V. HIGLEY,
Administrator.

The Indian's Dilemma

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. MARSHALL. Mr. Speaker, the so-called Indian problem is as old as the Nation and our policies have undergone many changes with the result that confusion seems to be the only consistent characteristic. The House will be interested in an article by George H. Dunne in the January 4, 1957, issue of the Commonweal, entitled "The Indian's Dilemma."

I was particularly interested in the proposals to encourage the individual initiative through Indian corporations administered by Indians to provide educational and economic opportunities for Indians. This idea parallels the provisions of H. R. 6943, my bill to provide for the establishment of a Minnesota Indian Administration for just such purposes.

Mr. Speaker, I also include a recent newsletter outlining some of the principal purposes of this bill:

THE INDIAN'S DILEMMA

(By George H. Dunne)

From time to time what is known as the "Indian problem" escapes from the prosaic and cloudy obscurity of statistical figures, Government reports, sociological analyses and impinges itself upon public consciousness with tragic and dramatic clarity in an incident like the death of Ira B. Hayes. One of the immortals of Mount Suribachi, he survived the terrors of blood-bathed Iwo Jima to die on a black night in January 1955, alone beneath the stars and desolate, on the cold desert near Phoenix, Ariz., a victim, the coroner said, of alcohol and exposure, a victim, more penetrating observers say, of the unresolved Indian problem.

After his return from war, Hayes could not find any life for himself on the reservation, any cultural pattern with which to integrate himself. There was nothing there to make life meaningful. On the other hand, he was totally unprepared to face life off the reservation. The record shows that Hayes made repeated efforts to integrate himself with the white man's off-the-reservation world and, alternately, as many efforts to discover on the reservation some form of living that had meaning. He who helped conquer Iwo Jima could not conquer frustration. Defeated, he lay down in the desert sands to die.

This is the real Indian problem which is, at the same time, a dilemma: On the one hand, the reservation does not offer a form of life with which the Indian can integrate and thus find himself; on the other hand, the Indian is almost totally unprepared to integrate imself with life off the reservation.

This is what created the problem: The white man destroyed Indian culture and failed to supply a substitute. As a result, the Indian moves in a cultural vacuum like a lost soul, condemned to wander forever in a meaningless void, at odds with the universe. Rare individuals manage to triumph over the insuperable odds which confront them; but for most it is a situation which leads to frustration and despair. It is, in point of fact, leading to the destruction of Indians on a grand scale.

What brought the Indians to this pass? All the muddled, often contradictory, policies which have characterized the Government's handling of the Indian problem over the years. First, we effectively destroyed the American Indian's way of life. Next, we isolated him on lonely reservations, making it impossible for him to integrate himself with the white man's way of life. Then, through the General Allotment Act of 1887, we authorized the division of tribal lands into individual parcels which, after a 25-year period of Government trusteeship, were patented in fee simple and made alienable. The Indian was, of course, totally unprepared for this step which by 1933 had led to the passing to white ownership of 91 million of the 138 million acres of land held by Indians in 1887. So, in 1933 we reversed our policy. Through the policies incorporated in the Indian Reorganization Act of 1934 we reinforced the reservation system, reestablished the principle of tribal ownership and sovereignty, discouraged talk of integration, and then, with a paternal smile, told the Indian he was now free to seek his own destiny. Having zagged in that direction until 1952 we are now, under the present administration, once more zigging in the opposite direction. The talk now is of withdrawal and of termination.

It is small wonder that the Indian is bewildered. Seek his own destiny where? Within the framework of his own culture which has been destroyed beyond possibility of revival? Within the framework of the paleface's culture which is not ready to accept him and which he is not prepared to accept?

The Indians once had a culture which, although primitive in character, enabled them to establish satisfactory relationships with their neighbor, with the world around them, and with the supernatural elements which, however erroneously they conceived them, they knew to be a part of the universe in which they lived. In their tribal, family, and social relations they had developed certain cultural values which enabled them satisfactorily to come to terms with their environment. The white man destroyed that environment and in the process destroyed the Indian culture related to it.

Twenty-seven years ago I heard an Indian chief describe with somber eloquence the gradual destruction of his people's culture. He was of the Coeur d'Alene tribe in Idaho. He was replying to the Catholic bishop who had just scolded the assembled members of the tribe for their failure to appreciate all that the white man's government was doing for them. His face stern as though carved in granite, his voice rich as the tones of a violincello, the chief recited the hundred years of infamous history during which extermination alternated with exploitation as a substitute for policy. With magnificent imagery he described the free way of life which had been destroyed by the white man and his government. In the end he affirmed that the only thing of value he and his people had received from the white man was his faith in the one true God, a gift brought by the Blackrobe. Now even this gift, he concluded bitterly, was being stolen out of the hearts of young Indians under the influence of the cheap bars, cheap movie houses, cheap dance halls in the white man's towns on the fringes of the reservation. When the chief had finished the bishop cleared his throat—and went home.

The other alternative proposed to the Indian, that he work out his destiny within the framework of the white man's culture, is not without its irony. Integration presupposes a readiness on the part of whites to receive the Indian into their cities, neighborhoods, schools, churches, shops, factories, laboratories. This is the key to the problem. Indians feel that whites do not want them. So again we find racial arrogance, the white man's idolatrous and degrading worship of the whiteness of his own skin, at the root of another one of our pressing national problems.

On the other hand, the Indians are not themselves prepared to find a way of life within the framework of the predominant culture of the white man. A great gulf separates the ancient ways of the Indian from our culture. Some Indians have bridged that gulf, chiefly those who have had a great deal of education. But they are relatively few. It is almost impossible for the average Indian to understand the white man's attitude towards the State, society, family, taxes, property, capital, labor, work and its motivations, money, religion and other essential elements of our culture. At the moment, for example, the most popular religion on the San Carlos Apache Reservation, despite long established Catholic and Lutheran missions both boasting numerically respectable memberships, is composed of a strange and

sad mixture of Catholic, Protestant and medicine man practices and beliefs. This is symbolic of the confusion in the midst of which the Indian lives as a result of the breakdown of his own culture and our failure to give him a satisfactory substitute.

The solutions proposed for the problem vary according as their proponents are more impressed by one or the other horn of the Indian's dilemma. Some urge a policy of withdrawal in two directions. Let the Government leave the Indians strictly alone. Let the Indians, having nothing to do with the white man's government or society, turn back to their own cultural milieu and find fulfillment in the preservation of their own primitive religious values, economic order, and social organization.

But for most tribes their way of life is destroyed beyond possibility of revival. It is not a question of whether they might prefer the world of yesterday to that of today. Whether it is more delightful to shoot a buffalo or to drive a tractor is for them an academic question. The buffalo are gone. If the Indians had not sold Manhattan Island to the Dutch; if the Dutch had not been followed by the English and the English by their rebellious colonists, the Americans; if millions of white men, lured by the promise of a new world, had not left their homes across the sea; if electricity had not been discovered nor the steam and combustion engines invented; if the march of history could have been halted 200 years ago, the state of the question would be quite different. But these, and thousands of other pertinent events, did happen. These facts and the conditions of living that have resulted from them constitute the real world with which we and the Indians must cope and within which we and they must live.

It may be possible for a small tribe such as the Hopi, which has succeeded in maintaining a kind of splendid isolation from the surrounding world down through the years, to live within its past. It is not possible for the larger tribes, many of whose cultural values were to begin with less durable, to isolate themselves. Even had their own culture not been destroyed, stark economic facts would prevent isolation. The reservations are simply incapable of supporting all the members of the tribe. A Stanford research study shows, for example, that with full development of reservation resources the San Carlos Apache Reservation in Arizona would still be unable adequately to support all members of the tribe.

Another approach to the problem is that of Oliver La Farge, longtime friend of the Indians and president of the Association on American Indian Affairs. Apparently chiefly concerned with the preservation of tribal entity, he opposes any weakening of tribal sovereignty and holds in anathema any policy which appears to him to lead in the direction of Government withdrawal or termination of the reservation system. All Indians recognize La Farge's proven friendship, but not all agree with him. They say the reservation is chiefly responsible for destroying the Indian as an individual. The reservation system is one of paternalism which makes the individual utterly dependent upon the Bureau of Indian Affairs and upon the tribal council. As they function under the Indian Reorganization Act of 1934, the reservations constitute islands of state socialism in a society organized around the principle of free enterprise. The Indian owns nothing. The tribe owns everything. The habits and attitudes almost inevitably engendered by the very nature of the reservation system unfit the Indian for survival in our highly competitive society, in which, for better or for worse, the virtues of initiative, self-reliance, energy, and thrift are of paramount importance.

Those Indian leaders knew what they were doing who, like Crazy Horse, Sioux conqueror of Custer, long resisted bitterly every effort, whether of blandishment, threat, or force, to persuade them to bring their people into the shadows of the forts and surrender them to the paternal care of the Government. Before white treachery and cruelty drove the Sioux into rebellion, Crazy Horse, as a boy, had witnessed the corrosive effects upon Indian character of this mode of life. In the end he was forced by the sufferings of his harried and starving people to yield. Before he sank, an Indian Caesar, beneath the bloody knives of grinning jackals of treachery, he had already learned to regret his decision. For in the encampments assigned them outside the Army posts where Indians sat in idleness waiting Government handouts of food, clothing, tobacco, he watched the disintegration of character rapidly setting in. Crazy Horse was glad to die. Better death than decay.

If the reservation system is itself responsible for the evils which are destroying the Indian, the answer to the problem would seem obvious: abolish the reservation system. There are some who advocate such a course, among them those who would like to get their hands on mineral and land resources belonging to the tribes.

The problem is not so easily resolved. Indians, generally speaking, have over the years become so dependent upon the Indian agencies, so unaccustomed to rely upon themselves, that they cannot conceive of any other form of survival. Any suggestion of doing away with the paternalistic system fills them with terror. For much the same reason they oppose desperately any measure which seems to them to threaten tribal entity. With so much of his own culture destroyed, the Indian feels secure only to the extent that he can identify himself with his tribe. This is why he supports tribal ownership of land and all the other features of tribal sovereignty.

This is the attitude of probably the majority of Indians. They can hardly be blamed. With the buffalo gone from the plains, with hunger gnawing at their vitals, with the icy fingers of winter rattling their bones, the followers of Crazy Horse could not be blamed for begging him to give up. Surrender to paternalism had become the only means of survival. Now, however, it becomes increasingly evident that paternalism is only a more subtle form of death. It preserves the body, but destroys the soul.

An increasing number of enlightened Indian leaders realize this. They are aware that the attitude of the majority must be changed and this now deeply ingrained dependence broken down if the Indian is to solve his problem. These men are devoted to ancestral traditions and tribal ties. But they want Indians who are free to own their own homes, till their own soil on or off the reservation; and also free to move into American cities and enter fully into the business, labor, professional, and intellectual life of these communities.

Clearly this aim implies the end of the reservation system as presently constituted. The reservations must go. But they must not go until the Indians have been adequately prepared. The abandonment of paternalism must be a gradual process and must be carried out in such a way that the many legal and moral obligations which the Government has incurred, and so often violated, are scrupulously fulfilled. It is wrong to condemn out of hand every governmental policy which leads toward withdrawal, but it is right to scrutinize closely every such policy. It must be clear that the policy is not inspired by the desire to shirk responsibilities, but rather by the resolve to carry them out fully and in a way that best serves the American Indian.

If there is any one key to the problem, it is education. White communities must be educated to welcome Indians as neighbors. The Indian must be educated to the inevitability and desirability of integration. There can be no question of forcing integration upon him. He must be free to choose his own path. But persuasive efforts must be made to convince him that the present path of reservation paternalism leads but to the grave.

This educational task will not be easy. Who can blame the Indian who wants nothing to do with the paleface's culture? He has vivid memories of limitless wrongs. The scars are still livid. Can the Apache, whose people never practiced scalping, forget the bounties on Apache scalps collected by white men? Or the Sioux forget the unspeakable desecration of the bodies of their murdered wives and daughters? It will not be easy, with these memories still living, to persuade the Indian to merge with the white man's society; but, especially with the younger generation, it will not be impossible. This educational task will best be achieved by Indian leaders themselves.

Most important of all, the younger generations must be given an education that will equip them to enter fully into the mainstream of American life. They must be educated to understand and to cope with the problems of living engendered by a society organized around the principles of political freedom, socially regulated freedom of enterprise, private property, individual initiative.

This will be the most difficult task. The difficulty does not lie in any deficiency of intelligence on the part of the Indians, but in determining what kind of education is needed. Vocational schools may equip Indians to repair automobiles, build radio sets, drive tractors. But what kind of curricula and what sort of pedagogy is required to equip the Indian to understand and to evaluate the operative principles of the dominant culture which surrounds him and to enable him to weave into the fabric of his own psychology the positive values of that culture? What type of education will enable him, while preserving whatever of positive value remains of his Indian heritage, to become an integral part of American society?

What of the reservations themselves? What should ultimately be done with them? It should be kept in mind that they belong to the Indians. More exactly, they belong to the Indian tribes. Most Indians feel that the tribal land base must be maintained, else the tribes will disappear as entities. Even those who feel that the preservation of tribal entity is less important than the preservation of the individual from decay would be slow to advocate division of the land. Indians on the whole are scarcely more prepared to assume this responsibility today than they were at the time of the Allotment Act of 1887.

A proposal that is winning constantly stronger support is that each reservation, with all of its property holdings, be incorporated, each member of the tribe becoming a shareholder. One of the most earnest advocates of this plan is Thomas Shiya. He is not himself an Indian, but he served for several years as manager of the San Carlos Apache tribal enterprises, and from this vantage point he acquired first-hand knowledge of the Indian problem. In a recent speech, Mr. Shiya described this plan:

"Let's visualize, them, a corporation, owned by Indian stockholders who elect their board of directors, who will hire qualified management to operate the corporation for the profit of the Indian. Whether the Indian continues to live on the land or moves anywhere else to live, he continues to hold his share of the corporation stock and receives his share of dividends.

"The corporation will act as any land-holding corporation in America. Its responsibil-

ities on the land are economic. The other public responsibilities such as education, law and order, health, welfare, etc., will be delegated to Government agencies already serving the rest of the people in the country, State, and Nation. * * *

"To continue Federal responsibilities but to free Indians from Federal bureaucracy, the corporation will be responsible to three or more private citizens as trustees. These trustees, successful and experienced leaders of unimpeachable character * * * would oversee management in the operation of corporation affairs on behalf of the Indian stockholder."

In his speech Mr. Shiya outlined other details of this plan which he terms one of "trust management" and which he believes would "open the way to all the incentives, rewards, and goals that make America the leading economic nation of the world. The Indian as an individual, rather than the tribe, becomes important and foremost, the family can own its own home on its own land, public-school education can be put to use on Indian land, and, above all, Indian land becomes integrated with the Nation's economy—an asset rather than a liability."

There are many others who also believe that in this direction alone lies hope for the Indian. They admit freely that such a transformation of the reservations will involve casualties; but they argue that almost any solution of the problem would cause fewer casualties than does the reservation system itself. It is hoped that with such a transformation there will be fewer tragedies like that of Ira B. Hayes and more Indians equipped to come to terms with the world in which they live. The advocates of this trust-management idea fully realize that such a transformation will require long preparation. First must come the educational project and its implementation. This will take time. Yet, in the opinion of serious observers, there is no time to lose.

Meeting Discusses Indian Enterprises

(By Congressman Fred Marshall)

The recess of the Congress gave us an opportunity this week to hold a highly interesting and informative meeting with officials of the Bureau of Indian Affaifs to discuss the problems of Minnesota's Indian citizens.

Discussion centered on the economic conditions which are largely responsible for many of the other problems encountered by our Indian population. Indian representatives. Bureau officials, and Members of Congress at the meeting agreed that steady family income must be the basic consideration in any program.

A bill which I introduced at the request of Minnesota Indian councils after a long period of study and consultation was discussed in some detail, since its provisions reflect the practical problems facing the Indians of our State.

The bill would create a Minnesota Indian Administration which would bring the Indians themselves into cooperation with the State and Federal Governments in promoting activities that would help them build a stable economy and provide family income.

The administration would undertake activities such as land-use planning, research on marketing of Indian products, establishment of commercial enterprises, encouragement of private investment in Indian enterprises, road building, educational assistance, and improved housing.

Most of these activities are authorized under existing law, and some programs are now in effect and making progress. However, the Bureau explained that the great demand for services in Indian areas throughout the country and the limited funds and personnel available have hampered any intensive activity.

It was admitted that remarkable progress has been made among the Indians of Minnesota and that the Minnesota Chippewas are probably among those best able to move forward more rapidly in taking over their own affairs. This is the goal desired by the Indians themselves, and they ought to be encouraged in every way possible to assume their rightful place as first-class citizens.

The paternalism which too often characterized the activities of our Government in dealing with Indian problems failed in many serious respects, and it is obviously time to help the Indians help themselves. Their resources in Minnesota are plentiful but pitifully underdeveloped.

Our primary purpose is to assist in sound development of these resources so that self-sustaining enterprises will provide year-round employment. Such employment would of itself help to meet education and housing needs just as it does in other communities.

Some progress has been made in reforestation efforts and the principle of sustained-yield management is being applied to the timber harvest. But this is only one important element in the Indian economy and the success achieved with limited funds and limited personnel is an indication of what might be done in other areas.

Trained technicians are needed among the Indian people themselves and an expanded program of vocational education to give them the skills needed in modern undertakings would be an important step forward. The Bureau outlined plans for such a program and we hope it will be carried out as promptly and effectively as possible.

Industries based on Indian arts, harvesting of wild fruits, and charcoal production are all possible but require technical and business training. The capital investment in most of these enterprises would be small but the steady employment provided in production and distribution would be an important supplement to the seasonal timber and fishing industries.

The improved highways to be built under the new program are expected to bring many more tourists into our north country and the Indians should be in a position to provide resort and motel facilities and other services travelers expect.

The important point is that we must help the Indians take advantage of the potential which is theirs so they themselves can build a self-sufficient economy based on ownership and productive effort.

Addresses Delivered by Hon. John W. McCormack, Hon. Joseph W. Martin, Jr., and Gen. Carlos P. Romulo, at Bataan-Corregidor Memorial Dinner, Washington, May 6, 1957

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. MILLER of California. Mr. Speaker, last night we witnessed a great event when a memorial dinner was held at the Mayflower Hotel to commemorate the 15th anniversary of Bataan and Corregidor. The speeches delivered are food for thought. Two of our colleagues, the Honorable John W. McCormack, of Massachusetts, and the Honorable Joseph W. Martin, Jr., also of Massachusetts, were conferred one of the highest decorations of the Philippine Government—the Philippine Legion of Honor in the degree of Commander. This shows that the Philippines does not forget its friends. It is an excellent attribute for any action to give recognition to those who have served it. This the Philippines has done and continues doing.

There is a message in General Romulo's speech that we should all heed. It is a message that will help us in the solution of national and international problems facing our Nation. At the same time, the speeches by Majority Floor Leader McCormack and Minority Floor Leader Martin convey to the Filipino people our gratitude for their loyalty to democratic ideals and their unswerving determination to continue fighting for such ideals. Those who doubt America's abiding faith in democracy should have been at the Mayflower Hotel last night and should have witnessed that wonderful friendship between two nations of two different races. It was both uplifting and encouraging.

The following are the citations:

Award of the Philippine Legion of Honor (Commander)

By direction of the President, pursuant to paragraph 2e, section I, AFPR G 131–051, this headquarters, dated January 21, 1954, the Philippine Legion of Honor in the degree of Commander is hereby awarded to: Majority Floor Leader John W. McCormack, of the United States House of Representatives, for exceptional and distinguished service to the Republic of the Philippines as a legislator and statesman. Majority Floor Leader John W. McCormack, as one of the stanch champions of the cause of Philippine independence, voted for the legislation which granted first autonomy and subsequently the complete independence of the Philippines. He has consistently shown a sympathetic and abiding interest in Philippine affairs and supported such legislation as the Philippine War Damage Act and other important rehabilitation and trade measures for this country. A courageous and farsighted liberal, he sponsored the historic resolution that pledged the United States to support the freedom of colonial peoples. His assistance and counsels have always been available to Philippine representatives to the United States of America. By his invaluable service, Majority Floor Leader John W. McCormack affirmed himself as a true friend of the Filipino people.

By order of the Secretary of National Defense:

Alfonso Arellano,
Lieutenant General, AFP,
Chief of Staff.

Award of the Philippine Legion of Honor (Commander)

By direction of the President, pursuant to paragraph 2e, section I, AFPR G 131–051, this headquarters, dated January 21, 1954, the Philippine Legion of Honor in the degree of Commander is hereby awarded to: Minority Floor Leader Joseph W. Martin, Jr., of the United States House of Representatives, for distinguished service to the Republic of the Philippines as a legislator and statesman. Minority Floor Leader Joseph W. Martin, Jr., has shown through the years consistent friendly interest in the Philippines, as the former Speaker, and as the incumbent minority floor leader of the United States House of Representatives. He showed sympathetic understanding of a people's love of freedom by voting for the legislation which ultimately granted complete independence to the Phil-

ippines. He is a friend and counselor to the Philippine representatives to the United States of America whose task he has made easier by his invaluable assistance and cooperation in the enactment of legislation for Philippine veterans, the Philippine War Damage Act, rehabilitation and trade measures, and other important legislations for the Philippines. Minority Floor Leader JOSEPH W. MARTIN's invaluable service is a manifestation of his continuing and lively interest in the welfare of the Filipino people.

By order of the Secretary of National Defense:

ALFONSO ARELLANO,
Lieutenant General, AFP, Chief of Staff.

Following is the speech of Minority Floor Leader MARTIN:

REMARKS OF JOSEPH W. MARTIN, JR., MINORITY LEADER, UNITED STATES HOUSE OF REPRESENTATIVES, UPON RECEIVING THE DECORATION CONFERRED ON HIM BY THE PHILIPPINE GOVERNMENT—LEGION OF HONOR WITH THE RANK OF COMMANDER—AT THE BATAAN-CORREGIDOR MEMORIAL DINNER, MAYFLOWER HOTEL, WASHINGTON, D. C., MAY 6, 1957

General Romulo, Mr. Justices, members of the Cabinet, my colleagues of the Senate and the House, ladies and gentlemen, I am grateful to your government for this honor. I treasure it because it is a symbol of the friendship that links our two countries as allies united by a common ideology. I welcome it as a token of your pepole's appreciation of the collective wisdom of our Congress in passing such legislation as has shown to the world America's faith in the ability of the Filipino people to govern themselves. In all humility, I accept it with the expression of my profound gratitude to President Garcia and the Filipino people. In compliance with our Constitution, I will deposit this decoration with the State Department until Congress has passed a law authorizing its acceptance.

When we look back at Philippine-American relationship one central fact stands out. It is that we have faced together many problems, some of them apparently insoluble, a number of them affecting fundamentally the relations between our two countries. There were times when certain irritants seemed to make it impossible for us to come to a solution. There has not been one single instance, however, when after a mutual exchange of ideas, after negotiations had been conducted by the leaders of our two peoples, when we did not come to a satisfactory solution mutually accepted by both our countries without the impairment of the dignity and honor of either. We have lived together in good faith and good will.

I believe this is a lesson from which the world can profit. Where there is honesty and justice and mutual respect there is real friendship. This is what has united our two peoples. To this we owe that unforgettable Filipino loyalty shown in Bataan and Corregidor. I do not believe anything can destroy or undermine the friendship of our two countries. It was born out of mutual loyalty, your loyalty to us, and our loyalty to you. We may make mistakes. You may also makes mistakes. We are far from perfect. What counts, however, is not the errors but the sincere desire that is evinced by you and by us to admit those errors and to correct them.

We look with pride at the progress achieved by your people. A recent instance of this is the vitality of your democracy. When your great leader, the late lamented President Magsaysay suddenly died in an airplane crash, his unexpected disappearance from the Philippine scene as its head of state could have caused an upheaval similar to that which has happened in other countries when faced by a similar emergency. To the credit of your people no such upheaval took place. You followed the even tenor of your democratic ways. Your Vice President took over and it is a tribute to him and to your country that he is carrying on in a manner that shows your maturity as a nation imbued with democratic ideals.

To President Garcia who has announced his avowed policy to fight communism and neutralism and to strengthen the relationship between our two countries goes my best wishes for a successful administration. I know he can count on the same cooperation from America as his predecessor. To you, Mr. Ambassador, serving your people here in Washington in a manner that has won the admiration, the affection and respect of all of us, my deep appreciation for this award which, in behalf of your Government, you have so generously conferred on me tonight.

Perhaps nothing can characterize the effectiveness of your work as Philippine Ambassador more appropriately than to recall what the late Vice President Barkley once said when as Foreign Secretary of your Government you came to Washington in 1950. At a luncheon at the Capitol which he gave in your honor he quipped—"When Churchill or Romulo come to Washington we should double the guard at Fort Knox."

Mr. Barkley, of course, was indulging in a little humor, for which he was so famous. But it did illustrate the aggressiveness and the effectiveness of a great Ambassador's representation of a great country. General Romulo is one of the strongest forces for freedom in our world today. A hero in war, General Romulo has continued his outstanding service to his country in peace. May the good Lord spare him to serve his nation for many years to come.

Again thank you, Mr. Ambassador, for this award which will be one of my most cherished possessions as long as life shall last.

Following is the speech of Majority Floor Leader MCCORMACK:

ADDRESS DELIVERED BY THE HONORABLE JOHN W. MCCORMACK, MAJORITY FLOOR LEADER, UNITED STATES HOUSE OF REPRESENTATIVES, UPON RECEIVING THE DECORATION CONFERRED ON HIM BY THE PHILIPPINE GOVERNMENT—LEGION OF HONOR WITH THE RANK OF COMMANDER—AT THE BATAAN-CORREGIDOR MEMORIAL DINNER, MAYFLOWER HOTEL, MAY 6, 1957

General Romulo, Mr. Vice President, Mr. Justices, members of the Cabinet, my colleagues of the Senate and the House, ladies and gentlemen, I am deeply touched and honored by the citation and I only hope, in all humility, that I will continue to deserve it. I receive the award conscious of the fact that the collective action of my colleagues in the House of Representatives made possible the legislation mentioned in the citation. I accept the award coming as it does from a people with whom I am happy to have been associated through the years both by political persuasions and by religious ties. I accept this award on behalf of my constituents without whose support this would never have been possible. They, too, share my admiration and affection for the Filipino people. Thank you, General Romulo, and please convey my appreciation to President Garcia and to the Filipino people for this honor that they have conferred upon me. I will deposit the decoration with the Department of State and will accept it when Congress gives me its approval. The honor and the decoration will always be one of my treasured possessions.

It is true that my relationship with the Filipino people has been a close and happy one. I hold them in high regard because of their loyalty to the ideals of freedom and democracy. I admire them also for their religious faith. With their representative here in Washington, Gen. Carlos P. Romulo, I am linked by close personal ties of friendship and esteem. Wherever there are men and women throughout the world who love liberty, General Romulo is deeply admired and respected. I respect him for his devoted service to his people. In the House, when he was our colleague as Resident Commissioner, he fought for the Philippine Rehabilitation Act and for the Philippine Trade Act, to get, through them, as much as he could, the best concessions for his people. The cause of the Filipino veterans he espoused with vigor and determination. He has come to me time and again to expound the side of the Philippines on matters before the House. In the United Nations, he has won world acclaim. He is a patriot and a statesman and the Philippines must be proud to have a spokesman of his character and ability.

I see in this award, Mr. Ambassador, a veritable symbol of the lasting friendship between the Filipino and American peoples. It is a friendship which has been tested time and again in fruitful collaboration since the beginning of the century. It was sealed in blood on the European battlefields of World War I, on the historic battlefields of World War II, in Bataan and Corregidor, and on the battlefields of Korea in the United Nations collective action against the Red Chinese and North Korean aggressors. It has been tested in the halls of the United Nations where, led by General Romulo in the Security Council, the Philippine fights for the cause of non-self-governing countries as well as for the cause of the underdeveloped areas of the world. This is a cause that it is the traditional American policy to follow. It was reiterated in a joint resolution which it was my privilege to sponsor on the floor of the House last year, and unanimously approved.

Against this background of friendship, we are gathered here tonight to commemorate the 15th anniversary of the fall of Bataan and Corregidor. Too much has been said about the fact that Bataan and Corregidor were a defeat. They were a defeat of the flesh, which could no longer endure the onslaught of superior arms and superior numbers. But they were, on the other hand, a victory of the unconquerable spirit of man. This man was of both East and West, fighting side by side for an ideal that he believed in, that he had hoped to pass on to his children with undiminished vigor. His action was the very heart of courage, as Walter Lippmann called it.

And we can pay tribute to his memory not by what we say here, but by what we do now and in the future to secure for the men, women, and children, who are his heirs the permanent blessings of a life with justice and a life free from want and poverty and conflict, a worldwide regime that not only passively respects but militantly fights for human rights.

This is the transcendental achievement we are called upon to do. The world has progressed immeasurably since the middle ages, indeed since the 19th century. But while there are parts of the world which live in peace and contentment, the rest of the world subsists in conditions of misery, squalor, and fear.

Asia and Africa are two vast continents seething with unrest and ferment. Their peoples are engaged in the historic struggle of man for liberty and political and economic freedom. Since the end of World War II, we have seen 19 of these countries emerge as free and independent states, jealous of their rights and responsibilities. They are engaged in the momentous struggle of nation building, and they will no longer be denied the fruits of the renaissance, however late in coming. It is for the free world to see to it that they gain and share in the economic largesse of the earth, lest they

fall for the blandishments of a godless communism.

Already, in September 1953, the United States announced its atoms-for-peace plan before the General Assembly of the United Nations. That was a momentous decision in this mid-20th century. It is calculated to bring, not the scourge of total destruction upon mankind, but the benefits of technology and science, to the less fortunate people and the underdeveloped areas of the world, so that they may begin to know the blessings of economic prosperity. Until this is done, our battle against hunger and poverty is not won, and Bataan and Corregidor would simply be a dim memory of the past.

Our friendship for your people we have shown in many tangible ways. Recently our government decided to make the Philippines the nuclear research center in Asia. This decision was made in favor of your country despite the insistence of several other countries in Asia that they be favored with such a center. This was a decision that revealed not only our friendship for the Philippines but our faith in your ability and competence to undertake such a great project. This means that we have selected you for leadership in your section of the world on a subject of paramount importance to all humanity such as nuclear research. This, aside from the fact that we have entered into a bilateral agreement with you to provide you with an atomic reactor.

When we passed the Philippine Rehabilitation Act, it was in the full knowledge that the United States has never paid any war claims in the past even to our own fellow countrymen devastated by our civil war. But this we did for you as a small token of our gratitude for your loyalty. True, it is far from adequate, it is certainly not meant as a compensation, but considering that we have never done it in the past, you can understand that it was really a sincere recognition, no matter how insignificant, of what was done by those whose memory we honor tonight.

When you came to us, as President Magsaysay's special envoy, to ask for the extension of the philippine Trade Act and later, when you appealed to us for the approval of the revised Philippine Trade Act, despite the pressure of other important legislation pending then in Congress, preferential attention was given your plea. The Philippine Trade Act was enacted by us in 1946 because we thought you needed it to cushion the economic effects of independence. When you came to us 10 years later to ask for modification that would benefit your people, Congress readily met your views. I can mention other instances wherein we Americans have consistently shown our interest in and friendship for the Philippines. I am citing these few examples out of others that I need not belabor here because tonight is also a night of remembrance and of recollection to recall Philippine loyalty to the United States and United States loyalty to the Philippines, friendship—real friendship and loyalty between our two countries. This is also explained by the fact that we worship the same God and we believe in the spiritual and moral values which an atheistic ideology such as communism rejects and proscribes. Indeed, our battle, ladies and gentlemen, is not merely a battle for the mundane and material things of the earth. It is far more than that. Our battle is really in the realm of the spirit. It is a struggle for men's minds and men's hearts. It is a pitting of ideas against the Communist ideology, the core of which is world domination and the enslavement of man. We have no doubt that our democratic ideals—that man is endowed with the inalienable right to life, liberty, and the pursuit of happiness—are the superior ones. We have no doubt that democracy, which extols the dignity of man and the paramountcy of his well-being, and that Government is the servant and not the master, will triumph in the end against an ideology that will keep him forever shackled as a slave, a mere pawn. Because this is the heart of our belief, we must strive to give life to it without letup, and in an affirmative and dynamic manner.

The American people are committed to the defense of human rights and freedom. Such a dedication was epitomized by the grant of independence to the Philippines in 1946. And to pursue these ideals, the United States has forged an alliance with many countries of the Free World. This alliance is meant not for aggression, but for self-defense, and for self-preservation enabling nations and peoples, large or small, to attain their national objectives in accordance with their cultures under governments of law in a world of peace. We still give the enemy no reason to miscalculate.

The leaders of the free world have shown the courage to stand and be counted with the forces of freedom. Such a leader was the late lamented Filipino patriot, Ramon Magsaysay. The free world has lost a fearless leader dedicated to the democratic cause. His life was short, but it was a full life dedicated as it was to the service of the common man who loved him and whom he loved.

It is fortunate that his successor is a man as uncompromising in his determination to fight communism and neutralism, no less farsighted, and no less idealistic, and who quickly and effectively dispelled the fear that was expressed in some quarters after Magsaysay's tragic death, that the Philippines might go neutral or drift into the Communist orbit. President Carlos P. Garcia has taken over the duties of President under constitutional processes, bringing to his new office a wealth of experience in the service of his people. He pledged shortly after assuming the office of the presidency, "I can only tell you I shall carry out every item of the Magsaysay program to its full realization." The free world can count on him, as it counted on Magsaysay. He is a stanch champion of freedom just as Magsaysay was. As the real friendship of our two countries continued and was strengthened, under the late president, so will it continue to strengthen under President Garcia. It can be said without contradiction that our relationship is more than friendship—that the family relationship of brothers exists between our countries and our peoples.

Men died on Bataan and Corregidor, but the cause for which they fought lives on. Magsaysay fought for such a cause; Garcia is fighting for it himself; and men who have known the blessings of liberty will forever fight for it. I associate myself with the stirring words that:

"Bataan has fallen, but the spirit that made it stand—a beacon to all the world—cannot fail. * * * Our defeat is our victory."

Let us make that victory permanent and with an unfaltering trust in an Almighty, we cannot fail.

Following is General Romulo's speech:

ADDRESS DELIVERED BY GEN. CARLOS P. ROMULO AT THE BATAAN-CORREGIDOR MEMORIAL DINNER, MAYFLOWER HOTEL, MAY 6, 1957

We have lived through half a generation since the glory of Bataan and the martyrdom of Corregidor. We have survived a great war, and several lesser wars, and the overhanging threat of a future conflagration. We have survived victory, and we have even survived "this peace of mutual terror" that followed victory.

Tonight we meet once again to recall the inner meaning of the blood brotherhood between the American people and the Filipino people that was sealed on that little peninsula and on that little rock whose names are enshrined in the histories of both our countries.

The rhythm of these annual remembrances was broken this year by the tragedy that befell our people. A son of the Philippines, a warrior in the cause of human freedom and understanding, died suddenly at the very height of his career, before his work was done.

A few moments ago I asked you to rise with me and stand in silent tribute to the memory of a great man, Ramon Magsaysay. Many noble words have been uttered about President Magsaysay, and perhaps each of us repeated them in our hearts just now. But I would add to all of these another word of tribute, which President Magsaysay might have been proudest to hear—a tribute to my people, and to yours. And it is this:

Ours is a young Republic. We have enjoyed our independence hardly 11 years. Yet, when the duly elected President, the darling of the masses of his countrymen, met sudden death, in all the outpouring of grief and bewilderment there was never a moment of faltering in the orderly processes of our governmental machinery. The duly elected Vice President, Carlos P. Garcia, took office in keeping with the Constitution of the Philippines, and quietly and efficiently assumed the duties of Chief Magistrate of our Republic.

As a member of the diplomatic corps, it would hardly be proper for me to suggest to you the names of the many nations—some of them much larger than the Philippines, some of them much longer experienced in the ways of self-government—where such an orderly transition would not have occurred. Fortunately for my diplomatic standing, you can all name such countries for yourselves.

I need only tell you that I am proud of the way in which my countrymen in the Philippines demonstrated the vitality of their devotion to constitutional government, the maturity of their political philosophy, and the stability of their political understanding. In time of stress the true nature of a man or a nation shows itself. We have gone through such a time, our people have shown their wisdom, their restraint, and their solidity.

We have, in sum, met our national affliction just as, on occasion in the past, you have met yours in the United States. The reason for this is that, on top of our own cultural heritage as Filipinos, on top of the faith and culture we acquired from the Spaniards, we in the Philippines took to our hearts the democratic ideals, the respect for constitutional law, and the desire for orderly government, which are today the hallmarks of both the American and Philippine democracies. What we have learned from you, we have learned well.

Today, we can perhaps begin to repay our philosophical debt to America. There was a time, in the past, when we were the learners and you the teachers. Now, in our new world of nations rapidly arising from the somnolence and colonial subjugation of past centuries, we may be able to convey to you a message that can help you understand and sympathize with those whose understanding and sympathy you need to win.

So, on this anniversary of Bataan and Corregidor, I ask you to look ahead with me for the next 10 or 15 years, rather than back at the past we know so well.

The United States, as the leader of the free world, now finds itself involved in the political turmoil and deep social and economic problems of peoples in places that had only recently been terra incognita for you. The Middle East is on your doorstep. Your sailors and marines spend their pay in Beirut because you choose to exercise the deterrent power of a show of force to maintain peace. Your newspapers shriek to the editorial skies because your diplomats cannot speak the languages of Laos, or Indonesia, or Ghana—

for suddenly such countries have become important to you.

At the precise moment when the world has been shrunk to the size of an orange by the rapidity of transportation and communication, at the very time when a creeping contagion called communism spreads out over the face of this tiny globe, there has come the awakening of the sleeping giants all over the world—the peoples who have thrown off the shackles of alien rule and have chosen to master their own destinies.

Asia and Africa are afire with a new nationalism. This powerful force, which in a different incarnation gave Europe its bloodiest centuries and its most magnificent civilizations, can now do the same, one or the other, in the rich and vast continents peopled by human beings in the billions.

Your survival—and that of freedom itself—depends on your capacity to recognize what is happening in the world; and, having recognized the nature of the upheaval, on your ability to act with wisdom and imagination.

I do not tell you this in a critical mood. I talk to you as a true and loyal friend. I tell you this because I truly believe that the fate of every person who believes as you do, the fate of every nation committed to the cause of freedom, is bound up in the actions of the United States of America. If you should choose unwisely, if you should make a false move in the battle for men's minds and souls and bodies, if you should betray yourselves and your principles, if you should lose the cold war either on the battlefield or at the conference table, then the whole free world will go tumbling down with you. We are all intertwined in our mutual responsibilities, and precisely because you carry the load of leadership you must take with good grace, and with deep thought, the friendly opinions of the rest of the free world.

Your President traveled virtually from his sickbed to meet personally with the heads of 20 Latin American States. Your Vice President traipsed all over Africa shaking hands with tomorrow. Your Secretary of State has visited more than 40 countries in his search for peace and friendship. Your Senators and Congressmen also travel all over the world to get firsthand information about other countries and peoples. These are the signs of your recognition of the strange new ways in which America must show her leadership.

They are good signs, but they are essentially outward symbols. What the New World of new nations look for, even more than symbols, is evidence of American understanding, of American acceptance, of American recognition of their equality in the society of man.

And that is where the Philippines enters the picture, beyond the great tradition of intimate friendship that has been built up between our two peoples over the past half century. The fact that, in your one great adventure into colonialism, you retreated almost before you began, has been a powerful weapon in your arsenal of democracy. You came to the Philippines, you saw, but you did not conquer. Instead, you worked with us, and learned with us, and out of the relationship emerged your promise to help us achieve and assure our independence. That promise went through the purification of fire 15 years ago tonight. And in 1946 the promise came true.

That piece of history has been a tower of strength in your dealings with other colonial nations. For they recognized that America was different from the other western nations, different in that it had no need or desire to become an empire.

I believe this piece of history was one of the most important reasons why, during the past decade, the new and subtle imperialism of Communist Russia made no greater headway than it has so far. But we are familiar enough with the weaknesses of the human character to know that recollection of the past does not long survive. In the minds of the new peoples of the Eastern World, the test is not yesterday and not tomorrow, but today.

At this very moment, the nature and quality of American friendship with the Philippines is under test. The scrutiny exists among my own people, quite naturally, but it is even more acute among the billion human beings whose ultimate choice may determine the outcome of the struggle between freedom and democracy, on the one hand, and slavery, tyranny, and totalitarianism on the other.

They are asking the questions now. They are demanding the answers. And the very power of their numbers, the very strength of their strategic locations, requires that their questions be answered.

Since they are suspicious of all outsiders, injured as they have too often been by their contacts with foreigners in past generations, they do not take you on faith, as we of the Philippines have learned to do. They are waiting to see whether all the years of mutual loyalty between two friends from different worlds, the Americans and the Filipinos, can be marred by misunderstanding. They are waiting to see whether the United States will maintain an absolute respect for the national sovereignty and territorial integrity of the Philippines. This is fundamental. They are waiting to see whether the relationship between our two countries will continue to be that of equals or whether there will be an unwitting deterioration into a semblance of the master slave relationship that exists between the Soviet Union and her so-called friends—whom we call, more accurately, her satellites or even her colonies.

For our part, I need not assure you that we wish nothing more and nothing less than equality. We wish this in our own behalf and in your behalf as well. The Philippines gladly chooses the title of friend and ally; it honors you as well as it honors us. We will never accept the title of colony or satellite; it would dishonor you and degrade us.

I do not believe the choice will ever have to be made. I repeat, I am confident, knowing you as I do, that no such choice will ever be made. That there are differences of opinion between us is natural and even healthy. That occasionally our tempers rise is normal. The unity of friendship, the comradeship of alliance, does not impose on you or on us the necessity to be silent, or to accept that with which we do not agree. It imposes on us—on each of us—the loyalty that comes with candor, with forthrightness, and with integrity. That is the kind of friendship that has grown between our two peoples, and it is the only kind of friendship worth having.

The next decade will test that friendship. Because it is a strong friendship, the test will make it all the stronger. That is what I believe. I hope you believe it, too.

For I say to you that what is at stake is something even more precious than the land I love, the Philippines—and more precious than your own beloved country, the United States. What is at stake is the very future of the human race. Only if the East and the West can truly meet on an equal footing, only if you can show your respect for the national sovereignty, the aspirations, the needs, and the problems of the nations that have just been reborn, only if you can adjust to the revolution of the 20th century, can the human race hope to achieve the liberty, the prosperity, the happiness that is the dream of civilized man.

The men who died on Bataan and Corregidor offered that which was most precious to them—their own lives—on the altar of human freedom and human friendship. We who survive have an obligation to them that cries out to be repaid. We owe them the continuation of the battle. We owe them the never-ending pledge to carry on until all the peoples of the earth see the birth of a new freedom, a new brotherhood, and a new and lasting peace.

No Changes Needed

EXTENSION OF REMARKS
OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Camden (S. C.) News of May 2, 1957:

NO CHANGES NEEDED

Josephine Ripley, Washington correspondent of the Christian Science Monitor, in a dispatch to her paper, says that Congress is not believed to be in any mood for a drastic overhauling of the Nation's immigration laws.

The correspondent also reports observers see no fundamental change in immigration theory on either side of Capitol Hill. Representative FRANCIS E. WALTER, of Pennsylvania, coauthor of the present McCarran-Walter Act, is in a strategic position as chairman of the Subcommittee on Immigration to oppose any efforts to change the law, the correspondent says.

However, in an article in Human Events, Mr. WALTER tells of the intensive effort being made to alter the law. He says:

"Spearheaded by the Communists, their fellow travelers, congressional liberals, and spokesmen for the so-called ethnic minority blocs, the assault on America's immigration system is increasing in intensity every month. Attempts to amend or abolish the Immigration and Nationality Act—generally referred to as the Walter-McCarran Act—have become standard operating procedure at every session of Congress since passage of the act in 1952.

"In the closing hours of the Congress last year, those who are bent on wrecking our protective immigration system came within a hair's breath of accomplishing their job of destruction. On the very last day of the session, Senators ARTHUR WATKINS and EVERETT DIRKSEN, in an unprecedented move, appended to a routine bill a series of amendments which would have demolished the national origins quota system and opened the floodgates."

Mr. WALTER, because of the fact that he was chairman of the Immigration Subcommittee in the House was able to head off adoption of these amendments.

These amendments have been introduced again at the present session and Mr. WALTER warns that unless the rank and file of patriotic citizens—at the crossroads of America—demand of their Senators and Congressmen that they vote against these weakening amendments, they are likely to be adopted in response to the mounting clamor of leftist organizations.

Mr. WALTER points out that the Committee on Un-American Activities recently disclosed that the Communist Party has created over 180 organizations for the purpose of bringing grassroots pressure on the Congress to destroy the Walter-McCarran Act. At the recent convention of the Communist Party in New York City, the destruction of this law was 1 of the 2 legislative objectives on which the twenty-odd thousand Communist agents in this country were ordered to concentrate during this year."

There is no need whatever for any tampering with the Walter-McCarran Immigration Act. It is the best immigration law this country ever had and it was the result of 4½ years of exhaustive hearings and painstaking research.

It would be well for every one to let his or her Congressman and Senators know that they want no tampering with this law.

Low Dam Subsidy

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. ULLMAN. Mr. Speaker, the editor of the Record Courier in Baker, Oreg., Mr. Byron C. Brinton, is a man who has long been dedicated to sound development of our great natural resource heritage. His knowledge and courage have done much to alert the people of the Pacific Northwest to the continuing encroachment upon their resources by the private power monopoly.

An editorial which appeared in the May 2 edition of the Record Courier is, I believe, a fine example of the excellent material which Mr. Brinton consistently presents in his paper. I commend it to my colleagues and ask that it be included in the Appendix of the RECORD.

The editorial follows:

LOW DAM SUBSIDY

Alarming as is the indefensible quick-right-off subsidy to the Idaho Power Co. by the administration, it is only one of a whole series of questionable public concessions to the private utility in return for what?—in return for the resource crime of wasting a high storage damsite.

But if the IPCO subsidy by ODM last week did nothing else it will dramatize the reality that authorization of Hells Canyon high dam now will not cost the taxpayers money—it will save them money.

There is ample evidence now, with testimony on end, that the defense writeoff is a direct subsidy. Senator BYRD, Secretary Humphrey, and many others have openly attacked the accelerated amortization subsidy as the worst form or public giveaway. We have in fact in the IPCO case a Dixon-Yates deal under another name. The false pretense used by the power company and administration support for low dams and for the low dam license has been completely uncovered and the claim "without cost to the taxpayers" has become a malicious myth. Tied into the entire prearranged deal is also the myth that IPCO low dams would pay millions in taxes, because the very operation of the ODM certificate calls for tax deduction.

SUBSIDY EXPLAINED

It might be well to outline how the IPCO subsidy will work. The company in fixing electric rates charges its entire costs, its taxes, its return on investment and all other profits and expenses. The consumers thus pay for the dam through high-cost power, and in addition pay the IPCO taxes in full. Now comes IPCO with its subsidy certificate, allowing amortization at greater than normal rates on its investment. The company thus intercepts the tax which the consumer has paid. Instead of going into the Federal Treasury, the millions of dollars becomes, "cash generation," in the very words of President Roach of the IPCO, and is used by the company as part of the financing of the low dams and begins to earn a return for the company but which cash costs the company no interest.

Then to make up the deficit for not having received the taxes, the Federal Government either raises the taxes on everyone else or borrows the money at interest and the taxpayers ultimately pay both the tax and the added interest.

There is some contention that the company, after the quick amortization is over, will then pay taxes at a higher rate in the distant future. But through refinancing, revaluation, sale, merger, bookkeeping losses, or otherwise, this likely would never come to pass. But if it did, the company would have had interest-free public money. Folks paying interest on real estate know that interest is in the long haul equal to the cost of the real estate. Nevertheless, if IPCO ever pays Uncle Sam the forgiven taxes on the low dam its only source of revenue is from the rate payers and the rates would be raised accordingly. The rate payer whose money was shortcircuited into the dams in the first place would then pay a second time. But there is no assurance the tax would ever be paid by IPCO at all as the deferral certificate is not a contract or a note—it is an outright deduction and current tax forgiveness.

VALUE COMPARED

It is like a gigantic green stamp which a housewife could go out and reclaim in the form of a low-dam premium.

We have seen various calculations of the amount of the IPCO subsidy. Apparently it will total $30.5 million over a period of 5 years. Over 50-year life of the project, assuming reinvestment of its interest-free loan, it would be worth $329 million or about the cost of the high dam. With interest, it would cost the Government directly about $50 million. But the public will never own the low dams. Instead it will have lost the dam site, lost the 400,000 kilowatts in power which a high dam would have added, lost the 3 million acres of additional flood control, lost the recreation value of a high dam reservoir, lost the million acres of irrigation assistance revenue, lost the saving in low-cost power.

The people we have talked to regard this ODM action a perversion of public responsibility and the company's defense of its subsidy as a positive indication its self-interest supersedes its public interest. IPCO's whole low-dam scheme becomes questionable in the disillusioned eye of its once supporters.

LOSS RECOVERABLE

At this time it is well to call attention to another point. While much money may be now invested in Brownlee, much of that investment (in railroad bridge, access, reservoir area acquisition—and no doubt 100 percent of the electrical facilities if any are on order—together with new transmission lines) could be salvaged 100 percent if the Government were to substitute a high dam at the Hells Canyon site and which would flood to the identical shoreline of the Brownlee project. This is a point that Congress can well keep in mind when it considers the Hells Canyon authorization during May.

The net loss because of the unfortunate administration error in licensing a low dam will be such that the superior output of a high dam project can earn the cost back in very few years of operation.

We thus come to the situation where the high dam will not cost the public—it will save the public money. Promptly authorized and work begun (extensive access roads could be started at once) the high dam could absorb the Brownlee working force—and many more—for a longer period of gainful employment. (Nor will regular IPCO crews likely go unemployed.)

This situation, combined with the fact that the Snake River has not yet been permanently diverted at Brownlee, would compel the most serious consideration to support the high dam authorization at this time.

Nasser's Provocations and Violations

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following recent speech by Prof. Alfred J. Hotz, department of political science, Western Reserve University, to the Cleveland Heights, Ohio, City Club which deals with international law violations of General Nasser of Egypt. Now that American ships are paying tribute to the nationalized Suez Canal Administration it is well to remember how far our policies of drift and inaction in the Middle East have permitted the Egyptian dictator to depart from the six principles agreed upon by the United Nations. The lack of a firm American policy in the Middle East, as Professor Hotz demonstrates, has resulted in repeated concessions to Egypt. We must stop this policy of appeasement.

The speech follows:

NASSER'S PROVOCATIONS AND VIOLATIONS

General Nasser, since his ascent to dictatorial power, has been a consistent violator of international law and justice, and a constant provocateur against the peace and security of the Middle East. Originally, his aggressive imperialism was directed solely against the little state of Israel, but, since his abrupt seizure of the Suez Canal, this Arab Hitler has directed his aggressive designs against the entire Western World.

In his constant pressure against Israel, Nasser has clearly violated international law. His total disregard of the 1949 armistice agreements manifested itself in three forms: (1) Nasser continued his declaration of "belligerency," which legally he has no right to do; (2) he denied the right of "innocent passage" through the Gulf of Aqaba; (3) he launched rapacious guerrilla war, through his fedayeen raiders, against Israel territory.

Nasser's denial to Israel of "free passage" through the Suez Canal is unquestionably a violation of international law. Article I of the Constantinople convention [1888], which governs the international obligations of Egypt, states clearly that Egypt shall never subject the canal "to the exercise of the right of blockade." When Nasser defended his interference on the inherent right of self-defense guaranteed in article X of the Constantinople convention, he conveniently neglected to apply article XI of the same treaty, which further declared that this right of defense for Egypt "shall not interfere with the free use of the canal."

Moreover, Nasser has continued to defy the Security Council resolution [September 1, 1951] which declared that Egypt's closure of the canal to Israel "cannot in the prevailing circumstances be justified on the grounds that it is necessary for self-defense." The Security Council further declared that

the sanctions applied by Egypt to ships of other nations which visited Israeli ports represented "unjustified interference with the rights of nations to navigate the seas and to trade freely with one another, including the Arab States and Israel."

Thus, the Eisenhower administration, led by the legalist-moralist Secretary Dulles, should have exposed Nasser as a violator of international law. But, instead, the Eisenhower-Dulles team has invariably applied a double legal standard, favorable to dictator Nasser. Moreover, this dual legal standard has been compounded by a double moral standard when President Eisenhower severely critized British-French-Israeli military action, taken in defense of their national interests. Never once has the administration exposed the Arab imperialist aggressions against the Western World .

Indeed, no American censure was directed against Nasser's deliberate sabotage of the Suez Canal last November. His scuttling of ships to block passage was not a military action, but a political action designed to grant him the leverage of economic blackmail, not solely against Britain and France, but as well against West Europe's economy. Nasser's calculated delay in not permitting the U. N. salvage operations to commence, until all British-French troops were totally withdrawn from the Port Said area was actually contrary to the General Assembly resolution of November 23, which declared that the condition for restoring the Suez to operation was a mere "cease-fire," and not total withdrawal.

Later Nasser continued his obstructive design against the western economy by adding still another condition—that of total withdrawal of Israel troops from Gaza and the Sharm el Sheikh region. Thus this Arab Hitler refused to permit the final lifting of the *Edgar Bonnet* in late February until total Israeli withdrawal, yet his key objective was to employ the nonopening of the Suez as political blackmail and as an economic bargaining point against the West.

Finally, and most important from the long-range viewpoint, Nasser has irrevocably declared a politico-economic war against the West to add to his persistent belligerency against Israel. In his March 29 memorandum on the future operations of the Suez Canal Dictator Nasser crassly dictated the terms, on a take it or leave it basis. The complete defiance of the Security Council's six principles, passed unanimously on October 13, 1956, demonstrates beyond a question of a doubt his violations of international law and his provocations against western interests.

First, the Nasser plan was a unilateral proposal and has none of the multilateral attributes of an international treaty. He thereby unilaterally revoked the Constantinople Treaty (1888) and denied the six principles established by the U. N. Security Council.

Second, Nasser declared that the new Suez Canal regime would be solely and exclusively under Egyptian sovereignty, thereby violating the vital third principle which clearly states that the "operation of the canal should be insulated from the politics of any country," meaning Egypt.

Third, his declaration that Egypt alone would decide the future determination of tolls violates the fourth principle, which solemnly states that the fixing of tolls and charges should be decided by agreement between Egypt and the users of the canal.

Fourth, the Nasser declaration that Egypt will have the final say as to the procedures whereby differences that may arise between the users and the new Canal Authority shall be settled indicates beyond a question of a doubt Nasser's determination to dictate to the West. Freedom of passage through the Suez Canal, formerly guaranteed by an international treaty, presently means freedom for Nasser to control passage and thereby to pressure the West in the future.

Nasser's firm grip on the jugular vein of West European economy bodes ill for the future. No nation is more responsible for this dangerous situation than was the United States. Since the fateful seizure of the canal on July 26, 1956, the Eisenhower-Dulles administration has consistently failed to adequately support British-French national interests, as well as the vital security interests of Israel. We have through either stupidity or duplicity built up the power posture of the Arab Hitler.

I have serious doubts that our inept administration will take a strong stand or make a sound legal and moral case against Nasser's new Suez Canal proposals. Having undermined the British-French bargaining position, and having abdicated the position of our own leadership of the Western World, no reversal of appeasement of the Arab dictator is conceivable.

Such is the tragedy of the purported triumph of the so-called legal and moral Eisenhower-Dulles team. Should we not remind ourselves of Victor Hugo's prophetic warning, "Ah justice, what crimes are committed in thy name."

Syria Celebrates 11th Anniversary of Evacuation Day, April 17

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Asian-African Conference at Bandung, Indonesia, I announced that I would address the United States Congress each time there was an anniversary of 1 of the 29 participating nations on friendly terms with the United States. April 17, 1957, marks the 11th anniversary of evacuation day in Syria, and I rise to felicitate that country in observance of that event.

I would like to congratulate the people of Syria, His Excellency Shukri al-Quawwatli, President of the Republic of Syria, and His Excellency Dr. Farid Zeineddine, Ambassador of Syria, upon the celebration of evacuation day.

Determined to have their freedom and independence, the period in Syrian history from 1920 to 1946 was that of a desperate and bitter national struggle. Making full use of the special circumstances of the Second World War, Syria succeeded in obtaining recognition of her complete independence and in achieving the evacuation of all foreign troops from the country. The death knell of imperialism was tolled when on April 17, 1946, the United Nations approved by a large majority of votes the evacuation of all foreign troops from Syria.

Syria has ably participated in international politics. The Syrian Government in 1945 joined the Allied cause. Following this she was invited to participate in the San Francisco Conference where she signed the Charter of the United Nations as one of the first members of that body, achieving thereby the status of a free and fully sovereign state.

Syria has made notable contributions to culture and civilization. In the course of many centuries, she has produced eminent poets, men of letters, jurists, historians, scientists, and journalists who made great contributions to world culture. Syria has also transmitted to the West the philosophy and sciences of the ancient world, serving thereby as a bridge over which the cultures of the ancient Greeks, Persians, Romans, and Indians passed to Europe and America.

It is to be hoped that those forces attempting to dissuade Syria from continuing to follow the ideals of democracy will not prevail and that she will once again be a strong ally of our country.

Will TVA Take a Mile?

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD an editorial which appeared in the St. Louis Globe-Democrat of Sunday, May 5, 1957, entitled "Will TVA Take a Mile?" This is an excellent editorial and poses a very proper question to the proponents of TVA expansion. I wonder if these proponents will state for the record just what they believe the limits to the TVA should be, if any.

WILL TVA TAKE A MILE?

United States Senator STYLES BRIDGES, New Hampshire Republican, wants to shorten the leash on the Tennessee Valley Authority. For about a year now, TVA has had tacit O. K. from Capitol Hill to go ahead and build powerplants without even so much as a by-your-leave from the House or Senate. Prior to that time it had to ask Congress' permission.

Senator BRIDGES wants to put TVA back on that basis. Otherwise, he warns:

"Before we know it, TVA may be spreading all over the country. It was established and has been financed with the taxpayers' money. I think Congress wants to keep a check on what TVA is doing."

Congressmen from the TVA area were shocked at the suggestion. It is unnecessary to put that restriction on this Federal agency, they argue. Senator LISTER HILL, Alabama Democrat, says it is ridiculous to think that TVA has any inclination to expand its service area.

So the big argument over TVA this year boils down to this:

"If you give an inch, will it take a mile?"

Well, as Al Smith used to say, let's take a look at the record.

TVA went into business when Congress passed an act authorizing it back in 1933. A look at that charter shows that the authority to go into the power business was almost an afterthought. Congress went on for 11 pages describing, in the preamble of the act, what TVA could do in the course of harnessing the Tennessee River.

These passages dealt with flood control, reforestation, navigation, agricultural and industrial development and national defense. Not until page 12 is there any mention at all about generating electric power.

Now, TVA is the biggest power producer in the world. It turns out most of its power from steam plants, not from dams on the Tennessee River and the streams that feed it.

By 1953, its coal-burning steam plants were generating 17 billion kilowatt-hours of power a year. By contrast, its 30 dams were producing a mere 13,500,000,000 kilowatt-hours of electric power.

Its web of powerlines now cover 80,000 square miles of hills, rivers, and forests in seven States. That area is twice as big as the Tennessee Valley itself.

To get back to the original question. Would this giant Federal utility take a mile if you gave it an inch?

If history is any criterion, the answer is "And how."

Japan

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Asian-African Conference at Bandung, Indonesia, I announced that I would address the United States Congress on the occasion of the celebration of an anniversary of each of the 29 participating nations on friendly terms with the United States. April 28, 1957, marks the fifth anniversary of the signing of the peace treaties between the United States and Japan. In observance of this event, I wish to extend my sincere felicitations to the people of Japan, Emperor Hirohito, and the Honorable Takeso Shimoda, chargé d'affaires ad interim of Japan.

Japan has made great strides along the road to freedom and democracy. In the years since the termination of the Second World War, she has adopted a new approach in the realm of government and accordingly has enacted a new democratic constitution based upon the principle of human rights. Political democracy has brought about many valuable changes.

Looking back over the years since the end of the war, Japan can take pride in her amazing recovery from the havoc wrought by that unhappy conflict. In coming to grips with her many problems and in realization of her goals, Japan recognized that stabilization of national life is indispensable to the attainment of real independence. Economically, Japan has set her feet soundly in the paths of progress and it is reasonable to expect that her economic advance will be accelerated. The Government of Japan although aware of the marked progress the nation has made in production and foreign trade, wisely urges the direction of further efforts toward raising living standards and expanding foreign trade by bringing about a balanced development of industrial activities and various fields of national life.

Japan's international position has been elevated and its responsibilities have increased as a result of the materialization of its entry into the United Nations. Acting Prime Minister and Foreign Minister Nobusuke Kishi in a speech on February 4, 1957, aptly described the significance of this event when he said:

It is now up to Japan to build up its material and moral strength to a level befitting such position and responsibilities.

In building up the nation's strength, the postwar inclination toward an attitude of depending on others must be eliminated and a spirit of independence and self-reliance must be developed.

The fundamental objective of Japan's foreign policy, agrees Mr. Kishi, "should be to contribute to world peace and prosperity, with the United Nations as the nucleus."

The avowed basis of Japan's foreign policy is cooperation with the democratic nations, and assures that "special attention will be given to the furtherance of mutual understanding and cooperation with the United States."

Japanese-American cooperation is the keynote of Japan's foreign policy—

States Mr. Kishi—

for there exists a communist of interests and objectives in a large measure between the two countries regarding political and economic affairs as well as defense.

Again I salute the Japanese people at this time and wish for them continued peace and prosperity.

Revealing Facts From Harvey

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Camden (S. C.) Chronicle of May 3, 1957:

REVEALING FACTS FROM HARVEY

Paul Harvey, the Chronicle's columnist, came up with a most revealing appraisal of the bugs in our foreign-aid program in Wednesday's paper.

Said Mr. Harvey:

"You and I (American taxpayers) are paying tuition and all expenses for the sons of wealthy Persians attending the American universities; in Portugal our dollars have built a 6-lane highway 15 miles long connecting Lisbon with the gambling resort of Estoril.

"We have bought dress suits for Grecian undertakers and built public baths for Egyptian camel drivers, we have, in the name of foreign aid, sent stage comedies to France, opera singers to Italy, drama groups to Germany.

"We have sent millions to help Nehru's Indians while neglecting our own American Indians, we have built an Italian village nobody wants to live in and an Iranian road that leads nowhere.

"In the name of foreign aid, King Saud is building a superhighway connecting his summer and winter palaces and took home from his recent United States visit 100 gold-plated Cadillacs.

"The 300 million we sent to Norway she applied to her national debt, 100 million to Denmark was applied the same way."

If what Mr. Harvey says is true, and it must be based on facts or he'd end up in a libel suit, it appears that our record national budget should be slashed the hardest in the foreign-aid department.

The United States should not continue playing Santa Claus to nations which do not appreciate our help and which laugh up their sleeves at us.

It seems ironic now that President Eisenhower should have uttered these words in 1952 while seeking the presidency for the first time:

"The United States cannot be an Atlas—it cannot, by its financial sacrifices, carry all other nations in the world on its shoulders. We should stop giveaway programs."

He Believed in America First

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial taken from the May 4–5, 1957, issue of the Bangor Daily News, Maine's largest newspaper:

HE BELIEVED IN AMERICA FIRST

It is significant that the words most commonly used in the tributes paid to the late Senator Joseph R. McCarthy were:

Courageous, sincere, and fighter.

The former Wisconsin farm boy who rose to heights in the United States Senate was all these things. He was also a patriot, a believer in America first. This is not fashionable among the one-worlder type of so-called liberals. To their way of thinking, it is all right for other nations to be nationalistic but not for the United States. And there are many nonliberals in our midst who are wishy-washy in their Americanism. In these perilous times the Nation needs among its leaders militant patriots like Joe McCarthy.

Senator JENNER, of Indiana, best summed up what Senator McCarthy's death meant to the Nation. He said:

"America has lost a fighting patriot, a courageous man who was willing to pay the price for his convictions and for his country."

It is true that Joe McCarthy's zeal sometimes led him into mistakes. It is also true that his tactics were rough. But he saw what others didn't see or, seeing, dared not tackle—the insidious infiltration of communism into our Government. Sneaky traitors, fellow travelers, and leftist dupes of the Reds wormed their way into strategic offices—positions where they could wield subtle influence or spy through keyholes for Moscow.

Joe McCarthy exposed the Red fester. He aroused public opinion and his sleeping colleagues in Congress. A housecleaning followed. Not a complete one, for as McCarthy's political star dimmed, so did the anti-Red probe. But he did his best. The Nation will have only itself to blame if it lapses once again into what could be a fatal complacency toward communism.

The Wisconsin Senator was a controversial figure. But his bitterest critics were more interested in saving the hides of suspected associates than in the security of America. Between the two, we'll take Joe McCarthy.

His neighbors in Washington saw him not as a wicked "witch hunter," but as "a regular Joe," a "friendly neighbor," and "a true-hearted American."

We have an idea that the bereaved Mrs. McCarthy will treasure these tributes above all others.

What Price Economy and Efficiency?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the April 25, 1957, issue of the Yardstick, containing the well-considered views written by Msgr. George G. Higgins, director, social action department NCWC, entitled "What Price Economy and Efficiency?"

The article follows:

WHAT PRICE ECONOMY AND EFFICIENCY?

(By Msgr. George G. Higgins, director, social action department, NCWC.)

The AFL-CIO Government Employees Council—representing a number of Federal employee unions with a membership of approximately 600,000 Government workers—will sponsor an important legislative rally in Washington, May 14 and 15. After a briefing session at a downtown auditorium, representatives of the various white-collar, blue-collar and postal employee unions affiliated with the Council will spend a day-and-a-half lobbying for classified and postal pay raises, annuity increases for retired Federal workers, and a union recognition bill.

Whether by coincidence or by design, this rally was announced shortly after the Department of Justice—in a brief filed with the United States Court of Claims in Washington—flatly took the position that Government workers are, in effect, a class apart, that they cannot expect to be treated like the employees of private industry in the field of wages, hours, and working conditions.

The Justice Department's brief was filed in answer to a test suit by a group of postal clerks in the Court of Claims, seeking overtime payments for extra time spent in studying postal sorting "schemes."

FUNDAMENTALLY UNSOUND

As the son of a postal supervisor and the brother of a postal clerk, I would not care to express an opinion on the merits of this particular case for fear of seeming to be prejudiced. On the other hand, regardless of how the case is eventually decided by the Court of Claims, it must be said—in all honesty and clearly aside from partisan politics—that the labor relations philosophy expressed in the Justice Department's brief is fundamentally unsound.

The director of the AFL-CIO Government Employees Council, Thomas G. Walters, was not exaggerating when he curtly dismissed the brief as "a throwback to the horse-and-buggy days." Mr. Walters and several of his associates in the Government Employees Council, have also made the point that the Justice Department's brief dramatically highlights the need for a comprehensive labor-management relations law in Government service. Their point is well taken.

The gist of the Justice Department's brief is that Government efficiency and economy (rather than social justice or the prevailing labor standards of private industry or the standards of Federal labor legislation) must be the determining, if not the only, norm in establishing rates of pay and conditions of work for Government employees.

RED HERRING

What does this mean in practice?

In the language of the brief, it means first of all that "the basic rights of labor—the right to strike and the right to bargain collectively—cannot be afforded Federal employees consistently with the Federal obligation to the taxpayer to operate the Federal administration economically and efficiently." This is obviously a red herring. For it is a well known fact that Government employees' unions explicitly waive the right to strike in their constitutions.

Secondly, the "efficiency and economy" philosophy of labor relations means, for example, that "if Congress desires that, insofar as it is possible, all workers in this country work only 8 hours a day, nevertheless Congress could, in its concern for Federal expenditures, require and validly provide that Federal employees work 10 hours a day."

Thirdly, the archaic labor relations philosophy expressed in the Justice Department's brief means that "the economical administration of Government precludes the immediate and total adoption by Congress of schemes such as automatic cost of living increases based on the consumer price index."

DANGEROUS FALLACY

Ditto for all of the other progressive labor standards adopted in recent years by private industry and/or enacted by Federal legislation. According to the Justice Department, in the case of Federal employees these improvements (which are lumped together in the brief under the heading of the present-day philosophy of labor law) "must either bow to or be balanced with considerations of economy and efficiency in Government."

In our opinion, this is a very dangerous fallacy and one that ought to be publicly repudiated by the administration at the earliest opportunity. It means, in the final analysis, that the Federal Government is above the moral law and is not bound by the rules of justice and equity in the field of labor relations.

The weakness of this philosophy of labor relations can be readily illustrated by a few simple examples. If the Federal Government can require its employees to work 10 hours a day, why not 12 or 14 hours? Why not 6 days a week instead of 5? Moreover, if Government economy is to be the principal, if not the only, norm in establishing labor standards in the Federal service, why not reduce the wages of Federal employees to the standards which prevailed 25 or 50 years ago?

OBVIOUS ANSWER

The obvious answer to these questions—prescinding, for the moment, from considerations of justice and equity—is that the majority of Government employees would refuse to accept these conditions.

In other words, if the efficiency and economy theory of labor relations were to be carried to its logical conclusion, the Federal Government would completely destroy the morale of its employees and eventually force them out of Government service in droves. What price economy and efficiency. And what a way to destroy the reputation of the United States Government as a symbol of justice and a bulwark of human rights and human dignity.

Welcome, Channel 5

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. BOLAND. Mr. Speaker, the recent decision by the Federal Communications Commission awarding TV channel 5 in Boston to the Boston Herald-Traveler imposes upon that newspaper a great responsibility because it now enters into an additional media of mass communication beyond its present field of two newspapers and radio station WHDH. I am sure that the Herald-Traveler will meet this challenge, and in this connection I would like to have printed in the RECORD the following editorial taken from the very distinguished newspaper, the Christian Science Monitor, published in Boston on April 30, 1957, and entitled "Welcome, Channel 5":

WELCOME, CHANNEL 5

May we add our congratulations to those which have come from all parts of the greater Boston community to the Boston Herald-Traveler for its great new opportunity and responsibility in the allocation of channel 5 TV.

Boston has long needed a third commercial television outlet to join the 2 effective stations which operate channels 4 and 7 and the Lowell Cooperative Broadcasting Foundation in its noncommercial operation of channel 2. The new channel will help Boston get more of the worthwhile programs which competitive pressures have sometimes kept off existing channels.

We are confident that in operating channel 5 the Herald-Traveler will perform a genuine community service. Channel 5 should add the best TV programs available from national sources to the outstanding sports coverage, frequent newcasts, and good variety of music now supplied by radio station WHDH.

In recent years the Herald-Traveler has distinguished itself in many ways. It has won a notable succession of Pulitzer prizes for editorials and has crusaded vigorously in its news pages.

All these things are good auguries for an effective and responsible operation of channel 5. More power to the undertaking.

Liberation Day—Ethiopia

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. POWELL. Mr. Speaker, when I returned from the Bandung Conference, I announced that I would address from the floor of Congress each one of the participating countries, except the Communist ones, on friendly terms with the United States. On May 5, 1957, Ethiopia celebrated her 16th anniversary of Liberation Day. I wish to send greetings to the Ethiopian people, His Imperial Majesty Haile Selassie I, Emperor of Ethiopia, and His Excellency Yilma Deressa, Ambassador of Ethiopia, in honor of that occasion.

The sovereign state of Ethiopia has enjoyed independence from time immemorial. Ethiopia was a great power from the beginning of recorded history. The holocaust of tyranny and totalitarianism in the years preceding the Second World War forced the Government to take refuge outside its own territory. Italian control was never recognized by Ethiopia nor the United States.

Emperor Selassie was one of the few men of courage who read correctly the

signs of those turbulent times. He cautioned the free world to resist the advance of totalitarianism and pled with the world to rally its forces to stop unwarranted aggression. While the free world turned deaf ears to his cry, the forces of nazism and fascism pursued their deadly course.

Alone against a towering enemy, Ethiopia fought valiantly for its life, and for the first time in 3,000 years Ethiopia lost her independence.

On May 5, 1941, 5 years after occupation forces had taken over Addis Ababa, Emperor Selassie reentered his country. One of his first official acts was to call upon his people to follow Christian principles and forgo acts of revenge against the tens of thousands of Italians who had been trapped by the liberation forces.

In the years since liberation, Ethiopia has tenaciously bent her energies toward the reestablishment of the country and the continuation of forward-looking projects which had been interrupted by the invasion and occupation.

Ethiopia and the United States have passed the midcentury mark in the history of their diplomatic relations. Friendly and cooperative relations with the United States in full support of the principle of collective security are the bases of Ethiopia's foreign policy.

Ethiopia can look with pride upon its record. I salute this nation of stalwart people and pray for them continued peace and prosperity as they go forward into a new year of national life.

Courage of Victims Is Inspiring

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Pageland (S. C.) Journal of April 18, 1957:

COURAGE OF VICTIMS IS INSPIRING

When disaster struck this region last week, it chose to return to a place it previously had visited when, a couple of years ago, one of the most severe hailstorms in recent years stripped a pathway from the Kershaw-Chesterfield County line across Chesterfield into Marlboro and beyond to the eastward. Scars of that earlier wound still are visible in places, dead pine trees that didn't recover, roofs of buildings still perforated, dents in automobiles and broken glass in many places. Yet through the same area last Monday night traveled another visitor, a terrifying tornado that dipped at random across several counties, leveling whatever lay in its path, disintegrating millions of dollars' worth of property and endangering lives all along the way.

For many years the scars of this severe blow will be visible, because destruction ranged from complete in the case of scores of homes and small buildings, to minor damage in the unexplainable instances that are part of the reasons tornados are considered freaks. Wide swaths were cut through thick stands of pines and hardwoods, clipping huge trunks in two as if they were playthings made of paper, destroying buildings that had stood for scores of years against the worst the elements could offer. These things do not vanish overnight.

To offset in large part the wanton destruction, there is ample evidence that the deep wells of courage that made the State and Nation great by carving it from wilderness still have not run dry. The immediate response to the challenge of the tornado was action: what was lost must be rebuilt, what was broken must be repaired. All who have seen the work done by the victims in so short a time are impressed with the immediacy and high purpose of their efforts.

While all the neighbors of the people of Jefferson, Cheraw, Wallace, and other sections the tornado visited in the fading light last Monday, April 8, extend sincerest sympathy for their plight, they also admire and envy the toughness and determination their reaction makes so obvious, and give thanks with them that no lives were claimed by the destroying winds.

Suspending Application of Certain Laws With Respect to Personnel Employed by Committee on Ways and Means

SPEECH
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. SISK. Mr. Speaker, reserving the right to object, I do this in view of some circumstances that arose last year with reference to the employment of certain people on the staff by the Committee on Ways and Means. There were certain charges of a possible conflict of interest. At this time I should like to ask any member of the Committee on Ways and Means to comment with reference to the position of the committee in the event they find that such conflict of interest may exist.

Mr. FORAND. Mr. Speaker, would the gentleman yield?

Mr. SISK. I yield to the gentleman from Rhode Island.

Mr. FORAND. Mr. Speaker, first of all I want to commend the gentleman from California [Mr. SISK] for being on his toes as usual. He always does a good job in looking after the welfare of his constituents.

In the instant case, I can assure him that the Committee on Ways and Means and also the subcommittees are mindful of the factors involved in this particular resolution. Also I can give the gentleman assurance that the matter relating to this particular resolution, or to which this particular resolution relates, has been thoroughly investigated by the chairman of the Subcommittee on Foreign Trade Policy, the gentleman from Louisiana [Mr. BOGGS], and no improper action was found.

The facts are simply these, Mr. Speaker, Due to the nature of the work involved in the investigations made by the Committee on Ways and Means on taxes and tariffs, it is most difficult to get qualified men to come work for the committee for a matter of only a few months. We must take people from the field who have a vast knowledge of the particular subject we are investigating. Naturally, they have a rather lucrative practice and dislike very much to take the chance of the conflict of interest statute depriving them of their future livelihood just for the sake of working for the committee for possibly 2 or 3 months. For that reason it is necessary for us to seek the enactment of a resolution such as this in order to protect these people and at the same time provide our committee with the type of help we need. I trust the gentleman will accept that explanation.

Mr. SISK. Mr. Speaker, I appreciate very much the explanation made by the distinguished gentleman from Rhode Island [Mr. FORAND]. I realize the need for these specialists and, of course, with his statement that conflicts of interest such as may have developed possibly in the past will not develop in the future, I withdraw my reservation of objection.

Israeli Independence Day

SPEECH
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. BOLAND. Mr. Speaker, yesterday Israel celebrated the ninth anniversary of its independence. May 6 is a date that truly symbolizes a great Jewish accomplishment. Within 9 years the ideal of Zionism has been transformed from dream to reality. During these 9 difficult years of existence Israel has struggled, but she has won, thanks to the skill of her leaders and the tenacity of her population. Both the Arabs and the great powers have exerted strong pressures on Israel, but in spite of them Israel has survived and flourishes. I salute Israel on this happy anniversary.

Israel, like America, is a nation of pioneers and a people of diverse origins. Both nations are devoted to democracy and both nations oppose the impending threat of communism in the Middle East. As America's bulwark against the Soviet threat, Israel deserves and will obtain America's fullest support.

Israel is more than ever important for the defense of the United States and the West in the Middle East, since Britain has evacuated Suez and since British standing the Middle East has declined. The United States is now assuming Britain's former role, and in order to do so it needs all the friends it can find at the eastern end of the Mediterranean. If war should break out in the Middle East, the United States must have bases and allies. Under these circumstances, Israel might turn out to be one of America's most important footholds in the Middle East.

It is therefore a clear necessity for the United States to support Israel out of strategic interest and strategic need. Also the United States has traditionally opposed aggression and supported the

weaker side in international disputes. Moreover, Israel represents the only center of western culture in an area which must be westernized. Israel is the spearhead of cultural revolution in the Middle East and when peace comes to that region Israel can serve as instructor and tutor and example to the surrounding Moslem nations.

Israel has declared for the side of the free world, for democracy, for the western cause; the United States must not and cannot abandon Israel nor the values and accomplishments for which Israel stands.

Irrigation, Power, and Flood-Control Projects Under ICA

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. MILLER of Nebraska. Mr. Speaker, this report shows in detail the irrigation, power, and flood-control projects for which this country has either spent or obligated funds from April 3, 1948, through December 31, 1956. It will show that we have obligated $355,800,000 for 197 projects in 46 different foreign countries. This list was compiled by the ICA and the projects range from a few thousand to many millions of dollars. These projects once started, must be seen through to completion and will cost many more millions of dollars. It is my understanding that just recently several more projects were authorized and money obligated for projects in Formosa and other Far Eastern countries.

It seems to me, Mr. Speaker, that if this country is able to spend $355,800,000 in irrigation and power projects from Ethiopia to Vietnam, we can afford to be a little more generous toward some of the irrigation, reclamation, power, and flood-control projects in our own country. These projects at home are an investment in the future of a great, dynamic, growing America.

I beseech the generosity of my colleagues in approaching this serious problem in these days when we are trying our best to cut the Federal spending. An irrigation project overseas pays no return to the United States; while an irrigation project in our own country pays back its cost in full to the Treasury over a period of years. In addition it adds new wealth to our Nation. It brings in new industry and new taxes for our expanding economy.

I trust my colleagues will examine the 197 projects on irrigation, reclamation, and power in the 46 different foreign countries. If you will do that, I am sure you will feel a little more kindly toward some of the projects urgently needed in our own country:

TABLE I.—*Summary of ICA or predecessor agencies' obligations for irrigation, reclamation (including flood control), and power projects, cumulative, Apr. 3, 1948–Dec. 31, 1956*

[Millions of dollars]

Program	Table in which detail is shown	Obligations as of Dec. 31, 1956
ICA and predecessor agencies' programs total		$355.8
Inactive programs:		
European industrial projects	II	97.8
European overseas territory projects	III	4.1
Continuing programs:		
Far East projects	IV	115.7
Near East and south Asia projects	V	117.1
Africa	VI	1.0
Latin America	VII	10.5
Europe	VIII	9.6

Source: International Cooperation Administration Office of Statistics and Reports Apr. 24, 1957.

TABLE II.—*European industrial projects:*[1] *ICA or predecessor agencies' obligations for irrigation, reclamation, and power projects by country and project, Apr. 3, 1948–Dec. 31, 1956*

[Thousands of dollars]

Country and project	Cumulative total through Dec. 31, 1956	July 1, 1954, through Dec. 31, 1956	Prior to fiscal year 1955
Europe total	$97,838	−$2,285	$100,123
Denmark	3,317		3,317
Steam electric station (60,000 kilowatts) at Kynby	3,317		3,317
France	17,879	−150	18,029
Extension of the Office du Niger irrigation project in French West Africa	1,191		1,191
Thermal electric powerplant at Dechy (120,000 kilowatts)	11,921	−127	12,048
Boiler for steam electric station at Arrighi (100,000 kilowatts)	2,444		2,444
Boiler equipment for steam electric unit at Nantes Chevire (100,000 kilowatts)	1,801	−4	1,805
Boiler equipment for 2d steam electric station at Arrighi (100,000 kilowatts)	522	−19	541
Iceland	4,857	−4	4,861
Expansion of hydroelectric plant on Sog River	3,890	−1	3,891
Expansion of hydroelectric plant on Laxa River	967	−3	970
Italy	59,979	−2,131	62,110
Steam electric station (50,000 kilowatts) at Genoa	5,510	−159	5,669
Steam electric station (60,000 kilowatts) at Palermo	5,730	−336	6,066
Turbo-generator with 60,000 kilowatts capacity to serve northern Italy	6,092	−138	6,230
Turbo-generator (50,000 kilowatts) at Genoa for Societa Edison, Milan	6,111	−58	6,169
Turbo-generator (50,000 kilowatts) near Turin for Societa Idroelettrica Piemonte	5,937	−159	6,096
Steam electric station (60,000 kilowatts) at Civitavecchia Rome	5,608	−502	6,110
Steam electric station (60,000 kilowatts) at Naples	6,014	−83	6,097
Steam electric station (100,000 kilowatts) at Piacenza	10,357	−162	10,519
Steam electric station (30,000 kilowatts) at Naples	3,280	−69	3,349
Steam electric plant (120,000 kilowatts) near Tavazzano for STEL	2,478	−102	2,580
Addition to steam-electric plant (30,000 kilowatts) at Turin	2,862	−363	3,225
Netherlands	3,092		3,092
Thermal powerplant (124,000 kilowatts) on the Amer River	3,092		3,092
Portugal	897		897
Irrigation and power development in the Sorraia Valley and plains of Villa Franca	897		897
Spain	7,300		7,300
Thermal powerplant at Burcena	3,650		3,650
Thermal powerplant at Escatron	3,650		3,650
International	517		517
Austro-German hydroelectric powerplant at Braunau on Inn River	517		517

[1] This special program, in which certain procurement authorizations issued by ECA and MSA were identified with various European projects, was particularly active during the Marshall plan period from 1949 to 1952. The last projects added to this program were the 2 thermal power projects for Spain authorized in June 1954. This table shows the current status, as of Dec. 31, 1956, of the obligations originally entered into during that earlier period.

A Free Poland

SPEECH

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1957

Mr. CELLER. Mr. Speaker, as news reaches us of increased unrest in Poland, punctuated by reports of new rioting over this past weekend, we realize how significant a link in the chain of freedom lies in Poland.

During the past year the Polish people have demonstrated to the world the failure of Communist policy to provide for the well-being of the people held in its grip; the failure of Communist policy in developing the potential of the individual; the failure of Communist policy to govern others by the use of force and terror.

May 3 was a significant day in Polish history, commemorating, as it did, the anniversary of the enactment of one of the first of European democratic and progressive constitutions brought to life on that date in 1791. This day has never been forgotten, and it is a mark—a dramatic mark—of the deathless will to freedom of the Polish people that through their own efforts they have succeeded in loosening to a degree the yoke of Soviet domination, so much so that in this year private celebrations of the significant May 3 date were permitted.

In helping Poland now, as I believe our Government must, we are understandably taking a calculated risk, but our risk is minute indeed in comparison to the risk the Polish people themselves are taking in turning to the United States. We cannot refuse to act out of a paralysis of fear. It could be that the very help we give Poland would be one of the greatest blows struck for liberty. It could be the step toward a bloodless divorce from Soviet control, and it could demonstrate that the concern of the United States for an interest in people

as people is a traditional mark of our own freedom, thus puncturing Soviet propaganda that the West cares nothing for people, only for money.

A Hoosier Nonconformist

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. GWINN. Mr. Speaker, I desire to set forth in the RECORD an article from the Los Angeles Times of April 3, 1957, a favorable appraisal of Senator WILLIAM JENNER, of Indiana:

A HOOSIER NONCONFORMIST
(By Holmes Alexander)

"In any but our conformist age," said a New York Times book review on March 17, "it would compliment a man to say that his opinions were currently unfashionable."

For a nonconformist who seldom draws compliments from the New York Times or the rest of the conformist press, there is Senator WILLIAM JENNER, Republican, of Indiana, a man whose unfashionable ideas are not nearly so unstylish as they used to be.

At this time of year with schoolchildren and their gaping elders paying the annual pilgrimage to Washington, D. C., the denizen is often asked for sightseeing advice. What shrine to visit? What restaurant to try? What Senator to hear make a speech in the famous citadel of our American liberties?

Next time somebody asks me, I'm going to recommend BILL JENNER. He's not so celebrated or notorious or so awe-inspiring or chummy as some of his colleagues who could be named, but JENNER has a bagful of qualities which typical American tourists would long remember to their benefit.

It's safe to say that nobody who hears JENNER speak will ever forget his palm-slapping, foot-stamping, finger-wagging way of oratory. It's certain that he is a well-turned, handsome, energetic, and compelling personality. You either like him or you don't. You burst out laughing or you turn away scandalized at his audacious, outrageous thrusts at the sacred cows and the sacrosanct institutions.

The man's a headache in many places around town, but he's nobody's bore, and, despite the effete criticism by the conformists, he's nobody's boor. He's a lawyer's lawyer and a razzle-dazzle debater.

These traits, though warm and gratifying, are not what the tourists would find most edifying. JENNER has a gift which Americans down through the years have unfailingly appreciated.

Like Mark Twain, like Will Rogers, like H. L. Mencken, this Hoosier politico can spot a phony and can recognize hokum by instinct. If you watch him down there in the Senate, well he may remind you of the legendary willow branch which old folks say is the only infallible finder of underground water. JENNER never misses the subterranean flow of ideological bilge water. He reacts like a Geiger counter to those hidden deposits of buncombe in which our political range is so prolific.

For example, not long ago JENNER made a long, serious analysis of the Eisenhower doctrine, in the midst of which he commenced a comic, singsong rendition of the following quotation:

"I cannot help but dream out loud a little here. The Tigris and Euphrates Valley can be made to bloom as it did in the times of Babylon and Nineveh. Israel can be made the land of milk and honey—Ethiopia—has 65,000 square miles of land just exactly like the Corn Belt of northern Illinois—self-liquidating projects—will come so fast that we will not recognize the world in which we now live."

A world dreamer? Yes, JENNER was quoting Harry Truman. JENNER was showing his bent-double colleagues that globalissimo under any party label is just as preposterous.

Several years ago the social-security law prevented funds from going to any State which made public the names of persons on the relief rolls. The bleeding hearts argued that disclosure would humiliate the recipients. JENNER scoffed at these crocodile tears and argued that disclosure would not embarrass anybody except the freeloaders and the bureaucratic empire builders.

The law was changed and 20 States availed themselves of the right to publish the relief rolls for the taxpayers to see.

It is imperative in our freethinking way of life and politics to tolerate the nonconformist unless he is a clear and present danger to our existence. Many liberals to this day are intolerant of JENNER and the anti-Communists but are sympathetic almost to the point of collusion with the Communists.

JENNER is serenely impervious to their criticism. He regards himself not as a leader of thought but as being politically representative of his sovereign State. Indiana has been electing him to public office since 1934.

The Senator, now in his third term and up for reelection next year, says that Hoosiers are commonsense Americans who put their country and its ideals of individualism ahead of worldism, welfare, and superstatism.

JENNER voted and spoke against the administration budget as well as against the Eisenhower doctrine, which he regards as a useless entanglement. He found that 4 of the 9 Indiana Republicans in the House of Representatives voted to return the budget to Ike for cutting. And 3 of these 9 Republicans sided against the administration on the doctrine. It is unusual for any House Members to oppose a popular, reelected administration.

These figures indicate to JENNER that close-to-the-people Congressmen are falling away from the new Republicanism. They are coming JENNER's way and this illustrates the moral lesson of being kind to nonconformists. This time next year the intellectual fashions may change.

Something Has To Give

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Rock Hill (S. C.) Evening Herald of May 3, 1957:

SOMETHING HAS TO GIVE

Many economists say business is not as good this year as they had expected.

The economists say business spending for improvements and expansion is running about $1 billion a year behind expectations. Inventory buying is running about $2 billion a year behind forecasts. Home building has dropped at the rate of nearly $1 billion a year. New car sales are lagging at the rate of $1 billion to $2 billion a year.

The drop in business amounts to between 1 and 2 percent of the total value of goods and services produced per year (gross national product). Economists say this drop is not large, but is enough to be felt. However, they say the chance of a real recession is unlikely—because Federal Government spending is rising strongly.

That Government spending is financed by tax dollars which come out of your pocketbooks and ours. Maybe, if the Government didn't take so many of our dollars in taxes, we'd have more money to spend, ourselves, and business might not be slumping.

Connecticut Flood Projects

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I include a statement made today before the Appropriations Subcommittee for Public Works by William S. Wise, director, Connecticut State Water Commission. The chairman of the water commission is former Congressman from the First District Herman P. Kopplemann. This fine comprehensive request merits most earnest consideration.

The statement follows:

Mr. Chairman and members of the subcommittee, the people of Connecticut—as individuals, as communities, and as a State—are making a magnificent recovery from the catastrophic floods of August and October 1955.

The task was of unparalleled magnitude. Never before in Connecticut history had natural disasters taken so tragic a toll of human life and resulted in such enormous property damage. Never before had so many people been left homeless and out of work, so many bridges and roads destroyed, and so many business and industrial firms damaged.

Connecticut is determined to prevent or at least greatly reduce the damages from any such disastrous floods in the future.

A special flood session of the Connecticut General Assembly in November 1955, authorized expenditures of approximately $70 million to start a recovery program.

The State has given great assistance to flood municipalities which would have been left in serious financial difficulties if they had been forced to shoulder alone the full burden of recovery. The State is replacing municipal bridges, roads, buildings, and fire equipment; it is reimbursing local communities for tax losses; it is building public housing and guaranteeing low-interest, long-term housing mortgages for families which lost their homes in the floods; it is assisting in planning and redevelopment so that from the wreckage of this disaster can rise a finer Connecticut than that which stood before the floods came; it is undertaking flood-control planning and projects; it is carrying out dam inspection and stream encroachment programs.

The present session of the General Assembly is considering a $8,275,000 program that will implement the work that has thus far been done. The water resources and flood control committee of the general assembly has reported favorably on the author-

zation of $5 million for flood-control facilities, $3 million for beach and shore erosion control, $100,000 for studies in flood control, $150,000 for the setting of stream encroachment limits along waterways, and $25,000 for inventory and supervision of dams. This program is aimed at trying to keep ravaging floodwaters from the people and also in trying to keep people away from the floodwaters.

Connecticut is thus meeting the complex problems facing it with courage, with determination, with faith in the future, and with large appropriations.

To effectively implement this program and to protect the State from future floods, however, Connecticut needs both financial and technical help from the Federal Government. The Federal Government, from both precedence and experience, has the responsibility for flood-control projects. In many instances, the control of floods in river valleys must be undertaken on an interstate basis and can be solved only by large and expensive projects. No State can carry by itself the full burden of flood protection.

Over the years Connecticut has more than shouldered its share of the national taxation load and helped less fortunate States. For every thousand dollars Connecticut has contributed in Federal taxes during the past 25 years, it has received back $49.92—the second smallest return of any State in the Nation.

Now the time has come when we in Connecticut need Federal help to protect our homes, our loved ones, and our economic life. There should be no hesitancy in meeting these needs. Here are Connecticut's urgent requirements for the coming fiscal year:

NAUGATUCK RIVER, MAD RIVER FLOOD CONTROL

The New England division of the Army engineers has been of incalculable help to Connecticut. With dispatch and in accordance with sound engineering principles, it has studied and proposed certain measures for implementing the State's flood-control program. The outstanding phase of this work is the recommendation and location of flood-control reservoirs to keep some of the flood waters away from our people. We request all possible financial help to carry forward these projects which are so greatly needed to protect the State. We ask for the coming year only such sums as the Army engineers believe can be spent wisely, effectively, and efficiently. The following are a few items in this category:

The Thomaston Dam, which will protect many sections of the vital industrial Naugatuck Valley, was started last year. The Army engineers have determined that $2,900,000 will be needed to carry on this work effectively during the next year.

Three other small reservoirs have been proposed to reduce the flood waters entering the cities of Torrington and Winsted. The Hall Meadow Brook Dam located above Torrington on the West Branch of the Naugatuck River, the East Branch Dam on the East Branch of the Naugatuck River above Torrington, and the Mad River Dam above Winsted all have been found to be economically justified. None of these dams has yet been authorized by Congress. We ask the Congress to authorize these projects immediately and to provide funds in the amount of $100,000 for each dam in order to proceed with further studies and the preparation of plans for the construction.

We urgently request that a total of $3,200,000 be provided for carrying on the needed flood-control dams in the Naugatuck River and Mad River Valleys.

CONNECTICUT RIVER FLOOD-CONTROL PROGRAM

The comprehensive flood-control program for the Connecticut River was set up some years ago, and five flood-control reservoirs in this program are in various stages of construction. It is necessary to provide funds for proceeding with the program involving the following reservoirs: Otter Brook Dam in New Hampshire, $2 million; North Hartland Dam in Vermont, $1 million; North Springfield Dam in Vermont, $1,300,000; Ball Mountain Dam in Vermont, $1,300,000; Townshend Dam in Vermont, $1,300,000.

We urgently request that $6,900,000 be provided to carry on these projects during the coming year.

THAMES RIVER FLOOD-CONTROL PROGRAM

The Thames River flood-control program was laid out a number of years ago. The disastrous floods of 1955 pointed up the need to carry out measures to control the floods in this valley, and the projects are now in various stages of construction, planning, and design. The dams and the amounts of money involved are as follows: Hodges Village Dam in Massachusetts, $1,860,000; Buffumville Dam in Massachusetts, $1,117,000; East Brimfield Dam in Massachusetts, $1,500,000; and Westville Dam in Massachusetts, $100,000.

We urgently request that $4,577,000 be made available in order to carry on the program in the Thames River Valley.

BUSH-M'CORMACK PROJECTS

Congress authorized the so-called Bush-McCormack projects in an effort to push along more rapidly much-needed projects following the disastrous 1955 floods. The Army engineers indicate that there are approximately 10 possible Bush-McCormack projects in Connecticut. The studies thus far have indicated that at the present time the plans have been prepared for 2 of these projects in Torrington; 1 on the east branch of the Naugatuck River and the other on the west branch. Federal funds are available for carrying out these projects.

We urgently request that Congress provide funds in sufficient amounts to continue the construction of the needed Bush-McCormack projects and those projects of the small flood-control nature.

HURRICANE PROTECTION FUNDS

Because of the frequency of severe storms along the Connecticut and New England coast, many of hurricane severity, a study has been underway aimed at providing reasonable protection for certain vulnerable areas. During the past year the efforts of the Army engineers have been concentrated in Massachusetts and Rhode Island. There are a number of areas along the Connecticut shore in which certain protective measures are needed. Studies, therefore, should be undertaken at the earliest possible date.

We urgently request that sufficient funds be made available to continue the hurricane protection studies along the Connecticut shore.

HARBOR IMPROVEMENT

Connecticut, like any other progressive State, wishes to develop its harbors to serve the needs of the State. New Haven Harbor was improved some years ago. There is one section of the harbor, referred to as the Quinnipiac River section, which still needs to be completed. It is requested, therefore, that $575,000 be made available to complete this project.

Bridgeport Harbor should be deepened from its present 30 feet to 35 feet. All indications point to the fact that this is an economical project. We, therefore, request Congress to authorize the deepening of Bridgeport Harbor and also to provide funds in the amount of $100,000 to proceed with the detailed studies and plans for this project.

We request that $675,000 be provided for harbor-improvement work in Connecticut.

BEACH-EROSION CONTROL

It is quite likely that the present session of the general assembly will authorize a State expenditure of $3 million to continue beach and shore erosion-control work in cooperation with the Army engineers. This program has been laid out in accordance with the wishes of the various towns involved and includes 25 projects spread along the shoreline. Studies indicate that Federal funds totaling $294,000 are justified at 6 projects. These projects are at Greenwich Point in Greenwich, Cumings Park and Cove Island in Stamford, Calf Pasture Beach in Norwalk, Woodmont Shore in Milford, and Lighthouse Point in New Haven. Actually, funds for Woodmont Shore were made available by Congress last year, but the project could not be carried out during the present year and, therefore, reverted. It is requested that these funds be reappropriated.

The groin at Guilford was completed during the present year and it is requested that the Federal Government's share of the cost of this groin in the amount of $20,000 be appropriated.

We urgently request that $314,000 be provided to carry out this phase of the shore erosion-control program.

Congress has not yet authorized the projects in several of the areas along the Connecticut shoreline. It is, therefore, requested that Congress authorize the projects in all Connecticut areas so that the necessary funds can be provided for carrying them out.

NORTHEAST FLOOD STUDIES AND SMALL PROJECTS

As indicated previously, the Army engineers have done an outstanding job in making their northeast flood studies during the past year.

It is requested that funds be provided to continue these studies to the point where comprehensive programs and recommendations can be made to relieve the conditions in this very important area.

Awards Presented by the Maryland State Council, American Jewish Congress

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. FRIEDEL. Mr. Speaker, we who have the honor of being Members of the Congress of the United States are concerned with the enactment of laws. Indelibly carved in solid marble over the entrance to the Supreme Court are the words "Equal justice under law," and we are constantly being reminded that ours is a government of law and not of men. The importance of a proper respect of law is being inculcated in our young people in order that they may become good American citizens. If we stop to consider, we cannot help but realize that the first laws were God-given when He gave the Ten Commandments to Moses on Mount Sinai.

Recently the great Cecil B. DeMille gave the world further evidence of his incomparable genius in the epic motion picture The Ten Commandments, which I am sure all of you have seen and been deeply moved by the graphic and reverential portrayal of the greatest of events in the world.

In recognition of the superb achievement of Cecil B. DeMille in making this incomparable picture and thereby reminding the world of God's basic laws, it is altogether fitting and proper that many organizations have taken affirma-

tive action in expressing their respective collective appreciation.

Mr. Louis E. Shecter, a very well known and highly respected fellow Baltimorean, who is chairman of the awards committee of the Maryland State Council, American Jewish Congress, on April 30, 1957, presented a plaque to this great artist. On that occasion he made stirring addresses when plaques were presented, not only to Cecil B. DeMille but also to Mr. Barney Balaban for having made possible the production of that great picture. A third plaque was awarded to a very civic-minded Baltimorean, Solomon Rogers, Esq., a well-known and highly respected member of the Baltimore bar, for his leadership in the communal life of our city.

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I deem it a privilege to insert the above three salutes made by Mr. Louis E. Shecter:

REMARKS OF LOUIS E. SHECTER, CHAIRMAN, AWARDS COMMITTEE, MARYLAND STATE COUNCIL, AMERICAN JEWISH CONGRESS ON PRESENTATION OF PLAQUE TO CECIL B. DEMILLE, APRIL 30, AT BLUE CREST, BALTIMORE, MD.

In the course of a long history, the Jewish creative genius, preeminently religious, has proved capable of dramatizing its sweet and bitter memories. The tragedy of Egyptian bondage is recited in the Bible and in the Haggadah with beauty and inspiration. And it is the Haggadah which tells us:

"In every generation, every man is obligated to look upon himself as though he himself had gone out of Egypt."

And now, in the 20th century, we find that a great Christian, the fabulous Cecil B. DeMille, has infused his magnificent talent into the production of The Ten Commandments so as to produce for many millions of us a sense of personal participation in the agony of Egyptian bondage and in the joy and triumph of liberation. And we are wondering whether Mr. DeMille accomplished this with or without the four festive cups.

It is fitting that all Americans, of all races and creeds, applaud the monumental artistry of Cecil B. DeMille's breathtaking direction in The Ten Commandments. But it is particularly appropriate that this saga of Moses, the great lawgiver, be recognized by the American Jewish Congress, an organization dedicated to preserving and attaining human rights through the agency of law. This congress was founded 35 years ago to carry on the fight for the precious liberties guaranteed us in the Constitution and the Bill of Rights and to make them endure through the medium of law. If there is one dominant philosophy in the congress creed, it is our faith in accomplishment by law. There is no figure in Jewish history who supplies the congress with more enriching inspiration than Moses, the lawgiver—Moše Rabbin. What could then be more appropriate today—when the shocking pages of the Egyptian past are being rewritten by a new and even more vicious kind of a Pharaoh—than that we of the congress draw new strength and new hope from the stirring drama of Moses.

The black record of Egypt's persecution, imprisonment, and deportation of the Jewish community of Egypt is now tragically spread on the pages of our times.

That record shows that since November 20,000 members of the Jewish community have been driven from Egypt after being imprisoned and deprived of their property and personal belongings. With few exceptions, those remaining in the country have been deprived by every means of earning a livelihood. They have been dismissed from all posts in public service; they have been denied the right to practice their professions; their businesses and bank accounts have been confiscated. Even the seizure of hostages from families leaving the country, so as to silence those driven out, has been part of this scheme of terror. It has now become clear that this deliberate liquidation of the Jewish residents of Egypt had been carefully planned under the direction and guidance of ex-Nazis, followers of Hitler, now attached to Nasser's regime.

It is rather shameful that the United Nations has not allowed a single word of public reproof of Nasser for calculated destruction of a defenseless community. Nor has any great nation expressed more than a mild and ambiguous concern.

The American Jewish Congress condemns this continuing campaign of violence, and oppression by the Government of Egypt against its Jewish community, in violation of the moral standards of all civilized lands and in violation of international law. To end such persecution, effective action must be taken both by the United States and the United Nations.

If there is one thing The Ten Commandments brings out, it is that the fight against dictators never ends. The struggle for freedom is continuous, and this great lesson of history is pointed up for us with graphic force by the newest DeMille production.

Cecil B. DeMille's rich canvas portrays Egypt's assault on human dignity with an impact that adds even greater stature to the DeMille reputation as a sublime artist. No painter, sculptor, or creative artist in the theater or the motion picture has ever made such a vast contribution to the culture of his times as DeMille. And today with The Ten Commandments he has produced for the world a magnificence that is difficult to describe with mere words.

Cecil B. DeMille has created through the medium of motion-picture art a heartwarming and exalting religious experience that far surpasses any of the achievements of even the great Michelangelo.

You have never crossed the Red Sea until you have crossed it with Cecil B. DeMille. You have never been as genuinely stirred by Moses as when he stands before Rameses, in the picture, and exclaims, "Thus, sayest the Lord God of Israel, let my people go."

In a world where so few struggle for their ideals, the American Jewish Congress is proud to honor an inspired leader who has given many of us the courage and the spirit to fight for what is right and decent.

Mr. DeMille, the congress treasures this opportunity to express the gratefulness of right-thinking men and women for a work of art which we consider your masterpiece.

We are deeply honored and thrilled that you have had the kindness to travel 6,000 miles to be with us tonight. To say that your visit is an unforgetable privilege is to express very mildly our feeling on this occasion. For your service to mankind it is our genuine pleasure to present to you the Stephen Wise plaque. How magnificent that the founder of our organization who has left us a blessed memory of dedication to freedom should be participating tonight in this salute to you.

I will read the inscription:

"Maryland State Council of American Jewish Congress salutes Cecil B. DeMille as the outstandingly brilliant producer of 1956 whose genius has given the world The Ten Commandments, the most inspiring film of the year. April 30, 1957."

Mr. DeMille, you have given us the kind of spiritual lift that comes once in a lifetime. Allow us to give you this modest expression of our gratitude.

REMARKS BY LOUIS E. SHECTER, CHAIRMAN, AWARDS COMMITTEE, MARYLAND STATE COUNCIL, AMERICAN JEWISH CONGRESS, ON PRESENTATION OF PLAQUE TO BARNEY BALABAN, APRIL 30, 1957, AT BLUE CREST, BALTIMORE, MD.

Mr. Balaban is not the run-of-the-mill businessman trapped in a cage of self-importance. He is a charitable man. He is a patriot. He is a devoted husband and father. He is the kind of a human being who will take time out from a busy day to listen to a little boy sing a chanukah song.

In honoring Mr. Balaban, the congress is honoring itself.

The inscription reads as follows: "The Stephen Wise Medallion, Maryland State Council, American Jewish Congress, honors Barney Balaban for distinguished administrative leadership which made possible the production of Cecil B. DeMille's The Ten Commandments, the most inspiring film of 1956. April 30, 1957."

It is our pleasure to present the award to Cecil B. DeMille who will receive it on behalf of Barney Balaban.

REMARKS BY LOUIS E. SHECTER, CHAIRMAN, AWARDS COMMITTEE, MARYLAND STATE COUNCIL, AMERICAN JEWISH CONGRESS, PRESENTATION OF PLAQUE TO SOLOMON ROGERS, APRIL 30, 1957, AT BLUE CREST, BALTIMORE, MD.

This whole idea of giving tablets started with Moses. He gave the tablets with The Ten Commandments to the children of Israel. Tonight, we are reversing the order. The children of Israel, as symbolized by the American Jewish Congress, are giving a tablet, or as we call it nowadays, a plaque, to Solomon Rogers. You only have to look at the past and evaluate experience in terms of community advances to realize that the contributions in patience and understanding and statesmanship by Solomon Rogers have been important. In one of the most exciting periods in the history of our people and our country, Solomon Rogers has made it his business to serve loyally—without any thought of self-glorification.

If testimony were needed as to the quality of his leadership, I am confident most of us here could give eloquent testimony as to his innumerable contributions. So, because we need no proof of Sol's unwavering dedication to genuine ideals and values, my major purpose tonight is to encourage others to give of themselves as Solomon Rogers does.

Ours is a proud Jewish community. We have men and women of stature, whose unstinted energies and generous hearts have brought distinction to our city. In the congress itself we have had giants, who have given towering strength to our cause. Among our leaders have been the brilliant and magnetic Judge Simon E. Sobeloff; the liberal-minded and persuasive Sidney Hollander; our beloved Rabbi Samuel Rosenblatt, with his warmth of personality and fervent convictions; the able former Congressman Daniel Ellison, whose leadership was so vigorous. And there were others, many others. And in this entire galaxy of Baltimoreans who have given vibrant leadership to the Congress and many other causes, I would have to place Solomon Rogers high up on the list.

He was my predecessor as president of the congress and I am indebted to him for encouraging me in liberal thinking. Solomon Rogers is a leader who doesn't handpick his activities. It is amazing to me how he finds

time to devote himself as intensely as he does to the Associated Jewish Charities-Jewish Welfare Fund, to the Baltimore Jewish Council, to the National Administrative Committee of the congress, to Levindale, to Chizuk Amno, to the National Conference of Christians and Jews, to the American-Israel Society, and the Jewish Theological Seminary.

It looks like some of Sol's talent has rubbed off on his lovely wife. Fortunately, for the Congress and many other important organizations, Mrs. Solomon Rogers is now giving direction on many vital fronts.

I know that Henry, and Nolan and other members of the Rogers family share with us the pleasure of this occasion. Your chairman was kind enough to mention that for the last 25 years, I have been chairman of the Man of the Year Awards of the Advertising Club of Baltimore. In that capacity it has been my opportunity to make awards to men and women of high purpose and outstanding achievement—great doctors, famous judges, able businessmen, men like our own Judge Sobeloff, Governor McKeldin and Dr. Alfred Blalock. In all those presentations, there has never been an award that has given me more personal gratification than tonight's salute to Solomon Rogers.

With all our hearts, we of the Congress thank you for your support, for your work and for your friendship.

As a long-time colleague and close personal friend, and as chairman of the Awards Committee, I am delighted to make this presentation. Allow me to read the wording:

"Stephen S. Wise Medallion, 1957 Maryland State Council, American Jewish Congress honors Solomon Rogers for his dynamic leadership and loyal dedication to the enrichment of the religious and civic and communal life of our city. Baltimore, Md., April 30, 1957."

With heartfelt good wishes we present you with this gift.

Time for Its Ratification

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. COLE. Mr. Speaker, two of Washington's newspapers have given strong editorial support for ratification by the United States Senate of the treaty to create an International Atomic Energy Agency.

On May 4 the Washington Evening Star editorialized Time for Its Ratification, and on today, May 6, the Washington Post, in its lead editorial, referred to The Senate and the Atom.

In my opinion, no treaty has ever been submitted to the Senate in the entire history of our country which offers greater promise for the economic stability, well-being, and peace of the world as does the one which would create and give substance to the International Atomic Energy Agency.

The editorials follow:

[From the Washington Evening Star of May 4, 1957]

TIME FOR ITS RATIFICATION

It is difficult to understand why there should be any American opposition to the projected International Atomic Energy Agency. Yet several Senators apparently intend to fight hard against it now that it is about to be subjected to hearings before the Foreign Relations Committee. Some of them apparently feel that the statute's ratification would start an American giveaway of fissionable materials, and others seem to fear that it would somehow enable the Communist world to get the jump on us in the field of nuclear weapons.

But this is an unjustified, oversuspicious frame of mind. For the IAEA, which has been agreed upon by no fewer than 80 nations, is an enterprise designed exclusively to promote the peaceful uses of the atom on a realistic and carefully supervised basis. The author of the idea is our own country, which has been the prime mover in the long and exhaustive negotiations that ended successfully last year with unanimous adoption of the statute—negotiations in which the Soviet Union, after first having taken a negative attitude, was finally persuaded to cooperate. No giveaway is involved, nor will the Agency's opeations require any exchange of military secrets or otherwise help countries behind the Iron Curtain to acquire a weapons advantage over us.

Actually, once it begins operating, the Agency will be governed by very strict rules and regulations. Its prime task will be to expedite nuclear progress throughout the world—civilian progress of a kind that will place major stress on industrial power, agricultural improvements, and special undertakings aimed at bettering human health. Accordingly, among other things, it will promote the spread of nonmilitary atomic knowledge and act as a bank for fissionable material to be contributed by the uranium-producing countries, including Russia and the United States. This material, in turn, will be allocated—generally through a leasing arrangement—to nations that can meet elaborate standards showing that they are fully qualified to receive and make good use of it. As for the supervisory machinery, it will include a thorough system of continuous inspection to afford adequate protection against the diversion of any project into military channels.

All this should serve to reassure those Members of the Senate who may be hesitant about ratifying the IAEA's statute. What needs to be kept in mind, above all, is that the Agency, although it cannot be expected to accomplish overnight miracles, is full of unique promise for the whole world. Certainly, if it is administered nad supported with steady vigor and unanimity, it can hardly fail to bring about, slowly but surely, a striking improvement in the material well-being of peoples everywhere. More than that, in a larger sense, it is ideally designed to foster mutual trust and international collaboration of a kind that could go far toward bringing about real disarmament and a decent global peace.

It is for such reasons as these that President Eisenhower has appealed for early ratification of this potentially great undertaking. The Soviet version of parliament has already acted affirmatively on the matter, and since the project is primarily the brainchild of the United States, our Senate should do the same thing with as little delay as possible. To do otherwise, to abandon what we ourselves started, would be to commit a kind of infanticide that would shock the world.

[From the Washington Post of May 6, 1957]

THE SENATE AND THE ATOM

If a clincher is required for the many persuasive reasons for early United States ratification of the International Atomic Energy Agency statute, the Soviet Union has supplied one. Russia long ago dropped its hostile attitude toward President Eisenhower's 1953 proposal for creation of the world agency to promote peaceful uses of the atom. Now it has become the first of the major powers to ratify the agreement signed by some 80 nations last fall. Byelorussia, Rumania, Guatemala, and Switzerland also have assented to the accord.

Does Moscow's swift embrace of the international atoms-for-peace program mean that the Kremlin believes Russia will reap great benefits from the proposed exchange of atomic energy materials and the fruits of research? Of course it does—but not because the agency it likely to give Russia or her satellites any new advantage in atomic development, peaceful or otherwise. The Soviet Union is already the world's second greatest producer of fissionable materials and has demonstrated that it is far along in superweapon development and well equipped for the most advanced research.

The Soviet Union reversed its position on world pooling of peaceful atomic materials and know-how because of the tremendous enthusiasm which the smaller and less developed nations of the world have shown for the proposal from the time of the President's historic address to the United Nations on December 8, 1953. In that speech, Mr. Eisenhower brought the delegates to their feet in thunderous applause when he pledged the United States "to devote its entire heart and mind to find the way by which the miraculous inventiveness of man shall not be dedicated to his death, but consecrated to his life." The Indonesian representative to the Assembly, Mr. Sudjarwo, seemed to speak for the great majority of the members when he responded that the President had "interpreted the deeply felt desire of mankind throughout the world to redress the appalling situation in which the world found itself in this atomic era."

The Soviet Union could not afford to turn its back on that great groundswell of hope that a way had been found to lessen and perhaps eventually to end the threat of a nuclear holocaust. The United States cannot afford such a course, either, especially since it was this country that first developed atomic weapons, first used them in war, and, in consequence, has so far led the search for controls and ways to divert the atom to peaceful purposes.

The International Atomic Energy Agency would not, of course, be a disarmament agency, although one of its goals is to siphon off atomic materials and commit them to peaceful uses. It would not be an atomic armament inspection agency, although nations which it provided with uranium for power, industrial and medical purposes would be required to submit to checkups and safeguards against diversions for military use. Quite beyond the commercial and other advantages to the United States from international accords on atomic development, the great contribution that IAEA can make, as Representative STERLING COLE recently observed, "is in the development of the technology, the law, and the public acceptance of international control."

The Senate Foreign Relations Committee will begin hearings shortly on the statute establishing the Agency. There are fears that the Senate may try to cripple the agreement with various restrictions or even to deny its consent to ratification. Such a course would be unthinkable. Even though the United States already has extended nonmilitary atomic development assistance to many friendly nations on a bilateral basis and presumably could continue to do so, the rejection of the carefully safeguarded IAEA statute by the Senate would all but end American leadership in the highly successful atoms-for-peace effort. It would give substance to small power fears that this major power, at least, is primarily concerned with atoms for war. It would hand the Soviet Union a priceless propaganda advantage. And rejection, far from somehow safeguarding American atomic resources and skills, would only intensify efforts of the

Soviet bloc to dominate world developments in this area.

Uranium is one of the world's most plentiful elements. The knowledge of how it and other materials may be fissioned or fused to produce energy and useful isotopes is already widespread and will soon be universal. Is the United States going to be part of a worldwide effort to channelize this awful knowledge in the ways of peace? Or is it going to stand aside and let other nations grapple with the fateful question that America itself wrote in the Hiroshima sky in 1945? That is the question before the Senate. There is only one proper answer.

Republican "Lipservice" to Small Business

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. MULTER. Mr. Speaker, it is high time that the Republican administration appointed to positions in the Department of Commerce, persons who have an understanding of the basic problems of small business.

During the past week the press has quoted Assistant Commerce Secretary Frederick H. Mueller as stating that bad management is the cause of most small-business failures.

The following letter, dated April 24, 1957, written to President Eisenhower by George J. Burger, vice president of the National Federation of Independent Business, is worthy of the attention of our colleagues:

Hon. DWIGHT D. EISENHOWER,
President of the United States,
White House, Washington, D. C.

DEAR MR. PRESIDENT: A report appeared in the press a day or two ago that: "Assistant Commerce Secretary Frederick H. Mueller yesterday blamed bad management for most small-business failures."

He is further reported as stating: "Most failures are management failures—persons who started in business without the knowledge or ability to succeeed." Mr. Mueller is also credited in the press story with expressing his opinion on what he believes to be contributing causes for small business failures, and he further stated it is his contention that small business is healthy.

Mr. President, this does not check with the findings we receive through our nationwide membership, comprised exclusively of independent business and professional men—nor does the statement as to their healthy position check with statements emanating from well known national syndicated columnists, and further, it does not check with the editorial thinking expressed in a national leading weekly periodical. It may also be found that a close check with most Members of Congress will confirm their contention too that small business is far from being healthy.

Our principal concern is that the charge made by the Assistant Secretary of Commerce is the same old line of bunk as to the contributing cause for the failure of small business being due to bad management.

Now let us look at the record of what we have found to be the principal causes for failure in the ranks of small business.

1. It was publicly stated before a Senate committee in February 1947 by the then Assistant Attorney General that for 35 years or more the administrations had merely given "lipservice" to the enforcement of the antitrust laws.

2. Review the actions of a Government agency in 1936 as it applied to a contract relationship existing between a big rubber producer and a large merchandiser. That contract disclosed the reasons for the inability of efficient independent retailers and producers in that industry to compete in fair competition in the open market, resulting in the failure of thousands of independent retailers and hundreds of producers. Such failures were not due to bad business management, but, on the other hand, they were due to violation of the antitrust laws.

3. When the Robinson-Patman Act was made a law of the land, independent business of all descriptions looked upon that law as the Magna Carta that would protect efficient independent business against ever increasing unfair competition. Independent business of all descriptions was sadly disappointed as a result of the failure of the Federal Trade Commission to vigorously enforce this major law, and particularly in their failure to follow up Commission orders where violations had taken place.

4. We now refer to the "basing point system" which was organized by certain large industries, and which system was eventually nullified by the United States Supreme Court. Either efficient small business played along with that system or they were out of business. So there was no bad management in that respect on the part of small business.

5. Is the Under Secretary of Commerce aware of the increasing concentration and the merger trend in our Nation's industry? Surely the administration is well aware of this when they recommended amendments to the antitrust laws, which proposal is wholeheartedly supported by Nation's small business. In this respect, we urgently made this recommendation during a White House conference with your economic adviser, Dr. Burns, on July 5, 1956. This merger trend in our economy has resulted in a most serious and unhealthy situation for small business, both at the production and distribution level.

Mr. President, let us sum this communication up in plain, understandable words—and here it is.

It's ridiculous to make the charge as it applies to small business, that failures are due to bad management. The principal cause for these failures is the result of unfair competitive conditions due primarily to the failure of the Federal Government to vigorously enforce the laws on the statute books, which were set up to bring fair competition in the open market.

Is it any wonder that the mounting opinion in the ranks of small business is that the Department of Commerce as a whole does not speak and act in the best interest of small business?

Let us go one step further. We know that just a few years back we were called upon, through a long-distance call, by a representative of one of the leading newspaper chains throughout the Nation. They advised they had discovered a release issued by the so-called Small Business Section of the Department of Commerce, in which a recommendation was made, in substance, for a suspension or modification of antitrust laws. This call was made from Washington, D. C., to me in San Francisco while I was in that city. They desired to know what our position would be, and our answer was that we would definitely oppose any such action.

It would strike us, solely in the interest of small business of this Nation, that if the Department of Commerce is to be truly representative of all segments of our business economy—then it's about time, Mr. President, some people are appointed to the high positions in that Department who have a common understanding of the basic problems of small business. From the record as it now stands it would appear to us that the Department of Commerce operates wholly in the interest of big business.

We hope and trust that this plea will not be in vain as small business today is facing a life or death struggle to maintain their rightful position in our economy.

Sincerely,

GEORGE J. BURGER.

Welcome to a Great Asian

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. FEIGHAN. Mr. Speaker, the Cleveland Press on Monday, May 6, carried a very inspiring tribute to President Ngo Dinh Diem of the Republic of Vietnam in the form of an editorial. The title of that editorial is "This Visitor From the Orient Deserves Respect of Americans." In this editorial the Cleveland Press cites the highlights of the record made by President Ngo Dinh Diem in support of freedom and preserving the independence of his own country. It points out that his secret weapon, if he does in fact have one, is fearlessness. It concludes on the note that we can count upon President Diem to stand by his word and to uphold any understandings that may be reached while he is here with us. I know President Diem personally and have had an opportunity to talk with him while visiting in Vietnam 18 months ago. He is in every sense of the word a true ally of the United States and a tried and proven friend of the cause of peace and freedom. Because of the interest I know Members of Congress have in this outstanding Asian leader, I insert this editorial under leave previously obtained.

The editorial follows:

THIS VISITOR FROM THE ORIENT DESERVES RESPECT OF AMERICANS

President Ngo Dinh Diem of the courageous Republic of Vietnam arrives in Washington Wednesday at the invitation of President Eisenhower.

All the honors and respect Americans may bestow on this capable but self-effacing Asian leader will be fully deserved. In the 3 years he has headed his struggling state, he has proved himself an uncompromising friend of the United States and an implacable foe of communism.

The 1954 Geneva parley that carved up Vietnam, a la Korea, opened the way for relatively easy Communist conquest. Had South Vietnam fallen then, as many were predicting, a vast area of southeast Asia might well be under Red tyranny today.

But with the odds heavily against him, President—then Premier—Diem set his course toward the twin goals of freedom for his country along Christian, democratic lines, and resolute opposition to the Communist menace. His secret weapon, if any, is fearlessness.

Today, South Vietnam is the haven for 900,000 of his countrymen who fled from the Communist north to prove President Diem's theory that multitudes of Asians are not resigned to any Communist takeover.

Unlike some other state visitors we have had from his part of the world, Ngo Dinh Diem can be counted upon to stand by his word and uphold any understandings that may be reached while he is here.

The Waste—The Cruelty

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix, I include the following article from the June 1957 issue of Popular Dogs. The article describes wasteful and cruel conditions in our meatpacking houses, which make necessary the enactment of effective humane slaughtering legislation now pending in the House and Senate. The article follows:

THE WASTE—THE CRUELTY

Even if I were not concerned with the enormous American tragedy of cruelty to our domesticated animals which clothe and feed us, the great tragedy of waste would be shocking. I am deeply concerned with both. In 1951 I wrote on the High Cost of Indifference and quoted that it is estimated the loss of meat at that time (it has increased) would fill a cattle car more than 10 miles long with animals which have died through neglect and injury during transportation to market. Another article, The Cruelty Is Worse Than the Waste, pictured some of the unfortunate animals which lived. Study these pictures and then write your Congressmen urging them to support the humane slaughtering bill. Write at once as the bill is to come up in this session of Congress.

In later issues, we hope to bring you the names of the meatpackers that fought this humane bill, and also the Members of Congress who voted against it.

Pigs are jerked off their feet, hauled high by a chain around one leg (the leg often broken in the process) and sent struggling on an overhead trolley to the "sticker" who thrusts a knife into the animal's throat. Although it bleeds to death, the screams of terror before and of pain after are constant—the fully conscious animal's struggle causes welts and dislocation of bones—then dead or alive, the pigs are dropped into the scalding vats.

Cattle are smashed on the head by a pole axe to render them "unconscious," but the terrified animal attempts to avoid the blows and too often the eyes and the nose are smashed first.

Why are meatpacking houses fighting this humane bill? It is true that the majority of slaughterers of the United States will not change their uncivilized methods unless they are compelled to do so by law.

Senator HUBERT H. HUMPHREY of Minnesota, who introduced slaughter bill, S. 1497, states: "It is time that we in the United States faced the fact that we trail behind much of the world in adoption of approved and humane practices in the slaughter of food animals. What we are asking in this legislation is already accepted and in use in many other countries. We pride ourselves in being advanced in technology; we should be just as advanced in humane regard for handling and treatment of animals."

Says Senator RICHARD C. NEUBERGER of Oregon: "Slaughter methods now almost universally used in American packing plants cause intense suffering and are grossly cruel. Practical and economical methods of killing animals humanely are available. It appears that the packing industry cannot or will not end the cruelty without legislation which will require all packers to act simultaneously."

Congressman WILLIAM A. DAWSON of Utah who introduced to the House bill H. R. 3029, says, "America has a fine tradition of extending kindness to the unprotected, of exerting its strength to protect the weak. Despite this tradition, millions of animals annually are killed in the United States under conditions that would shock and outrage the average citizen."

Telegraph and write your congressmen today. If you do not know their names, your nearest newspaper or the county courthouse will furnish the information.

ONE SLAUGHTERHOUSE OF THOUSANDS

The following excerpts are from a report of the SPCA:

"Witnesses reported that calves were being thrown, dropped and kicked from vans at a local slaughterhouse. We found a mixed load of cows, pigs and calves ready to be unloaded. They had been purchased the day before at an auction in New Jersey. The rectums of all were bleeding from the sharp pointed, sawed-off canes that are used as prods.

"Two cows had fallen in the truck, being skinned by the hoofs of standing animals. There were no unloading ramps at the slaughterhouse and no tail gate on the truck; thus animals were forced to jump or be pushed to a slippery concrete platform where many fell and were injured. They stood quivering in fear at the edge of the truck before being pushed off.

"A young exhausted pig was prodded off and fell to the platform breaking her two front legs. The slaughterer started to pick her up by a hind leg to drag her to the killing floor to be shackled, but we stopped him and insisted that she be shot where she lay. We made certain (for that load) that each calf was lifted out of the truck and placed on the platform.

"Our agent has now been on hand daily at 7 a. m. to check incoming loads. The use of canes and electric prods has been discontinued by this slaughterhouse personnel. Employees commented that unloading is much easier.

"However, the improvement does not affect the cattle in transit to the slaughterer. On another morning we saw a van arrive in which an aged cow was down and we found the driver about to use an electric prod on her rectum to get her to her feet. We had her shot where she lay. Another shipment contained 7 cows, 2 bulls, and 10 calves. Two calves had fallen and their legs were caught and sticking through the slats of the gate. Another shipment contained an old cow, blind in one eye and with back covered with inflamed, red bruises. We had her shot at once.

"At another slaughterhouse we found a boar (a male pig) with a gaping wound in his side. There were bony cows with cuts and bruises on their backs, which had been shipped from an area near Buffalo. Several had fallen.

"At 7 p. m. trucks were lined up waiting to be unloaded. Calves and cows in mixed loads were sent sliding, sprawling, and falling down the ramp, a 40° incline of slippery concrete. Calves were thrown and landed in a fallen position. They were promptly kicked to a standing posture and a wire tag was stapled through the ear. If an animal was stubborn it was prodded in the rectum, struck with steel wire cutters on the back, or the tail was pinched with wire cutters.

"Handlers seemed to derive a sadistic delight out of their ability to make the terrified, confused animals leap with pain. A rabbit in a crate was hurled 20 feet from a truck to a pen. Chickens were overcrowded in crates to the point of suffocation. Dogs and puppies also are auctioned here and we have been buying them for 25 cents and 50 cents with a contribution given us for this purpose by one of our members * * *.

"At 10:30 p. m. (three and one-half hours after arrival) the animals to be auctioned are forced into a ring, were bid on by packers and then begin their weary journey to the slaughterhouse. The loading continued until after 2 a. m."

Humane workers work long, weary hours with small pay to lighten the agonizing ordeals of the journey to the death houses of our domesticated animals. If you cannot visit an auction market to watch and supervise the unloading and loading of animals, the very least one can do is to send a regular contribution to humane societies whose workers will do this difficult and nauseous task.

One of the worst cruelties is the separation from mothers of calves too young to eat and drink. Thousands of "bob" calves are forced to starve for several days while truckers and auctioneers beat them periodically into activity before they wind up in the slaughterhouse. Trucks with loose boards, nails, and upright braces cause torn hides, bruises, and fractured ribs. Partitions should separate the large animals from young small animals. It is still common to see small animals loaded underneath large animals while in transit. Clubs, whips, steel prods, and prods with nails should be banned.

If Congress passes humane slaughter legislation at this session, much will be accomplished to lessen the suffering of food animals.

Interfaith Committee

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. McCORMACK. Mr. Speaker, I am in receipt of a letter from our friend and former colleague, Hon. Dewey Short, Assistant Secretary of the Army—Civil-Military Affairs—writing me as Government chairman of the Interfaith Committee, and in connection with making May 14, Washington, D. C.'s first Interfaith Day, a success. I am very glad to note that Assistant Secretary of the Army, Dewey Short, is the Government chairman of the Interfaith Committee this year. This activity is a great contribution toward creating and cementing understanding and unity among our people. Everyone should cooperate in every way possible toward the success of this fine activity.

In connection with the events that will take place on May 14 in relation to participation in the celebration of Interfaith Day, the day's activities will close with a professional ball game played in its honor. As Assistant Secretary Short well said in his letter, "Since baseball is a living embodiment of American democracy in action," I am pleased to note that

a game will take place that evening between the Washington Senators and the White Sox; also, that this baseball game has been arranged for in honor of Interfaith Day through the cooperation of the Washington Senators.

I hope that all persons will properly celebrate Interfaith Day, which will take place May 14, and enter into its spirit; that as many persons as possible will attend the baseball game, which will take place the evening of May 14.

Arabs Step Up Raids From Gaza and Jordan

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following letter written by Ambassador Abba Eban, permanent representative of Israel to the United Nations, to the President of the Security Council on April 5, 1957.

The letter follows:

ARABS STEP UP RAIDS FROM GAZA, JORDAN

Ambassador Abba Eban, permanent representative of Israel to the United Nations, addressed the following letter to the President of the Security Council on April 5, 1957:

"I have the honor to bring to your attention the following cases of infiltration and marauding from the Gaza strip into Israel that have occurred since my communication of March 13, 1957:

"1. On March 10, a group of marauders attempted to break into Mefalsim village near the Gaza border. One of them was killed by the watchmen of the village.

"2. On the same day a marauder from the Gaza strip was arrested near Kissufim by Israel security forces.

"3. On March 12 two marauders from Gaza were arrested near Nirim by Israel security forces.

"4. On March 12, a flock of sheep was stolen from Kissufim by marauders from the Gaza strip.

"5. On the same day two marauders were arrested near Nir Am by Israel security forces.

"6. Again on March 13 another marauder from Gaza was arrested in the vicinity of Nir Yitzhak.

"7. On March 14, a group of infiltrators from the Gaza strip crossed into Israel and reaped 40 dunams of wheat from the fields of Kfar Aza.

"8. On March 15 infiltrators from the Gaza strip stole 50 sacks of grain from Nirim village.

"9. On March 17 a tractor from Nahal Oz struck a freshly laid mine on a well-traversed road near the village. Two farmers in the tractor escaped injury, but their vehicle was wrecked. The tracks of four barefooted men led to the Gaza strip.

"10. On the same day three more plastic antivehicle mines were found in the proximity of the first mine.

"11. On March 18 infiltrators from Gaza stole a stand of corn in the fields of Mefalsim village.

"12. On March 22 a plastic mine of Czech manufacture was discovered on a dirt road near Nirim in the vicinity of the Gaza strip. The road is in constant use.

"13. In the night of March 22 the watchmen of the Ruhama settlement repelled an attack by four marauders. In the morning it was found that the village fence had been broken in three places. Tracks of the marauders led to the Gaza strip.

"14. On the night of March 23 infiltrators stole 12 goats from Dagan village. Tracks led to the Gaza strip.

"15. On March 24 infiltrators stole 3 calves from Shuval.

"16. On the night of March 25 infiltrators stole irrigation pipes from the fields of Ein Hashlosha.

"17. In the same night infiltrators from Gaza stole livestock from the village of Tekuma.

"18. On March 27, 400 meters of irrigation pipes were stolen from the settlement of Nirim by infiltrators whose tracks led to the Gaza strip.

"19. On the same day a heard of sheep was stolen from the settlement of Shdema by infiltrators whose tracks led to the Gaza strip.

"The continuation of marauding and infiltration from the Gaza strip into Israel is a matter which my Government cannot avoid viewing with extreme concern. Experience has shown that incidents which at first sight appear to be relatively unimportant, such as infiltration and marauding for purposes of theft and robbery, are the invariable preludes to serious outbreaks of violence and terror throughout the area.

"I have the honor to request that this letter be circulated among all members of the United Nations."

FURTHER RAIDS AND VIOLATIONS

Since Mr. Eban's letter was delivered, the following armistice violations, raids, and border incursions were reported:

April 3: An infiltrator from the Gaza strip was taken prisoner near Mefalsim.

April 4: Three Syrian soldiers penetrated the border at the village of Dardara. After an exchange of fire with Israel border guards, they withdraw.

Five Jordanian infiltrators fired on a group of Israel soldiers south of Ashdot Ya'acov. One Israel soldier was wounded.

April 8: A Syrian outpost fired on a new bridge south of Lake Hule.

A Syrian outpost fired on an Israel patrol south of Galilee. The fire was not returned.

A Syrian outpost opened automatic fire for 20 minutes on the village of Ashmorah; there were no casualties.

An infiltrator from Gaza was taken prisoner near Kfar Aza.

Infiltrators from Jordan kidnaped an Israel Arab shepherd near Wadi Ara and took him and 140 head of sheep across the border.

One hundred Arabs crossed the border west of Shear Yashur and attempted to steal crops before they were driven off.

A Syrian outpost fired on workers near Beit Guvrim. The fire was not returned.

New York State Democratic Delegation Protests Compliance With Saudi Arabia's Religious Discrimination

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a letter addressed to the President of the United States by 15 members of the New York State Democratic delegation, protesting compliance with Saudi Arabia's religious discrimination, and the reply from Assistant Secretary Robert C. Hill, for the Secretary of State. The texts of the letters follow:

APRIL 10, 1957.

Hon. DWIGHT D. EISENHOWER,
President of the United States,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: We, the undersigned Members of Congress, are greatly disturbed that the renewal agreement with Saudi Arabia for use of the air base at Dhahran carries with it the tacit compliance to discrimination against American citizens of varying religious faiths. For example, United States Army personnel of Jewish faith are disqualified from being stationed at the base. At the Dhahran base United States chaplains cannot wear the insignia crosses denoting their status as Christian chaplains. Such religious services as are conducted at the base are done in secrecy.

While the position could legally be defended that an alien sovereign state, as an attribute of its sovereignty, may determine when an American is persona non grata and cannot enter, is it not equally true that the United States can, if it wishes, refuse to concede to conditions which are contrary to explicit constitutional provisions, as well as contrary to its own moral standards? Our history is replete with incidents where we, as a country, have refused to concede to intolerable conditions which other sovereigns have sought to impose upon us as a price of continued diplomatic negotiations.

In a comparable situation President Wilson argued that the price of yielding was too great. He said that "America is not a mere body of traders; it is a body of freedom" and that the greatness of America "is moral not material" and that we must "square our politics with our principles."

Again, John W. Foster, grandfather of the present Secretary of State, when American Minister to St. Petersburg, made this point unmistakably clear in writing to the acting Russian Minister of Foreign Affairs:

"The Secretary of State instructs me to state to your Excellency that in the presence of the fact that an American citizen has been ordered to leave Russia on no other ground than that he is the professor of a particular creed or the holder of certain religious views, it becomes the duty of the Government of the United States, which impartially seeks to protect all of its citizens of whateevr origin or faith * * * to protest * * * insofar as the regulations for the expulsion of foreign Jews from Russia affects America citizens, it is an unjust reflection upon American Jews as a class and a discrimination which cannot be acquiesced in by my Government."

In accepting the conditions laid down by Saudi Arabia in the name of expediency, are we not asserting that the end justifies the means and are we not placing ourselves in the position of suppliants for the favors of Saudi Arabia when we accept conditions which are contrary to American principles?

May we respectfully ask that you address yourself to this matter so that necessary diplomatic negotiations with other nations are consonant with our principles at home. We cannot in defense of our position maintain one set of principles for internal policy and another set for the conduct of our foreign policy abroad.

Sincerely yours,

EMANUEL CELLER

(FOR VICTOR L. ANFUSO, CHARLES A. BUCKLEY, JAMES J. DELANEY, ISIDORE DOLLINGER, LEONARD FARBSTEIN, JAMES C. HEALEY, LESTER HOLTZMAN, EDNA F. KELLY, EUGENE J. KEOGH, ABRAHAM J. MULTER, JOHN J. ROONEY, ALFRED E. SANTANGELO, LUDWIG TELLER, HERBERT ZELENKO).

DEPARTMENT OF STATE,
Washington, April 30, 1957.

The Honorable EMANUEL CELLER,
House of Representatives.

DEAR MR. CELLER: I am pleased to provide a further reply to your letter of April 10 to the President concerning Saudi Arabian restrictions affecting the stationing of United States personnel at the Dhahran Airfield.

The recent negotiations with Saudi Arabia were aimed at an extension of the 1951 agreement covering rights of the United States at the airfield, which are important to our worldwide defense requirements. The text of the 1951 agreement was not at issue.

The problem of the admission of persons of the Jewish faith into Saudi Arabia is one related to the visa regulations of that country. These regulations, as you mention, are an attribute of sovereignty.

The United States, of course, does not condone practices by foreign governments which discriminate among American citizens on the basis of religious faith. In previous representations and during the recent discussions with Saudi Arabian officials, we have clearly set forth our special concern over the practices of the Saudi Arabian Government to which you refer. We will continue to exert these efforts on behalf of acceptance by Saudi Arabia of American principles in matters of this nature affecting American citizens. We have not deviated, and will not deviate, from the traditional American position.

Sincerely yours,

ROBERT C. HILL,
Assistant Secretary
(For the Secretary of State).

St. Lawrence Seaway Tends To Increase Budget

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. BRAY. Mr. Speaker, our increased budget is caused by a number of factors, not the least of which is the tendency of cost estimates to be unrealistic and unreliable. The St. Lawrence seaway project offers a good example of how estimates on multimillion dollar projects often prove untrustworthy.

For more than a half century there has been a strong demand by many groups for the construction of canals and locks which would open the St. Lawrence River and the Great Lakes to more shipping. During my first term in Congress I was a member of the Public Works Committee which for several months heard testimony on the St. Lawrence seaway project. Groups favorable to it naturally magnified its value and minimized its cost. Both political parties sponsored it. It was apparent to me that the cost would far exceed the estimate, and I stated this publicly. Lobbyists for this project, who were many and well paid and experienced in their profession, attacked me for my statements.

During the 2 years I was on the Public Works Committee, the bill was not reported out of that committee. It became law, however, in 1954. The cost of those parts of the project which the United States will build was estimated to be $66,815,000. Now the cost is estimated to be $133 million and an additional authorization is being asked of Congress. Frankly, it is going to cost far more than this. The cities on the Great Lakes ports are requesting Government authorization to the extent of hundreds of millions of dollars for the deepening of their harbors in order to accommodate ships of deeper draft.

At the time of the drive to get public backing for the building of the seaway, it was represented that Indiana and most of the other States would be greatly and directly benefited by this project. It was also stated that the toll charges would pay for the canal and so the St. Lawrence seaway would cost the American people nothing. It is now admitted that if tolls are set high enough to pay for the project they will discourage traffic and be self-defeating. We can have high tolls and little traffic, or low tolls and heavy traffic; but the total revenue, in either case, will not meet the yearly costs if the seaway is to be self-liquidating as it was approved. Funds to make up any deficit can only come from one source—the Federal Government.

The person in charge of the drive to get the authorization of the St. Lawrence seaway was N. R. Danielian, a hard worker and one of the most capable lobbyists I have known. During the time I was a member, great pressure was brought to bear on the Public Works Committee to approve this project. Interested parties held meetings in the Seventh District to create support for it. They told Seventh District voters how cheap this project would be, the great benefits the district would derive from it, and how it would pay for itself. Now the people are realizing the cold facts. I will now quote Mr. N. R. Danielian, president, Great Lakes-St. Lawrence Association, and chairman, Users' Committee on St. Lawrence Seaway Tolls. This is the same man who was the chief lobbyist for the project. I am quoting from a speech made by Mr. Danielian in Cleveland, Ohio, on April 5, 1957:

> Thus, one of the first misconceptions we must set aside is that this new waterway will bring a bonanza to everybody by and of itself, just because it is there. It will bring great advantages if and to the extent that it lowers transportation costs. Will it do that?
>
> The answer should be definitely "Yes" in the Great Lakes coastal areas, such as the North Shore of Ohio * * * for most goods, Pittsburgh, as of now, would still find it cheaper to trade via Baltimore; Cincinnati probably so. Columbus and Dayton and Youngstown may be marginal.
>
> Because such a wide belt across New York, Western Pennsylvania, Ohio, Indiana, Michigan and Illinois is marginal as between the Great Lakes-St. Lawrence tributary area and east and gulf coasts, the level of tolls will have a definite effect upon amount of traffic through the seaway and commercial activity in the Great Lakes ports.

As for the tolls from the seaway paying its costs, he stated:

> If any attempt is made to set tolls so high as to collect $28 million a year from the users right off the bat it will as surely dry up traffic as I stand here, and there will be neither traffic nor revenues commensurate with expectations.

On the basis of present-day cost estimates, it will require over $28 million to meet the annual requirements, an increase of some 75 percent over 1954 estimates.

Yes, the cold facts are now coming to the American people. The St. Lawrence seaway will only directly benefit a small area. Its costs will be many times its original estimate. Its tolls will not pay for its construction and maintenance.

I do not question that the seaway will be beneficial to some. Perhaps the seaway is even worth its cost. Perhaps the American people would have backed this project even if they had known the true facts, but the sad part is that the estimated cost was misleading. Incidentally, cost estimates for the Canadian share of the project have also risen sharply. Why have the costs risen? Partly, construction costs are higher than they were a few years ago. Partly, the increase is due to changes and additions made in the plans. Nevertheless, it is typical of how projects once approved expand and become more costly and force increases in Government spending.

Should Richer States Help Poorer States?

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, Mr. Clarence Poe, senior editor and board chairman, has written a timely and thoughtful editorial which will appear in the June issue of the Progressive Farmer. It is addressed to Senators and Representatives in Congress and I feel it will be of great interest to all Members, whether representing rural or urban constituencies. The editorial is as follows:

SHOULD RICHER STATES HELP POORER STATES?

(By Clarence Poe)

To Our Senators and Representatives in Congress:

Right now there is a tremendous demand for reducing expenditures of the Federal Government. And we agree that in many respects they should be reduced. In many quarters there has been waste. In others, inefficiency. In others, too much political spending. Too many men have been given office to pay party debts. Unjustifiably expensive projects for rivers, harbors, and public buildings may be cited.

But on the other hand, the United States Government has spread education and scientific research. It has helped build hospitals and schools. It has furthered justice through its promotion of the general welfare and its protection of our Bill of Rights. It has given labor its rights and has protected capital from confiscatory legislation. It has stretched the hand of Christian charity to the veteran, the unemployed, the sick, and handicapped, the aged and deserving poor.

Such are the two aspects of Government spending. One is bad. The other is not.

But we now seem to have a nationwide movement which seems about to say, "All Federal spending is bad. And what Federal spending is not bad should be done not by the Federal Government but by the States.

Let's shift all possible spending burdens to the States." (And to the States might often mean the very poorest rural counties in these very poorest States.)

Burdensome as we know present tax policies are and anxious as we are to promote all sound economy and efficiency, it seems only fair and reasonable to present and answer two questions:

What kinds of Government spending should be reduced?

What classes of Federal spending should be shifted to the States and counties?

1. The first big fact we run up against is that an overwhelming proportion of our $70 billion Federal budget—about $45 billion—goes for preparations for war. The next biggest item is a result of past wars—$7½ billion for interest on war debts and $5 billion for war veterans. These two together make nearly $58 billion of our $71 billion Federal budget. By all odds, therefore, the No. 1 way to reduce taxes should be by doing more to prevent war and instead insure sound programs for international disarmament and world peace.

2. As the richest Nation on earth we are not likely spending too much for health or for the care of the sick, aged, unemployed, and incapacitated. "To hear the needy when he crieth, the poor also and him that hath no helper"—this should always be one of the major objectives of Government if we are to call ourselves a Christian nation.

3. Nor are we doing enough for education and scientific research by which we can increase wealth and industrial production, safeguard peace, and conquer many diseases not yet under control. We should not be willing to stay behind Russia of which Chester Bowles has just reported:

"A public education system has been developed which seeks to give every Soviet student as much training as he can profitably absorb from first grade through graduate school. Soviet universities are now graduating twice as many qualified scientists and engineers as our own each year."

But what we now wish to consider mainly is the proposal to shift the burden of what are wise and necessary expenses of government from the Federal Government and throw this burden more and more on the States. This would certainly be all right if the 48 States were equally able to bear these burdens. But is it fair when our per capita income ranges from $873 in agricultural Mississippi to more than $2,000 in several of our greatest manufacturing States? Would not the inevitable result be to lighten the burden on the States most able to provide the needed revenues and increase the burden on States least able to pay for needed services?

The 1956 figures we have also show the United States per capita income as $2,010 for nonfarm people and $889 for farm people. And in two-thirds of our States, more than one-third of the population is rural, while in 18 the majority of the population is rural. If an inequitably heavy burden per person or per dollar of income is placed on these largely rural States what may we expect? Should we not have depressed areas with a poorly educated people, a people without adequate medical and hospital service, a people where absence of scientific research and higher education handicaps all talent, a region where the sick, aged, and incapacitated are not adequately taken care of—and will not this mean a sore spot in America which will hurt the Nation as a whole and all American business? Is it not just for the Federal Government to help in these matters? And will not the richer States themselves be benefited by helping poorer States to develop the full capabilities of their people and to maintain adequately high standards of buying power, living, and progress? We think they would.

As for the justice of the proposal, let's consider some basic facts. Have not our farmers as customers of industry contributed greatly to the income and prosperity of both urban manufacturers and urban labor? Are or are not farmers justified when we hear them saying such things as this:

"Up to about 50 years ago the money the farmer received for his crops and livestock remained largely in his own State. He bought no automobiles, trucks, tractors, tires, or farm machinery from distant States. He depended on wagons, trucks, and plows made in his own State. Now the larger part of the things he buys comes from distant States. His patronage helps maintain or enrich both the manufacturers and laborers in distant areas. He is not complaining about this but he does want it recognized.

"Quick and easy transportation by automobiles, railroads, trucks, and airplanes have made all America one industrial unit—not 48 industrial units separated by tariff boundaries that hold the income of each State inside the borders of that State. Our relatively unorganized farmers cannot fix prices of our labor or our products. But we do buy the products of urban labor and business which largely fix their own prices and labor costs. So we wind up with a reported $889 national average income for farm people and $2,010 for other groups. To us therefore it seems that the wealth or well-being which farmers have helped create has spread all over America. We are glad it has, but we do think we should not now have an excessive burden put upon us when it comes to maintaining the agencies of modern civilization—schools, health services, hospitals, and scientific research."

Another fact to remember is this: without proper educational opportunity the people who either leave the farms for urban areas or remain on the farms cannot give America the intelligent citizenship which is essential for good government. In our opinion there is no better safeguard against communism in America than equal educational advantages and the feeling that the rich help bear in proper degree the heavier burdens of the less fortunate poor. "One nation indivisible with liberty and justice for all" is the proud claim we make—and what does this mean if not a universal concern for the rights and welfare of the individual, whether in a rich State or a poor State? If we give our youth everywhere the conviction that America means equality of opportunity there will be small chance for communism to flourish among us. There will be a stronger support for what we call "Free Enterprise" and "the American Way of Life."

In urging greater consideration for our poorer rural States we do not appeal solely to our great manufacturers and capitalists. We appeal also to the workers in our labor organizations. They can have the sympathy of our farming population only if they help support equality of opportunity as represented by our modern schools, colleges, research, health services, and the care of the aged and needy wherever they are. Few will deny that our industrial interests have benefited from the Government help given by tariff, ratemaking, and other special advantages. Nor will anyone deny that minimum wage laws, collective bargaining, unemployment compensation, and other forms of labor legislation have likewise helped increase the incomes of industrial workers. Should not both groups therefore be willing to help share the burdens which our poorer rural States and counties must carry?

American business will suffer more by neglecting rural America than by helping it. For rural America has something unique to contribute to American life today just as it had in the days of our fathers and grandfathers. The independence of the individual farmer is a part of the Nation's strength. The farm as a wholesome place to rear children must be seen against the increasing juvenile delinquency in our cities. The farm as a source of leadership for business and industry and government must not be overlooked. Religion itself is involved because a large proportion of our ministers and religious leaders come from rural districts. And unless we adequately train the talent in country districts—the men that the America of tomorrow will need for science, medicine, education, industry, and peace—the loss to the Nation in all these fields will be tragic.

Our richer States should remember how, when World War II began, a shockingly large percent of our rural State draftees had to be rejected because of educational or physical deficiencies. And this condition still continues to an extent truly alarming. The safety of all America in case of another war, both of rich States and poor, may depend upon our having a thoroughly qualified wartime population both from rural and urban States.

Address by Jerry Voorhis, Executive Director of the Cooperative League of the United States of America, to the 23d Annual Meeting of the Louisiana Credit Union League, Alexandria, La., April 27, 1957

EXTENSION OF REMARKS
OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. HAYS of Arkansas. Mr. Speaker, recently Hon. Jerry Voorhis, a former Member of the House, and one of the Nation's outstanding authorities on credit union operations, delivered a splendid speech on this subject to the Louisiana Credit Union League. Under leave to extend my remarks I include his address, as follows:

ADDRESS OF JERRY VOORHIS, EXECUTIVE DIRECTOR OF THE COOPERATIVE LEAGUE OF THE UNITED STATES OF AMERICA TO THE 23D ANNUAL MEETING OF THE LOUISIANA CREDIT UNION LEAGUE, ALEXANDRIA, LA., APRIL 27, 1957

The noblest and deepest of all our ideals are those which flow from our religious faith. It was for the sake of their religious faith that the pilgrims and puritans settled in Massachusetts, and the Catholics in Maryland. Because they would not abandon the faith in which they believed the Acadians came to Louisiana and planted the seeds of the rich and varied culture which this great State now possesses. America owes her inspiration to religious faith.

In 18th century France a new ideal for human society began to move through the minds of people. That ideal came to be summed up in these words—liberty, equality, fraternity. It spread across Europe with the armies of France. It crossed the seas to America and was written in words of living, challenging truth by Thomas Jefferson into our Declaration of Independence.

"We hold these truths to be self-evident: That all men are created equal, that they are endowed by the Creator with certain inalienable rights, that among them are life, liberty, and the pursuit of happiness, that to to protect these rights governments are instituted among men, deriving their just powers from the consent of the governed."

Those words inspired a ragged, ill-fed Army under George Washington to win a long war against the greatest colonial power of the

time. They rang around the world and to this day they bring hope of dignity and a better day to struggling peoples in every part of the globe. For the ideal of the Declaration of Independence and of the French statement of the Rights of Man is an ideal fundamental to human life. It is an ideal which all the might of Russian tanks and all the cleverness of Communist indoctrination has not killed and never will kill in the minds of the brave Hungarian people. It is the ideal of the dignity of man, of the right of all people to be free because they owe final allegiance only to God, and derive all other loyalties—to family, community group, or nation—from that final loyalty to God. It is the ideal of the fraternity and brotherhood of people like you and me and the billions of others like us in the world. And in America, I think, we have come closer to it than has ever been done elsewhere in the world's history.

For nearly 2,000 years the most profound influence on the social, economic, and political life of man has been one simple phrase. It was given us as a Commandment by our Lord. He said then and He has been saying ever since: "Thou shalt love thy neighbor as thyself." This was His central social teaching, second only to the First Commandment to love God with all one's heart and soul and mind. How well we have kept it is a question. But there can be no question at all that it has been the guiding light for those who have sought to build better communities, better societies, and a better world.

The courage and vision of Columbus, the willingness to endure hardship of those who sought liberty to follow their chosen faith, the insight of Rousseau and Jefferson into the fundamental facts of human relationships—and over and above and beyond all these the Great Commandment to love our neighbors as ourselves, and to practice fraternity and mutual aid—these have been the ideals which have inspired the mind of America and shaped the development of all her best institutions. Credit unions, for example.

As our own 20th century dawned the United States of America was a young giant of a nation, possessed of very great natural resources, populated by a creative, dynamic, ingenious people, and above all blessed with a deep spiritual heritage and a large and generous soul.

There followed in the 20th century two World Wars. Partly as a result of the demands of these wars but more fundamentally because of the organizing and inventive genius that had developed among our people, America's might, her productive power, her wealth, her world leadership grew by leaps and bounds.

But along with all this tremendous material progress there have come about certain changes in our country's life which should cause every one of us to stop and think. All through our early history it was the free land frontier that virtually guaranteed freedom and opportunity to every reasonably ambitious American family, because the frontier offered economic independence to people. Today that frontier is gone and people have to make opportunity and gain freedom and build their own institutions that can take the place of the land in giving them economic independence. America was once a land of many, many small businesses each with a reasonably equal chance to grow and expand. Today we are a nation of a comparatively few gigantic businesses which draw the smaller ones more and more into their orbits and—perhaps without even intending to do so—make the smaller businesses that survive depend on the great ones.

The House Small Business Committee, headed by Congressman WRIGHT PATMAN, recently showed that our 500 biggest corporations, each with assets of over $100 million, owned 51½ percent of all manufacturing assets in 1952, but had boosted this percentage to 57 percent in 1955. From 1953 to 1955 there was a net loss of 19,000 manufacturing companies in the country. If present trends continue, the committee asserted, these 500 firms will own all the Nation's factories by 1976.

We owe much to our great corporations. They have almost deluged us with a flow of useful and enjoyable goods. But this should not blind us to the fact that the people as a whole, the millions of us, are in danger of losing our feeling that we can take part in guiding the destiny of our country. We are in danger of losing our feeling of being responsible for economic decisions that can really affect the welfare of our families, our communities, and our Nation. The people are in danger of losing these things because they are losing their chance to exercise responsible ownership over part—even a small part—of our country's economic system.

Therefore, the most important single thing that any of us can do for our Nation's life today is to help restore this responsibility, this feeling of having a part in making significant economic decisions, this feeling that part of American economic life belongs to me, as one of the average citizens of our country. This is exactly what credit unions do.

We face across the world sinister forces committed to an opposite idea. The forces of world communism are committed to bigness and to concentration of power. The threat of communism cannot be destroyed by building our own kind of bigness and concentrated power.

But there is one thing which we possess which Russia lacks and which every Communist country and every dictatorship country of every sort will always lack. That something is here in this meeting tonight and in other meetings like it all over our country. That something is a free people, a people free enough and wise enough to use their freedom to solve their problems and build their economic strength and security together, voluntarily. In the contest between our way of life and the Russian way of life the one thing we need most and the one thing that will best assure our ultimate victory is a demonstration that in this world of bigness and of scientific and production marvels it is still possible in America to have not only a government but a political and social and economic system of, by, and for the people.

The way to do this is well known. It is as old as man. It is as young as America. It has run like a silver thread through all our history. It is with us here tonight.

What is that way? Let me read it to you from the policies of CUNA, established by the national directors of the Credit Union National Association and amended to May 1956. Article 1 of these policies is called "objectives," and the first, second, and fourth of these objectives read as follows:

(a) To advance, encourage, and foster the principles and practices of cooperative pooling and use of the credit and financial resources of average salaried and income groups.

(b) To exemplify the ideals of the equality of man, freedom of opportunity, and unselfish cooperation by their practical application in the control and use of credit and financial resources.

(d) To afford all persons an opportunity to have a direct voice in the control of all public financial and economic affairs.

Everything I have been saying in this speech is summed up really in these three brief statements. The first of them talks about the cooperative pooling and use of the credit and financial resources of average Americans. And the second one tells the reason for doing this—because the ideals of equality, freedom, and unselfish cooperation demand it.

The story of credit unions is the story of how by the simple application of the principle of mutual aid more than 8 million families in the United States and 10 million in North America have been able to accumulate their savings together, to borrow from and pay interest to themselves, and thus to accumulate assets of more than $3 billion in their own names. Credit unions have proven the safest place for people to put their money. Ninety-six percent of credit unions survived the financial crisis of 1929. The highest percentage for any other kind of lending institution was 68 percent. The figures show that even as to that small percentages of credit unions that have had to be liquidated, their members and depositors have received back in the overall more than a 100 percent of the money they put in. These figures are for Federal credit unions. During the past couple of years when every other institution including even the United States Government has been sharply raising interest rates, credit unions alone have stood against this trend and so far as I know have not raised their interest rates at all. Despite this fact in one State alone in 1956 credit unions returned in patronage refunds to their borrowers almost $2 million.

If this practical application of a great ideal is worth working for, it is also worth contributing something to.

I believe you have under consideration at this meeting a revised dues structure for the Louisiana Credit Union League. I hope very earnestly that the delegates will look favorably upon that proposal.

Now, the fourth objective set forth by the national directors of CUNA reads like this: "To afford all persons an opportunity to have a direct voice in the control of all public, financial, and economic affairs." There in one sentence is a statement of what I said a while ago was the most important economic need of our country today. But this right of the people to an opportunity for a direct voice in the control of public, financial, and economic affairs, is under attack today. It is under attack in many ways by forces very powerful and very well financed and very clever. An evidence of that attack is the pamphlet entitled "Credit Unions" put out by a special committee of the National Tax Equality Association.

This pamphlet complains because the percentage of the small-loan business which credit unions provide has increased faster than the percentage done by some other types of lending agencies. What is not said in this pamphlet is that the increase in credit-union business has been largely at the expense of the very worst type of usurious money lenders. Whereas, other legitimate and reputable money lending institutions have increased just about as fast as credit unions. Another thing that is not said is that it was credit unions which demonstrated to the banks of this country the practicability of serving the people adequately with personal and family loans. Before credit unions became important, banks made hardly any such small loans. Today, they make a great number of them, because credit unions showed the way. Instead of attacking credit unions, the banks of this country ought to be praising them. Many of our best bankers do exactly that.

Let no one deceive himself that these attacks upon institutions like credit unions or similar forms of enterprise are going to diminish in intensity in the immediate future no matter what you may do. Least of all will they diminish if any of us attempt to deny the faith that is in us or attempt to represent our institutions as something other than what they are.

We are not against large-scale modern industry or finance. But if we are to have a vital democratic society true to the ideals of

our country, we must have institutions like credit unions to go along with large-scale industry and business. And it is quite indefensible for the other lending institutions of this country, which now have, at the very least, between 82 and 85 percent of the small-loan business, to insist they should have every bit of it by attempting to use political means of attack on credit unions.

The forces which are now seeking to eliminate the competition of credit unions and other types of mutual businesses like them would naturally prefer to pick us off one at a time. Credit unions might or might not be their first target. But once credit unions were isolated and their natural allies weakened, their politically organized competitors would hit credit unions all the harder. It is a false hope to think that isolation can help in a situation like this.

The only way to stop attacks on credit unions would be to stop their growth.

This would be a crime, not only against the credit-union movement but against the welfare of our country. This is why the only thing I personally or the cooperative league desires in connection with the credit-union movement is that it continue to grow and expand and succeed in bringing more and broader benefits to more and more people who need them. I would say the same thing, of course, about any other kind of the democratic voluntary people's institutions.

There is an utterly false and un-American idea abroad today. Clever propaganda is actually trying to establish the idea that there is something wrong or queer about it when groups of people join together to do something for themselves instead of depending upon big government or big industry or big finance to do it for them. We are being told we should be dependent on bigness. This idea is wrong. It is contrary to the traditions of our country. Nothing, in fact, could be further away from the traditions of our country than the idea that the people should be dependent. Credit unions are in business to make them independent, and credit-union experience stands like a rock against the false idea I just described. Those who know the fruits of the people's economic independence and who will defend the right of all people to serve themselves through mutual-aid user-controlled economic institutions will not give up this fight. The future of the American ideal depends on our winning that fight.

Every great movement among the people must pass through three stages of development. The first is the stage of beginnings when the movement is small and weak and regarded by those outside it as a sort of harmless dream of idealists. But in the second stage the movement begins to gain real strength. Its growth becomes more rapid. It begins to actually change conditions that were wrong and to bring its benefits to substantial numbers of people. It is in this second stage of development that the enemies of the movement begin to attack it in earnest in the hope of destroying it or at least stopping its growth before it reaches the third stage, which is the stage of general acceptance as a valued part of the life of a nation or society.

The credit-union movement is in the second stage of its development right now. It is at the fork in the road. One fork leads downhill. It is the easy one to take. It is the road whose signpost says: "Stay small. Don't grow any more. Don't challenge your big competitors any farther." The other fork in the road leads uphill. It is the hard one to take. Its signpost says: "Build more credit unions and build them stronger and broader and better. Grow and keep on growing, for your influence is good and your challenge is good, even for your competitors."

I have no doubt which one of these roads you people in Louisiana are going to choose. You will choose the uphill road, I know. You will choose it because it is right for you to do so. But as you make that decision remember that it will require dedication and hard work. It will require devotion to your ideal of mutual aid among people. It will require a willingness to stand against attack, never run away from it.

All these requirements I know you will fulfill.

Ideals are the dynamic of all human progress. They are the lasting values in human societies. They are the values we must never neglect in this atomic age, if we are to hope to be, in any degree, the masters of our destiny.

The Late Dr. Dowell J. Howard

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. ABBITT. Mr. Speaker, early this year the Commonwealth of Virginia lost an outstanding, loyal, dedicated, Christian servant.

The death of Dr. Dowell J. Howard, State superintendent of public instruction in Virginia, on February 23, is mourned not only by those with whom he was closely associated in Virginia but also by educators throughout the Nation. In his passing, education has lost a beloved and esteemed leader.

Dr. Howard's entire career was in the field of education. A native of Maryland, he received his B. S. and D. Sc. degrees from the University of Maryland and his M. S. degree from Virginia Polytechnic Institute.

He came to Virginia early in his career to serve 37 years in various educational positions, as a teacher and principal in the public schools and later in administrative positions in the State department of education.

Throughout his career, Dr. Howard never lost sight of the goal to which he aspired—to spend his life and energy in the betterment of educational opportunities for all the children of all the people—not only in Virginia but in the Nation. He was a calm, straight thinking individual with a firm belief that the people of his State to whom the schools belonged would in the end have the right judgment in the determination of school policy. In his last report as superintendent of public instruction he stated his conviction that—

It is important that we avoid diversion from the fundamental purposes and progress of a sound system of education for the children of Virginia. * * * Problems will not be solved by sudden and emotional decisions but only through the exercise of reason and intelligence. * * * Whatever the crises, whatever the challenge, whenever and however met, it will be met by the people. It is our wish that they have right judgment in all things.

He possessed the rare ability to inspire devotion and steadfast loyalty in those who worked with him. His personal relationships were marked by consideration for those around him and a deep sense of the dignity and worth of the individual.

The children of Virginia bowed their heads in sorrow at the passing of this man. Their feeling is typified in the words spoken by the young vice president of the Virginia association, Future Homemakers of America, at a memorial service for Dr. Howard:

We are joined together in sincerest feelings of humility as we honor the memory of Dr. Howard who gave the utmost of sympathy, understanding, and helpfulness during his lifetime to the present and future well-being of the boys and girls of Virginia.

The NAM Plan for Income Tax Reduction Perpetuates Discrimination Against the Self-Employed, Milwaukee Attorney Argues

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. REUSS. Mr. Speaker, Members of this House who are concerned about income tax relief for the self-employed will be interested, I believe, in the following analysis prepared by an able Milwaukee lawyer, Richard H. Tyrell, Esq. Mr. Tyrell argues that the 5-year plan for income tax reduction put forward by the National Association of Manufacturers Taxation Committee is deficient because it perpetuates the present discrimination against self-employed citizens. Before any general reduction of rates on a substantial scale occurs, this discriminatory treatment should be ended:

COMMENTS ON OBJECTIVES OF KEOGH-JENKINS BILL IN RELATION TO NAM'S 5-YEAR PLAN FOR INCOME TAX REDUCTION

(By Richard H. Tyrrell)

Reference is made to the December 1956 booklet of the NAM Taxation Committee in support of the 5-year plan for income tax reduction.

This booklet restates the committee's position upon the so-called self-employed plan. I wish to refer to those things which I consider illogical and inconsistent in the NAM committee's position and which I think weaken its advocacy of the 5-year plan. I intend my comments to be constructive.

The overall objectivs of the 5-year plan are important and vital to our national economy. The plan is presented under the heading "Facing the Issue of Income Tax Discrimination."

I think that the Congress should first "face the issue" of income tax discrimination as it now exists between two groups of taxpayers—one group (by far the larger) consists of employees (including officers) of incorporated business, the second group consists of self-employed small business and professional people who, by choice or circumstance, go it alone.

The employee group (including officers) for years have enjoyed deferred compensation plans, profit sharing plans, stock option plans, pension and retirement programs, by which taxation of the income presently earned by the employer (actually by the employees, as I shall attempt to show later)

A PRECEDENT

14th amendment, other States or communi-

admission to the college. They met all quali-

but earmarked for the employees is postponed until a later date—usually until retirement. This has been done by means of what the NAM committee calls "gadget relief" (pp. 14–15) as applied to attempts of the self-employed to seek similar benefits.

A very large percentage of the income taxpayers of this country, having obtained this gadget relief, now through the effective mouthpiece of NAM: "One healthy result, however, of all the charges and countercharges about tax loopholes, gimmicks, and special privileges, is the growing realization among tax authorities that the core of the problem is the rates, and that the most direct and equitable means of tax relief is to reduce rates. It is now generally agreed that introduction of special devices instead of reducing rates simply whittles away the revenue by reducing the base of taxable income" (pp. 14–15).

And the self-employed plan (designed to give the self-employed some relief comparable to that enjoyed by corporate employees—including officers—opens an area for further "gadget relief."

This plan is opposed by NAM not because of lack of sympathy for the motivation, but because it is simply another means for avoiding the issue of the burden of excessive rates of income tax on middle and high incomes. Enactment of such legislation would inevitably postpone the time when the basic issue could be met (p. 15).

In other words, the group of employees of incorporated businesses (by far the larger group), having obtained relief for itself (and apparently without concern for the resulting reduction in tax base), now cites the burdens of the ungadgeted self-employed to point up the issue of the burden of excessive rates. Why should they be the whipping boy?

The NAM proposal for overall reduction in tax rates is of course meritorious but why should that plan freeze the discrimination against the self-employed, many of whose members must of necessity soon retire.

Suppose that the NAM 5-year plan is put into effect. Is it likely, or possible, that during the 5 years, or at its termination when the rate reduction is in full effect, that all of the thousands of deferred compensation plans, profit-sharing plans, and the like now in effect, are going to be eliminated? If not, the discrimination against the self-employed will simply be frozen.

Industrial managements have said time and time again that in order to obtain and retain competent personnel it is necessary in these days of high taxes to provide stock options and profit sharing and pensions because a salary increase in dollars means nothing. These plans are admittedly plans for additional compensation for services presently rendered but to be received and taxed later when incomes are lower and retirement exemptions are greater.

Attention is invited in this connection to the statement on page 16 of the NAM booklet that employees under company pension plans are not now entitled to deduct their contributions to such plans. That is only grammatically true, for, as above shown, they are not presently paying a tax upon that portion of their compensation which is paid by the company—not to them, but to a fund for their future benefit. That is the essence of the plan for the self-employed (Keogh-Jenkins bill, for instance) who have no employer's staff to work out and administer a retirement program for them.

NAM also fears the self-employed plan because "as a matter of normal business, the insurance companies would bring out a variety of retirement annuity plans designed to appeal to various segments of the population" (p. 15). Industry has made wide use of insurance companies in funding and otherwise financing its own gadget relief plans and apparently has done so because of the financial stability and economical administration offered by such companies. The NAM statement merely emphasizes its disregard of the real discrimination that now exists between groups whose members are otherwise equally burdened by the excessive income tax rates.

I submit that the NAM article on the self-employed plan is summed up by the statement that "now that we incorporated businesses have obtained our tax gadgets, tax gadgeting has gone far enough, even though discrimination results to the self-employed segment of the country's earners; therefore give everybody income tax relief by reducing rates but preserve for us the gadgets already achieved."

Congress should first adopt the Keogh-Jenkins bill and then adopt the NAM 5-year plan.

The So-Called Civil Rights Bill

EXTENSION OF REMARKS
OF

HON. D. R. (BILLY) MATTHEWS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 7, 1957

Mr. MATTHEWS. Mr. Speaker, I am opposed to the so-called civil rights legislation which is now being considered by the House Committee on Rules. I have previously stated to the House my reasons for objecting to this legislation which I believe is a violation of States rights and the chief purpose of which is to satisfy the wishes of a minority of our citizens for political purposes.

Each day I am more confirmed in my opposition to this so-called civil rights legislation. I read in the CONGRESSIONAL RECORD of yesterday the extension of remarks of two of our colleagues concerning a recent ruling by the United States Supreme Court which emphasizes the fears those of us living in the Deep South have about what will happen in our section of the country if civil rights legislation is passed. I refer to the ruling by the Supreme Court which held that Negroes are being unconstitutionally excluded from Girard College in Philadelphia, Pa. Girard College, which is not supported by public funds, was set up 125 years ago and has been maintained ever since by a private trust fund donated by a wealthy Philadelphian, Stephen Girard. In his will, Mr. Girard specified that his money should be used to provide a school for "poor male white orphans."

I note with grave concern that the Supreme Court has held that since Girard College's board of directors is an agency of the State of Pennsylvania, that even though the board was acting as a trustee for the Girard trust fund, it cannot refuse to admit Negroes because that amounts to discrimination by the State.

I am not a lawyer, but it seems to me that this ruling by the Supreme Court has set a dangerous precedent in denying a man the right to dispose of his own money as he sees fit.

In the present-day atmosphere of centralization of money control and thought control in the Federal Government, I intend to oppose this trend in every proper manner possible. Certainly, if the so-called civil rights legislation were passed denying our citizens the right of trial by jury and subjecting us to the increasingly bewildering interpretation of our laws by the Federal courts, those of us who live in the Deep South can foresee grave and almost limitless dangers ahead.

I am pleased to present the complete story of the Girard College case as it appeared in the U. S. News & World Report in its issue of May 10, 1957:

NEW TANGLE OVER INTEGRATION—SUPREME COURT RAISES QUESTIONS OF PRIVATE SCHOOLS

(Are some private schools now going to be compelled to admit Negro students? This is just one of the questions that are being asked as a result of the latest ruling on racial integration by the United States Supreme Court. Doubts about many charitable trusts also are created. Here is what this ruling is—and what it may mean.)

A ruling by the United States Supreme Court is raising some new questions about racial integration.

The Court last week held that Negroes are being unconstitutionally excluded from Girdard College in Philadelphia, Pa.

What brings up the questions is this: Until the Court ruling, Girard College was regarded as a private institution. And it was assumed—even after the Supreme Court outlawed segregation in public schools 3 years ago—that races could continue to be separated in private schools.

NO PUBLIC MONEY

Girard College is not supported by public funds. It was set up 125 years ago, and has been maintained ever since, by a private trust fund donated by a wealthy Philadelphian, Stephen Girard. In his will, Mr. Girard specified that his money should be used to provide a school for "poor male white orphans."

The Supreme Court held, however, that Girard College's board of directors "is an agency of the State of Pennsylvania." Therefore, the Court said, "even though the board was acting as a trustee" for the Girard trust funds, its refusal to admit Negroes amounts to "discrimination by the State." Text of the Court's ruling appears on page 56.

Now, as a result of this ruling, it is being asked:

How far is this judicial reasoning likely to be extended?

What other schools now considered to be private may be held to have a public character? Will those schools also be required to integrate?

What about private schools which may be set up in some Southern States in an attempt to avoid mixed public schools? Will they be forbidden to segregate the races?

MORE THAN RACIAL

It is not only racial discrimination that is considered to be involved in this Supreme Court ruling. Many private schools restrict admission on other grounds—such as religious faith. The question here is: Would such schools, if found to have some official trustee, be required to throw open their doors to all applicants?

Doubts created by the Supreme Court ruling are not limited merely to schools. Lawyers are asking:

What about other types of trust funds which provide benefits to people of a certain race or religion to the exclusion of other races or religions?

If the trustees of such funds are found to be agencies of the State by extension of the Supreme Court reasoning, will the restrictive clauses of such trust provisions be set aside?

A PRECEDENT

Some lawyers are saying that the Supreme Court has set a dangerous precedent in denying a man's right to dispose of his own money as he sees fit. This was suggested by the Supreme Court of Pennsylvania in its ruling on the Girard case which the Federal Court overturned.

Holding that Negroes could be excluded from Girard College, the Pennsylvania court said:

"Subject, of course, to compliance with all applicable laws, it is one of our most fundamental legal principles that an individual has the right to dispose of his own property by gift or will as he sees fit; indeed this right is so much protected that a testator's directions may be enforced even though contrary to the general view of society, and however arbitrary, unwise, intolerant, discriminatory or ignoble his exercise of that right may be. He is entitled to his idiosyncrasies and even to his prejudices."

What stirs so many questions about other schools and other trusts is the line of reasoning indicated in the United States Supreme Court decision.

Attorneys for Girard's board of directors stress that no tax money is used by Girard College. Its money came from the estate of Stephen Girard, a French-born sailor who came to Philadelphia in 1777 and built up an immense fortune as a merchant and banker. When he died in 1831, he left the bulk of his $7-million estate for Girard College.

As trustee for the college fund, Mr. Girard designated the city of Philadelphia.

SCHOOL'S ADMINISTRATORS

Since 1869, the trust has been administered by a board of directors of City Trusts of the City of Philadelphia, which administers all charitable trusts confided to the city—numbering about 90. Board members include the mayor, the president of the city council, and 12 other citizens appointed by courts.

Under this direction, the value of the trust has grown to about $98 million, and the school has grown to an enrollment of more than 1,000 youngsters.

All Girard pupils have been white. But, in 1954, admission was sought for two Negro youngsters, William A. Foust and Robert Felder. The board refused them admission because they are Negroes.

The position taken by the board was that, in administering the college, it was acting in a private role as a fiduciary for the trust—not as an agent of the State. Therefore, it said, it was bound to observe Mr. Girard's ban against Negro pupils.

The board also maintained that the 14th amendment, as applied by the United States Supreme Court to forbid segregation by a State agency, does not apply to a board which is carrying out a private trust.

STATE COURT'S VIEW

Pennsylvania's Supreme Court upheld the board's position, saying:

"The beneficiaries of the charity of Stephen Girard are not being determined by the State of Pennsylvania, nor by the city of Philadelphia, nor by this court, but solely by Girard himself in the exercise of his undoubted right to dispose of his property by will, and, in so doing, to say, within the bounds of the law, who shall enjoy its benefits."

Attorneys arguing for admission of the two Negro youngsters, however, maintained that, "in every sense of the word, it is municipal or State power which is being exercised by the board of directors of City Trusts when it administers Girard College and when it rejects Negroes from that college on the basis of their race."

It was suggested by these attorneys that, if Girard College were exempted from the 14th amendment, other States or communities might escape mixed schools by administering segregated private schools under some similar sort of trusteeship.

The view adopted by the United States Supreme Court was that Girard's board is indeed a State agency, and therefore is subject to the 14th amendment.

No oral arguments were heard by the Federal Court in reaching its decision, and it issued only a brief ruling which did not detail its reasoning.

ALL TRUSTS AFFECTED?

Now, pondering that brief ruling, lawyers, private school boards and trustees throughout the country are wondering where the decision may eventually lead.

Lawyers point out that enforcement of charitable trusts is generally the responsibility of a State attorney general, and that trustees are commonly named by State courts.

Some ask whether this might be construed to mean that virtually all trusts are enforced by State agencies—and whether this would mean that no discriminatory clause in any trust provision could be enforced.

The Pennsylvania Supreme Court gave an indication of how far such an interpretation might reach by commenting that private trusts for charitable purposes "abound in overwhelming numbers." It said:

"We have charitable trusts for ministers of various church denominations, for foreign missions, for churches, priests, Catholics, Protestants, Jews, whites, Negroes, for relief of the Indians, for widows or orphan children of Masons or other fraternities, for sectarian old-folks homes, orphanages and so on.

"Certainly no one would contend that a donor or a testator could not establish a charity, the beneficiaries of which were to be those whom he designated—persons of any prescribed race, creed, or color, or however otherwise differentiated."

ALTERNATIVES

In the case of Girard College, lawyers suggest that three possible courses now lie open:

A Pennsylvania court might appoint a new trustee—one not connected with the city.

Negroes may be admitted to Girard.

If courts conclude that neither of these courses would legally fulfill the trust, the money would revert to the State or Federal Government for development of inland waterways—as Mr. Girard's will provided. In that case, the school would be closed.

In any case, a lot of people are left to wonder how far the United States Supreme Court will go in the elimination of segregation and whether private schools will be integrated next.

LATEST RULING BY UNITED STATES SUPREME COURT ON SCHOOL SEGREGATION

Following is the text of the ruling by the United States Supreme Court in the Girard College case, handed down on April 29, 1957:

"PENNSYLVANIA VERSUS BOARD OF DIRECTORS OF CITY TRUSTS OF PHILADELPHIA

"Per curiam: * * * Stephen Girard, by a will probated in 1831, left a fund in trust for the erection, maintenance, and operation of a 'college.' The will provided that the college was to admit 'as many poor white male orphans, between the ages of 6 and 10 years, as the said income shall be adequate to maintain.' The will named as trustee the city of Philadelphia. The provisions of the will were carried out by the State and city and the college was opened in 1848. Since 1869, by virtue of an act of the Pennsylvania Legislature, the trust has been administered and the college operated by the 'Board of Directors of City Trusts of the City of Philadelphia.' * * *

"In February 1954 the petitioners [William A.] Foust and [Robert] Felder applied for admission to the college. They met all qualifications except that they were Negroes. For this reason the board refused to admit them. They petitioned the Orphan's Court of Philadelphia County for an order directing the board to admit them, alleging that their exclusion because of race violated the 14th amendment to the Constitution. The State of Pennsylvania and the city of Philadelphia joined in the suit also contending the board's action violated the 14th amendment. The orphan's court rejected the constitutional contention and refused to order the applicants' admission. * * * This was affirmed by the Pennsylvania Supreme Court.

"The board which operates Girard College is an agency of the State of Pennsylvania. Therefore, even though the board was acting as a trustee, its refusal to admit Foust and Felder to the college because they were Negroes was discrimination by the State. Such discrimination is forbidden by the 14th amendment. * * * Accordingly, the judgment of the Supreme Court of Pennsylvania is reversed and the cause is remanded for further proceedings not inconsistent with this opinion."

Israel's Independence Day

SPEECH

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1957

Mr. FRIEDEL. Mr. Speaker, it gives me pleasure to be able to give the people of Israel this message of encouragement and hope, despite the present dark and threatening clouds of possible further conflict in the strategicaly important and oil rich Middle East. The State of Israel is here not only because Theodor Herzel and others conceived it, but because the drift of history made it inevitable.

At any rate, the State of Israel, recognized as such by President Truman within a few hours of its proclamation, admitted to the United Nations a year later, and carrying a population of about 2 million souls, is a fact. Israel began life 9 eventful years ago, fighting to survive. Today she is still fighting for her very life in one way or another, and with God's help, no force will be able to dislodge her.

The reason I have high hopes for a bright future for Israel is that she is a bastion and bulwark against the atheistic forces of evil communism and is, therefore, the natural and spiritual ally and kin of the United States, of western democracy, and of freedom. Also, very recent events in the United States point to a better and more sympathetic understanding in the near future, of the necessity of closer cooperation between these two genuinely democratic and freedom loving nations. We must never forget that God is the source of our strength. We look with reverence to that sacred spot on Palestine's soil, remembering that from Zion went forth the law, and the word of God from Jerusalem. We proclaim the same divine truths today, which notwithstanding the changes of time, have remained our heritage and which no powers of persecution or tyranny by the vile and venal communistic forces can destroy.

Polish Independence Day

SPEECH

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 6, 1957

Mr. DIGGS. Mr. Speaker, on May 3, 1791, the Polish people, in freedom-loving tradition, adopted one of the first European democratic constitutions.

In their heroic struggle to maintain their freedom, we in America feel a close kindredness. This bond was early established by such men as Tadeusz Kosciuszko, the Polish general and national hero who came to America in 1777 to aid the cause of American independence. Despite its own economic plight, the Polish nation—continuing its firm alliance with the cause of freedom and democracy—extended a helping hand to Hungary in her resistance to the strangling hold of Communist oppression.

On the 166th anniversary of Polish independence, we pay humble tribute to these courageous people, and we take this opportunity, also, to salute our own loyal citizens of Polish descent. For Poland's example, democracy is eternally grateful.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

The Road Ahead for Business

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. MARTIN of Iowa. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered before the annual convention of the Junior Chambers of Commerce of Iowa at Waterloo, Iowa, on May 4, on the subject, The Road Ahead for Business."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ROAD AHEAD FOR BUSINESS

(Address by THOS. E. MARTIN, Republican, Iowa, before the annual convention of the Junior Chambers of Commerce of Iowa, Waterloo, Iowa, May 4, 1957)

Mr. Chairman and my good friends of the Junior Chambers of Commerce of Iowa, it is a great pleasure to address your convention tonight. The many communities of Iowa are no different from any firm or any organization—they need the enthusiasm, the interest and the new blood of their younger members in order to stay alive. Through the junior chambers of commerce, the towns and the cities of Iowa benefit greatly from your knowledge and your services. To say you are doing an outstanding service for the areas in which you live would be a gross understatement. You are making a significant contribution, not only through the many worthwhile projects you initiate and carry through, but also by the very fact that you care enough about your community to work for it through your organization. I sincerely congratulate you on your interest and your service.

I am going to talk to you about "the road ahead for business." Since most of you participate in the business life of your community, the future road of business is of real interest.

You and I have a common meeting place for my brief remarks tonight. You participate actively in the business world of today and I am employed as one of your servants in government. Our mutual interest concerns the blending of these two forces—business and government. In the complex world of today government and business are thrown together in a variety of ways. That association generally works to the great benefit of both. Whenever the association works to the detriment of business, it behooves all of us to do what we can to improve matters and when a business group has organized a monopoly that restricts trade and the free flow of commerce, Government must step in.

There are other instances where the Government has undertaken competitive business operations that are not warranted. I have had a firsthand view of some of the abuses that have occurred. When I became a Member of the Senate, I was assigned to the Government Operations Committee. One of the subcommittees of that group is the Subcommittee on Reorganization of Government. We have been holding hearings and investigating the recommendations and findings of the second Commission on Organization of the Executive Branch of Government—the Hoover Commission—headed by a truly great native Iowan, former President Hoover.

In almost 2 years of committee hearings on the report of both the first and the second Hoover Commission, I've seen the work of the various junior chambers of commerce, all across the country. It is my impression that in many, many areas the junior chamber was one of the first—and often the very first—organization to put its weight behind the recommendations of the Hoover Commissions. For that interest and public service, I sincerely congratulate you. In turning your efforts toward one of the great tasks facing our people today—that of reorganizing certain portions of our Government—you are fulfilling one of the public services for which the junior chamber of commerce was founded.

National defense, security, and the general public interest sometimes justify active conduct of limited business operations by the Government, but in my service on the Subcommittee To Study the Findings of the Hoover Commission, I have seen a great number of instances where Government has violated its proper role in relation to business. To emphasize this point, allow me to pass on to you some of my observations.

It is impossible to make a precise estimate of the number and type of private enterprises into which Government has extended itself in the last several years. We did discover, however, that within the Department of Defense alone, the total number of commercial and industrial-type facilities that were owned by the Government exceeded 2,500. Our subcommittee was told by the Hoover Commission that on the 31st of December 1954, there were 47 categories of this type of enterprise that the Defense Department was operating. The list is far too long to enumerate now, but let me call off a few of them for you. Each of these is an instance where the Government actually owned and operated the business: A clothing manufacturing plant, a paint factory, an ice-cream plant, an eyeglass manufacturing firm, a furniture repair shop, a cement mixing plant, a tree and garden nursery, a coffee roasting business, an airline, a steamship line and a railroad. The estimates were that the total Government capital involved probably exceeded $15 billion. I believe your conclusion is the same as mine.

It is easy to see how the Government became involved in these businesses. Because of exceptional circumstances—an economic emergency or perhaps the emergency of war—the Government became involved in areas usually reserved for private enterprise. But the continuance in business by Government long after the emergency had passed is a different matter. In 1954, a subcommittee of the House Committee on Government operations found that from 1929 to 1948 public wealth had grown 287.5 percent while private wealth had increased only 78.7 percent. In 1929 the public wealth represented only 15 percent of the total national wealth, but in 1948 the public wealth amounted to 27.3 percent of the total national wealth. These figures occasioned this comment from one of the Government leaders in Washington: This is not creeping socialism—it's galloping along at a very fast pace.

There are many reasons why this is an unfortunate trend—why this trend must be stopped. In the first place it violates the basic principles of our Government. Without any question, our Constitution places protective and regulatory functions in the Federal Government rather than the right to produce goods and services. Government is not supposed to compete with private business.

Secondly, the competition that is established between private business and Government is not only a breach of principle, but it is decidedly unfair. As you very well know, one of the items that is highly important in establishing a record in business is the ability to keep production costs at a minimum. The businessman who keeps his costs below his competitors has a better chance to establish a lower cost for his product. When business and Government are the competitors however, Government has certain advantages on its side. For example, Government business enterprises are usually relieved of many important charges private business must pay—charges like taxes, interest, depreciation, a full payroll and fringe benefits to personnel. I'm certain if your competitor were allowed to ignore these charges you would consider the competition highly one-sided, yet when Government is doing the competing, it enters the economic battle with these built-in advantages.

There are two possible reasons why Government has continued in these business activities. I have little patience with either of them. One reason is the natural resistance to change of great size and magnitude in established operations. It certainly is easier to let things ride, but we can't afford to ignore any fundamental disregard of principles. The other reason is that the advocates of Government in business sincerely believe Government can do a better job than private enterprise. Such persons haven't read their history lessons carefully enough. They don't understand the philosophy of our Constitution, our Government or our people.

I'm proud to report to you this evening that in Washington we are doing something about this breach of principle. In the last 2 years the Defense Department alone has closed down 359 Government businesses, and action by other agencies brings the total closed down to almost 500. Each of these 500 examples is an instance wherein the Government formerly operated a business—operated it in direct competition with private business—operated it to such an extent that in some cases it gained a monopoly because private business couldn't compete and had to fold up—but in each of the 500 cases the Federal Government is now out of private business and free enterprise has gained what it should not have lost. I'm proud of the job we've done in the past 5 years. It's sheer nonsense to find the Government involved in making bread, mixing cement or repairing furniture. But a great deal remains to be done. We find special pockets of resistance whenever we start to translate a recommendation into a concrete removal of Government from a specific business field. We will continue the fight to keep Government where it should be. And we welcome the support of such fine groups as the junior chambers of commerce.

I may have given you the idea that Government should never be involved with business matters. That would be a mistaken idea. There are certain areas where Government and business can work together closely,

hand in hand, to the mutual benefit of both. One such area was aptly defined by President Eisenhower in his economic report for 1956. I would like to quote a few sentences from that report because the President puts his finger squarely on one of the most important segments of our economy:

"Government can strengthen competitive markets by helping small and medium sized businesses overcome impediments to their expansion. In our modern economy with its heavy capital requirements, high taxes and emphasis on national markets, small concerns are subject to serious handicaps in many lines of endeavor. Yet the continuance of small and medium sized businesses, and their ability to prosper and grow, are vital to the Nation's welfare. * * * When the Government helps smaller concerns to overcome some of the hindrances to their growth, it is acting in the interests of the whole economy."

It is not my role this evening to make a partisan speech to you, but I would like to cite the record of the past five years in relation to the program to help the small businesses of the country. I'm certain you remember, as I do, the many charges that flew back and forth across the country last November to the effect that the small businessman has been the forgotten man. No speech on the future of business in our country can be complete without a recitation of some of the accomplishments in this field in the last five years.

The Government agency that is tied most directly with the small businesses of the country is the Small Business Administration. This agency, created in 1953, is the first agency in our country's history that is devoted exclusively to aiding the small businesses of the country. The functions of the Small Business Administration can be summarized into four categories:

1. To provide financial assistance and counseling.

2. To provide procurement assistance to small firms.

3. To secure for small business management and technical assistance.

4. To provide disaster loans for small businesses.

The SBA is most noted for the financial loans and assistance it provides for the small-business communities of our Nation. One thing that is highly significant is the procedural pattern of the Small Business Administration in this field. True to the principles we conceive to be basic to our economy, the SBA does not compete with private banks. It is not the function of this Government agency to compete directly with private banks for loans to small business. Rather, it is an auxiliary force—one that works with banks to the eventual betterment of the business climate of the country. Two-thirds of all loans made through the SBA are accomplished in cooperation with participating banks. I am particularly proud of the record in this field made in the State of Iowa. Without encumbering you with figures, I would like to cite the record to prove that in Iowa the SBA and the private banks are working together in a model pattern of private and Government cooperation. From the time the Small Business Administration was created until the 31st of March 1957 the SBA had approved a total of 173 loans for the State of Iowa, totaling $5,301,202. Of those 173 loans, only 20 of them were direct loans, made solely by the Small Business Administration; 80 loans were made whereby the banks nad the SBA participated jointly immediately and another 73 loans were made whereby the bank made the loan for the first portion of the term and the Small Business Administration will come into the loan picture for the latter portion of the loan term. These figures are doubly important when you realize that years ago under the RFC approximately one-third of the loans were participating loans and the other two-thirds were made solely by the Government agency. Under the SBA, nationwide, about 70 percent of the loans are made in cooperation with banks. But in Iowa, from the time the SBA started until the 31st of March this year, 88.4 percent of the loans were participating. That means that of all the loans made under the auspices of this Government agency, 7 out of 8 of them are made in cooperation with private banks. As I indicated before, this is the model pattern of cooperation between Government and private business. In Iowa it works the way it should work.

The second function of the Small Business Administration is to assist small businesses in gaining a fair share of Government contracts. There are two reasons for this policy. In the first place, it seems axiomatic that a thriving and successful small-business community is the common denominator to a successful American economy. Our system of free enterprise depends on both small and large business. By making certain the small businesses of the country receive their proportionate share of Government contracts we are helping to assure ourselves of a healthy economy. Secondly, in the event of a national-defense emergency, it is necessary that the small businesses of the country are ready for full mobilization. History makes it abundantly clear that in the event of such an emergency the country needs the efficiency and ingenuity of the small-business man.

The third function of the Small Business Administration is to provide management and technical assistance for the small businesses of the country. The significance of this assistance is highlighted by figures from Dunn and Bradstreet indicating that 86 percent of business failures are due to poor management. I'm certain you are acutely aware of one fact: today, the businessman is competing in a highly complex business world of accounting practices, cost controls, time and motion studies, and a great variety of similar business practices and studies. The SBA's program to grant technical assistance and managerial aids to small-business men puts him on a more nearly equal footing with his big brother.

The Small Business Administration operates this program in a variety of ways. Booklets and pamphlets are made available, courses are offered in conjunction with colleges and universities and a new products program is conducted by the SBA.

Of course, the effectiveness of Government in this program is decidedly limited. The Small Business Administration, and the top officials of the executive branch of Government, realize that such a program must be entirely voluntary in nature. Certainly you don't want the Government to step in and tell you how to run your business. But the SBA makes this information available if you desire it. This area is one in which the junior chambers of commerce might make a significant contribution to their business communities.

The fourth function of the SBA is one that fortunately we haven't needed to a great extent in Iowa. This is the function of providing disaster loans to small businesses. Since its inception in 1953, the small business administration has made a total of 9 disaster loans in Iowa, totaling slightly over $125,000. Of course, we are fortunate that we haven't had to request a large number of such loans—like the 1 year total of $5 million for Connecticut, but it is good to known this service exists if we do need it.

I have spent some time discussing the SBA with you. I feel this agency of Government is entirely worthy of praise and consideration. I'm proud of the job it is doing. For that reason, I am one of the cosponsors of legislation currently before the Senate which would make the SBA a permanent organization. I believe that certain definite advantages would result if we could make this arm of Government permanent. For example, I believe the agency would be able to attract more competent personnel if it were permanent. Furthermore, I believe the private banks around the country would be more willing to participate with the SBA if they knew it was permanent. This confidence would spread to businessmen also. In short, the Small Business Administration is doing a splendid job and I want to see it continue its program of aiding and assisting the small businesses of the country.

The small businesses of the country, and particularly those of Iowa, are making a great contribution to the economy of the country. They have shared the burdens that accompany economic or international crises. And they have contributed significantly to the strength of the peacetime economy of our country. Small business asks no special favors from this or any administration. It asks only to be allowed to grow in an atmosphere of free economy and fair competition. With all the power at my command I shall continue to work toward this goal.

Ninth Anniversary of Independence of Israel

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. JAVITS. Mr. President, on the occasion of the ninth anniversary of the independence of Israel, there was a commemorative dinner held in Washington by the women's division, American Jewish Congress. The gathering was addressed by the Ambassador of France to the United States, Hervi Alphand; by the Ambassador from Israel to the United States, Abba Eban, and by myself.

The occasion of the dinner of the American-Jewish Congress demonstrated three points which are so vital on this anniversary, first, that Israel has performed its mission of being a haven for oppressed Jews from everywhere, its doors being wide open to persecuted Jews from wherever they may come; second, Israel's able and heroic efforts to secure its national integrity and make the country viable; and, third, that Israel is a firm ally of the United States in the struggle of the free peoples of the world.

I ask unanimous consent to have printed in the Appendix of the RECORD the speech which I made upon that occasion.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BEFORE THE WOMEN'S DIVISION, AMERICAN JEWISH CONGRESS, NATIONAL CONVENTION, SHOREHAM HOTEL, WASHINGTON, D. C., MAY 6

The vital question for us as a government is United States-Israel relations and their effect on the maintenance of peace and security in the Mideast. On this, the ninth anniversary of the establishment of Israel, we note that Israel has met every funda-

mental challenge which has been extended to her.

It preserved its existence against the aggression of the neighboring Arab States—1948–49.

It met the initial challenge of absorbing the harassed and persecuted Jews from many areas of the world—from the D. P. camps, Iraq, Yemen, North Africa, Europe, even from behind the Iron Curtain—and is still meeting that challenge today. Israel's security and integrity had to be preserved so that never again, as happened in the dreadful time of Hitler's barbarism, should Jews find that they have no place to go, suffering death and extermination because they had no refuge. There is now a refuge, and this refuge is proving equal to its mission; help is, of course, needed but the structure is there of hope, not hopelessness, as before.

United States-Israel relations are much improved. Economic aid for the fiscal year ending June 30, 1957, not yet allocated to Israel, has been under negotiation since Israel's forces evacuated Gaza and Sinai. This will, I am confident, within the next few months, result in Israel's receiving the same amount of economic aid it received in the fiscal year 1956. United States technical assistance is being restored to the level it had before the October 1956 hostilities and will continue. The program of supplying agricultural commodities under Public Law 480 is also going forward and I understand the Export-Import Bank loan mission under Lynn Stambaugh will go out in July. Finally, Representative Richards and his mission have just been in Israel on the Eisenhower doctrine but neither Israel nor our Government has as yet announced a policy.

The value of Israel's contribution to the peace and security of the free world can be seen from its policy in the recent Jordan crisis. Israel's sensible, hands-off action contributed greatly to the solution of what might have been the start of world war III. Israel made no threats and took no action to deepen the crisis. Yet the mere fact of Israel's presence on Jordan's border—and its strength—appears to have been an important factor in restraining Egypt and Syria from aggressive action there which would inevitably have involved others and put in jeopardy the survival of Jordan itself as a country.

Now, as to Israel's security and integrity—its security and integrity depend upon two factors. First, is it economically practical? And second, will it be submerged by some form of forceful attack from the outside? Now as to its economic viability, it is making great strides ahead. It still has a very serious imbalance in its foreign exchange position, but this is attributable primarily to the blockade, boycott, and other unfriendly economic actions by the Arab States which surround it and which are its natural market. It might well be pointed out that the Arab States are passing up the chance for tremendous economic boons, for Israel is a great manufacturer of inexpensive goods which could contribute greatly to enhancing their own standards of living. Some peaceful understanding with Israel—which Israel has consistently proposed—and an end to Arab intransigence would solve the Palestine-Arab refugee problem, make the Jordan River waters available for irrigation to Israel and its neighbors, relieve both of heavy military phases of it. I think the chances priceless and technical assistance for a reflowering of the Middle East.

As to military security, I think Israel has shown its capability for meeting challenges in the action which took place in the Sinai desert, and I am speaking now only of the military phases of it. I think the chances are now excellent that transit of Israeli shipping through the Gulf of Aqaba will be secured by international means and, indeed, with the support of the United States which I believe to be indispensable in that regard—and which should be forthcoming.

I think in the Suez Canal there is going to be a real struggle. But there the whole Western World has a struggle. I strongly advocate the fact that the free world take vigorous and effective measures to seek and to back our friends in seeking alternate routes for moving Mideast oil to Europe and bypassing the Suez Canal. Because I think the Suez Canal is the Achilles' heel of Colonel Nasser, who represents, in my opinion, practically a stalking horse for everything that the Communists want to accomplish in the Middle East.

As for the Gaza strip, I think the U. N. emergency forces are serving a real purpose there. Now what happened there in admitting the Egyptians to civilian control and of the joining of certain Arab police on the Gaza strip border with Israel is not to the liking of many of us, including myself. But I think the important thing is that the UNEF is there and remains there and our determination must be to keep it there, because it does seem to be doing a fairly practical job or restraining infiltration raids across the border into Israel.

In short, I think Israel will live, survive, be successful and do its job; and I have tried to outline some of the things that we need to do in commemoration of this great anniversary in helping Israel. Beyond everything else, let us not forget that our support both financial—which includes the United States Government and individual Americans—and moral must continue to be forthcoming for considerable time to insure what we aspired to for Israel—its security and independence; its ability to perform its mission for harassed and persecuted Jews everywhere, and its continued cooperation as a strong ally of the free world.

Pilgrimage to the Alamo

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. JOHNSON of Texas. Mr. President, there is no shrine that is closer to the hearts of Texans than the Alamo. For more than a century, it has served as a constant source of inspiration.

Every year, during Fiesta Week in San Antonio, there is a pilgrimage to the Alamo. This year the speaker was Maj. Gen. H. L. Grills, commander of Lackland Air Force Base.

General Grills did a superlative job of capturing the spirit which has made the Alamo a permanent part of American history. I ask unanimous consent that his remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MAJ. GEN. H. L. GRILLS, COMMANDER, LACKLAND AIR FORCE BASE, TEX., AT THE PILGRIMAGE TO THE ALAMO, APRIL 22, 1957

I am grateful for the privilege of participating in this 1957 observance of a rite which has been practiced during fiesta week to an extent that it has developed the stature of a tradition here in San Antonio. Over the years I have constructed for myself something which I call "a claim on Texas citizenship"—a claim based on the fact of my marriage to a Texas woman and to the fact that 2 of my 3 children were born in Texas. It has been a temptation for me to carry the presumptuousness even further—there should be some way in which I could relate my Tennessee origin to Davy Crockett and his Tennessee boys, and thereby establish for myself a proprietary interest in the fame which the defenders of the Alamo created for themselves. I am afraid, however, that such an attempt on my part would affront the feelings of even my closest friends among you—and with good reason, for it is now widely conceded that those personal attributes possessed by the members of the Alamo garrison produced a result which cannot remain the exclusive property of San Antonians, of Bexar Countians, nor even of Texans. The saga of the Alamo now belongs to American history—and all Americans must be allowed to share the pride of Texans in it. It stands for all Americans as an example of that ultimate spiritual attainment which is achieved only by those who prove their willingness to give "the last full measure of devotion" to a cause in which they believe.

In further support of my contention that this consecrated spot must be considered a national shrine, let me point out that, since its earliest beginnings, the destiny of Texas has been shaped by forces assembled from widely separated external points—and Texas shows itself today as a distillation of many influences drawn together by some supernatural arrangement. Its character today is a refinement of many human qualities brought to it by the forebears of its present citizenry.

Its original colonial economy now bolstered by oil, gas, cattle, cotton, sulfur, magnesium, and the many manufactured products made possible by these commodities—its frontier lawlessness long since subdued by regard for order and insistence upon an environment of individual dignity and mutual respect—its pioneer simplicity and necessarily narrow intellectual horizons now replaced by technological development and cultural appreciation reflecting a breadth of interest universal in scope—its openhanded welcome to newcomers and its equality of opportunity having attracted outsiders in such numbers that its population now possesses a truly composite quality—its early provincialism having given way to a highly developed sense of national and international responsibility—Texas is now able, with genuine self-assurance, to share generously its magnificent heritage of which the Alamo is the keystone.

The history of the siege of the Alamo needs no recounting here. Most Americans, as well as all Texans, are familiar with that history—familiar with that meagerness of fact which inevitably resulted from the violence of human conflict in which the defending garrison died to a man—familiar also with that mass of legend which likewise inevitably grew out of that display of fanatic courage. With the passage of time, reality has undoubtedly been embroidered by imagination to an extent that any attempt today to completely separate fact from fiction would be an impossible undertaking. We can be sure, however, that, for every legendary invention, for every enlargement of fact, there occurred here a matching courageous reality which will remain forever buried beneath the dust of this plaza and in the sepulchers of those who died here. We know that history provides no comparable example of collective dedication to a common purpose. There is little, if anything, that we might say here to increase the stature of those embattled men who lived out their last desperate hours together—their sacrifice speaks for itself. Nothing can ever dim the glory with which they have surrounded themselves. They stand far beyond the reach of any who might endeavor to detract from the honor which accrues to them.

We may, however, find inspiration in a consideration of the factors which possibly influenced them to place their lives upon the altar of conviction. We can, I believe, derive spiritual benefit from a search for the answers to questions which undoubtedly have been asked with much repetition through these intervening 121 years—questions which concern the thinking, the objectives, the faith, the sense of obligation possessed by these heroic figures.

What, for example, encouraged these men to choose to fight a battle of position rather than to wage a campaign of maneuver when they knew that they were greatly outnumbered and outgunned? What prompted them to select as a battleground a site where the greater weight of local sympathy lay with the enemy? Why did the gallant detachment of 32 from Gonzales—knowing that timely aid to the beleaguered garrison from other sources was highly unlikely, if not impossible—knowing also the strength of Santa Ana's forces and the inherent weaknesses of the Alamo as a fortress—why did these courageous men unhesitatingly sign their own death warrants when it was apparent that their assistance in the fight could not of itself influence the final result? Why did the leaders of the garrison, in the face of that certain annihilation guaranteed by the enemy's flag of "no quarter," refuse the avenue of surrender when their brothers-in-arms in other locations had availed themselves of that privilege in less fatal circumstances? Perhaps they intuitively understood that they alone could insure the survival of the new Texas Nation—the nation whose independence had been so recently declared at the convention in Washington-on-the-Brazos that they themselves were unaware of the declaration. One wonders if they were encouraged by a belief that for them, for their families, and their friends, Texas was the land of promise—promise which has been fulfilled so repeatedly in the intervening years. To what extent were they persuaded by the determination of Jim Bowie, who wrote: "I will die in these ditches before I will give up to the enemy"—or by the character of J. B. Bonham, a gentle and cultured man who had no background of experience in the practice of violence, but who insisted on returning to the Alamo and to his death in order that he might inform his friends of his failure to obtain assistance? Perhaps they were simply influenced by a conviction—a conviction only vaguely understood—that a man must preserve his own self-respect and the good opinion of his associates—even though forfeiture of his life is a necessary part of this achievement.

These speculations as to motive lead us to no exact conclusion, of course. The hopes, the aspirations, and the ideals which guided these men into an eternity of honored glory cannot now be accurately assessed and assigned. We can believe, however, that the strength of each one of them generated additional strength in all of the others—that in losing their lives together their individual weaknesses were subjected to a process of sublimation which achieved for every one of them an enduring state of grace.

As we are gathered here in this twilight—in the long shadows of this sunset—at this place of sacrifice—on this hallowed ground—we can, if we listen carefully, hear the echo of their voices. The voice of Travis as he said: "I shall never retreat or surrender. Let everyone who will stay here and die with me, step across this line." And the voice of the stricken Bowie saying. "Boys I can't make it by myself, but I'd appreciate it if some of you would give me a hand over the line." Then the voice of Crockett: "I don't like to be hemmed up in here. I think we ought to march outside and die in the open air." And finally, voices in unison—a collective voice reverberating down the long corriders of time and saying: "For God and Texas. Victory or death."

These voices assure us that this sacred structure, all that remains of what was once a mission, later a fortress, and now a shrine, may crumble into dust; but, as a monument to valor, its symbolism will forever remain rooted in the hearts and minds of men.

United States Participation in Brussels World's Fair

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Empty Pavilion?" published in the Washington Post and Times Herald of May 5, 1957. The editorial bespeaks the necessity of the full appropriation requested being granted for United States participation at the Brussels Fair.

The Universal and International Exhibition of Brussels, which will open next spring, will be the first world's fair since the New York World's Fair of 1939–40. Some 35 million people are expected to attend, and more than 40 nations will participate. American participation in this fair will not only offer an opportunity for those coming to the capital city of one of our NATO allies to gain a better appreciation of our people, our culture, and our industry, but will also present an opportunity to contrast United States enterprise with that of the Soviet Union—that is, if the funds necessary for United States participation in this endeavor are forthcoming with a minimum of delay. This is one project as to which we are not asked to outspend the Soviets; as a matter of fact, an American expenditure of $15 million will suffice, as against the Soviet's $50 million effort. But to meet the Communist challenge, and a challenge it is, because the Soviet pavilion will be next to ours, we must at least be prepared to spend this fraction of the amount the Soviets are willing to put forth. To do less is to accept a decision by default.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN EMPTY PAVILION?

The Soviet Union is spending more than $50 million on its participation in the Brussels World's Fair to be held next year. Congress last year authorized the United States to join in the exhibition with the understanding that the expense would approximate $15 million. For a starter, $4 million was appropriated. Now the construction of the American pavilion is under way, plans have been laid for appropriate scientific and cultural exhibits and for participation by various representatives of the American performing arts. The energetic United States Commissioner General for the Fair, Howard S. Cullman, believes he san do as well as the Russians on his smaller budget.

But, with the opening date less than a year away, the House proposes to limit funds to two-thirds of the sum that had been counted upon. The result, if the Senate is unable to rectify the situation, will be a beautiful pavilion in Brussels emblazoned with the seal of the United States above the door—and little or nothing inside. It is too late already to shift funds from pavilion construction to other needs. If Congress does not provide adequate cash to sustain a creditable American presentation, it would be better, we think, to abandon the venture altogether.

Address by Hon. Edward Martin of Pennsylvania to Convention of International Brotherhood of Boilermakers and Blacksmiths

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered in Philadelphia yesterday afternoon to the convention of the International Brotherhood of Boilermakers and Blacksmiths.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE CONVENTION OF THE INTERNATIONAL BROTHERHOOD OF BOILERMAKERS AND BLACKSMITHS IN THE BELLEVUE-STRATFORD HOTEL, PHILADELPHIA, MAY 7, 1957

It is an honor to greet this great organization of free Americans, meeting in the city of Philadelphia, the birthplace of our liberty and independence.

Here was established a government based upon the dignity and freedom of the individual. It is the first government in world history which derives its just power from the consent of the governed.

How long that concept of government will continue depends upon the interest we take in our government. Eternal vigilance has been described as the price of liberty. No group in America has a greater interest in the size of government, the cost of government, and the overall fiscal problems of our Nation than those sehted here in this room.

Let us look at some facts. It is well known that the great burden of taxes in our country is borne by those in the low income brackets. This includes the skilled craftsman, the tradesman, the small-business man, the professional man, and the farmer.

The fact is that out of every hundred dollars you earn you turn back to Federal, State, and local government more than $30 in taxes. Three-fourths of every Federal income tax dollar is paid by men earning less than $6,000 per year. If we took every dollar from those with income taxes of more than $50,000 per year, it would only be enough to operate the Federal Government for less than a month. That shows how much economy in government means to you and to your family.

Why has government become so expensive? Why has the cost of government, Federal, State, and local combined, jumped from $13.5 billion a year 25 years ago to the present figure of $109.5 billion, an increase of

more than 700 percent. Take Federal spending alone. In 1932 the cost of operating the Federal Government was $5,125 million. The current budget calls for the expenditure of nearly $72 billion.

One reason for this great increase is that the Federal and State Governments are financing a great variety of activities that formerly were the responsibility of local government, and depended upon the self-reliance and initiative of the people in their home communities.

As an example let me cite the big increase in so-called grants-in-aid from Washington to the States. In the early twenties $100 million dollars a year in Federal funds were paid in grants to the States. This has now increased to $4 billion. With each grant there goes a measure of Federal control—chipping away at the powers and functions of State and local government, and increasing centralization of authority in the Washington bureaucracy.

There are now employed by the local, State and Federal Government more than eight million people. This does not include the Armed Services. The number of Federal Job holders has jumped from 600,000 to about 2,400,000 in 25 years, or about 4 times. The Federal payroll is $1 billion per month. It is now greater than the combined payrolls of all our steel mills or railroads in the United States.

Here is another fact. One American out of five, men, women and children, gets a check at regular intervals from Uncle Sam.

When we established Social Security in the United States the proponents said it would entirely do away with relief rolls. What is the result? We are now in the peak of great prosperity and what do we find? Five and one-half million Americans are on relief and last year it cost over $3 billion.

Another great reason for the alarming rise in the cost of Government is the constant demand from organized pressure groups for appropriations for their pet projects, for new and expanded functions of Government, for sectional advantage and for every conceivable form of spending.

That same sort of pressure must now be exerted in support of economy. If we are to achieve Government at lower cost we must develop a demand for economy, so strong and so insistent, that no one in the executive or legislative branches of Government will dare to ignore or oppose it.

There is no doubt in my mind that the drive for economy in Government can succeed if it is supported by the power and strength of organizations like this. You men are interested in keeping our economy strong. You are interested in maintaining the American standard of living—and you know that excessive spending by Government means burdensome taxes and reduced take-home pay.

The American living standard is the highest in the world because our workers and our industry have brought productivity to the highest level in the world. In our free enterprise system, which is the pride of free men everywhere, it takes a capital investment of $12,500 in order to provide a job for an American workman. Government never created any wealth or a job for anyone—and never can. Invested capital must be put to work in productive enterprise to make jobs, and capital for investment comes from our savings.

We must be continuously mindful of increasing our national productivity in order to enjoy the fruits of our labors under our great American free enterprise system. Increased production is the strength of our Nation and the key to prosperity. We are all mindful of the fact that during the past 20 years we have increased our national productivity over 35 percent per man hour. This has been accomplished under the free enterprise system by more efficient methods for our workers, better tools in the hands of our craftsman, and greater know-how by management. These accomplishments require a capital investment of dollars in the hands of individuals, and not in the coffers of Government.

It has been estimated that in the next 20 years it will be necessary to provide 20 million new jobs to care for the needs of our growing population. Government cannot do this. It will have to be done by courageous and resourceful individuals, willing to risk their savings in new and expanded enterprises. That is the only way we can create increased opportunities for gainful employment.

Let us watch the dangers confronting us. One of the greatest of these dangers is inflation or the loss of the purchasing power of the dollar. The greatest causes of inflation are taxes and burdensome debt, both private and governmental. Inflation, high taxes, deficit governmental finances, big government debt, and big centralized government have destroyed more nations than invading armies. They will destroy more countries than the most horrible bomb that could be invented.

Let us bear this in mind. No nation, regardless of how rich it may be in natural resources, can live if it must pay taxes which destroy initiative and the private-enterprise plan of economy. Let us never forget that the free-enterprise economy plan has done more to advance our living standards and our cultural and spiritual attainments than all our vast natural resources.

There are many systems of government that advocate some form of socialism. Let us look at some of the results. After 40 years, the Soviet type of communism has produced a living standard only one-tenth as high as that of the United States. The so-called Swedish welfare state has produced a living standard only one-third as high as the United States. In England, where nationalization of basic industries has continued for 12 years, the living standard is about one-half what it is in the United States.

We can have a strong and prosperous America if we work for three important objectives:

1. Labor must be gainfully employed at wage scales adequate to maintain the American standard of living.

2. The farmer must have a profitable market for his product.

3. The investor in industry must have a fair return on his investment.

If these objectives are achieved, and if they are strengthened by efficiency and economy in Government, I have no fear for the future of the United States. Above all, we must approach our problems in the American way, with courage, determination, and patriotism.

People-to-People Program

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. JOHNSON of Texas. Mr. President, all of us who have served in the House have developed a deep respect and affection for Maj. Gen. Melvin J. Maas. He is now serving as Chairman of the Committee for the Handicapped, People-to-People Program.

At a recent meeting of 47 representatives of various People-to-People Committees, General Maas secured the adoption of a resolution. For the benefit of the Senate, I ask unanimous consent that his resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION PROPOSED BY MAJ. GEN. MELVIN J. MAAS, USMC (RETIRED), CHAIRMAN, COMMITTEE FOR THE HANDICAPPED, PEOPLE-TO-PEOPLE PROGRAM [1]

Whereas the People-to-People Program after some seven months has become organized and has already made and is making a significant contribution; and

Whereas this has been made possible by the assistance and helpfulness of the Director and staff of the USIA; and

Whereas this assistance has been rendered without any strings or without any attempt at dictation but only in the spirit of helpfulness: Now, therefore, be it

Resolved, That participants in the People-to-People Program here present express their deep appreciation to the Director and staff of USIA for their great assistance in helping the program get a start.

[1] Approved unanimously by 47 representatives of various People-to-People Committees attending the short course "World Ideological Conflict" in Washington, April 8–12, 1957, under auspices of the People-to-People Program.

Australian Cloud-Seeding Experiments

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD a table listing the results of cloud-seeding experiments conducted by the Division of Radiophysics at Sydney, Australia.

It is interesting to note that in this summary both precipitation and dissipation have been effected under certain conditions and methods. In any discussion of weather or cloud modification, the effects of cloud retardation and thus of storm retardation are of considerable interest as well as the effect of increasing the precipitation.

Operations in America have also been able to produce dissipation and have thus opened interesting fields of study in the possibility of abatement of storms. Operation Skyfire, conducted by the Forest Service, seeks to determine if storms might be modified to reduce lightning, one of the major causes of Forest Fires in our western States.

Cloud modification opens vast fields. The need is great for basic research both to the increase and decrease of the effects of clouds. Information, such as that contained in this report, is both enlightening and interesting, and contributes to our understanding of the problems involved.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Summary of results of seeding experiments

[Height is given in feet, temperature in degrees centigrade, and time interval in minutes]

Date	Cloud					Seeding level	Results	Time interval from seeding to precipitation at base	Remarks
	Type	Base		Top					
		Height	Temperature	Height	Temperature				
Oct. 15, 1953	Cumulus	7,000	+4.5	13,000	−8	(1)	Moderate rain to ground	25	Only 3 clouds in area over fires. Unseeded clouds unchanged throughout experiment.
Oct. 10, 1953	do	3,000	+4	7,000	−2.5	(1)	Nil		Minimum temperature in cloud −4° C. A few drizzle drops at base soon after seeding.
Do	do	3,000	+4	7,000	−2.5	(1)	Dissipated		Dissipated rapidly 20 minutes after seeding.
Oct. 23, 1953	do	3,500	+2.5	7,000	−4	(1)	Moderate rain to ground	12	Two clouds seeded. Unseeded clouds in area also rained.
Feb. 16, 1954	do	3,000	+20	15,000	−5	(1)	Heavy rain to ground	20	Rain heaviest 25 minutes after seeding. Ceased 10 minutes later. Control clouds did not rain.
Mar. 15, 1955	do	6,500	+5	15,000	−7	10,000	Very light rain to ground	22	Faint radar echo. Large drizzle drops.
May 4, 1955	do	4,000	+6	12,000	−12	10,500	Heavy rain to ground	16	Radar echo in cloud in 12 minutes. Heavy rain to ground 26 minutes. Control clouds did not rain.
May 18, 1955	do	6,500	−2	10,000	−11	9,400	Dissipated		Dissipated almost immediately. Minimum temperature in cloud −5° C.
May 19, 1955	Layer strato-cumulus	4,500	0	8,500	−6	8,500	Drizzle	40	Slight drizzle, not to ground.
June 16, 1955	Layer alto-cumulus	8,000	+2	13,000	−7	12,500	Light to moderate rain	20	Mostly light rain. Unknown whether it reached ground.
June 23, 1955	Cumulus	3,500	+3	9,500	−9	8,600	Light rain	20	Light rain inside cloud 13 minutes after seeding, at base 7 minutes later. Did not reach ground.
Do	do	3,500	+3	9,500	−9	8,000	Dissipated		Commenced to dissipate 17 minutes after seeding. Nearly gone 6 minutes later.
June 28, 1955	do	4,000	+1	12,000	−14	10,000	Light rain	10	Faint radar echo at 9,000 feet 7 minutes after seeding. Visible rain at base 3 minutes later.
July 16, 1955	Layer strato-cumulus	4,300	0	6,200	−4.5	5,500	Nil		No change 30 minutes after seeding.
July 26, 1955	Layer alto-cumulus	10,000	−8	12,500	−12	12,000	Light rain	20–50	Rained only in line of seeding. Delay 20 minutes at deepest end, 50 minutes at other. Not to ground.
Aug. 3, 1955	Cumulus	5,000	0	12,000	−13	(1)	Dissipated		Dissipated rapidly 18 minutes after seeding.
Aug. 4, 1955	do	3,500	+5	9,000	−8	(1)	Nil		No change in 35 minutes.
Sept. 8, 1955	Layer strato-cumulus	5,000	+2	10,000	−6	(1)	Moderate to heavy rain	19	Rain accompanies by lowering of base.
Sept. 16, 1955	Layer alto-cumulus	10,200	−3	10,700	−4.5	10,500	Nil		No change in 35 minutes.
Do	Cumulus	7,000	+5	14,500	−6	12,500	Heavy rain to ground	9	Trace of radar echo soon after seeding. Other clouds in area also rained heavily.
Oct. 20, 1955	Cumulus	5,000	+13	14,000	−6	(1)	Moderate rain to ground	24	Base lowering 13 minutes after seeding. Rain widespread below cloud 12 minutes later.
Nov. 9, 1955	do	9,000	+9.5	20,000	−11	(1)	Very heavy rain to ground	14	Faint radar echo 11 minutes after seeding.
Nov. 11, 1955	do	5,000	0	15,000	−11	(1)	Light rain to ground	26	
Nov. 15, 1955	do	8,000	+12	18,000	−6	(1)	Very heavy rain to ground	24	Control cloud through bigger rained 10 minutes later and not as heavily as seeded cloud.
Nov. 23, 1955	do	6,500	+12	20,000	−14	(1)	Nil		No change observed in 50 minutes.
Jan. 11, 1956	do	5,000	+12	16,000	−10	(1)	Moderate rain to ground	30	
Jan. 19, 1956	do	7,500	+9	20,000	−14	(1)	Light rain to ground	23	Moderate rain developed 28 minutes after seeding and lasted 7 minutes.
Feb. 15, 1956	do	5,500	+12	20,000	−16	(1)	Dissipated		Base lowered 18 minutes after seeding. Cloud dissipated 30 minutes after seeding.
Feb. 16, 1956	do	6,000	+8	17,000	−12	(1)	Heavy rain to ground	20	Light rain 20 minutes after seeding, became heavy 15 minutes later.
Feb. 19, 1956	do	6,000	+11	12,000	−2	(1)	Nil		Cloud base lowered but otherwise no change.
Feb. 25, 1956	do	7,000	+12	17,000	−9	(1)	Heavy rain	22	Light rain 22 minutes after seeding. Heavy 8 minutes later. Still raining 45 minutes after seeding.
Mar. 7, 1956	do	3,000	+19	20,000	−10	(1)	Moderate rain to ground	22	
Apr. 18, 1956	do	3,800	+4	9,000	−6	(1)	Dissipated		Commenced to dissipate slowly 27 minutes after seeding. Control clouds did not change.
Do	do	5,000	+2	9,000	−6	(1)	do		Started to dissipate 5 minutes after seeding.
Apr. 21, 1956	do	2,700	+3	8,000	−7	(1)	Drizzle	18	Only drizzle fell from seeded cloud. Control clouds remained unchanged.

[1] At base.

NOTE.—From the experiments reported it seems clear that silver iodide is an effective agent for inducing precipitation in supercooled clouds whose temperatures are less than −5° C. The time taken to release precipitation is usually some 20 to 25 minutes after seeding in the case of a cumulus cloud, but may be longer in the case of layer clouds. The question as to whether the precipitation will reach the ground, clearly depends on the quantity released, the height of cloud base above the terrain, and the dryness of the air between. In most cases however any reasonably deep cloud that was seeded produced rain that reached the ground. It is of interest to note that these conclusions are very similar to those of Squires and Smith (1949) in relation to the effect of seeding supercooled clouds with dry ice.

Source: Extract from the Use of Silver Iodide for Seeding Individual Clouds, by J. Warner and S. Twomey, Division of Radiophysics, C. S. I. R. O., Sydney, Australia. TELLUS—vol. 8, No. 4; November 1956.

Polish Independence Day

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. McNAMARA. Mr. President, 166 years ago the people of Poland, indeed the people of the whole civilized world, witnessed an event of greatest importance—the enactment of one of the first truly democratic constitutions on the continent of Europe.

The Polish Constitution of May 3, 1791, is a most remarkable document. It bears eloquent testimony to the undying spirit of freedom and justice that was the hallmark of Polish history throughout all ages.

In this country of ours we have millions of people of Polish descent. It is only fitting for us to congratulate them on this anniversary of that great historical document and to express to them—and through them to the people of Poland—the sincere friendship we have always felt toward the Polish nation.

Poland today, however, is not yet free, but I have no doubt that some day soon it will be free. The Polish people have demonstrated on innumerable occasions that they will never consent to live in slavery. They have risen again and again against their various oppressors, and in the face of great odds they have brought forth victory. Only last year they rose again, and solely through the strength of their courage and determination they shook to the roots the power of their Communist masters.

There will be yet many difficult days ahead. But I am certain that with the help of God the undying will of the Polish people to be free again will ultimately win out.

Mr. President, last Sunday in New York Michigan's Governor, Mennen Williams, delivered an address on the observance of Polish Constitution Day. I ask unanimous consent that it be printed in the Appendix of the RECORD at the conclusion of my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GOV. G. MENNEN WILLIAMS, OF MICHIGAN, OBSERVANCE OF POLISH CONSTITUTION DAY, 69TH REGIMENT ARMORY, NEW YORK, N. Y., MAY 5, 1957

Dziekuje Panie Prezesie Wazeter, Wielebni Duchowni, Panie Generale Sosnkowski, Drodzy Polacy, it's a great pleasure and honor to be invited by you to spend this national holiday in your company. I want to share with you in your pride, and your love for Poland; and I want to participate in your fight, and in your hopes, on this great anniversary in Polish history—an anniversary that is dear to the whole democratic world, to the cause of Christianity, and of tolerance, and of progress in human rights, everywhere.

My good friend Mayor Robert F. Wagner has issued a special proclamation for this occasion, commemorating May 3 as the date of the signing of Poland's constitution of 1791. In his proclamation, Mayor Wagner refers to that constitution as: "One of the world's greatest documents of freedom—then, as now, a symbol of the ideals of democracy and liberty—which came into being just 14 years after the signing of our own Declaration of Independence."

In Michigan, we have similar observances, and I am proud to be the Governor of a State where we have so many good citizens, and great leaders, who trace their ancestry to Polish parents.

But one cannot speak of the constitution of May 3—or of our American Polonia—without looking also at the Poland of today, in the world of today, to discover the lessons of history, and find out what duties destiny has put before us.

Let us think of Poland of May 1791, and then let us think of Poland of May 1957.

In 1791, Poland was hemmed in between two countries where absolutism and oppression reigned, and it was then that Poland lit the torch of democracy in Europe, proclaiming equality, social justice, and the rights of freedom. The light from this torch reached oppressed peoples far outside her borders—in Russia, and in Germany, in fact, everywhere. It was a dangerous light in 1791—and it is no less dangerous today—dangerous to oppressors, and dangerous to dictators.

In 1791, invaders were quick to act, to extinguish that light of freedom. They got together and wiped Poland off the map of Europe, because these ideals of freedom would otherwise have meant the death of their own power.

It is the same today.

Light is a powerful weapon against those who rule in darkness.

A few months ago a new revolution started in Poland. It is not over yet. It will not be over for a long time. The people of Poland marched to the barricades of Poznan, demanding liberty—demanding independence. Again the torch burst into flame—and again its light reached into many nations—a threat to oppression and dictatorship—today, as in 1791.

Shall Poland again be crucified for having the courage and inspiration to stand up for human rights, for herself and for her neighbors?

That is the question before decent men and women everywhere—today, as in 1791. That is why the cause of Poland today is the cause of the whole civilized world—the cause of Christianity—today, as it was before.

As an American, I say this to my fellow Americans: Whenever and wherever there is a struggle for liberty and justice, there is our cause—there is our struggle—there is being decided the fate of the American people, and the fate of all good people everywhere. And there must we do our part.

It is our sacred duty to help and participate, not just because Poland and other countries once helped us—not merely because Poles came to our country, to do their part to make us great, and to die to help us keep our freedom—but rather because the entire world is peopled by children of the same God, and there can be no happiness, no freedom, while oppression and misery prevail. Freedom is indivisible. We cannot be truly free as long as anyone anywhere is denied freedom.

To help Poland in her fight for freedom is to fight for our own freedom—and that is why we have opened our doors and our hearts to millions of displaced persons, and extended our assistance to millions abroad who are in need of our aid.

In a sense, all Poland today is a displaced nation. The Red delegates in the United Nations do not represent the Polish people—nor do the Communist bosses, there, represent the Polish people.

Recently, during negotiations to extend material assistance to Poland, our Government declared that Poland is a friendly nation. That was necessary to remove certain legislative restrictions—but, in fact, Poland is and always has been a friendly nation—friendly to us, just as we have been friendly to Poland.

The Poles themselves are the Polish nation. Their nation is a thousand years old—and the Poles are the same today as always: Poland is the average Pole, the true, the Polish Pole—who has only friendship and good will toward us. Their masters from the Kremlin are not the Poles—and we should not think of them as such.

In this I agree with my good friend, Governor Harriman, when he said the other day that "correctly administered assistance from America might well be decisive in helping these Polish people, who are overwhelmingly opposed to the Kremlin and to communism," so that they will not be forced to depend exclusively upon the Soviets for their economy.

This has been the position taken by such great leaders of American opinion as my colleague across the Hudson River, Governor Robert Meyner, of New Jersey, who has called for aid to Poland, and asked that America open her doors to refugees from Soviet terrorism.

This is the position that has been taken by Senator THEODORE FRANCIS GREEN, the chairman of our Senate Committee on Foreign Relations, and by such men as Senators KENNEDY, HUMPHREY, MANSFIELD, and RUSSELL.

All of these men have, I am sure, been moved to even greater vigor in this cause, due to the inspiring example of such great Polish-American statesmen as Governor Muskie, of Maine, and Congressman GORDON, of Illinois, who is chairman of the House Foreign Affairs Committee.

As your Polish American Congress put it in a declaration 3 months ago, "the gains made toward freedom in Poland must be recognized and the Polish people must be encouraged to continue" in their effort to throw off Communist rule.

One of the best ways to help—when we see friends in distress—is to aid, with money, and with food, so that hungry and distressed people, like those in Poland today, will have courage to continue their battle. That is the least that we can do—and we must be sure that what we do is enough to meet the need, for in addition to her own people, Poland has today 500,000 repatriates from Russia and Siberia, who must be cared for, and to whose needs the democratic world must not turn its back.

We must always remember that the voice of Poland to which we are responding today is the voice of the Poland that had the courage to say "No" to Hitler in 1939—that had the magificent courage to say "No" to Khrushchev in 1956. This was the essence of the spirit of Poland in 1791—and this is the spirit of Poland today. The Poles who then came up with their constitution of May 3—166 years ago—proclaiming freedom and independence, did not expect a blessing from St. Petersburg or from Berlin. They knew what was coming to them. The Poles knew in 1939 what to expect for themselves and their children, from Hitler and his Nazis. They knew last fall what to expect from the slave masters of the Kremlin—and yet they acted. There is no power on earth that can destroy the spirit of free men; and there is no power in the universe that will forgive us, if we fail to help and uphold that spirit, so far as it is within our strength to do so.

Thus do I see the connection between May 1791 and May 1957.

Administration leaders have talked about liberation for Poland—and many speeches have been made about that subject. But action is what is needed, not speeches, not slogans.

There is much to be done.

The powerful voice of America ought to be uplifted in the halls of the United Nations, to demand that Russia restore to Poland the right to free elections, unhampered by Communist terrorism. The solemn words of international treaties demand these rights for the Polish people—and it is the duty of our diplomats, and of our Government, to make those rights meaningful.

My congratulations to you for the work which your organization has done and is doing. You have provided a rallying point not only for American Polonia, but for all freedom-loving men. I particularly congratulate you for the assistance which you have lately extended to that great spiritual leader, Stefan Cardinal Wyszynski, who suffered deprivation and imprisonment in the cause of freedom, and who in a few days will visit the Vatican for the first time in years, as a free man and as the representative of the conscience of the whole world. And I know that you will continue to give him the support which he so much needs, to make the cause of freedom prevail.

In my State of Michigan I have many thousand of friends of Polish extraction—including some, like my State auditor general, Frank Szymanski, Congressman Thaddeus Machowicz, Congressman John Lesinski, and Congressman John Dingell, who have risen to positions of exalted leadership in the affairs of our whole country. I have come to esteem and to love them—and I have even managed to learn a few words of their Pplish language. So, I am going to finish my greetings in that language—and if my accent is not perfect, the thought comes from my heart: "Niech Zyje Wolna, demokratyczna, niepodlegla, wielka, Polska."

Address by Dr. Howard L. Bevis at Dedication of the University of Arkansas Medical Center, Little Rock, Ark.

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by Dr. Howard L. Bevis at the dedication of the University of Arkansas Medical Center in Little Rock on April 25, 1957.

Dr. Bevis is Chairman of the National Committee for the Development of Scientists and Engineers. I believe that Members of the Senate will be interested in his comments on the problems which have arisen as a result of the shortage of scientific manpower.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY DR. HOWARD L. BEVIS, CHAIRMAN, THE NATIONAL COMMITTEE FOR THE DEVELOPMENT OF SCIENTISTS AND ENGINEERS, DEDICATION OF THE UNIVERSITY OF ARKANSAS MEDICAL CENTER, LITTLE ROCK, ARK., APRIL 25, 1957

I appreciate the opportunity to be here with you today and take part in the dedication of your university's fine new medical center. It is an enduring monument to the vision and spirit and energies of the people of Arkansas. Future generations can look with great pride to Dr. Caldwell and those who have worked with him to make this possible.

We are here today considering a common problem—the development of scientific manpower, manpower which is as necessary to the progress of medicine and medical research as it is to our national security, to our rising standard of living, and to our continued technological leadership in the world.

Medical research today is at the molecular level. It can no longer be separated from research in the physical sciences. The physical sciences are so interwoven into every aspect of modern medical research that the distinction between biology, medicine, and the physical sciences is fast being wiped out.

The American Medical Association, in the AMA Journal of August 1956, made this significant declaration:

"Medicine is in itself not a science, but rather a collection of the applications of chemistry, physics, and mathematics in biology. * * * Future knowledge must come not only from study of the content and structure of metabolic components, but also from exploration of the physical factors that control organization of these components in the cell and its environment. Thus, though there is no medical science, medicine does provide the 'commons-hall' for all science."

And Dr. Detley Bronk, president of the National Academy of Sciences and a member of our national committee, expressed it this way: "Why is it that a person who studies the heart action of a frog is a zoologist, while one who studies the heart action of a man is a physiologist?"

The unity of science today is such that when the doctor enters the operating room, or carries his skill to the bedside of the sick, he is supported by physicists, mathematicians, biochemists, reactor engineers, agronomists—all the vast array of highly trained people who make up the Nation's scientific and technological complex.

By releasing atomic energy, the physicist has touched off countless medical advances. The mere byproducts of atomic energy have provided tools for medical research which may prove as valuable in the future as the microscope has been in the past. Radioisotopes are being used, for example, in the diagnosis and treatment of cancer, vascular diseases of the heart, the brain, the eyes, and other parts of the body. Internal use of isotopes is being studied as a substitute for exploratory surgery.

The work of the mathematician pervades all modern research. It is present in physics, in biochemistry, in engineering. The National Institutes of Health, for example, are buying an electronic computer to solve, through mathematics, the intricate and changing equations involved in their health research.

Metallurgists have their place in medical research, developing new metals for use in nucleonics, and for the production of the extremely sensitive yet durable instruments of modern medicine.

Without engineers, the reactors which make possible atomic energy and its byproducts could not have been built, the "cobalt bomb" for treating cancer would not exist, and other essential electronics instruments would not be possible. The doctor is the human engineer.

One of the most dramatic medical stories of our time is that of penicillin. Penicillin was made possible by the work of agricultural scientists in the Department of Agriculture's research laboratory at Peoria, Ill. Along with penicillin, agricultural research over the country has produced other powerful antibiotics—streptomycin, aureomycin, chloromycetin, terramycin, and more.

The past 10 years have come to be known as the "age of the biochemist"—the indispensable leader in discovering and codifying the secrets of metabolism and the biological processes.

Even the astronomer, searching into outer space, paradoxically must return to the structure of the atom and contributes to medical research.

Supporting these creative specialists are a host of technicians of all kinds—in the laboratories and factories, at the drawing boards and testing benches. As never before, we see the unity of science demonstrated for us, day by day.

Your primary concern, of course, is with medical education.

On the President's Committee we have a responsibility in all the broad fields of scientific and technological education. As the essential unity of the biological, the medical, and the physical sciences is operationally established, our common goal is made ever clearer.

The need for medical manpower—for general practice and for research—is rising along with the Nation's requirements for other trained manpower. Within the past 25 years, the number of graduates from the medical schools has increased 45 percent—from 4,735 in 1930–31 to 6,845 in 1955–56. This is a large percentage increase. But the ratio of doctors to total population has remained relatively stable since 1920. Dr. James A. Shannon, director of the National Institutes of Health, recently named the training of adequate manpower as a priority in the program for strengthening medical research. He struck this note of alarm: "Despite unparalleled need for a vigorous effort in this field," he said, "research is not flourishing. The number of younger men of top caliber who aspire to research and teaching careers in medical schools is inadequate."

It is small consolation to say that this is part of the general picture across the Nation—that the supply of doctors, scientists, engineers and other trained professionals has not kept pace with demand. We do not have a great deal of information on supply and demand in the scientific manpower field. The problem is, in fact, one of the most talked about and yet one of the poorest documented problems of our time. But even with the limited information we have, we know that the major cause of America's current shortage of scientific manpower is not a decrease in supply. The cause is the tremendous increase in demand. Note this:

The United States labor force has grown by five times since 1870. Employment in science and technology has increased by 85 times, or 17 times as fast. The supply of engineers today is actually much larger than it was before World War II. It is increasing every year.

Yet there is a shortage in supply. The shortage has its roots in the low birth rates of the 1930's. This "lean generation" has now reached college age. During the next 10 years there will be an actual decrease in the number of male workers in the 25–34 year age group. At the same time, total population and total labor force will be rising.

In contrast to the immediate problem of shortage, we have had to look ahead to another kind of problem—the massive increase in school and college enrollment that will reach its peak in the 1970's. The middle and late 1960's will bring a tremendous upsurge in America's college-age population. The number of births in the United States has been rising sharply since 1945. College enrollments are expected to double by 1970.

Thus our National Committee—and you as well—faces a problem that has a double stress. We must move now to meet shortages. Simultaneously, we must plan and act to provide teachers and facilities able to handle this future enrollment without lowering America's educational standards.

Here are some of the things the committee has done: Current labor demands can be met only from the current labor supply. Consequently, our Committee took up early in its work the matter of utilization—of using effectively the scientific manpower we have. First we moved to increase the supply and improve the use of technicians, the vital supporting personnel for scientists and engineers. Our program calls for expanded training, greater recognition, systematic upgrading, on-job training, and opportunities for additional education of these vital aids to progress. A committee task force under the direction of Dr. Eric Walker, president of Pennsylvania State University, and the Committee's vice chairman, is going into selected industrial communities. The task force will assist in the development of local action programs, and will assemble and "codify" tested methods for conserving engineering manpower.

To meet the longer range problem—the increase in school and college enrollments—the Committee has turned first to the need for improving the teaching in mathematics and the sciences. The training of modern-day scientists and engineers does not begin in college or even in senior high school. Educators agree that mathematics and science training should start in the elementary grades. A group of specialists in elementary and secondary school education studied the problem for the Committee. They found that far more young people have capacity for careers in science and technology than are currently entering these fields. They found evidence that current enrollment in science and mathematics courses would be adequate if the quality of instruction were improved and the number of dropouts reduced. The group produced a broad program of action that joins the forces of educators, professional societies, industry and labor, and the entire community.

A companion problem to the need for an early start in science training is the need for identifying at an early age those young people with an aptitude for science and engineering. The Committee has had a preliminary study made on identification and guidance of such young people.

I have mentioned that early attention was given to increasing the use of technicians. This immediate problem led us into a long-range problem—the need for a midway point in United States education between high school and college. We have become convinced that there is need for a proper recognition of 2-year training in higher education. The Committee is working for uniform recognition of technical institutes, for the strengthening of technical institute curriculums, and for the encouragement of junior and community colleges.

Over the country, many States and communities have set up their own organizations for improving education in science and mathematics; for attracting young people to the sciences; for training more technicians; for taking other steps to meet the nation's present and future requirements for scientific manpower.

President Eisenhower, in establishing our Committee, wisely recognized that the problem is not a job that can be solved by Government alone. It is a task—I quote the President's words—that "requires for its solution the power and concerted action of citizens and citizens' groups organized to act effectively."

That is the basic charter of the Committee. We are an action group. But our objective is action in the community—among private organizations concerned with the education, training, and employment of scientific personnel.

In a very real sense, then, the Committee's work is your work. Our Committee sitting in Washington cannot by itself do very much about the national problem.

Improvement of training in science and mathematics, greater recognition for the teacher, better job opportunities for young people, conservation of scientific manpower—these are steps that must be carried out in your schools, in your laboratories, in your industrial plants. The final results will come through hometown organization, which requires hometown leadership. For this we look to you—as educators, as members of the professions, as industrial and civic leaders.

The committee stands ready to help you. We can provide some of the tools. We can tell you what others are doing.

So—go back home and start the ball rolling. That is the way things get done in America.

Dorothy McCullough Lee

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an informative article, from the Washington Post and Times Herald of April 28, 1957, about the distinguished public career of Mrs. Dorothy McCullough Lee, former Mayor of Portland, Oreg., and now Chairman of the Subversive Activities Control Board.

The article, which is entitled "Feminine Official Is No Feminist," by Eileen Summers, of the staff of the Washington Post and Times Herald.

This sketch of the public service of Dorothy McCullough Lee points out that she is "the highest paid woman member of the Eisenhower administration." I am pleased that Miss Summers' article quotes extensively from comments about Mrs. Lee by my wife, Maurine. Although Mrs. Lee is a Republican and my wife is a Democrat, Mrs. Neuberger campaigned extensively for Mrs. Lee's reelection as Mayor of Portland because of the latter's record for integrity in the field of law enforcement and enlightened government generally.

Mrs. Lee and her husband, W. Scott Lee, now reside in the District of Columbia, because of Mrs. Lee's position with the Federal Government. I ask unanimous consent that the entire article from the Washington Post and Times Herald appear in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESENTING CHAIRMAN LEE—FEMININE OFFICIAL IS NO FEMINIST

(By Eileen Summers)

The highest paid woman member of the Eisenhower administration has about her an ante bellum aura of fragility.

Dorothy McCullough Lee, Chairman of the Subversive Activities Control Board at a salary of $20,000 per year, is hyperfeminine. But while her blue eyes may harbor a faraway expression, there has been nothing dreamyeyed about her approach to any of the jobs she has handled in 28 years of public service.

Her previous jobs took her all the way from a law office in Portland, Oreg., to the State legislature for 15 years, back to racket-ridden Portland as its first woman mayor, and thence to the United States Parole Board.

She joined the Subversive Activities Control Board in September 1956. She backs away from any discussion of the criticism aimed at the Federal loyalty-security program by former Board member Harry Cain, but she does have decided views on the function and record of the five-member, bipartisan Board itself, established under the Subversive Activities Control Act of 1950.

Mrs. Lee maintains quietly but firmly that the Board justifies its existence. "Its procedures are fair and the Board's work makes it possible for the American people to be given legal proof that certain organizations are Communist dominated or Communist infiltrated."

Mrs. Lee would like to see many more women run for public office, but is decidedly not a feminist.

"Keep your femininity but develop immunity to personal criticism," she advises young women considering taking the plunge into public life. "Don't take defeat at the polls as a personal failure. Men don't."

Probably one of the highest compliments paid her comes from another woman—and a Democrat. Maurine Neuberger, wife of United States Senator RICHARD NEUBERGER, was serving in 1952 in the Oregon State Legislature with her husband. Both of them campaigned for Mrs. Lee's reelection as mayor of Portland. Says Mrs. Neuberger: "She's very easy to work with. And she observed the bipartisan spirit required of the mayor's office so closely that I thought of her not as a Republican but as a fine administrator."

Mrs. Neuberger adds: "My husband and I believe if she had been reelected then, we wouldn't now be watching the disclosures of labor and city hall rackets in Portland."

Mrs. Lee's interest in public affairs dates back to the days when she was a 12-year-old, living in Washington. Her father, a naval officer, was Assistant Surgeon General at the time and young Dorothy used to risk parental displeasure by skipping her homework in favor of watching congressional debates on women's suffrage.

She dismisses as of no consequence the theory that women won't support other women for public office as well she may. It was, after all, a group of Portland women engaged in civic good works who persuaded her when she was 26 and just starting out in her own law office to run for the Oregon State Legislature as a member of the lower house.

She served in both houses for a total of 15 years, and for another 5 as public utilities commissioner of Portland, before winning the mayoralty at the age of 46. She didn't have a platform, she says, unless it was the promise: "I will enforce the law." And that she did. Gambling and other rackets that had aroused the citizenry suffered a marked decline in health during her administration but she disavows any suggestion that she's a reformer.

"I just try to run a good, businesslike administration free of corruption," she says. "If that is reform, so be it. But I'm no Carrie Nation bent on changing the world."

How did she go about cleaning up Portland? It was very simple, she insists. "I enforced the law as I had promised. The charter gave me the power to choose my own chief of police. I picked a tried and true man for the job and periodically changed the personnel of the vice squad."

There was no swooping down, she says. "We just looked at enterprises operating illegally and gave them a week's notice to close down. They did. The people running them knew from my record that I meant what I said."

Her appointment to the United States Board of Parole came in August 1953, following her defeat for reelection as mayor. She traveled all over the country to Federal prisons, hearing applications for parole, and has a few ideas of her own about possible explanations for intermittent outbreaks of prison riots—mostly State—in recent years.

Overcrowding, with resultant tension, may be an important factor in these riots, she believes. So is the personality of the prison warden. "Some wardens are able to maintain discipline, yet preserve a comparatively relaxed atmosphere. A lot depends on the warden's attitude toward the prisoners. If he believes they can be salvaged, the men will become aware of this and he will be able to inspire some of them with the same belief." Characteristically, Mrs. Lee adds, hastily: "But I'm not a prison expert."

With her to Washington came her husband, W. Scott Lee, and her two adopted children—David Scott Lee, now at George Washington University, and Priscilla, a sophomore at the University of Maryland. Her husband, an oil company executive, was able to transfer to the Washington office and has always been an enthusiastic supporter of her career.

It is the function of the Subversive Activities Control Board to determine whether an organization is, as charged by the Attorney General, a Communist-action group, a Communist-infiltrated group, Mrs. Lee explains.

Members of the Board move about the country to hear evidence from both sides. A verbatim transcript of each day's hearings—they are public—goes to each member of the Board, and when all the evidence is in the Board sits as a body to consider it.

If an organization is classified "Communist action" and loses or does not make an appeal from the board's decision, its officers and members must register with the Attorney General's Office and such persons become ineligible for Federal Government or defense plant jobs, says Mrs. Lee. "If it is designated Communist front the officers and the organization must register."

In defense of the board Mrs. Lee points out: "A tremendous amount of thought went into the drafting of the law by which it was established. Constitutional lawyers and a special subcommittee of the American Bar Association studied it. All the due processes of law safeguards are there."

Those safeguards include the right of counsel on both sides to cross-examine witnesses, to appeal the board's decision up to the Supreme Court, and for an individual or organization to petition for a new hearing at a later date to have their name removed from the Attorney General's list. She adds:

"Our job is to disclose subversive organizations. We don't investigate them—that is the FBI's job. This board is not prejudiced; we don't judge any case on what the Attorney General says about it but by what he and his witness can prove about it."

Much of Mrs. Lee's time during the first few months was taken up with a review of

the Federal Government's case against the Communist Party of the United States. The board, after hearing all the evidence, had named it a Communist-action group. The 15,000 pages of testimony, plus Communist literature introduced as exhibits, kept her reading until the small hours, many a night.

Visitors At the National Presbyterian Church

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. MARTIN of Pennsylvania. Mr. President, attendance at the various churches in the United States is very encouraging. People are not only attending their own churches, but when they are in other communities they attend churches of those communities.

In March of this year, Dr. Edward L. R. Elson, pastor of the National Presbyterian Church, became interested in the number of visitors attending the church. He asked the visitors to sign a card indicating their churches. It showed, on a single Sunday, 393 from other churches. 32 denominations were represented, and they were from more than two-thirds of the States of the Union, as well as many foreign countries.

The division as to denominations is most interesting, and I ask unanimous consent to have printed in the Appendix of the RECORD the list showing the number of visitors from each denomination on a single Sunday.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

Denominations and number of visitors' cards

Presbyterian	163
Methodist	83
Lutheran	21
Episcopalian	17
Roman Catholic	6
Jewish	4
Congregational	21
Baptist	31
Church of England	3
United Presbyterian	4
Protestant of Germany	1
Independent	1
Reformed	5
Evangelical and Reformed	4
Disciples of Christ	7
Bible Church	1
Latter-day Saints	2
Russian Orthodox	1
Universalist	1
Free Evangelicals	1
Christian Science	2
Evangelical United Brethren	2
Free Methodists	2
Hindu	1
Unitarian	1
Mission Covenant	1
Pentecostal	1
United Church of Canada	3
Christian Missionary Alliance	1
Mennonite	1
Nazarine	1
Community Church	1
Total	393

Budgetary Headaches in the Kremlin

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Budgetary Headaches in the Kremlin," written by C. L. Sulzberger, and printed in the New York Times of May 6, 1957.

The article demonstrates that far from being behind the Russians in terms of defense, we have been ahead of them.

The New Look in our defense came several years before that of the Russians, who are now endeavoring to revise their weight of armament of 175 divisions in the same direction.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUDGETARY HEADACHES IN THE KREMLIN

(By C. L. Sulzberger)

OXFORD, England, May 5.—The entire world seem plagued by budget troubles. We in the United States are acutely familiar with this exasperating problem. A drive to trim expenses threatens to cut dangerously into defense and foreign aid appropriations. In Britain the urge to economize has already revolutionized military planning. And, during last week's NATO meeting, Bonn echoed both Washington's debate and London's decision.

To reduce taxes appeals to crisis-wearied citizens of the West. But we are not alone with such sentiments. Similar impulses have begun to strain the fabric of Soviet empire. The U. S. S. R.'s own industrial schedule is becoming overextended. And its fiscal system finds it increasingly difficult to meet Kremlin commitments abroad. The truculent satellites are commencing to cost Russia heavily in raw materials, manufactured goods, and gold.

This does not imply that the Communist empire has started to falter. Nevertheless, it is experiencing expensive surprises. These could most easily be alleviated if the West curtails assistance to uncommitted nations and cripples its already minimal defenses. For, then, Moscow might also ease off on foreign aid and arms.

Even before the Polish and Hungarian upheavals the U. S. S. R. was heavily extended. Its disguised military budget remains huge. Its capital investment plan has been found too ambitious. And despite all claims of Soviet statisticians living standards remain abysmally low.

NEW OBLIGATIONS ABROAD

During the past 6 months Moscow had to increase its obligations in Eastern Europe by about 8 billion rubles ($2 billion at official exchange rates). Two billion one hundred million rubles in Polish debts were canceled for obvious political reasons while new loans and credits of 1,100,000,000 were offered to appease Warsaw. East Germany's contribution for upkeep of Soviet garrisons has been halved. This adds a new charge of almost 1,500,000,000 rubles annually to Moscow's treasury. Furthermore, since October Russia has had to give ravaged Hungary perhaps 1 billion rubles.

Apart from these unexpected imperial expenditures, Russia has other bills to meet. The Hungarian revolt probably cost Budapest a billion dollars in dangers. Resulting emigration cut available factory labor by perhaps 10 percent.

Satellite investment plans failed to meet their targets. Vociferous demands for wage increases have had to be met in part. Therefore, the U. S. S. R. was able to extract from its empire fewer imports than anticipated and was required to export more goods. This has drained Russia's material stocks and gold.

In an effort to counter our own assistance to underdeveloped lands, the U. S. S. R. has pledged itself heavily in non-Communist nations like Egypt, India, Afghanistan, and Syria. Furthermore, the Soviet armaments outlay continues prodigious. Imagine the Kremlin's perplexity to meet requirements of nuclear defense while still maintaining 175 divisions.

Despite boasts of their economists, despite impressive industrialization, and despite a massive harvest, the Russian people are poor. In simple things like meat and dairy products they are no better off than 30 years ago.

The U. S. S. R. will not be able to attain goals fixed for 1960 in the current 5-year plan. Nineteen hundred and fifty-six saw a lower rate of increase in industrial output than any year since 1946. The momentum of expansion has slackened. As a result the Kremlin is desperately trying to do what our own budget trimmers seek—but on a higher scale and with less reserves.

STEPS TAKEN AT HOME

Khrushchev has decreed administrative decentralization to stimulate initiative and curtail duplication. Even more important Moscow had to take the ignoble step of canceling bond obligations. Issues which began to fall due this year have simply been erased. Once more Soviet citizens lost their savings. Scheduled 1957 repayments of loans amounted to about $4 billion. In a decade this annual charge would have doubled. Now some three-fourths of the entire internal debt—about $65 billion—has been officially forgotten.

No Government with a healthy economy would dream of such drastic steps. Yet Moscow is still faced with a serious dilemma. Either it will have to curtail capital expansion and satellite aid; or it will have to reduce the military power and external adventures that now make Russia so dangerous.

This is one reason for efforts to launch another peace offensive. It is strongly in Soviet interest to restore tranquillity to the world and thus to obtain a breathing spell. Such tranquility, of course, would also be desirable in the West. Nobody likes to live on the brink of war. But any worthwhile settlement must be carefully negotiated. Before beginning negotiations the democracies should be certain they are both united and strong. It would clearly be folly to precede diplomatic talks with a wave of budget-cutting, defense, and overseas aid reductions. One doesn't throw away one's best cards before the game has started.

Property Rights Voided

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. RUSSELL. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an editorial entitled "Property Rights Voided," which was published in the Augusta (Ga.) Chronicle of April 30, 1957. The editorial discusses the recent decision of the Supreme Court invalidating the 131-year-old will of Mr. Stephen Girard, of Philadelphia.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROPERTY RIGHTS VOIDED

The United States Supreme Court, as it is now constituted, seems bent on stripping the States and individuals of their most cherished and fundamental rights.

Pursuing its policy of forced integration, the court has ruled that Philadelphia's Girard College cannot exclude Negroes although it was established from funds left in a will which specifically directed that the school be built for poor white boys.

The high tribunal said that the board of directors of City Trust of Philadelphia, which administers Girard College, is an agency of the State of Pennsylvania; therefore, the court decided, the college must come under the terms of its desegregation edict.

It mattered not to the Justices that Stephen Girard, who died in 1831, directed the city in his will to establish and operate the college with admission limited to poor white orphan boys.

What the court has said, in effect, is that a will which was binding in 1831 is not binding today; that a citizen of the United States, indeed, cannot direct the disposition of his own property.

What are we coming to in this country when the judiciary usurps the right of private property?

It is noteworthy that this right was upheld, as it properly should have been, by the Pennsylvania Supreme Court which found itself reversed by the United States Court in upholding the will. In the State court's opinion it said:

"It is one of our most fundamental legal principles that an individual has the right to dispose of his own property by gift or will as he sees fit. This right is so much protected that a testator's direction will be enforced even though contrary to the general views of society."

Those who believe in constitutional government were astonished when the Supreme Court, in its desegregation edict, made a decision based on sociology rather than on law. They are appalled now to see the court, in its Girard College ruling, nullify, in effect, the right of the individual to do what he wants with his own private property.

The possible far-reaching effects of this latest judicial decision are frightening.

In view of this decision, does any citizen of the United States any longer have the right to dispose of his own private property as he sees fit?

This time, the high court hung its decision on the peg that this particular trusteeship constituted an official agency. Next time, it might decide that it doesn't need any peg at all—that a man's will must be administered according to the whim of the court.

Minnesota Mother of the Year

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. THYE. Mr. President, we in Minnesota have been very proud of one of our native sons, Gen. Lauris Norstad, who is presently the Commander of NATO Forces in Europe.

General Norstad's mother, Mrs. Marie Norstad, has been recently named Minnesota Mother of the Year. All five of Mrs. Norstad's children are outstanding citizens.

The Minneapolis Sunday Tribune and the St. Paul Sunday Pioneer Press of April 21 honored Mrs. Norstad with two outstanding articles.

Mr. President, I ask unanimous consent that these two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the St. Paul Sunday Pioneer Press of April 21, 1957]

SONS INCLUDE NATO CHIEF—MRS. NORSTAD STATE MOTHER OF 1957

(By Gordon Richmond)

Mrs. Marie Norstad, of Red Wing, mother of five children, including Gen. Lauris Norstad, NATO commander, Saturday was named Minnesota mother of the year.

White haired, 77-year-old Mrs. Norstad is the widow of Rev. Martin Norstad, a Lutheran minister who served pastorates in St. Paul, Minneapolis, Red Wing, Jewell, Iowa, and Chicago. They met when he attended the seminary at Red Wing.

Looking back over the years, she said Saturday:

"We have enjoyed life despite its ups and downs. We couldn't have been happier.

"I can tell you no rules for bringing up a family. Every mother with five children has different problems."

One of her sons, with whom she is now staying, Rev. Frederic M. Norstad, 8501 Thomas Street South, Bloomington, professor of theology at Luther Theological Seminary, said:

"One of the things I recall best of our family life was the calmness and relaxed feeling. There was little nervous tension."

The other children are Victor Norstad, a Minneapolis printer; Mrs. Marie Ernster, wife of a Chicago research chemist, and Robert Norstad, Seattle, a manufacturer's representative. There are 11 grandchildren.

She said her most famous son, General Norstad, was a quiet and inquisitive boy.

He and his father made the first radio set in Red Wing. When Lauris got it to work, she recalled, he ran up to the church to tell his dad. The preacher and the choir were practicing, but Lauris' news ended rehearsals.

"I never pushed the children for special attainments," she said. "And we let them make their own choice of careers."

Her husband died in 1946. He was a hospital and jail chaplain here from 1907 to 1911.

"The considerateness of my children is what makes life worth living now," she said.

The entire family will have a reunion June 9 at St. Olaf College when General Norstad receives a doctor's degree.

In announcing her choice, Mrs. E. H. Kopplin, of Litchfield, State chairman of the American Mothers committee, said:

"Mrs. Norstad was selected mother of the year because she has been a successful mother, as evidenced by the character and achievements of her individual children, and she has exemplified in her life and conduct the precepts of the Golden Rule."

[From the Minneapolis Sunday Tribune of April 21, 1957]

NATO CHIEF'S MOM IS STATE MOTHER OF YEAR

(By Ed Magnuson)

Mrs. Martin Norstad, a slight 77-year-old mother of five—including the supreme commander of NATO—has been named Minnesota's 1957 mother of the year.

Widow of a former Red Wing Lutheran pastor, Mrs. Norstad has been living recently in the Bloomington home of a son, the Reverend Fredric M. Norstad, 8501 Thomas Avenue South.

Announcement of Mrs. Norstad's selection was made by Mrs. E. H. Kopplin, Litchfield, State chairman of the American Mothers Committee. Mrs. Norstad will be considered for the national mother of the year award.

A woman who talks little but laughs often, Mrs. Norstad says she is very proud of her children, who include:

Lauris, 50, a Minneapolis-born officer who became an Air Force brigadier general at 35 and now directs the 15-nation forces of the North Atlantic Treaty Organization from its Paris headquarters.

Fredric, 45, a professor of theology at Lutheran Theological Seminary in St. Paul and former director of the Luthern Welfare Society of Minnesota.

Robert, 42, a manufacturer's representative for Carborundum Co. in Seattle, Wash.

Victor, 53, a printer for Walkup Typesetting Co., Minneapolis, who lives at 3451 24th Avenue South.

Mrs. Marie Ernster, 47, wife of a research chemist in Chicago.

The selecting committee said Mrs. Norstad was chosen because of the "character and achievements of her children" and her "courage, cheerfulness, patience, affection, kindness, understanding, and homemaking ability."

Her role as a minister's wife and her following of the Golden Rule also were cited.

Mrs. Norstad grew up in Red Wing and met her husband when he was a student at a theological seminary there.

The family then moved frequently as Mr. Norstad served successively as pastor of St. Paul's Lutheran Church in Minneapolis, chaplain of various institutions in St. Paul, pastor of parishes in Jewell, Iowa, and Red Wing, officer synodical headquarters in Minneapolis, pastor of Faith Lutheran Church in Chicago and rector of Lutheran Deaconess Hospital in Chicago.

Since the death of her husband in 1946, Mrs. Norstad has lived in the homes of her children, getting special enjoyment out of her 11 grandchildren.

Fredric describes his mother as a person whose interests always were centered in her family and in the church.

"She's always been so calm and relaxed," he adds. "And she has a good sense of humor. I don't think many families have laughed as much as we have."

Mrs. Norstad, who has white hair and still keeps up with current events through newspapers and magazines, expresses great surprise at the honor she's been given.

"I've just been so lucky to have such good children," she says.

"Oh, yes, they had their scraps and arguments like other children and I guess they thought I was pretty stern at times, but they never got into any real trouble."

She said she believes there is a middle ground that must be reached in bringing up children. Many parents today, she thinks, are too lenient and give their children too many material things.

She said Lauris, who is called "Lol" in the family, was a quiet youngster she never would have guessed might grow up to become famous.

"I used to have to urge him to go out and play," she recalls. "He would find things to make and he used to like to sit and read. I certainly was surprised when he decided to go into the Air Force."

She did not object to his choice of a career, however, and she avidly reads anything published about him.

She indicated she is looking forward eagerly to a family reunion in June—the first in 11 years—when the general will come to Minnesota to accept an honorary doctor's degree from St. Olaf College in Northfield.

New Hospital Aid

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "New Hospital Aid Possible," which appeared in the April 24 issue of the Devils Lake (N. Dak.) Journal.

The editors of the Journal support my bill S. 380, which would facilitate hospital construction in Indian areas.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEW HOSPITAL AID POSSIBLE

In a matter of weeks first earth will be turned for the construction of an addition to the Mercy Hospital.

It will represent the next major improvement for Devils Lake, which is completing the construction of 3 public schools and 1 parochial school and a new J. C. Penney Building.

While Devils Lake makes plans for increasing its hospital facilities, it could well obtain further assistance in financing the addition under bills submitted in Congress by the Montana delegation.

They provide grants to assist in the construction of community hospitals to serve both Indians and non-Indians.

Inasmuch as the local hospital has been used by both races since the closing of the one at Fort Totten, it would seem to qualify for assistance under the proposal, which would authorize the Federal Government to chip in to help build community facilities, instead of continuing to build Indian hospitals.

Because the Indians have no hospital at Fort Totten and they are too far away from Becourt, headquarters for the agency, most of them logically come to Devils Lake for care and treatment.

Mercy Hospital apparently qualifies for assistance under the Hill-Burton aid to aid in the construction of hospital facilities. Under the proposed bill, it could qualify for an additional grant based upon the percentage of use of the hospital by Indians.

Closing of the Fort Totten hospital has had its effect on the overcrowding at Mercy. Indian people, with their lower standards of living, are more susceptible to illness and they contibute more than their share of patients, when compared to their numbers.

Hospital services, therefore, are more important for them, relatively, than for the non-Indian population. With the difficulty of staffing an Indian hospital, it is perhaps as economical for the Public Health Service now responsible for providing medical facilities for Indians, to cooperate with existing hospital facilities in the community.

At one time the Indians favored retention of their own hospital, but since it has been closed, the Public Health Service apparently has no intention of reopening it.

It is only fair, as proposed by the Federal measure, that the Government contribute to the construction of facilities. As wards of the Government, Indians are entitled to medical care and they are treated under a Federal arrangement.

Some health officials see the bill as a real step forward not only for improvement of health and hospital services for the Indian but also for their integration into the life of the community.

Such a provision would bear watching by local hospital officials. They might still be able to get help with the financing of their addition, which costs a lot of money, hospitals being among the most expensive type of facility to build.

Statement by Adm. Frederick J. Bell, United States Navy Retired, Before Subcommittee on Labor of Senate Committee on Labor and Public Welfare

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement delivered by Adm. Frederick J. Bell, United States Navy, retired, executive vice president of the National Automobile Dealers Association, before the Subcommittee on Labor of the Senate Committee on Labor and Public Welfare, on February 28, 1957.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF FREDERICK J. BELL, REAR ADMIRAL, UNITED STATES NAVY, RETIRED, EXECUTIVE VICE PRESIDENT, NATIONAL AUTOMOBILE DEALERS ASSOCIATION, BEFORE THE SUBCOMMITTEE ON LABOR OF THE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE, FEBRUARY 28, 1957

Mr. Chairman, the National Automobile Dealers Association consists of approximately 30,000 members out of the some 39,000 new car and truck dealers in the United States. Our members are engaged in selling goods and services in their respective communities to local consumers. Our membership extends into every State and every congressional district in the United States.

It is our view that wages should be earned—not legislated.

Our members, the backbone of America's small business free enterprisers, are apprehensive that the expression "free, competitive enterprise" may well be destroyed of all meaning, and be replaced by a Government-controlled form of enterprise that is neither free nor competitive.

I'm not here to plead the inability or the lack of desire of an automobile dealer to pay a living wage to all of his employees—a wage that is directly in line with conditions within the local market in which he operates. Obviously, the words that the gentlemen of the trade unions so frequently use—sweat shop conditions, substandard wages, and so on—do not apply to the franchised automobile dealers of America who, as I said earlier, represent in every community across the country the very essence of a small business free enterpriser.

You will find in him the man who heads up your local community chest and charity drives. You will find in him a good churchman and a sound, solid, civic leader.

His average capital investment is $100,000 and he gives employment on the average to 16 people.

I might add that on the basis of figures just completed, the members of NADA during 1956, the men who sold the vast majority of the 6 million new passenger cars that were bought in America during the year, had a profit for the entire year of eight-tenths of 1 percent (on sales) before taxes. I'm not here to cry poor mouth or to plead inability. I do wont to point out, however, that the profit picture of the retail automobile industry as a whole might well create concern on the part of any economist or businessman or government leader, because of the extent of the impact of the automobile industry on the national economy.

This typical, average, small-business man to whom I'm referring—civic leader and stalwart citizen—is a very rugged individualist, jealous of the rights of an individual, determined to preserve to the fullest possible extent the rights of individuals which he feels are inherent in the Constitution and in the Bill of Rights. He is equally determined that he will, insofar as he is able, fight to protect the rights of the State where he lives and in which he carries on his business.

A further injection of the Federal Government into matters that are properly and historically local or State in character is abhorrent to this citizen. In his mind it represents many "isms," but not "Americanism." In his mind it is directly contrary to his teachings and his beliefs in free markets for free men, the free and uncontrolled workings of the marketplace, and he wonders just how far the Federal Government will go in further encroaching on the rights of an individual, the rights of a community, the rights of a State, before we begin to lose all semblance of the political and economic fabric with which America has been built.

By no means does this indicate that he's the type of man who either fears change or who faces the future by looking constantly over his shoulder at the past. I know of no group of men in any business who perform in a more dynamic atmosphere of competition than the men who sell those American necessities, the automobile and the truck.

There are two grounds for our opposition to an extension of the Fair Labor Standards Act to the retail trade. The first is general in nature and is applicable to not only our retail business, but applies generally to all retail business.

The second justification which will be developed upon the conclusion of the first, deals solely with our own industry.

EXTENSION OF FEDERAL REGULATIONS INTO RETAILING IS BOTH UNDESIRABLE AND UNNECESSARY

In the absence of Federal interference and regulation the fact remains that average wages in retailing have generally kept pace with the rise of wage rates in other sectors of the economy. At the same time hours of work have continued to decline in retailing as in other industries. Also, payrolls have more than kept pace with gross sales.

In 1948 payrolls accounted for 10.4 percent of sales as compared with 10.8 percent in 1954. It is apparent that extension of the Fair Labor Standards Act to retailing under these circumstances is unwarranted. To do so would constitute further Federal encroachment into an area of economic activity which is local in nature. If regulation and control is desirable or necessary, the States have both the authority and the responsibility for taking the necessary action.

Wage differentials among the various States are considerable. To impose one uniform Federal wage standard on the entire Nation would result in inequities in some areas and would serve no purpose in others.

It is important to recognize the distinction between the activity of manufacturers of merchandise and the retail merchants of these products.

This distinction between manufacturing and retailing is already recognized by the Fair Labor Standards Act.

Whether independent or part of a chain, a retailer normally serves a local community and rarely crosses a State line.

As a rule, the retailer takes the final and ultimate step in commerce. His is the face-to-face contact with the consumer. This local characteristic of retailing should be the controlling factor in the present question and this feature clearly indicates that it is inappropriate to extend Federal regulation to retailing.

INEQUITIES WILL RESULT IF THE FAIR LABOR STANDARDS ACT IS APPLIED TO RETAIL ESTABLISHMENTS

It has not been established that an extension of the Fair Labor Standards Act to retailing establishments will increase productivity per employee. The reverse seems to be indicated.

The practical problems involved in complying with the law would constitute an unreasonable burden to those engaged in retailing. This burden would be greater than in many other industries because of the complex wage structure that prevails in retail trade where bonuses, commissions, and other special forms of compensation prevail. To determine regular hourly rate of pay would require each establishment covered by the law to employ the services of an expert in this field. Limitation of operations to a 40-hour week, coupled with an increased pay burden for time in addition to the 40-hour week, are unrealistic when applied to a business dependent upon the good will and convenience of the general public for its existence.

Application of the Fair Labor Standards Act as a result of imposing an arbitrary standard based on annual total sales will result in inequities and will discourage growth within the industry.

TO EXTEND COVERAGE OF THE FAIR LABOR STANDARDS ACT TO RETAIL AUTOMOBILE DEALERS WOULD BE UNREALISTIC AND RUINOUS

Traditionally, NADA has opposed legislation which would limit or diminish the existing retail and service establishment exemption and extend Federal wage and hour coverage to franchised automobile and truck dealers. We have taken this position because such limitation or extension of coverage would create discriminations and impose inequities.

The overwhelming majority of retail automobile dealers are local, small-business men.

The typical franchised automobile dealer engages in the folowing activities:

(a) He sells new motor vehicles, as well as used vehicles which are accepted in trade, and parts, tires, batteries, and accessories. Today the ratio of used vehicle sales to new vehicle sales is approximately 2 to 1.

(b) He engages in repairing automobiles, trucks and farm tractors.

(c) He services motor vehicles and in this connection some operate a gasoline filling station, grease and wash racks.

Practically all of the retail dealer's customers are ultimate consumers in his community. These customers are both private, public and business users of motor vehicles.

The principal work force of an automobile dealer is composed generally of salesmen, repair mechanics, servicemen and clerical workers.

The typical retail automobile dealer does not come under the present law by virtue of the retail and service establishment exemption. A suggested legislative proposal, however, would extend the coverage to dealers with a gross annual business in excess of $500,000, or to persons employed in firms with fire or more establishments. Also, those dealers who did over 25 percent of their business with business users would not be exempt regardless of the total volume of business done. Such extension of coverage would have discriminatory effects. These proposals would place some dealers under the wage and hour standards of the law and exempt others, untwithstanding the fact that exempt and non-exempt dealers may be located in the same community, be in keen competition with each other, use the same type of labor, and employ pay practices which are similar if not identical.

If the $500,000 standard is applied to automobile dealers, 61.7 percent of the dealers of the country would be subject to the minimum wage and overtime requirements of the law. Most of these are dealers who sell the more popular lines of automobiles because they have the largest dollar volume of business. This would mean that mechanics, servicemen and other employees of such dealers would come under the coverage of the law, while the same classification of employees of dealers in other lines of cars, who have-a lower volume of business, would not come under the law's coverage. Hourly earnings and pay rates of automobile mechanics, servicemen, etc., are substantially the same in any given particular locality, irrespective of the size of the dealer's establishment where the mechanics or servicemen may work. Hence, the unfairness of a $500,000 classification as applied to automobile dealers is immediately apparent.

Moreover, in operating rapair shops and service stations, automobile dealers are also in direct competition with independent garages and filling stations which do not sell motor vehicles, and most of whom would be exempt. Because the dealer is selling a high unit cost product he may be made subject to the act notwithstanding that he has only a few employees and a small place of business. On the other hand, other retail and service establishments having larger places of business and more employees would be exempt because they sell low unit cost products.

The Small Business Administration takes cognizance of the fact that automobile dealers sell a high price per unit item and therefore cannot be classified in the same category with retailers in general. With respect to automobile dealers who qualify for loans from this Adminstration, a test of $2 million total gross annual sales is used in determining whether the business is small whereas the test applied to other retailers generally is only half that amount.

The business-use test which the proposed legislation injects is one that was rejected by Congress in 1949—and for very good reason. It certainly makes little sense to say that a sale of an automobile to a private householder is retail while the sale of a similar automobile to a local grocer for use in his business is not retail.

Because of the nature of the services which the automobile dealer renders in most communities, he is required to offer such services to the public during 6 days of the week. These services are an indispensable part of local transportation, and the local community is vitally dependent upon them.

It would be virtually impossible to limit the work of the dealer's employees to 40 hours a week, as contemplated by the objectives of the law. Most dealers' establishments are too small to introduce a shift system of employment. Hence, most dealers would have to pay overtime penalties on a regular basis.

It is significant to note that while discharging this responsibility of serving the needs and desires of the owners of 60 million automobiles and trucks, the average weekly hours of employment in 1956 by automobile dealers was 43.8 hours and the average hourly earning was $1.81 per hour. This is the highest average hourly rate paid in all of the retail trades, except in eating and drinking establishments, where tips play a major factor. This is almost a 6-percent reduction in the average weekly hours worked since 1945. For the same period the average hourly wage rate rose 88 percent. This has been done voluntarily by automobile dealers without the compulsion of either Federal or State laws.

The foregoing is true, whether the individual dealer does an annual volume of business of over or under $500,000. The $500,000 limitation, therefore, is irrelevant to the question of whether the automobile dealer should be exempt from the law.

Furthermore, the application of the overtime provisions to employees of the automobile dealer would be extremely burdensome because of the difficulty of computing overtime pay for the automobile mechanic who, in many communities, receives a guaranteed minimum rate, plus a piece rate, plus incentive bonuses. This difficulty was clearly demonstrated in our industry during the period prior to the 1949 amendments, when many dealers were regarded by the Department of Labor as covered by the law. During this period, many dealers made an attempt to comply with the law, but found that their attorneys and accountants were unable to advise them definitely as to how overtime should be computed.

Penalties for violation of the Fair Labor Standards Act are very severe, since they provide for retroactive double liability plus attorney's fees and criminal punishment. An employer who is to be made subject to the act should be apprised of the fact in clear and unambiguous terms. To impose upon him the impossible task of determining whether his business is one affecting commerce is to fail to inform him of his responsibilities and punish him for violations of which he is unaware.

As heretofore pointed out the retail automobile dealer is a local businessman and we oppose the extension of the act to him because of the local character of the business he operates. The law as originally written was intended to exempt him. As President Roosevelt stated in proposing minimum-wage legislation to Congress in 1937: "There are many purely local pursuits and services which no Federal legislation can effectively cover."

Then Senator Black (now Mr. Justice Black), the sponsor of the legislation in the Senate, expressed the same view when he said: "Businesses of a purely local type which serve a particular local community, and which do not send their products into the streams of interstate commerce, can be better regulated by the laws of communities and of the States in which the business units operate."

The franchised automobile and truck dealers' establishments are typical of the local businesses referred to in these quotations. The dealer is required to adjust himself to the demands of his community, whether it be agricultural, mining, or industrial, and regardless of its size. In selling and servicing cars he is furnishing essential transportation services in his local community.

Conditions vary greatly from community to community, and local working conditions cannot be made uniform by a single national standard. Therefore, the impact of the proposal to extend the law to retail automobile dealers would vary greatly between different communities.

THERE IS NO NEED TO EXTEND COVERAGE TO AUTOMOBILE DEALERS

Within the retail trades automobile dealers paid the highest average wages of all of the major 11 groups in which the Bureau of the Census divides retail trade. They also paid higher average wages in establishments with annual sales below $100,000 than the comparable wages that were paid in the largest units selling general merchandise. The most current data in this area is for the year 1954.

The highest wages in retailing were paid by the automotive group. Average weekly wages in this group were 25 percent higher than for all retailing, when eating or drink-

ing places are excluded, and 50 percent higher than in general merchandise, the group of retail establishments with the lowest wages.

Even with the position of automobile dealers within the retailing industry being as high as it is, there is nonetheless a variance in average weekly wages paid of $41.39 in one State to $89.37 in another.

I'm informed by our researchers that within 10 years 90 percent of the job openings for young people will be in the field of sales and service rather than in production and manufacturing.

Recognizing that many, many thousands of these young men and women will seek and receive employment by the small-business men who comprise our membership, NADA is expanding as rapidly as possible its services in the field of good business management and good human relations. It is our belief that it is the duty of business, small as well as large, to accept the obligation and the responsibility for creating ever better job opportunities. I repeat, we think that is our job; not the job of the Federal Government.

In summary, the small-business men whom I have the honor of representing, men who are engaged in a very vigorous form of intracity and intrastate commerce, oppose any further extension of the Federal Government into the matters that are and must remain local and State affairs. Dedicated in the future to improving the economic climate of all America, to which they have made so vital a contribution in the past; willing to take their chances of success or failure in a rugged, competitive business; violently opposed to special privileges for any person or any group, they will continue to reject as un-American, undemocratic, unwise, and unsound, any action by their Government that would deprive the States of their historic rights or that would place the individual, regardless of where he might live or the type of work that he might perform, in the position of operating under governmental controls, Federal strangle holds that might well become increasingly oppressive.

CONCLUSION

The extension of the Fair Labor Standards Act to embrace the retailing industry will not necessarily increase productivity nor will it provide the ability of the retail industry to pay higher wages. High wages which are the result of increased productivity produce a better standard of living. Both high wages and a better standard of living rest upon the freedo mof American industry to grow and expand in a climate unrestrained and unimpeded by restrictions and regulations.

For the foregoing reasons, the National Automobile Dealers Association vigorously oppose the enactment of any proposal which would extend the coverage of the present law and respectfully urges that the retail and service establishment exemption in the Fair Labor Standards Act be preserved in its present form.

Testimony of Judge Emile Lemelin Before Congressional Subcommittee

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the May 6 issue of the Manchester (N. H.) Union Leader newspaper entitled "New Hampshire Jurist Flays Reds." The article reviews testimony given to a congressional committee by Judge Emile Lemelin, of Manchester, N. H., who is the presiding justice over the Hillsborough County Probate Court.

Judge Lemelin is a highly respected citizen of my State, and he is a keen student of national and international affairs. I commend him for his straightforward opinion on our international relations, especially as to our handling of Russia and her satellites. I recommend this article to my colleagues and I believe his opinion is worthy of national attention.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW HAMPSHIRE JURIST FLAYS REDS

When a Queen City probate judge stepped up at Laconia a short while ago to talk to a congressional subcommittee, the Washington visitors were in for a surprise.

Where the liberal view had been aired, here was a vigorous, outspoken opponent of softness toward communism or Communists. The speaker, Judge Emile Lemelin, was flatly against any American-aid money whatever to any nation under Communist rule, such as Yugoslavia. His was a realistic appraisal of how to fight the Red menace.

Because what he had to say was of great importance, we are presenting extended extracts from his address:

"I think we shall agree that the proper role of the United States in the United Nations and other international organizations should, like our American foreign policy, be dictated by enlightened self-interest; and I also believe it to be generally understood that the success or failure of the role we play in the United Nations should, like the success or failure of our foreign policy, be judged by its results.

"Applying that test, I am forced to the conclusion that we have consistently failed in our many and repeated attempts to attain our main objective, which, to my mind, is, or should be, to prevent the further spread of communism throughout the world. Were I forced to venture a guess as to the major underlying cause of our failures in this respect, I would give it as my considered opinion that such cause is to be found in the inability or blind refusal on the part of too many of our leading statesmen to recognize communism for what it really is and Communists for what they really are.

"For more than a decade, we have been engaged in a cold war with the Soviet Union and its satellites at a current cost to the American taxpayers of some forty-odd billion dollars a year. We are justified in doing this because we must at all cost remain strong if the Communist threat is to be averted. I firmly believe that if we are still free men today, we owe it to our defense program. In this respect I feel that we have been successful. This policy of military strength must be continued as long as the threat remains.

"Where we have failed, however, is in our attempt to reduce or minimize, if not actually eliminate, the Communist threat itself.

"During the past decade or so, communism has taken over China, a part of Korea, half of Indochina, thus imposing its despotic rule on 40 percent of the population of the world so that Communist leaders everywhere are now gleefully boasting that they are well on their way toward attaining their main objective, which is to conquer the world.

"If we don't react at once and effectively to this dangerous situation, our western civilization stands a fair chance of being totally destroyed within the next decade or, at least, within the next generation.

"In the face of this threat, the need of the hour is a strong, resourceful, effective, and, especially, uncompromising leadership.

"Recent United Nations history shows that the Soviet Government has repeatedly used and abused its veto power. Our first step should therefore be to seek an amendment to the United Nations Charter which would modify and curtail such veto power.

History also tells us that the Soviet Government and the satellite countries have abused our hospitality by using the United Nations headquarters in New York City as a springboard from which they could practice intimidation, sabotage, and espionage throughout our beloved country. They should immediately be formally notified that unless they abandon such tactics, the American people will insist that the United Nations headquarters be removed from our shores, preferably to some isolated island, if they should ignore our warnings, then we should not hesitate to act accordingly.

"Recent history further shows that treaties, conventions and agreements entered into by the Soviets or their satellites are absolutely worthless, and that Communists consistently honor them more in the breach than in the compliance. For that reason, we should stop chasing rainbows in the false hope that somehow, sometime, somewhere, we may reach an agreement with them whereby communism and Western civilization may coexist in a peaceful and prosperous world. Such dreams are futile because the essential aim of communism is world conquest by force and violence, if necessary.

"Duplicity, conspiracy, treachery, intimidation, murder and mass murders are their favorite weapons. Having no conscience, denying the very existence of God, they have neither moral standard nor sense of honor and decency.

"Under those circumstances, international agreements and treaties should be made enforceable by international law. To allow nations to disregard their treaty obligations with impunity and immunity can only result in disrespect for, and the general breakdown of all international law.

"Finally, we should at all times make a distinction between Communist governments and the peoples over whom they rule. We should encourage in every possible way all internal movements within Communist enslaved countries tending to rid those countries of their ruthless and barbarous tyrants. We should never, under any circumstances, give financial, economic or military aid to any Communistic government, nor should we under any circumstances undertake to help feed or clothe any people living under Communist rule. To do so would inevitably strengthen communism itself."

A New Approach to Mutual Security

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. CASE of New Jersey. Mr. President, a few days ago the Honorable Douglas Dillon, Deputy Under Secretary of State for Economic Affairs, discussed the Mutual Security program before the American Assembly at Arden House.

In his talk he pointed out the number of studies that have been made of that program. All of them, he notes, are

agreed on two basic points. The first is that the continuation of a mutual-security program is in the best interests of the United States and that we will have to maintain such a program for a long time to come.

The second point on which all these studies agree is the need for greater clarity in defining the mutual-security program and its objectives.

That there is widespread confusion as to the nature of the program and the amounts involved is, I think, undeniable. For example, probably all of us have heard from persons who apparently believe that the budget proposes to give away billions in economic and technical assistance to other nations. Actually, as Mr. Dillon makes clear, most of the economic aid proposed will be given in the form of loans which might eventually reach some $750 million a year. In addition, something less than $500 million would be used to cover administrative expenses, technical assistance and contributions to such international activities as the International Children's Fund and aid to refugees. This $500 million contrasts with a total request for the mutual-security program of $4 billion.

Mr. President, I believe that Senators who have not seen the full text of Mr. Dillon's talk will be very much interested in it, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A NEW APPROACH TO MUTUAL SECURITY

(Address by the Honorable Douglas Dillon, Deputy Under Secretary of State for Economic Affairs, Before the American Assembly, Arden House, Harriman, N. Y., May 2, 1957)

During the past year our programs of mutual security have been going through a period of critical reexamination. The complexity of these programs has made them difficult for the American people to understand. There has grown up in many quarters the mistaken impression that the United States, in an attempt to please foreign countries and without adequate thought for its own best interests, has been busy giving away some $4 billion a year of our taxpayers' money.

Of course, nothing could be further from the truth, but there is no denying that this is what foreign aid means to many Americans.

There has also grown up in some quarters a feeling that our economic-aid programs may not have been administered in the most effective manner possible; that there may have been unnecessary waste in the use of Government funds abroad.

All this has led to a widespread and thoroughgoing review of our programs for mutual security. This is as it should be, for these are complex and costly programs.

Studies have been made by a Presidential commission, a presidential advisory board, the Foreign Affairs Committee of the House, a special Senate committee, and by the interested executive agencies of the Government. Universities, business groups, and research institutions have been studying and debating the subject. This current meeting of the American Assembly is but one of many serious attempts by groups of private citizens to find the right answer to this question which is so important to the future of the American people.

In short, this effort at reappraisal has involved not only officials in Washington, but also a great many of our most distinguished private citizens, of whom some of the wisest are in this room tonight.

It is our hope that as a result of all this interest, both public and private, the way can be found to redefine, clarify, and simplify the program so that all our people can have confidence that we are pursuing the right objectives in the right way.

Are there any general guidelines that we can draw from all this study and thought? Is there any real consensus? The answer is certainly "Yes." Two general conclusions are found in all the reports and studies; they are sometimes expressed with greater or lesser vigor but they are always present.

First, and most important, there is agreement that the continuation of a mutual-security program is in the best interests of the United States, and that we will have to maintain such a program for a long time to come. So long as international communism exists in its present form, challenging our very existence, either by direct military threats or by economic penetration and subversion; so long as the explosive demands for economic progress in the underdeveloped countries threaten the very existence of free and democratic institutions in those countries, we must maintain some form of mutual-security program.

The second general conclusion of all the studies is that there is need for greater clarity in defining what the mutual-security program actually is. Both the objectives of the program and the ways in which we move to achieve these objectives must be widely understood by the American people or the program itself will not be supported.

What is the reason for all this confusion about the mutual-security program? The answer is simple. We have in the past lumped tightly together under the heading of "Mutual Security," a bundle of diverse programs, a package with a broad variety of contents.

For example, during the last 6 years mutual security has meant 44,000 artillery pieces, 40,000 tanks and combat vehicles, and 7,000 aircraft for the military forces of our allies.

It has meant loans to build dams, roads, and harbors.

It has also meant technical assistance, such as telling people how to plow, or how to kill mosquitoes so as to avoid malaria.

All of these things, involving an expenditure of approximately $4 billion, have been lumped together in our budget. It has been difficult, if not impossible, for the American people to know just what part of these funds were going for military purposes, what part for long-term capital development, and what part for technical assistance or for meeting unforeseeable emergencies.

In view of the complexities of this program, it is easy to understand why there is public confusion. Our major efforts are now being devoted to finding a better way to present the program so as to clearly explain its purposes to the American people, while at the same time assigning major responsibility for the various parts of the program to the agencies which should have that responsibility.

The general lines of this new approach were first announced by Secretary of State Dulles on April 8 in his testimony before the special Senate committee. The President will send the completed proposal to the Congress later this month. Tonight I would like to give you a brief review of our current thinking.

First, let us look at the military portion of the mutual-security program. It is by far the largest. It includes 2 kinds of funds.

The first is for military hardware—the actual guns, tanks, planes, etc., which we put into the hands of the Koreans, the Vietnamese, the Nationalist Chinese, the Turks, and our other military allies.

The second kind of funds are those required to help those countries who maintain, for our common security, military forces larger than they could otherwise support. This second form of aid is called defense support. A good example of defense support is the economic assistance we provide to Korea to assist in maintaining the 20 divisions of Korean troops which are such an important part of our joint defense against the Chinese Communist threat.

About $2 billion, or half of the present mutual-security appropriation, goes for military hardware. Just under a billion dollars a year is required for defense support. None of this billion-dollar figure goes to our NATO allies in Western Europe. All of it goes to those of our allies who are maintaining military forces larger than they themselves can support. Thus we see that approximately $3 billion a year, or three-quarters of our mutual-security program, goes for military purposes.

All of this military assistance, whatever it takes to equip and maintain strong forces, is an integral part of the defense of the free world and serves the purpose of deterring Communist attack. Admiral Radford, Chairman of the Joint Chiefs of Staff, put the matter plainly last year when he said: "The military aid program is part and parcel of the United States Defense Department program. The expenditures abroad in support of our alliances do not differ in purpose, scope, and objective from our own military expenditures. * * * The fact that that part of our program was not included in the Defense Department budget is more a matter of procedure and administration than of substance."

What we intend to do now is to change the procedure. Henceforth, we wish to place all funds for foreign military assistance in the Defense Department budget where they can be recognized for what they really are, part of the United States military security program. We will recommend that this sum of approximately three billion dollars be taken out of the Mutual Security appropriation bill and be added to the funds which the Defense Department has already requested for the Armed Forces of the United States.

It is the Defense Department that must make the military decision as to how many divisions equipped with American arms are needed to defend the Republic of Korea and other places where we and our Allies are facing Communist troops. It seems only plain common sense for the Defense Department to justify to the Congress, and so to the American people, the cost of equipping and maintaining these divisions.

On the other hand, the Defense Department is not organized to do the actual day-to-day administering of the defense support funds required to maintain these allied troops. Although their purpose is purely military, these funds are a form of economic assistance. This assistance can best be administered in the field by the same organization which handles other forms of economic assistance. Therefore, it is proposed that the administration of these defense support funds be carried out in the field by the ICA, the International Cooperation Administration, which presently administers all United States economic assistance abroad.

Now let us turn to the purely economic side of the mutual-security program which goes primarily to help the underdeveloped countries of the world. One may ask why should we, the United States, be concerned with their economic progress.

All of the studies which have been made during the past year agree that it is vitally important for the United States to cooperate and assist in the economic development of these countries, whether or not they are allied to us militarily.

It is not hard to see why this is in the national interest of the United States when one considers the revolutionary changes that are

taking place in Asia and Africa today. There are 700 million people in the 19 new nations which have come into being since the end of World War II, ranging in population from India, with nearly 400 million, to Libya, with slightly more than 1 million. Most of these people, and millions of others in older countries, exist under primitive and backward economic conditions, but modern communications have brought them the knowledge that other people on their planet live in far greater comfort and happiness. So these peoples are pressing their governments to bring them economic improvement and to do it rapidly.

If these underdeveloped countries find themselves unable to move toward fulfillment of their economic aspirations under free and democratic conditions, there is real danger of their falling into some form of totalitarianism under which the people would be forcibly deprived of goods and freedom in an effort to achieve the goals of the State. This is the solution offered throughout the underdeveloped regions by the Communists. They say that their system, and only their system, can bring about the rapid economic improvement so much desired. And they are accompanying this propaganda attack by an active campaign of economic penetration and subversion which poses a continuing threat to the stability and peace of these vast and highly populated regions of the world.

It seems clear that the national interest of the United States would be best protected in a world in which free institutions predominate, and in which popular aspirations for material improvement and social change can be met by free and democratic governments without recourse to forceful means.

Therefore it is in our interest to do what we can to help the underdeveloped peoples along, and so to make it easier for them to resist the Communist drive. At the same time their advance will help them to participate increasingly in world trade to the benefit of all, including the United States. However, our main motive in extending this sort of assistance is, I think, to further our own enlightened self-interest by helping to maintain a peacefully advancing world in which free and democratic institutions can flourish.

We believe that the best development comes through private capital, domestic and foreign. But within the regions we are talking about there is simply not enough private capital available to do the basic things that must be done. Technical skills are also lacking.

Our part is to supplement this dearth of capital and knowhow. Our effort is bound to be small compared to those of the countries themselves, but we can help to stimulate the growth process until such time as private capital and the increasing resources of the people can take over. This, however, can only be a long-haul proposition. Good business demands that we adopt the methods most suitable for long-term operations.

Therefore, the Administration intends to propose the establishment within the ICA of an economic development fund which would be an agency of the United States similar to the Export-Import Bank.

Instead of the present method of setting dollar figures for assistance to each country every year in advance, instead of creating projects in Washington for construction all over the world, we would expect foreign governments to develop sound projects themselves, and to apply for loans to cover the costs of these projects. We would have the time carefully to consider and examine the plans for each project because we would no longer be operating on only a year-to-year basis. After thorough study, we would decide each case on its merits.

Loans would be granted only in cases where there was assurance that the project would be carried out competently and where there was reasonable promise that it would contribute directly or indirectly toward the growth of the productive capacity of the recipient country.

The economic development fund would not compete with the World Bank, the Export-Import Bank, or with private sources of capital. Indeed, we contemplate that it would make no loans until assurance had been received that the projects could not obtain financing either from other public institutions or from private sources.

The economic development fund would differ from the World Bank in that projects would not necessarily have to develop the foreign exchange required for prompt repayment in dollars. It is probable that many of the loans from the development fund would be repayable largely in the currency of the borrowing country. For example, a loan to India might be repaid in rupees.

But this repayment in local currency would not rule out possible eventual repayment in dollars. For instance, suppose the fund makes a loan to an underdeveloped country repayable in local currency over a period of, say, 15 or 20 years. After the loan has been repaid this money might well be loaned again to the same Government, but we could reasonably hope that the economic situation of that country would have so improved that it would be possible for this second loan to be repaid at least partly in dollars. In this way the great bulk of such foreign currency loans could eventually be repaid in dollars.

The vital feature of the economic development fund, differentiating it from the present method of operation, is that it would have continuing and flexible authority to operate on a worldwide basis in the same way the Export-Import Bank now does. It would not have to be authorized all over again each year. Thus, it could plan ahead in the same way that a businessman, a banker, a university president, or a farmer can plan ahead. This should result in far more efficient and effective use of United States funds.

The Export-Import Bank can only make loans for the specific purpose of promoting United States exports. Its loans must be repayable in dollars. The new fund would complement the operations of the Export-Import Bank, and of the World Bank. It would be empowered to make subordinated loans to support projects favored by these two institutions.

As Secretary Dulles has said, it is our view that loans by the new fund may eventually amount to some $750 million a year. During the next fiscal year, however, as the fund gets into operation they could be expected to be considerably smaller.

Aside from these funds for military purposes and for economic development, there remains something less than $500 million dollars out of the $4 billion mutual security program total. These funds would be used to cover administrative expenses, the costs of the technical assistance program, and our contributions to international activities such as the international children's fund and aid to refugees. They would also cover such emergency grants as might be found necessary and a strictly limited amount of capital assistance for those countries needing help and unable to contract further loans of any sort.

The important point in all this is that the American people should know that what we are proposing to use, both for technical assistance and in all other cases where grants will still be necessary, comes to something less than $500 million a year, a small percentage of the overall amounts involved in our national budget.

By this new program, the basic outlines of which I have just described, we hope to accomplish three things.

First, by centering budgetary responsibility for the military portion of the program in the Defense Department where it belongs, we will ensure that our military programs are as economical as possible consistent with the national security.

Secondly, by putting our economic development largely on a loan basis, administered in a business-like manner over the long term, we will provide more effective and economical use of these funds so that the American people can be satisfied that they are not being wasted.

Third, and most important, we will clearly show to all our people just what their money is being spent for and why.

By such methods as these—and in my belief only by such methods—can we hope to continue, at maximum usefulness, a reasonable program of mutual security. In closing I would like to leave one final reminder: This program is a vital ingredient of the platform of security from which true peace will someday come.

Death of Senator McCarthy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the broadcast by Fulton Lewis, Jr., on May 2, 1957, regarding the death of Senator McCarthy.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

FULTON LEWIS, JR., BROADCAST, MAY 2, 1957

Good evening, ladies and gentlemen, this is Fulton Lewis, Jr., speaking from the Mutual studios in Washington, D. C. I'll have the news for you in just a moment.

The controversial Joseph R. McCarthy, of Wisconsin, no longer is controversial tonight.

The Senator died at 6:02 p. m. at Bethesda Naval Hospital, after 4 days of hospitalization for acute hepatitis. He entered the hospital on Sunday, and had failed to show any improvement since he went there. He began running a temperature elevation again today, and at 5 p. m. the hospital issued a bulletin which stated that the Senator had failed to show any improvement during the day, and the temperature elevation had increased. The bulletin added that Senator McCarthy "still is considered to be seriously ill."

The disease which struck him down did so with dramatic suddenness. As of recent weeks in the teamsters' investigation, he seemed subdued, but otherwise, pretty much himself. He has not been looking well, but that is largely because of the fact that a year ago, he decided he was carrying too much weight, and went on a diet which resulted in a cut down of about 30 to 40 pounds.

He has done little socializing for some time, because of the baby girl, Tierney, whom he and Mrs. McCarthy adopted, and who was the apple of his eye. If the world could have seen the supposedly sinister Joseph McCarthy carrying that baby around in his arms, or dancing capers to make her smile, they would have understood an entirely different person than the one who has been painted to the American people by his political and ideological enemies.

Probably no man in my memory in public life has ever had such a divided public as this one. Half the world hated him; the

other worshiped him. He was a dedicated man, with a dragon to slay, and that dragon was communism. It was against the teachings of his church, and against his tenets of Americanism, and he loved both of them, almost fanatically.

And therein lay his destruction, as all who have dared take up the public cudgels against communism have met their downfall. They are instantly marked for destruction, and the destruction is inevitable.

The forces that combined to first oppose, and then destroy Joe McCarthy—and they succeeded today—were respectable people, people of position—people with pasts, who were afraid that unless Joe McCarthy was destroyed, they themselves, sooner or later, would be exposed and disgraced.

That was the truth behind the Army-McCarthy hearings. Joe McCarthy was the front man, in digging into the skeletons of the armed services. That was his crime—that, and no more.

The forces that were behind Senator FLANDERS, of Vermont, in the charges which he brought and later apologized for, were the shadowy, sneaky figures of an outfit that called itself, profanely, the Committee for an Effective Congress.

The backing and the inspiration was made up of people with fear; people who felt that Senator Joe McCarthy would get them, unless they got him. And so they did.

Since the Senator no longer needs defense, I wish to say, ladies and gentlemen, that I have never seen such a shocking exhibition of distorted reporting and reportorial untruth, as I witnessed throughout the coverage of the Army-McCarthy hearings.

It was a journalistic lynching party, spurred on by powerful and frightened groups, who were in for the kill—the objective was to discredit a man whom they feared as much as death itself.

The pressure which they generated was such that any reporter who dared try to tell the truth as to what was going on, as I did, was boycotted through sponsors, harassed by defamation, held up to scorn and ridicule, and all but crucified himself.

And the same was true of the Members of the Congress, particularly the Members of the United States Senate, who were stampeded into passing judgment on him.

That was the beginning of the long, slow death of Joe McCarthy, which finally was consummated in the loneliness of a hospital room at 6:02 p. m. tonight.

That, he took to heart, and he had reason to, because most of those who voted for the censure of Senator McCarthy did so, with the guilty knowledge that they were playing the role of a Pontius Pilate. They were afraid of the public clamor; afraid of the columnists who had their own reasons for joining in the lynch mob; afraid of the power of influential, supposedly respectable individuals, some of whom were in the mob for their own self-protection, others of whom merely prated and parroted the cliches that they heard from their golfing companions.

Never, in 35 years of reporting, have I seen such an organized lynching as was given to the junior Senator from Wisconsin, and I have no hesitancy in sitting here at this microphone and saying so, forever and forever.

Senator McCarthy was a much softer personality than anyone was ever willing to allow. I knew him. I saw many of those manifestations.

I asked him once whether his mother—who could barely speak understandable English—had lived to see him elected to the Senate. He said no, and he was glad, because she wouldn't have understood it. The height of her pride in her son came when he was elected Justice of the Peace. That, he said, she could comprehend. That was within the scope of her world. The idea of being a Senator would frighten her. It was too big.

Jeannie Kerr, the secretary who was converted to his Catholicism from a Presbyterian, in order to marry him, was at his bedside as he passed away. What happens to the adopted baby girl, Tierney, nobody knows, because I believe the adoption is subject to a 1-year probation period which has not run, and what happens to Jeannie is a question, too, because there are no pensions for Senator's widows.

Perhaps some memorial trust fund will be set up, by those who believed in the fighting Senator who dared tackle the impossible, and paid for it with his life. There certainly should be, and every member of the United States Senate who voted for the censure of the junior Senator from Wisconsin should contribute to that memorial fund, from his own pocket.

The White House itself might well do the same, because its persistent snubs and rebuffs did their part to bring this end of today. They hurt. I could see them hurt. Joe McCarthy tried to brush them over, but they cut, and they were unnecessary. More than that, they were ill-bred.

They have won. The forces that feared McCarthy have had their way. But I venture to believe that the mark he has left behind him will last a lot longer than they.

Senator KARL MUNDT, of South Dakota, has just said that Senator McCarthy's death "takes out of the American political arena a courageous fighter against communism and a stalwart advocate of our traditional American concepts."

News of the death reached the Capitol after most lawmakers had gone home. Its flags, however, were immediately lowered to half mast.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. THURMOND. Mr. President I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the April 25, 1957, issue of the Anderson (S. C.) Free Press. The editorial is entitled, "The Dangers of Federal Aid to Education." In addition, I ask unanimous consent to have printed, following this editorial, comments from several other newspapers across the country on the subject of Federal aid to education.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

THE DANGERS OF FEDERAL AID TO EDUCATION

Strong opposition to Federal aid to education has been voiced by United States Senator STROM THURMOND of South Carolina. Terming the administration's proposed program as far more dangerous than other important measures now under consideration, THURMOND expressed his views on the subject recently during a network TV panel discussion in which he participated on April 14 with Senator CLIFFORD CASE (Democrat, New Jersey), and again this week when he spoke before an open forum meeting in Oconee County. It is significant that THURMOND's opinions coincide with a cross-section of the Nation's newspapers.

The Senator from South Carolina bases his argument against Federal aid to education on several important points which we present here. First, the field of education has not been delegated to the Federal Government in the Constitution. Therefore, there is no basis for the Government to participate in school operation. While there have been some violations of this through the Smith-Hughes Act and land grant colleges, only 3 percent of the aid to education is presently contributed by the Government, 40 percent is paid by the States, and 57 percent by the school districts.

Second, the Federal Government has no legal jurisdiction over the schools. Operation of schools is a local matter reserved for the States and the people. And third, Federal aid will inevitably lead to Federal control of the Nation's school systems.

THURMOND has pointed out that when Smith-Hughes went into effect the original program was set up for the purpose of training mechanics. However, it gradually went further into agriculture, home economics and the like. Today it issues a book containing 108 pages of regulations which provide that plans of the State shall be approved by the governor.

The Senator has predicted that when Federal Government goes into school construction, there will be no control on a local or State level. Should the Government go further and contribute to teachers' salaries, sooner or later it will step in and prescribe the school curriculum.

"This is the way in which Hitler and Mussolini gained control of Germany and Russia," THURMOND warns.

The Senator emphasizes the fact that the States are presently meeting their school responsibility and have not asked for Government aid. In this connection he refers to Congressman GWINN, of New York, who made the statement that not a single governor, a single legislator, or a single school board member has come before the House Education Committee asking for aid.

Of equal significance is the fact that the Nation's classroom shortage was placed at 340,000 3 years ago by the Secretary of the Health, Education, and Welfare Department, but the shortage in 1956 was estimated by the Office of Education at only 159,000. This is a reduction of 57 percent in a matter of 3 years' time, showing that the States are continuing to meet their needs and indicating that within 2 or 3 years the classroom shortage will be completely wiped out. It is THURMOND'S opinion that the school-construction program would be progressing more rapidly at present if it were not for agitation for Federal aid.

Although segregation is not mentioned in connection with the proposed Federal-aid program, Senator THURMOND believes that it would be a matter of only a few years before segregated schools would be barred from participating in the program. If there is no power of amendment attached to the bill, what will happen, THURMOND questions. Suppose someone would demand a ruling on segregated schools. It is logical to assume that under such a Government setup the ruling would be denied. The South would then be putting hundreds of millions of dollars into the Federal Treasury and getting nothing back.

That Senator THURMOND'S views on Federal aid to education are widely shared is evideht from editorial comments of numerous United States newspapers (carried elsewhere in the Free Press) whose editors are clear thinking and genuinely concerned for the welfare of the Nation's school systems. We believe all citizens who examine this program carefully will see the many dangers involved.

WHAT OTHER PAPERS SAY

El Paso (Tex.) Herald Post: "For instance, in the first year of President Eisenhower's proposed Federal 'aid' program, the budget included $20 million for 'helping' the States plan how to build schools. It will include $1

million for 'administration,' which is what the Government will keep for doing its own redtape on this program.

"Moreover, the Office of Education, which will hand out this dole to the school districts, has raised its budget $2,230,000 for next year. That's some more 'administration.'

"The home folks can build their own schools cheaper, faster, and better, and exactly according to their own needs. They know what the needs are. Uncle Sam proposes a sweeping overall program. He will do a slower, less effective job, and charge the home folks more for it."

Haverhill (Mass.) Gazette: "Massachusetts is consistently classified among the so-called richer States and, therefore, in a Federal-aid program consistently pays out more than it receives.

"But if Federal aid was distributed among the States in precise proportion with the contribution of each, the States would still lose money. Washington does not collect money in Massachusetts, handle it in the Capital, and return the amount that is collected. The mere business of bureaucratic administration means that some of the money sticks in Washington. The Federal-aid game is one that the States simply cannot win."

Knoxville News-Sentinel: "The people who best know the actual needs are the residents of the school districts. And however these schoolrooms are built the people in the school districts are going to pay for them in taxes. The cost will be high if the money makes the round trip to Washington.

"For instance, in the first year of President Eisenhower's proposed Federal 'aid' program, the budget includes $20 million for 'helping' the States to plan how to build schools. And it will include $1 million for 'administration,' which is what the Government will keep for doing its own redtape on this program."

"Moreover, the Office of Education, which will hand out this dole to the school districts, has raised its budget $2,230,000 for next year. That's some more 'administration.'

"The home folks not only can build their own schools cheaper, faster, and better, but exactly according to their own needs. They know what the needs are. Uncle Sam proposes a sweeping, overall program. He will do a slower, less effective job, and charge the home folks more for it."

Omaha World-Herald: "Into this picture now strolls Uncle Sam, jingling in his pockets the $74 billion or so he takes every year from his taxpayers. Magnanimously he offers to return a couple of billion of this amount to the people who have paid it to him, to enable them to build schoolhouses. "And," adds the journal writer, "it is a tempting proposal even to self-reliant communities. Government, Federal, and State, has got us in such a fix that Government aid, Federal or State, begins to look like welcome beneficience."

The writer concludes:

"But somehow it strikes us like the beneficence of the croupier who having cleaned your pockets at the casino graciously gives you carfare home."

Sheridan (Wyo.) Press: "In its paper, Washington Report, the United States Chamber of Commerce has come up with statistical report that says 16 States, plus the District of Columbia, would provide about $100 million annually to build 3,326 classrooms in 32 other States.

"New York State would be the biggest contributor under the administration's school-construction bill. Its tax share would be $48,122,000 and it would receive only $15,765,000 in construction aid. The difference, $32,357,000, will build 1,709 classrooms in other States.

"Chief beneficiary, according to the Chamber of Commerce, would be North Carolina. Its tax payment would be $4,125,000 and it would receive $14,615,000 in aid. The $10,490,000 gain would build 350 classrooms.

"Wyoming, too, would be a beneficiary. The national chamber's figures show Wyoming's tax share would be $469,000, and it would receive in school construction aid an amount totaling $674,000. The different of $205,000 would, according to the chamber's figures, mean seven classrooms paid for by other States.

"The first impression, of course, is to get the hand out for the handout. After all, whenever a State stands to get back more in taxes from the Federal Government than it puts in, it should probably commence a push for the pot of gold.

"On the other hand though, Wyoming ought to be able to build twice as many classrooms by keeping its $469,000 tax share at home. It kind of looks like Wyoming could lose seven federally financed classrooms in the end, but have more of its own.

"And that's one of the certain things about Federal aid—somebody's going to get it in the end."

Salisbury (Md.) Times: "Over in Cambridge this week Senator GLENN BEALL reminded his audience that the Federal Government never gives you anything. You pay for it; I pay for it.

" 'And remember, too, it's a long walk to Washington and back, and every dollar that makes the trip comes back to you or your community quite a bit slimmer.'

"Senator BEALL was speaking in generalities, but his remarks tie with a report of the Chamber of Commerce of the United States."

Tallahassee (Fla.) Democrat: "Who knows what about the actual needs of the Nation for more classrooms?

"The President has asked Congress for $1.3 billion in Federal aid for school construction over the next 4 years. The administration's bill is based on a critical classroom shortage.

"Against this is the statement of the United States Chamber of Commerce to a House committee conducting hearings on the bill. The chamber's position is that:

" 'It is the concensus of business in this country that the States and their communities are responsible for, and able to finance the development of the school systems required by their citizens.' "

Jackson (Miss.) Clarion-Ledger: "The chairman of the United States Chamber of Commerce Committee on Education may not have been speaking for Mississippi but he voiced prevailing Mississippi conviction and opinion when he warned a House Education Subcommittee that Federal aid for school construction is 'unwise and unnecessary,' and that it 'would lead inevitably to the transformation of public education from a State and local function education to one increasingly directed by the Federal Government.'

Those are two basic reasons why most Mississippi citizens and taxpayers, most Senators and Representatives from Mississippi, like most of those from other Southern States, oppose this Federal school-aid proposal.

This informed and earnest United States Chamber of Commerce official also voiced the conviction of most Mississippi businessmen when he declared to the House Education subcommittee, "It is consensus of business in this country that the States and their communities are responsible for, and able to finance, the development of the school systems required by their citizens."

Many Congressmen probably heard or read those declarations, and some of them may be influenced by these statements when they vote on the issue.

The Arizona Republic: "The clamor for Federal aid for schools is based on several false assumptions, some of which are pointed out by the Freeman magazine in its March issue. The false assumptions and facts follow:

"Assumption: 'The schools are being discriminated against in the allocation of public funds.' Fact: School funds have risen faster than enrollments. Between 1900 and 1955 the public school enrollment doubled, while school costs rose 43 times in actual dollars, or 12 times in price-adjusted dollars.

"Assumption: 'The schools are receiving a smaller part of the national income than they used to.' Fact: In 1900 public education took 1.5 of the national income. In 1955 it took 4.6 percent. The World Survey of Education, made by the United Nations, shows that the United States spends both more money and a larger share of its national income on schools than any other country.

"Assumption: 'The States and communities can't afford to build more schools. The Federal Government must do it.' Fact: The Federal Government can get money only from the taxpayers. Federal aid, like foreign aid, is paid for by all of us. More than 1,800 participants at the White House Conference on Education last year approved a report saying, 'No State represented has a demonstrated financial incapacity to build the schools it will need during the next 5 years.'

"The administration bill to give a $1.3 billion to the Nation's schools is in trouble. A lot of people are taking a good look at it, for the first time, and they aren't liking what they see. Here's an excellent place to stop the big spending of the big government in Washington. There is no real need for Federal aid to schools, despite such pressure groups as Mrs. Stough represents. Even if there were it would be a mistake to let a Federal bureaucracy in Washington take over this stronghold of community responsibility in the United States."

San Diego (Calif.), Tribune: "One of the most enduring fallacies is that you can get something for nothing. It's as old as time, yet as fresh as any still unhatched scheme to finance something with so-called Federal aid."

"We say 'so-called' and put more quotes around 'aid' for some enlightening reasons.

"The simple fact is that the Federal Government, to begin with doesn't have a dime of its own to give back to the States. The money it ladles out first comes from the taxpayers in the 48 States and the territories.

"To borrow an apt description of this transaction, coined by the New Jersey Taxpayers' Association, it is 'round-trip money.'

"And just as a taxpayer can't take a trip to Washington and back for free, neither can his money. It is estimated that as much as 25 percent 'brokerage' is kept for the questionable privilege of having our money taken on this junket to Washington and back.

"If things keep on as they have been going, by 1975 the Federal Government will be collecting 84.5 percent of all taxes; the State governments, 15.5 percent, and local governments, nothing.

"In viewing this enormous circulation of money between the States and Washington and back again. We may paraphrase a wartime question: 'Is this trip necessary?' "

Brazil's "Population Explosion" and Our Latin American Policies

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. NEUBERGER. Mr. President, in our concern with foreign policy in the case of Europe, Asia, and Africa, we too

often ignore the importance of our relations with Latin America. Yet the products of South American and Central American nations play an impressive role in the United States economy, and our neighbors to the south provide a vast and largely unrealized market for American goods and services. We must recognize that continued support of economic development in this area benefits not only the people of these nations, but the populace of the United States as well.

In two recent speeches before the Commonwealth Club of California, in San Francisco, Charles A. Gauld, lecturer and assistant editor of the unique monthly Hispanic American Report, published by Stanford University, pointed out the opportunities and difficulties facing one South American country, Brazil, and outlined steps which the United States might take to further assist Latin America.

Mr. Gauld is particularly well qualified to discuss this topic. He studied Latin American affairs at Stanford University and the University of California, and for 4 years he served as a specialist in this field at the Library of Congress. He has traveled widely in South America, and his writings on this subject have appeared in major United States publications.

Mr. President, I ask unanimous consent that two addresses by Mr. Gauld—entitled "Will Brazil's 'Population Explosion' Make the 21st Century Brazil's—Or Will It Mean 'Chinafication'?" and "What's Wrong With Our Latin American Policies?"—be printed in the Appendix of the RECORD.

There being no objection, the address were ordered to be printed in the RECORD, as follows:

WILL BRAZIL'S "POPULATION EXPLOSION" MAKE THE 21ST CENTURY BRAZIL'S—OR WILL IT MEAN "CHINAFICATION"?

(From an address by Charles Gauld, lecturer, Hispanic American Studies, Stanford University, delivered before the Commonwealth Club of California, San Francisco, March 11, 1957.)

An American spending years in Latin America is tempted to for get how fortunate we have been in our geography and in being colonized from the most advanced parts of Europe.

What if the hardy Portuguese pioneers who colonized Brazil had colonized North America instead—and left Brazil to the tardy English and other northern Europeans?

"JUDGE NOT, LEST * * *"

It is unfair to draw to many adverse comparisons—we enjoy one of the largest pieces of one of the world's best climatic zones. It is hard for us sometimes to imagine what that advantage is. We inherited a continent of great resources of fertile soils and homogenous forests.

Guesses vary as to whether Brazil is at the stage of economic development the United States was in a century ago or merely 50 years past.

Can we fairly ask whether Latin American social and economic problems, and certain effects such as corruption, are aspects of problems to governments everywhere? The big question is the percentage of the national income that goes down the ratholes of graft, waste, nepotism, and padded payrolls.

Are Latin American problems such as corruption, due like some of our own to insufficient parental discipline, lack of adequate Sunday schools, and other such matters?

GROWING PAINS—OR RUIN

Is Brazil literally a young, potentially powerful giant, suffering growing pains? Or is it a not too healthy older civilization in a young country being rapidly ruined by deforestation and erosion?

Is Brazil becoming a kind of United States in Latin America or is uncontrollable overpopulation slowly dooming Brazil to become a kind of overpopulated weakling like India and China?

Will the colorful three-way melting pot of tolerant and amiable Brazil crystallize in a new creative civilization next century? Some of my Brazilian friends hope that the next century will be theirs.

WILL GROWTH BE DISASTER?

A Stanford graduate now in Brazil writes that, despite size, this country does not have a large effective population. Too great a proportion are slum dwellers, contributing little. There is a real population explosion in Brazil. Most Brazilians are optimistic about this growth, not realizing that population can be a disaster, that Brazil can become another China instead of another United States. * * * Educational and economic growth is not keeping pace.

We think we are having a tough time here producing enough schools and other things, but the same thing is happening in Brazil. Rio today has some 2,700,000 people; São Paulo claims 3 million.

Brazil has superb natural resources, but development of them is not as fast as many Brazilians have hoped.

"BEGGAR ON A GOLD MINE"

Brazil has been likened to a beggar sitting on a vast diversified mine, with enormous resources of iron, manganese, diamonds, gold, emeralds, and strategic and critical materials of all kinds that we need. We hope we can help develop their resources under a mutually advantageous basis.

But these portents are menaced by synthetics. The quartz crystal used in World War II and currently in radar came largely from Brazil until synthetics came along. The Brazilian economy is perched precariously on one leg of coffee exports.

In Brazil there are 20 "cow colleges" and they are not half full; yet Brazil is overwhelmingly a rural country. It is tragic more is not being done to educate the people.

In Latin America as a whole 6 million babies are born each year. Brazil is one-third of Latin America in area and population and in this growth.

LACK OF EDUCATION

The tragedy of these millions of babies is that only about half of them go to school, and they get not more than 3 or 4 years of a very sketchy primary education.

Many Brazilians say that most Americans greatly exaggerate the Communist menace in the world, but it is disturbing to the American observer to see so many intellectuals, and others who should know better, dabbling in communism. The top Brazilian painter and the top architect are Communists, and cannot visit the United States.

Americans tend to overoptimism on reading of Brazil's resources, and overpessimism after exasperating experiences in Brazil.

Why are there only 10,000 Americans in Brazil and I estimate only 2,500 Brazilians in the United States?

Brazil is the great unknown republic largely because Brazilians write few books and are lax in disseminating them; also the low level of education and of universities and libraries. There is a paucity of professional men.

MORE TOURISTS, EXCHANGE FELLOWS

Only 10,000 American tourists visit Brazil each year. If there were more, the gulf between our two countries could be more easily bridged. One thing that would help would be more exchange fellowships between the two countries. Stanford since its very beginning has had a great interest in Brazilian studies. David Starr Jordan was a pioneer in this.

One of the best ways in which some are helping to bridge the differences is through education and religion. Brazil does not produce her own clergy. Catholics and Protestants alike have mostly come from abroad.

The Protestant church is growing faster in Brazil than in any other country. This has stimulated the old church to do better.

Many Catholic orders in the United States are turning more and more to Brazil. There is no important church in the United States that is not doing something useful in that country.

ANSWERS TO WRITTEN QUESTIONS FROM FLOOR

Question (Carter Collins): "Aren't Brazil's resources adequate to support population equal to China?"

Answer: "Unfortunately most of Brazil is in tropical zone. Cut down a section of jungle and you have some of the most leached out, worn out soil on the globe. Five percent of Brazilian soil is estimated to be fertile, 10 to 15 percent fair. I don't see how it could support a big population, with a high living standard."

Question: (E. L. C. Heims): "Is relationship between Brazil and Argentina friendly and cooperative?"

Answer: "Peron's successors have invited Brazil to discuss a South Atlantic pact. But there remains an Argentinian phobia about invasion and Argentina has never built roads to Chile and Brazil."

Question: "What about the World Bank financed steel plant?"

Answer: "The national steel mill in Brazil, between Rio and Sao Paulo, is ideally situated for water supply and distribution but some think it should have been closer to the iron mines. It is now producing a million tons a year and President Kubitschek hopes to double that in the next five years. We helped back the steel mill partly out of gratitude for President Vargas' cooperation in World War II."

Question: "Twelve years ago, twenty-five thousand Brazilians were fighting in Italy as part of the United States Army. Has this military cooperation strengthened the bond between the two nations?"

Answer: "Very much so. The most American element in Brazil is the Air Force. Brazil is the world's number two nation in airlines. Many young men in the Brazilian Air Force received training at California, Stanford and U. C. L. A."

Question: (Stuart R. Ward): "How important to United States in event of World War III?"

Answer: "Minerals could be of immense value. Brazilian Navy and Air Force could do a great deal of patrol work.

Question: (James B. Bullock): "Brazil's attitude to foreign capital?"

Answer: "Brazilian Government has some of the most favorable laws in the world towards everything except oil. Oil is a government monopoly, but Americans are helping build the oil industry."

Question: (John M. Koffman): "Freedom of religion?"

Answer: "Complete—all religions are tolerated. In the cities people swarm to the swarms and to philosophical discussion, especially if it is called philosophy rather than religion."

Question: "Would Communists like to gain control of Brazil?"

Answer: "Yes—if for no other reason than to embarrass United States—but for great resources too. There is a very active Commu-

nist party. Leaders are popular with the hungry and dissatisfied masses."

Question: (Carlos B. Lastreto): "Which trans-Andes railroad is reputed as the highest engineering feat?"

Answer: "The highest railroad in the New World is 15,000 feet line from Lima to the American copper mines in Central Andes around Oroya. Brazilian railroads run through difficult mountains, as Percival Farquhar learned to his cost when he invested $200 million of European capital in the effort to tie Brazil together by rail."

WHAT'S WRONG WITH OUR LATIN AMERICAN POLICIES?

(Summary of an address by Charles A. Gauld of Stanford University, delivered March 28, 1957, before the international relations section of the Commonwealth Club of California in San Francisco)

United States policies of the good neighbor and good partner are quite good but could of course, like every program, be improved. One way would be to add an informed neighbor policy on both sides of the Tropic of Cancer along which a deep gulf of differences and misinformation exists.

Both North and Latin America need to work harder to educate citizens to understand how many common problems we need to solve. Among the gravest problems little understood are loss of topsoil and forest resources through destructive use by ignorant farmers. Even the well-educated, rich United States of America has failed to inform a majority of its citizens thoroughly about scientific farming and forestry. Education is an even graver need than better diet in Latin America. There barely half the children receive any schooling. Of the half which does, only a small minority gets beyond the fourth grade. Most children quit after perhaps 3 years of poor, ineffectual, impractical primary schooling. They become ignorant, unproductive, embittered adults often ripe for dictatorship or communism.

Too much of our good partner policy is run by Madison Avenue admen not specialists on Latin America. Too many technical missions go to Latin America poorly informed on the republics. Too many officials of our Department of State and point 4 are so busy pushing papers and unsnarling bureaucratic redtape they fail to read the unique monthly Hispanic American Report edited by Stanford Prof. Ronald Hilton, now in its 10th year. A dismaying number of officials of major United States corporations making big investments and profits in Latin America also claim to be too busy to be well informed.

The Pentagon has since 1945 been pressing the poverty-stricken republics to waste a third or more of their inadequate Federal budgets on arms. Money is taken from underpaid, scarce teachers, nurses and public health and public works projects for arms often used against democratic movements, as in Colombia, Venezuela, and the Dominican Republic.

Our Export-Import and World Banks are right in lending sizable sums to sound projects to improve transportation and increase hydroelectric and other power projects basic to the rapid growth of cities and industries. These however bring appalling problems of water and food supply, education, health and sanitation which our point 4 technicians are working to alleviate. They may never be solved, merely made less worse in view of the population explosion. Many republics are increasing by 3 percent a year. Some 6,500,000 babies a year are being born in our neighboring nations. Latin America may become a kind of American India, or China.

A. P. Giannini on a visit to south Brazil about 1946 found a pattern of homesteads and a rising middle class permitting social, economic, and political democracy. He saw similarly favorable climatic, soil, and social conditions in few other areas in Latin America. No wonder much of Latin America is too unstable to attract much United States capital, which still faces double taxation. Amazing diversity from primitive aboriginal Andean millions in misery to a small rich class with sophistication and fine architecture exists. The builders of United States skyscrapers and of the new Arizona State capitol would do well to employ some of Brazil's world famous architects.

Civic clubs should urge our Senators and Congressmen to continue studying ways to tighten up practicality and efficiency in the spending of our $30 million annual point 4 aid in Latin America. Congressional and private reports are constantly appearing. A congressional probe in 1956 critized these programs, perhaps excessively. We have many able, dedicated officials despite the stultifying effects of bureaucratic fear of initiative and of congressional persecution. The report of Dr. James G. Maddox on technical assistance of United States religious groups in Latin America implied what is well known to veteran observers like Dr. John B. Griffing, adviser to Nelson Rockefeller's useful, practical projects. Griffing says a dollar spent by dedicated missionaries equals two or three dollars spent by point 4 and many more spent by lax Latin American officials. The latter are accustomed to excessive graft and political featherbedding such as bankrupts State railroads and other Government enterprises.

Despite our differences in this hemisphere, we get along better than any similarly large area on earth as scholars like J. Fred Rippy, Hubert Herring, and William L. Schurz note in recent books. We of the United States of America should be charitable in judging Latin America, remembering how favored we are in climate, soil, resources, and our colonization from the technically and morally advanced lands of northwestern Europe. Today only about 20 percent of Latin Americans enjoy 20th century standards of living and education. We can help them raise their standards and strengthen economies and democracies.

Associated Press Award to William Zadick, of Montana, for Excellence in News Photography

---

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. MANSFIELD. Mr. President, the Associated Press Managing Editors Association recently announced the winners of their annual national contest for excellence in news photography.

I am extremely pleased to learn that this year's winner is William Zadick, a close personal friend of mine, and city editor of the Great Falls Tribune, Great Falls, Mont. Zadick's protograph, Cowpoke's Dilemma, shows a rodeo rider tumbling head down from a bucking horse at the North Montana State Fair in August 1956 at Great Falls.

Zadick's picture was selected from 100 photographs submitted by staff photographers of the Associated Press member paper. He describes his prize-winning shot as a lucky shot. The Tribune's city editor is being somewhat modest as to his skill. Readers of the Great Falls Tribune are well aware of William Zadick's fine work in newspaper photography.

I join with Bill's many friends in congratulating him on this well-deserved recognition of his contributions to the field of journalism.

I ask unanimous consent that two articles from Montana newspapers, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Great Falls (Mont.) Tribune of May 4, 1957]

TOP NEWS PHOTO—CITY EDITOR OF TRIBUNE WINS AWARD

NEW YORK.—The Associated Press Managing Editors Association Friday announced William Zadick, city editor of the Great Falls Tribune, as winner of its annual national contest for excellence in news photography.

Zadick's photograph, Cowpoke's Dilemma, shows a rodeo rider tumbling head down from a bucking horse at the North Montana State Fair in August 1956 at Great Falls.

Selection of Zadick's picture from more than 100 photographs submitted by staff photographers of Associated Press member papers was made by a panel of 3 judges.

The judges were George Beebe, managing editor of the Miami Herald; William J. Foote, managing editor of the Hartford (Conn.) Courant, and Samuel Day, managing editor of the New York Journal-American.

Zadick was awarded $100 and his name was engraved on a permanent plaque in the lobby of the executive offices of the Associated Press.

Zadick Friday described his prize-winning picture as a lucky shot.

He said the honor of the award is equally the Tribune's.

GOVERNOR CONGRATULATES

HELENA.—Gov. J. Hugo Aronson Friday sent a congratulatory letter to William Zadick, city editor of the Great Falls Tribune, for Zadick's national award-winning news photograph.

Aronson conveyed his congratulations as governor and as a personal friend. He told Zadick, "We are all extremely proud of you.

"Of course, we here in Montana have known about and recognized your talents for a long time but we certainly are glad the rest of the country now knows what a good job you have been doing," Aronson wrote.

[From the Montana Standard, Butte, Mont., of May 4, 1957]

FALLS MAN WINS NATIONAL HONOR

NEW YORK.—The Associated Press Managing Editors Association of the Great Falls, Mont., Tribune, Friday announced William Zadick as winner of its annual national contest for excellence in news photography.

Zadick's photo "Cowpoke's Dilemma" shows a rodeo rider tumbling head down from a bucking horse at the North Montana State Fair in August 1956.

Selection of Zadick's picture from more than 100 photos submitted by staff photographers of Associated Press member papers was made by a panel of three judges.

The judges were George Beebe, managing editor of the Miami Herald; William J. Foote, managing editor of the Hartford, Conn., Courant; and Samuel Day, managing editor of the New York Journal-American.

Zadick was awarded $100 and his name was engraved on a permanent plaque in the lobby of the executive offices of the Associated Press.

HELENA, MONT.—William Zadick, Great Falls, Mont., Tribune city editor, Friday described as a "lucky shot" his picture "Cow-

poke's Dilemma," national winner of the Associated Press Managing Editors Association annual contest for excellence in news photography.

Zadick was taking pictures for the Great Falls Tribune at the 1956 North Montana State Fair when he got the picture of a rodeo rider tumbling head down from a bucking horse.

Montana Gov. J. Hugo Aronson congratulated Zadick as governor and as a "personal friend." He told Zadick, "We are all extremely proud of you."

In Great Falls, Zadick also commented that the "honor is equally the Tribune's."

Facing a Nuclear Opportunity

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from The Washington Evening Star by the noted columnist, Mr. Thomas L. Stokes, in which he points out that the administration, in its policy of reluctancy, may again lose an opportunity to seize the initiative in working out a plan with other nations for the abandonment of further nuclear tests.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FACING A NUCLEAR OPPORTUNITY—CHANCE TO RETRIEVE OURSELVES SEEN IN URGE FOR H-BOMB LIMITATION

(By Thomas L. Stokes)

Ever so often history seems to come full circle and offer humankind a chance to retrieve itself.

It has been a quick swing this time, only a dozen years, come August 6, since we dropped that atomic bomb on Hiroshima. Three days later, August 9, will be the 12th anniversary of the second one on Nagasaki; and 5 days later, August 14, Japan surrendered.

Now comes a visitor from Japan, Prof. Masatoshi Matsushita, rector of a Christian college in Tokyo, representing Prime Minister Nobusuke Kishi. He asked Secretary of State Dulles if we won't please abandon tests of nuclear weapons. Sorry, can't oblige just now, replied our Secretary.

But the professor is used to "No." He got it in England where he saw Prime Minister Macmillan and Winston Churchill. He asked that Britain abandon tests scheduled for Christmas Island off China. While he was away, his country got all stirred up over Soviet Russian nuclear tests in Siberia. Japanese scientists, in the belief the Russian tests are contaminating the atmosphere over Japan, urged housewives to boil drinking water and to wash fresh fruit as a precaution.

The day after Professor Matsushita saw Secretary Dulles we saw on our television screens news pictures showing crowds parading about Tokyo to protest nuclear tests. Strangely enough the banners they carried and their shouting condemned the British and us, but not Russia. That might suggest Communist inspiration for the demonstrations.

But, unfortunately, we are vulnerable for such exploitation, by Russia or whomever, and especially where Japan is concerned. We are the natural target. For it was our bombs that fell on Hiroshima and Nagasaki to start a new era of fear in the world. Since then the world has figuratively huddled under the awful shadow of the mushroom cloud. Even if another bomb never goes off, the tests by ourselves and Russia and Britain could injure the human race and coming generations because of the radioactive fallout. Or so some scientists tell us.

In expiation, it would seem we should be leading a crusade to abandon nuclear tests, in fact, should have been leading one a long time ago, as was suggested, indeed, in the 1956 presidential campaign by Adlai Stevenson. Once again he advocated stopping hydrogen-bomb tests this week after a visit with Professor Matsushita, who saw the 1952–56 Democratic presidential candidate in Chicago on his way to San Francisco and back home to Japan.

We have let Russia get the jump on us with proposals to stop atomic-bomb tests and, a long time ago, to outlaw the atomic bomb. Whatever her motives, and we are suspicious, she obviously is making headway in the battle for men's minds, while we hold back and let her seize the initiative.

Clearly, she is capitalizing on the current London conferences on disarmament. At least our representative, Harold Stassen, reported here to Secretary Dulles and to President Eisenhower in Augusta that he regards Russia's intentions on disarmament as serious this time.

Why couldn't Secretary Dulles and the President have been dramatizing our position before the world? We have presented proposals to limit production of fissionable materials to peacetime use, starting April 1, next year, if an inspection system is in effect, and are ready to make some compromises on inspection. We also have proposed a gradual reduction in nonnuclear weapons and in armed forces.

A dramatic offer by the President to stop nuclear tests might restore to us the initiative that we seem to have lost in recent weeks and months. Meanwhile, we could go ahead working slowly in the necessarily secret negotiations in London to get long-range agreement with Russia on disarmament, nuclear weapons and all.

It is too bad that the President did not seize the occasion of the Japanese professor's visit. We have assumed a standoffish and suspicious attitude, fettered by our fears, constantly cautious and noncommittal, negative instead of positive. No longer are we the bold nation which the world had come to expect, and which our heritage beckons us to be.

Even as a ragged collection of colonies hovering along our Atlantic coast so many years ago now, we were able to say the things in our Declaration of Independence that went all over the world, and inspired men all over the world, and then again, a few years later, to create a symbol for men everywhere in our Constitution.

Why are we so afraid to be ourselves now?

Housewives Share Food Cost Blame

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the May 8, 1957, Washington Post, the headline of which is "Housewives Share Food Cost Blame."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSEWIVES SHARE FOOD COST BLAME—OFFICIAL CITES DEMAND FOR STAMPS, PARKING LOTS, AND PACKAGING

Part of the blame for the high cost of groceries may rest on the housewife herself, Department of Agriculture marketing experts told Congress yesterday.

Consumer demand for such things as grocery store parking lots, trading stamps and prepackaged foods has almost transformed American shopping habits since World War II, they reported.

Testifying at the start of an Agriculture subcommittee inquiry into reasons for the size of the family food bill, Omer W. Herrmann, Deputy Administrator of the Agricultural Marketing Service, said:

"Customers are more and more being attracted into retail stores by convenience and service.

"It is under such circumstances that retailers, in particular, look for new promotional techniques to attract and keep customers.

"It was in such a setting as this that the use of trading stamp plans began to grow by leaps and bounds after 1953."

But he also stated consumers are eating more and better food than before the war.

Against these figures, however, Herrmann reported that the farmer's share of the retail cost of food products has dropped from a postwar high of 53 percent in 1945 to 40 percent in 1956.

The farmer gets the biggest share of the retail cost of food on unprocessed commodities like eggs, poultry and meat—from 58 to 69 percent.

Herrmann testified that the food marketing "spread"—or the cost of marketing food products—has risen from $9 billion in 1940 to $34 billion last year. Much of the increase has gone into packaging and processing, and higher labor and transportation costs.

New built-in services added to the marketing since 1940 now cost the consumer about $6 billion a year more, Herrmann said.

Herrmann said corporate profits before taxes of food processors, distributors and retailers have grown substantially since 1945, but profits as a percentage of sales have been going down.

Corporate profits before taxes in 1955 were about 6 percent of the total food marketing bill. After taxes they were about 2½ percent.

Farm Legislation

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. BEALL. Mr. President, the farmers of Maryland have always shown a keen desire to till their fields with a minimum of government regulation and interference. Therefore, it was only natural for them to give overwhelming support to the farm program advocated last year by Secretary of Agriculture Benson, and I feel sure that they will now approve Mr. Benson's efforts to gain still greater flexibility in agricultural legislation. A fine editorial on these current plans of the Secretary was published in

the May 4, 1957, edition of the New York Times, and I now ask unanimous consent that it be printed in the Appendix of today's RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CLASS (FARM) LEGISLATION

Secretary of Agriculture Benson has chosen a propitious moment for launching his long-planned drive for a reform of farm price controls, particularly the mandatory price supports applying in the case of the so-called "basic commodities."

At a time when the country is more economy-minded than it has been at any previous time in recent years, it is to be hoped that Mr. Benson's views on this question, outlined in a letter to Senator ELLENDER, may receive the serious public attention to which they are entitled. Price supports on these particular crops are mandatory, and in all cases except that of tobacco must be raised as supplies decline. The support level—that is the level at which the Government is prepared to take the commodity off the hands of the producer—may at no time go below 75 percent of parity, and may rise automatically to as high as 90 percent.

Mr. Benson's basic position is that price supports are still too high and too inflexible. In support of this position he argues, as follows:

1. A program that merely seeks to achieve a certain price level for commodities holds out a false goal if there is no market, or only a very limited market, for such commodities at these artificially achieved prices.

2. Policy objectives should seek to maximize farm income, and this can be accomplished on a permanent basis only by policies designed to enable the farmer to sell his product in the market.

3. Despite the fact that the Government has twice been bailed out from the consequences of ill-considered high-level support policies by wars, the cost to the taxpayer to date has been $11.7 billions.

4. Finally, though the price support program has, in its uneconomic way, helped the politically powerful and generally well-to-do producers of a small handful of favored crops (and even encouraged them to produce a good part of the time for sale not to the market but to the Government itself) the tragic fact is that, in the words of Mr. Benson, "it has made little or no contribution to the problem of the low-income farmers, in whose name farm programs are frequently defended."

No one, probably, will be so unrealistic as to assume that Congress will accept without a contest Mr. Benson's proposal to make price controls of the basic farm commodities more flexible and more discretionary. We hope, therefore, that the administration will not relax its efforts to keep before the public this fourth and last argument by Secretary Benson. We have an idea that public demand for reform will prevail if people can be made to understand that the system of mandatory price supports for a small handful of commodities is strictly class legislation and does not affect the fortunes of the farmers who are most seriously in need of help.

Pitfalls of Civil Rights Bills

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Pitfalls of Civil Rights Bills," from the April 26, 1957, issue of the Waycross (Ga.) Journal-Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PITFALLS OF CIVIL RIGHTS BILLS

The apparent dangers of the civil rights (so-called) bills are now being admitted even by some Members of Congress who formerly appeared to be in favor of the proposed measures.

Presumably it has dawned on many lawmakers that, in effect, the bills would infringe on the civil rights of all Americans in an attempt to protect alleged infringements on the rights of one group.

Indeed, it seems that the term "civil rights" is being much misused these days.

All decent, law-abiding people believe in civil rights. These are rights contained in our constitution and they are for all people regardless of race, color or creed.

We are told that the proposals now before Congress would permit the jailing of citizens without the normal judicial procedures guaranteed in the Constitution. This would be done through contempt citations and other proceedings.

Senator RICHARD B. RUSSELL said recently: "Highhanded and drastic legislative action in this field must be weighed well in the light of its effect upon the rights of the States and the sum total of the liberties of all of the American people."

The measures are, of course, aimed at the South but, make no mistake, they would encroach on the rights of all States and all citizens.

We here in the South must continue to work for understanding and good relations between the races. If we permit violence and let lawlessness go unchecked, we are inviting Federal interference.

But we do not believe that conditions in the South or elsewhere today justify the measures that have been placed before the Congress.

It is our hope that the bills will receive a careful and thoughtful examination from all lawmakers. Their shortcomings should be clear to one and all.

The Image of George Norris

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column from the Chattanooga Times of April 15 about George Norris, whose dream of the Tennessee Valley Authority became the worldwide symbol of democracy in action. Mr. Norris, as Mr. Stokes points out, throughout his career fought for the best interests of the great mass of people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE IMAGE OF GEORGE W. NORRIS
(By Thomas L. Stokes)

WASHINGTON.—We may take it for granted that true greatness is eternal, but there do come times when it gets obscured as the people lower their standards and go chasing off after strange new gods which usually prove to be phantoms.

For reasons which are obvious, these are hardly times that would be kindly disposed to such a man as the late, great Senator George W. Norris of Nebraska. This rugged battler for what Abraham Lincoln called the common people belongs back in another day—in the day when his big dream, the TVA, was acceptable and not creeping socialism.

He is being projected into this materialistic era because he is on the list being considered by a Senate committee named to select the five outstanding Senators in our history. Their portraits will be hung in the reception room just off the Senate Chamber.

Like other prophets and dreamers, he is without honor among some of his own people in his State. He always was. They are represented in the Senate today in CARL T. CURTIS, a Republican. CURTIS has asked to be given advance notice of the identity of the chosen five, not, he explains, for purposes of a veto but just so that he might not be caught unawares. This comes, one would suppose, in a category of senatorial courtesy.

Antagonism to Senator Norris existed when he was here with us, for he always was fighting powerful forces in his advocacy of measures to improve the living and the security of our rank-and-file citizens.

These measures included not only TVA, but those to protect labor and its rights, such as the Norris-La Guardia Act to prevent injunctions by which labor unions had been destroyed, and his constitutional amendment to abolish "lameduck" sessions of Congress when Members who had already been defeated were vulnerable prey for all sorts of selfish interests.

Because of all the causes with which he was belligerently associated in his day, as a Republican and later as an Independent, the thought of George W. Norris is disturbing to some in the seats of power in Government and business today. Most especially, he is an offending reminder of the memorial he left behind in the great TVA project which means so much to so many people in our Southeast.

He is a reminder, too, of the still bigger dream with which he inspired some who still are around—the dream of similar integrated public development of all our great river valleys by the Government so that our rivers would be harnessed for protection against floods, for production of low-cost power, for navigation, for irrigation, and reclamation.

Some headway was made toward this dream by Presidents Roosevelt and Truman. Now it is being blasted by the present administration. By something called the partnership policy, this administration is dealing out choice sites in our public domain to big private utilities in a manner that will disrupt basinwide development and thus will not reach the full potential to protect the public interest.

If this is not done right now, it will be forever wrong. For there is no going back. We are seeing basinwide development shattered in the mighty Columbia in the Pacific Northwest, and efforts being plotted elsewhere.

My memory of George Norris goes way back to the beginning of his dream when, for a decade or more, he was trying to get Congress to authorize Government operation of a leftover World War I Government dam and nitrate plant at Muscle Shoals, Ala.

He was thwarted by Presidents Hoover and Coolidge, but President Roosevelt espoused his dream, broadened the project to embrace the whole Tennessee system. And in the wake of the Federal Trade Commission's revelation of the financial shenanigans of great utility combines, TVA was approved by Congress.

But the moneychangers are back in the temple of government and they are effective.

Memory goes back to the last time I saw Norris. It was in the spring of 1944, a few months before his death. We sat talking on

the side porch of the home in McCook, Nebr., where he had lived for 60 years.

He told of the worldwide interest in TVA. From all over the globe people wrote to him, and some came to McCook to see him. In the few days before, he had seen an engineer from China and a woman from France who was writing a book about TVA.

His idea has been exported all over the world. In fact, we are lending money to some 20 other nations, either directly or through the International Bank, for TVA's. They are monuments to an American idea.

But we have abandoned the idea here. For us it is now "creeping socialism" if it is done in the United States.

George Norris ought to be among the five great Senators. But it really won't matter much if his picture doesn't hang in the Senate. It surely wouldn't matter to him. He was a simple and unaffected person to whom such things mattered so little. His image is in the minds and hearts of people all over the world.

The Conservative Conscience

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. CHURCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Intermountain and Alameda Enterprise, a newspaper published in Pocatello, Idaho, on May 2, 1957. The editorial was written by Mr. Perry Swisher, a distinguished Idaho journalist and Republican. It emphatically opposes "the further centralization of economic power, the further stultifying of small competitive enterprise, and the further commingling of public policies and private utilities, which are beginning to characterize the Eisenhower administration."

After praising the senior Senator from Virginia [Mr. BYRD] for his opposition to the administration's tax writeoff for the Idaho Power Co., and the senior Senator from Delaware [Mr. WILLIAMS] for his efforts to obtain a reappraisal of the oil depletion allowance, the editorial concludes by expressing the hope that the Senate may once again provide the Federal Government with a vigorous conscience as it did in the days of Borah, Nye, Norris, and LaFollette.

It is significant that the author of this editorial is a leading Republican member of the Idaho State Legislature.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SIGNS OF LIFE

Virginia's Senator HARRY BYRD inclines to be so one track on the subject of budget balancing that he is most sparing in his votes for any Federal projects. Certainly you couldn't classify him as a public-power man.

While he was being consistent, the Senator must have shocked the Idaho Power Co. this week when he attacked as "indefensible" the Eisenhower administration's $29,250,000 tax writeoff for the Idaho utility. This was criticism from an unexpected direction.

THE CONSERVATIVE CONSCIENCE

And, a few weeks ago, Senator JOHN WILLIAMS, of Delaware, a Republican who is scarcely a raving liberal, tried to get consideration for cutting the superflush oil companies' depletion allowance from 27½ percent down to 20 percent. A noble gesture, but one need only scan the list of contributors to senatorial campaigns to know why he failed.

The actions of BYRD and WILLIAMS are heartening in a Congress that began by deciding it couldn't afford to provide tax relief for the casualty-filled world of small business.

If the Eisenhower administration has an obvious weakness (aside from such less obvious weaknesses as the way a colossal budget was dumped mish-mash on Congress, and its untranslatable Middle East policy), it is favoritism to super-big business, to big oil, and to electric utilities.

THE 1920'S, ONLY SMOOTHER

When the special favors handed out by Federal agencies are too much for conservatives like BYRD and WILLIAMS to swallow, it is politically high time that the President looked to the specific record of modern Republicanism in the executive department. It may be these special favors—they smack of the 1920's—that make it so hard for Mr. Eisenhower to define modern Republicanism except in the most general terms.

We do not favor political vendettas against big business and utilities simply because they are big or intrinsically monopolies. Nor do we discount the place of private utilities like Idaho Power in the generation and sale of electricity.

But we emphatically do oppose the further centralization of economic power, the further stultifying of small competitive enterprise, and the further commingling of public policies with private utilities, which are beginning to characterize the Eisenhower administration.

We like our conservative Democrats impartially conservative, like BYRD, and we vastly prefer our Republicans Lincolnian if the Eisenhower regency now setting policy is a sample of modern Republicanism.

After a long stagnation, the Senate seems to be showing signs of life, and may once again provide the Federal Government with a vigorous conscience as it did in the days of Borah, Nye, Norris, and La Follette.

Review of the Book Entitled "The Enemy at His Back"

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a review of the book entitled "The Enemy at His Back," written by Elizabeth Churchill Brown. The review was written by Sister M. Margaret Patricia, and was published in the Wanderer on October 25, 1956.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

ELIZABETH CHURCHILL BROWN, THE ENEMY AT HIS BACK—NEW YORK: A FREE ENTERPRISE PUBLICATION DISTRIBUTED BY THE BOOKMAILER, 1956

(By Sister M. Margaret Patricia)

This is a slow-paced, indestructibly argued exposure of obscene dishonesty. This book is carefully researched and meticulously documented. If all the perfidies that can be cataloged from 1939 to 1956 (yes, yesterday) were argued and exposed, documented and distributed no easy task, this last) the world, I fear, would not contain all the books.

This is a first book, and its writing was absolutely necessary to the little woman who had suddenly comprehended the meaning of the enemy at the American GI's back. As the whole sun is pictured in a tiny drop of water, the whole world scheme is revealed in this one narrative.

Oh, I know what the members of old IPR, now regathering under the auspices of World Peace Foundation and World Affairs Council, will do with this book. They will make mincemeat of it, not for its logic, not for its documentation, not for its import—for its composition and rhetoric. I'll beat them to this and in doing so I will assert that the very style, so reprehensible to those who, using Rockefeller, Carnegie, Gianninni, and Ford moneys, can employ the most skilled mechanics of rhetoric, indexmakers, and typists, unconsciously does poetic justice to the subject of this selected sentence:

"Our obstreperous 'boy,' Mr. Grew, got his feet in even more hot water when, as Acting Secretary of State, he dipped his fingers into the propaganda machine and gummed up the works for a short minute."

Lattimore will swoon over that; Bisson will walk out. Professor Fairbank will ask Mrs. Fairbank what she thinks of this—on second thought, I'll bet he won't.

The Nation won't carry advertisements for this book alongside Agnes Smedley's memoirs of Stilwell's Chinese hero. (The effect of the "Khrushchev" technique reminds us of a game of hide and seek, when the one who is "it" calls out, "Come out, come out, wherever you are." Allee Allee, outs in free.")

Out here in California we have memories of hydraulic mining. (It may come back; Calaveras County is leaping again—not that everlasting frog.) By hydraulic mining one of our hills can be lowered in an afternoon and turned into a pile of smooth, round granite stones that look like gigantic potatoes. The method of placer mining suggests itself as a figure to show the meaning of Liz Brown's book. She has exposed the men who, one day in midcentury when a mountain was lowered, held the nozzle of the eroding hose. She does not describe the hose or trace its hydraulic power to the source, but she includes in the appendix one excerpt from the diary of Prince Konoya—who was surrounded and whose work was destroyed by the IPR. Do not read it running; read it on your knees:

"In the first place, there has been a notable ascendance of Soviet Russia in world politics. In the light of her recent activities in Europe, we must judge that she has not abandoned the hope of bolshevising the whole world. * * * With regard to internal affairs, potentially dangerous factors include the rapid deterioration of the people's living conditions, increase in the voice of the laboring classes, rise of pro-Soviet feelings as enmity against America and Britain increases, attempts by an extremist group in the military to achieve radical changes in internal politics, activities of younger bureaucrats sympathetic with that group, and disguised activities of the Communists behind the military bureaucrats.

"A majority of younger officers seems to think that the present form of the Japanese Government is compatible with communism—a conception which, in any opinion, constitutes the basis of the radical thought of the military. The Communists are influencing them with the theory that, even under communism, Japan can maintain the Tenno system. I have now come to seriously doubt whether the whole series of events from the Manchurian incident to the present war have not been what they have pur-

posefully planned. It is a well-known fact that they openly declared the aim of the Manchurian war was to achieve drastic reforms in domestic affairs. A central figure of theirs also declared that the longer the China incident continues, the better, for otherwise the intended reform would not be accomplished. Of course, the reform aimed at by the military may not necessarily be a Communist revolution, but the group of bureaucrats and civilians (both left and right) who are in close collaboration with the military are definitely intending to bring about such a revolution. In the light of this conclusion, I now realize that I have, during the last 10 years, come across many events the meaning of which I did not then fully appreciate. (As) prime minister twice during that period, and overeager to bring about national unity by accepting as much as possible of the doctrine advocated by those radical elements, I failed to perceive the true intentions hidden behind their arguments. I do not pretend to find any excuse for my shortsightedness, but I feel responsible for it.

"In the last few months, the slogan 'Hundred Million Die Together' has become increasingly louder, seemingly among the rightwing people but it has its real basis in the activities of the Communists.

"Under such circumstances, the longer we continue the war the greater will be the danger of revolution. We should, therefore, stop the war as soon as possible" (p. 226f).

And remember "Fear not, little flock, I have overcome the world," means "Fear not," but it does not mean "work not" or "fight not."

Problems of Taxation

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Time To Stop the Wild Party," from the April 25, 1957, issue of the Jeff Davis County Ledger, of Hazlehurst, Ga.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO STOP THE WILD PARTY

Even though Senators TALMADGE and RUSSELL, and Congresswoman IRIS BLITCH, the three people whom we of the Eighth District are largely dependent on to fight our battles in Washington, are hammering away at the very serious tax problem, and undoubtedly are receiving some help from their confreres, the road is long and hard.

For taxation has gotten out of hand. President Eisenhower and his pet group of Republicans, joined by an alarming number of Democrats, have gone "hog wild" and are having an orgy of spending, and planning more. Since the end of the fiscal year 1954-55 there has been a recurring policy to increase Federal spending as fast as revenues rise, with no leeway for tax reduction (in appreciable amount) or retirement of debts.

"It gives me great concern to reflect on the fact that over 10 percent of the national budget or 7¼ billion annually, now goes for interest alone on the Federal debt which, as of next June 30, will total $270.6 billion," the junior Senator from Georgia said Monday. "The people are deeply concerned over the fact that Federal taxes of $72.1 billion during the current fiscal year are sapping up more than one-sixth of everything every citizen produces in goods and services. (Gross National Production, 1956–1957, estimated $412 billion). This does not count or include State and local taxes," he declared.

President Eisenhower has recommended to the Congress that it create 18 more spending programs. Yet, already the tax bite takes one out of every three dollars earned by corporations and individuals in this country. The Federal Government gets over two-thirds of the tax dollar.

Now, in peacetime, the budget is far in excess of any wartime budget we have ever had and it is getting bigger and bigger every year. The purchasing power of the dollar continues its downward plunge which has already brought the cost of living to the highest point on record.

Competent authorities tell us that much waste and duplication in Government operations can be eliminated. The Federal budget as proposed calls for too much spending and must be cut to reason.

Thomas Jefferson warned "were we directed from Washington when to sow, and when to reap, we should soon want bread." Jefferson knew that when people turned from self-reliance to dependence on the Government to solve their problems they were inviting trouble. The wisdom of a Jefferson should be heeded.

The one way to control the spenders is to take the money away from them. That is what our Senators and Congresswoman know and that is what they are trying to do. Senator TALMADGE outlined five steps which he feels are necessary to restore Federal fiscal responsibility. He thinks the National Congress should:

1. Eliminate nonessential Federal spending.
2. Press for a systematic beginning on debt reduction and outlaw deficit spending.
3. Adopt new legislation guaranteeing better budgetary control.
4. Institute a reduction in Federal income taxes of at least 10 percent to restore incentive and to stimulate new job opportunities.
5. Halt encroachment by the Federal Government on the revenue sources of the States.

We believe that our people of the Eighth District are greatly concerned over the rising tide of spending and the ever-increasing taxes. We think they are back of our Representatives at the Capital. We sincerely wish and hope many of them will write Senators RUSSELL and TALMADGE and Congresswoman BLITCH commending them for their stand and cheering them to continue the good work.

Small Dams Halt Floods

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. MONRONEY. Mr. President, in the last month 6 inches of rain fell on northeast Oklahoma's Double Creek Valley in 10 days. That much rain once would have flooded 2,000 acres of farmland. That much rain was enough to test the network of six small upstream dams built there under the soil conservation program. The Tulsa World reports that the small dams did their flood prevention work perfectly.

I ask unanimous consent to have printed in the Appendix of the RECORD the World article describing the effectiveness of one of our small watershed programs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Tulsa Daily World of April 30, 1957]

SMALL DAMS HALT FLOODS—DOUBLE CREEK VALLEY PROJECT SHOWS RESULTS

RAMONA, April 29.—Farmers in the Double Creek Valley here had waited 3 years to see if the Government's network of small upstream dams would hold back the raging waters once it rained enough to send the creek on a rampage.

The test came late last week when more than 6 inches of rain were dumped on the Double Creek Watershed in 10 days and it was still raining Monday. In previous years that much water would have flooded 2,000 acres in the valley, destroying crops on more than 40 farms.

DAMS HALT FLOODS

But this time there was no flood. The dams held back the water. Farmer Elwood Eden, who has lost whole crops to floods before, said Monday "The creek hasn't run over half bank full at any time during the rains."

Fay Redman, retired mail carrier, said, "The water would have been over the highway north of Ramona if those dams hadn't been there."

Farmer James Little said he believed he would have had "more than 800 acres on his farm flooded if it hadn't been for the dams." Floyd Short, who farms on the bank of the creek, added, "There's no question about the detention dams holding the water back."

CAN SLEEP AT NIGHT

Farmer Floyd Hand was enthusiastic about the dams. "We can sleep at night now when it rains, since the flood hazard is removed and we don't have to worry about losing our crops."

Some farmers were skeptical about the small dams working when the Soil Conservation Service and the Caney Valley Soil Conservation District started building the Double Creek flood-prevention project 3 years ago.

The last of 6 dams, with a combined capacity of 7,000 acre-feet of storage, was completed in January 1956. There hadn't been enough rain until last week to prove their value.

CREDIT GOES TO DAMS

Charlie Kilpatrick, Soil Conservation Service, Bartlesville, said that all the credit for prevention of a flood on Double Creek cannot go to the detention dams.

"A good share must go to the good land treatment being applied to land by farmers on the uplands, all part of the overall flood-prevention program," he said.

He pointed to more than 19,000 acres of properly managed native grass and 2,558 acres of pasture planting to give the land a cover against water and soil losses; 200 farm ponds, 5,000 acres of legumes, and miles of terraces which have been built as part of the flood-prevention plan.

Prayer Is Power

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. WILEY. Mr. President, I have on many occasions on the floor of the Sen-

ate pointed out the need for the invocation of divine guidance for the solution of our personal and national problems.

In this connection, I should like to recall that back in 1941, a half year before Pearl Harbor, I arranged for the printing in the CONGRESSIONAL RECORD of the text of an article which was carried in the March issue of the Reader's Digest of that year.

Since then, I have had many occasions to refer to this article, and many readers of the RECORD have likewise referred to it.

Because of the widespread interest in it, because it is more valid today than ever before, in view of the problems facing our Nation, I ask unanimous consent that this article, entitled "Prayer Is Power," by the famed scientist, Dr. Alexis Carrel, be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Reader's Digest of March 1941]

PRAYER IS POWER

(By Alexis Carrel, M. D.)

Prayer is not only worship; it is also an invisible emanation of man's worshiping spirit—the most powerful form of energy that one can generate. The influence of prayer on the human mind and body is as demonstrable as that of secreting glands. Its results can be measured in terms of increased physical buoyancy, greater intellectual vigor, moral stamina, and a deeper understanding of the realities underlying human relationships.

If you make a habit of sincere prayer, your life will be very noticeably and profoundly altered. Prayer stamps with its indelible mark our actions and demeanor. A tranquillity of bearing, a facial and bodily repose, are observed in those whose inner lives are thus enriched. Within the depths of consciousness a flame kindles. And man sees himself. He discovers his selfishness, his silly pride, his fears, his greeds, his blunder. He develop a sense of moral obligation, intellectual humility. Thus begins a journey of the soul toward the realm of grace.

Prayer is a force as real as terrestrial gravity. As a physician I have seen men, after all other therapy had failed, lifted out of disease and melancholy by the serene effort of prayer. It is the only power in the world that seems to overcome the so-called laws of nature; the occasions on which prayer has dramatically done this have been termed "miracles." But a constant, quieter miracle takes place hourly in the hearts of men and women who have discovered that prayer supplies them with a steady flow of sustaining power in their daily lives.

Too many people regard prayer as a formalized routine of words, a refuge for weaklings, or a childish petition for material things. We sadly undervalue prayer when we conceive it in these terms, just as we should underestimate rain by describing it as something that fills the bird bath in our garden. Properly understood, prayer is a mature activity indispensable to the fullest development of personality—the ultimate integration of man's highest faculties. Only in prayer do we achieve that complete and harmonious assembly of body, mind, and spirit which gives the frail human reed its unshakable strength.

The words, "Ask and it shall be given to you," have been verified by the experience of humanity. True, prayer may not restore the dead child to life or bring relief from physical pain. But prayer, like radium, is a source of luminous, self-generating energy.

How does prayer fortify us with so much dynamic power? To answer this question (admittedly outside the jurisdiction of science) I must point out that all prayers have one thing in common. The triumphant hosannas of a great oratorio, or the humble supplication of an Iroquois hunter begging for luck in the chase, demonstrate the same truth: That human beings seek to augment their finite energy by addressing themselves to the infinite source of all energy. When we pray we link ourselves with the inexhaustible motive power that spins the universe. We ask that a part of this power be apportioned to our needs. Even in asking, our human deficiencies are filled and we arise strengthened and repaired.

But we must never summon God merely for the gratification of our whims. We derive most power from prayer when we use it not as a petition but as a supplication that we may become more like him. Prayer should be regarded as practice of the presence of God. An old peasant was seated alone in the last pew of the village church. "What are you waiting for?" he was asked; and he answered, "I am looking at Him and He is looking at me." Man prays not only that God should remember him, but also that he should remember God.

How can prayer be defined? Prayer is the effort of man to reach God, to commune with an invisible being, creator of all things, supreme wisdom, truth, beauty, and strength, father, and redeemer of each man. This goal of prayer always remains hidden to intelligence. For both language and thought fail when we attempt to describe God.

We do know, however, that whenever we address God in fervent prayer we change both soul and body for the better. It could not happen that any man or woman could pray for a single moment without some good result. "No man ever prayed," said Emerson, "without learning something."

One can pray everywhere. In the streets, the subway, the office, the shop, the school, as well as in the solitude of one's own room or among the crowd in a church. There is no prescribed posture, time, or place.

"Think of God more often than you breathe," said Epictetus the Stoic. In order really to mold personality, prayer must become a habit. It is meaningless to pray in the morning and to live like a barbarian the remainder of the day. True prayer is a way of life, the truest life is literally a way of prayer.

The best prayers are like the improvizations of gifted lovers, always about the same thing yet never twice the same. We cannot all be as creative in prayer as St. Theresa or Bernard of Clairvaux, both of whom poured their adoration into words of mystical beauty. Fortunately, we do not need their eloquence; our slightest impulse to prayer is recognized by God. Even if we are pitifully dumb, or if our tongues are overlaid with vanity or deceit, our meager syllables of praise are acceptable to Him, and He showers us with strengthening manifestations of His love.

Today as never before prayer is a binding necessity in the lives of men and nations. The lack of emphasis on the religious sense has brought the world to the edge of destruction. Our deepest source of power and perfection has been left miserably undeveloped. Prayer, the basic exercise of the spirit, must be actively practiced in our private lives. The neglected soul of man must be made strong enough to assert itself once more. For if the power of prayer is again released and used in the lives of common men and women; if the spirit declares its aims clearly and boldly, there is yet hope that our prayers for a better world will be answered.

Mrs. Hazel Abel, Former Senator From Nebraska, Named Mother of 1957

EXTENSION OF REMARKS

OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. HRUSKA. Mr. President, a great honor has come not only to this body, but, likewise, to the State of Nebraska, in the naming, as American Mother of 1957, of Mrs. Hazel Abel, who served in the Senate in 1954.

I ask unanimous consent that an article from the Washington Evening Star of May 7, 1957, may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MRS. ABEL, EX-SENATOR, NAMED MOTHER OF 1957

NEW YORK, May 7.—Mrs. Hazel Abel of Lincoln, Nebr., 68-year-old former United States Senator and construction company president, was named American mother of 1957 today.

The announcement was made by Mrs. Daniel A. Poling, president of the American Mothers Committee, Inc., at the opening of the group's annual mothers' conference.

Mrs. Abel is a widow with five children—four daughters and one son. She had six grandsons.

Mothers of the year from every State, the District of Columbia and Puerto Rico competed for the national title. A committee jury chose the winner.

"Hazel Abel's work embraces many fields—church and religious organizations, education, civic and welfare groups, and above them all stands out her work with youth," the announcement said.

"She has been awakening thousands everywhere to all the known causes of juvenile delinquency, and has been stimulating communities to study and put into effect modern ways of prevention. In her own State she is responsible for new interests in a statewide juvenile probation system, improved courts for children and recodification of Nebraska's children's laws."

Mrs. Abel was born in Plattsmouth, Nebr., and has lived in that State all her life. She met her late husband, George Abel, when the two were students at the University of Nebraska.

After graduation he started a construction company with $100 in savings. The business grew to a large firm.

When Mr. Abel died in 1937, his wife took over as company president. She ran the business for 15 years. Then she turned it over to her only son.

Mrs. Abel was elected to a short term in the United States Senate after the death of Senator Dwight Griswold in 1954, and served from November, 1954, to January, 1955.

Next Friday she will be honored as the American Mother of 1957 at the annual awards luncheon of the mothers committee at the Waldorf-Astoria Hotel.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. HRUSKA. I yield to my colleague.

Mr. CURTIS. Mr. President, I share in the expression of pride and appreciation that this honor has come to the State of Nebraska. Mrs. Hazel Abel was a distinguished Member of this body.

She has been named American Mother of the Year. I wish to congratulate her and to express my feeling of pride that this honor has come to her and to our State.

Mr. MUNDT. Mr. President, will the Senator yield?

Mr. HRUSKA. I yield to the Senator from South Dakota.

Mr. MUNDT. I should like to associate myself, Mr. President, with the felicitations extended by the two Senators from Nebraska. Mrs. Hazel Abel is a neighbor of ours, in South Dakota. I have known her for a long time. She served with distinction as a Member of the Senate.

I was visiting with the South Dakota Mother of the Year, Mrs. Hans Sorenson, of South Dakota, in my office this week. She expressed her high regard for this outstanding American lady.

I join in congratulating our neighbors in Nebraska.

Mr. HRUSKA. I should like to thank the Senator from South Dakota.

Problems of Integration

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Latest Court Edict Very Dangerous," from the Metropolitan Herald, of Atlanta, Ga.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LATEST COURT EDICT VERY DANGEROUS

The United States Supreme Court reached a new low in making law this week by ruling that a racially segregated school in Philadelphia, operated with funds left in trust by a private citizen for "poor white male orphans," must admit Negro students.

In its latest seizure of power the Supreme Court overruled the Philadelphia Orphans' Court, the Pennsylvania Supreme Court, precedent of 108 years and the right of a private citizen to spend his money as he saw fit for the youth of the land.

The case involved a suit brought in the name of two Negro boys, obviously by the NAACP. They sought entrance into the school established in 1848 under the terms of a will by Stephen Girard, a wealthy Philadelphia citizen, who left $2 million in trust to set up and operate a school for "poor white male orphans."

For 109 years the terms of the will had been met. The school had been operated for "poor white male orphans." Since 1869 the school has been under the direction of a board of directors called City Trust, as trustees, which includes some city officials.

Because some city officials had a part in the direction of the school, as trustees, although no tax money was spent in its operation, the Supreme Court ruled that the "Negroes were discriminated by the State" in violation of the Court's recently amended 14th amendment.

Since the Court ruled that Negroes were being discriminated against by the terms of the will, it stands to reason that a suit brought in the name of females would result in a ruling that it also discriminated against females.

Obviously this ruling means that a person, in the future, will not be able to set up trust funds for the education of children of any particular race or creed. It's ruling, in effect, means that a person can no longer spend his or her money to assist and help with the education of any particular segment of our population. In practically every State the State board of education has some control, however limited, over private and religious educational institutions. It may be in the matter of fire safety, accreditation, etc., but regardless of how limited, such institutions would be under some "control" of a State agency, thus the 14th amendment, as amended by the Supreme Court, would control.

We wonder how many more illegal decisions this group of justices will proclaim before the rank and the file of American citizens wake up to the fact that our highest court is undermining constitutional government and replacing it with a system based on judicial decrees.

Death of Senator McCarthy

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Clifford Ward and published in the Fort Wayne News-Sentinel of May 3, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOOD EVENING

(By Clifford B. Ward)

The man who was lynched atop Capitol Hill by the 20th century nightriders of political intolerance is dead.

They whipped him, they scourged him, and they strung him up, leaving him to die the slow but possibly willing death of a man who has taken more than even the strongest can bear.

It has happened many times in the past and will happen again, in spite of all the protestations of brotherhood, in spite of all the drumbeats for tolerance of differences, in spite of all the protestations against abuse of people whose ideas aren't acceptable.

What was done to Senator Joseph McCarthy should never have been done to any human being, but it was. Today, his enemies who are honest must be quietly rejoicing, while his admirers quietly mourn.

WHO WAS THIS MAN?

Who was this horrible man, whom the Senate of the United States censured, whom two Presidents of the United States snubbed, and whose name was used as a synonym for something evil? What was his crime?

He was an American lad from a Midwest farm State, who thought that if he worked and studied hard enough he might become a lawyer in record time, which he did, and possibly become a judge in record time, which he also did. He was a kid who thought that he, like everyone else in health, had a duty to fight for his country and he went to war, not as a desk clerk in Washington, but as a marine in the field of battle.

He saw action, won medals and picked up steel fragments in a knee, but all this was later to be poohpoohed by enemies whose only contact with battlefields and wars were through reading about them or seeing them in newsreels.

FOUGHT BARE KNUCKLED

They had the effrontery to call him a coward. They had the effrontery to imply that his wounds were the fabrications of a liar. He came home to be elected Senator by the sovereign citizens of a sovereign State, and he was on his way, until he began fighting communism and Communists bare knuckled. From then on, he was in trouble.

He discovered that a slurring remark about the United States in this New World of ours is something to evoke applause, but a damaging statement about the new experiment in tyranny emanating from the Kremlin is something to be hissed.

His was a losing fight and his enemies got him as they got Martin Dies, as they got Whittaker Chambers, as they got everyone who stood up to them and fought.

There were things wrong with Senator McCarthy. He had a man's heavy beard that grew too fast on a face that was meant for a football lineman. He talked with a halting, bumbling timber that made his vocal assaults sound like those of a Sherman tank. He hadn't been taught at an eastern boarding school to call a lie an equivocation. He bluntly tagged it "a lie," and its author, "a liar."

NOT TAUGHT MODERN GRACES

He had never been taught that the modern graces call for being nice to enemies when talking to them but to get them from behind. He just doubled up his fist and smacked them in the face. For that he was called boorish and crude. Possibly he was. He drank whisky when he felt like it and never thought to lie about it. He used profanity now and then and believed that maybe in the circle of men, while it wasn't approvable, it wasn't criminal.

There wasn't much they didn't do to Senator McCarthy. They belittled his war record. They scoffed at his medals and his injuries. They tried to say that he was a crook and he made those who said so eat their words. They accused him of income-tax evasion and the Treasury gave the lie to this by sending him a tax refund. They even tried to alienate his wife by the lie that he was a homosexual. They even tried to say that he was a Huey Long, bent upon being a new political boss of the United States.

Senator McCarthy discovered what most people discover, that life is a battlefield and that not all soldiers retire from it in a field of glory. To him, death was an honorable discharge. He retired from battle, knowing one thing that not even his enemies could deny, namely, that he never ran from a fight. May he be in the hands of better friends than he found here.

Jefferson National Expansion Memorial in St. Louis, Mo.

EXTENSION OF REMARKS

OF

HON. STUART SYMINGTON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. SYMINGTON. Mr. President, for more than 20 years the city of St. Louis, in cooperation with the National Park Service and the Federal Government, has been working to develop the Jefferson National Expansion Memorial in the heart of St. Louis.

Because of the national interest in this matter, and because of the Federal responsibility in regard to the Memorial, I ask unanimous consent that an editorial entitled, "Why Not a Second Miracle?" from the St. Louis Post-Dispatch of April 26 be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY NOT A SECOND MIRACLE?

St. Louis is getting weary, mighty weary, of the delay and the foot dragging which so far have prevented a real start on the national memorial on the riverfront. Delay can become atrophy. And atrophy can kill.

Twenty years have passed since the site was cleared, and the National Park Service has had a staff here most of that time. Yet what is there to show for this? Some interior decorating and a few coats of paint on the old courthouse.

Obviously, the war was a genuine reason for holding back. But the war has been over for a dozen years, and in those years Pittsburgh has redeveloped its Diamond Triangle, New York has built its great new convention center, and Philadelphia has made long strides in the redevelopment based on Independence Hall—all with Federal aid.

Even though the latest dash of cold water for St. Louis comes from Washington in the form of a statement that National Park Service officials fear it may be too expensive to put the riverfront railroad tracks in a tunnel, we doubt that the frustration of this magnificent project really stems from the National Capital.

Our congressional representatives have been active. They obtained an appropriation, and they are ready to ask that more of it be allocated to the railroad tunnel, if that really should be necessary. But after 7 months of negotiations between the National Park Service, the city, and the railroads, nobody seems to know what a tunnel will cost. That information now is expected from a firm of Chicago consultants.

Why is it taking so long to get up-to-date cost figures on a tunnel that was planned years ago? How long has it been since Harold Ickes said: "The tracks must go"?

Why is the old proposal of the railroads for an open cut being revived? Why are we getting another crop of public relations stories about diverting the riverfront to other uses, including a white-elephant stadium? That is all "old stuff," except perhaps the line that people so love to watch trains that it would be a shame to force them into a tunnel—as though one could not watch them approaching and leaving that tunnel.

Frankly, we suspect that most of the causes of delay are centered here in St. Louis. Part of the fault may be attributed to lethargy; part of it seems to be more serious. Fortunately, however, the year-in, year-out champions of the Saarinen plan for the riverfront—the splendid plan which emerged from the competition for which St. Louis businessmen raised $250,000—have found new and energetic allies in the St. Louis chapter of the American Institute of Architects.

These men know how much is being done elsewhere on a grand scale. They know the obstacles here. And they are determined to get them out of the way. If they succeed, nobody will be happier than the members of the local staff of the National Park Service. They find no fun in sitting on their hands.

There are other groups in this community which could—and should—give their powerful support to the architects and to our Senators and Representatives.

The railroads—and they owe very much to St. Louis—could provide a stimulant by announcing their eagerness to get on with the tunnel.

The chamber of commerce could help by knocking down pettifogging objections and calling for full speed ahead.

The city government—which has sacrificed 20 years of taxes on the site, not to mention the bond money used to clear it—could revitalize its demand for the completion of the park. To borrow a phrase from the late "Big Bill" Thompson, it is time to "throw away the hammer and get a horn."

Better still, there is a home-bred example for St. Louis to follow. The community should take the same approach to the riverfront that it took to smoke elimination. If one miracle could be worked overnight, why not another?

Death of Senator McCarthy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Fort Wayne News-Sentinel of May 4, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOSEPH MCCARTHY, GREAT AMERICAN

In the death of Wisconsin Senator Joseph R. McCarthy America loses perhaps its most dynamic and uncompromisingly outspoken personality since Teddy Roosevelt. Even the Senator's most bitter foes would agree that there never was anything static about Joe McCarthy. Even they would also be obliged to agree that he kept the issue of Communist infiltration in America (unfounded bugaboo they termed it) more dramatically in the public eye than any other person.

Indeed, in this Senator McCarthy became an international figure and a national issue, during the height of his career from 1950 to 1954, in which as chairman of the Senate Un-American Activities Committee and in the public forum, he took on all comers, including two President of the United States.

So volatile and uncompromising a personality as Joe McCarthy, projected into the national prominence that was destined to be his on the issue of communism, could not help but win both profound and loyal friends, as well as fierce enemies. No man ever fought more courageously and earnestly in the Senate for the things he deemed right.

His zeal and unfailing courage and adamant refusal to compromise and dispose of cases of alleged complicity with, or softness toward, Communist infiltration here, "quietly and diplomatically" brought him in conflict with the high and the mighty, including two Presidents and the Senate, which censured him on the grounds that he "acted contrary to senatorial ethics and tended to bring the Senate into disrepute and dishonor" and for "intemperate abuse" of Brig. Gen. Ralph Zwicker.

McCarthy accused former President Truman and others in the Truman administration of keeping top subversives in the Government after the FBI had warned them that these traitors were spying against their Government.

And he accused President Eisenhower of congratulating Senators who hampered "the exposure of communism" and of putting up "a shrinking show of weakness toward Red Chinese who are torturing and brainwashing American uniformed men."

Senator McCarthy's controversy with those high in the Government waxed most bitter in his committee's investigation of Communist infiltration in the Army, when they came to the rescue of Maj. Irving Peress and General Zwicker, who were called before the Senate committee. When McCarthy asked Major Peress about charges he had been a Communist and had attended a Communist leadership school, Peress declined to answer any questions concerning his Communist connections, taking refuge behind the fifth amendment, when because of his refusal to give any explanation of the charges, Senator McCarthy declared that Peress should be court-martialed. He was 3 days later given an honorable discharge instead. And when General Zwicker was called before the committee and questioned about the Peress honorable discharge, Secretary of the Army Stevens issued a resounding defense of Zwicker and an intemperate denunciation of McCarthy.

McCarthy also gained the ill will of the Eisenhower administration for criticizing it for retaining such men as John Paton Davies in the State Department after the McCarran committee, headed by the late Democratic Senator Pat McCarran, charged that "John Paton Davies, Jr., testified falsely before the subcommittee in denying he recommended to the Central Intelligence Agency that it employ, utilize, and rely upon certain individuals having Communist association and connections."

Senator McCarthy's rise to worldwide fame was distinctly in the American tradition that no one in America can be born so humble as not to have the hope of rising as high as his talents and ambitions merit. A Wisconsin farm boy and 1 of 7 children, he was early initiated to the rigors of hard farmwork and his early educational advantages were very limited. He worked in a grocery store to enable him to get a high-school education and applied himself so zealously that he completed the 4-year course in 1 year, which prompted the principal to refer to him as "the irresistible force who overcame the immovable object."

In so inescapably alerting his country to the grave menace of the worldwide Communist conspiracy, Senator McCarthy rendered the Nation an invaluable service. His stature will rise with the passing of time just like that of the five Senators honored by the Senate the other day—Henry Clay, Daniel Webster, John C. Calhoun, Robert La Follette, and Robert A. Taft, all of whom also had been unmercifully abused.

May his great and untiring soul enjoy the repose that it so justly merits.

Extra Dividends From Acreage Reserve Land

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. MUNDT. Mr. President, I ask unanmous consent to have printed in the Appendix of the RECORD an article entitled "Extra Dividends From Acreage Reserve Land," published in the Dakota Farmer of May 4, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXTRA DIVIDENDS FROM ACREAGE RESERVE LAND

Widely scattered though it is, a big acreage of good Dakota cropland will go cropless this coming season to satisfy requirements of the Federal acreage reserve program.. Neither cropped nor grazed, it will comprise what popularly is termed "idle acres."

Idle, perhaps, but not unattended. While acreage reserve regulations say that noxious weeds must be controlled, many forward-looking farmers will not be content to let it go at that. They've thought of ways to improve that land even while receiving pay for keeping it out of crop production.

How land may be improved depends on individual farm situations. Ranking high among intentions are means of conserving moisture, destorying weeds, improving tilth, adopting or revising crop rotation methods, preparing for tree plantings, and building up plant food reserves through green manuring or summer fallow.

FALLOW HAS DISADVANTAGES

Whether summer fallow should be preferred is being questioned by many farmers. Summer fallow is a first thought in many areas, but there is this also to be considered: the possibility of loss of soil through wind and water action. High winds scouring dry soil or a flash rain on black or bare fallow can be much more serious than the loss of a high-yielding crop.

Rather than using black summer fallow, some farmers will keep their acreage reserve on the same land for 3 years. This will give them a 10 percent higher payment over the established rates for the second and third years.

During the first and second years, weeds will be controlled by spraying or clipping. The third year will call for planting a green manure crop or fallowing by stubble-mulching. Other farmers will plant the acreage reserve to grass to build up the soil over a 3-year period.

SOLVE WEED PROBLEMS

Farmers with noxious weed problems may find in the acreage program an excellent opportunity to rid themselves of the pests even while receiving pay for keeping the land out of production. Terms of the program call for controlling noxious weeds. Some farmers will go further by arranging to retire tracts where noxious weeds have been especially troublesome. Likewise, some will concentrate on getting rid of wild oats and other annual weeds.

If a farm has bad patches of leafy spurge, quack grass, creeping jenny, Canada or sow thistle, what better time to attack with chemicals and intensive cultivation? In effect, the Government money will help pay for weed eradication.

One farmer we know probably represents the thinking of many others when he says he'll work his idle acres into a regular crop rotation. His notion is that there'll probably be some kind of a Federal program to cut wheat and corn—and maybe cash feed grain—production for some time to come. He's thinking ahead in terms of shifting from cash grain to pasture, hay, and feed crops to support more livestock.

PREPARING NEW PASTURE

Some idle acres will be planted to grasses and legumes, not for harvest or grazing in the current crop year, but for plowing down as green manure or for pasture and hay next year if the same piece of land isn't designated as wheat or corn acreage reserve. This is a likely proposal, for such planting probably should be protected from grazing the first season anyway.

If increased livestock is contemplated, these acres planted to legumes now would work in naturally. For some, extra acres in grasses and legumes would provide better feed assurance for present livestock holdings.

Some may feel, like James Pfeiffer of Eddy County, that it pays to plant legumes if for no other reason than for the soil benefits from nitrogen and organic matter.

Acres out of crop production will be far from idle on some farms where contouring, terracing, grassed waterway construction, or gully control should be done. These are lasting improvements, as both William Robbie of Bon Homme County and Stan Johnson of Davison County are quick to point out on their own farms.

Again, such acreage will be partially paying its way even while major conservation projects get under way.

IDEAL FOR TREES

If farm plans call for more trees—field shelterbelts, for example—an ideal situation may develop. To get agricultural conservation program help on 1958 plantings, a site first must be fallowed, be cleaned of weeds, and be approved by a Soil Conservation Service representative. This could be acreage reserve land.

Summer fallow has been an established practice for many years in parts of Dakota. Moisture conservation, better fertility, and weed control are the objectives. The trouble with summer fallow, as generally practiced, however, is that land is exposed to blowing. Now even the value of black fallow as a moisture-conserving device is being questioned.

More and more farmers think their land should not go through a summer unprotected. Adequate cover not only protects land from blowing but also against washing during heavy rains. The greater part of the washing process starts when raindrops blast loose particles of soil. Cover breaks the force of the falling raindrop, shatters large drops into small ones that trickle slowly to the ground.

In addition, cover helps prevent raindrop splash from sealing the pores of the soil. This permits water to soak into the ground more rapidly. Living and dead cover slows down runoff. Each blade, leaf and stem acts as a tiny check dam which catches and holds soil particles that the water is carrying off.

BIG EVAPORATION LOSS

Thirty-two years of black summer fallow tests at the United States Northern Great Plains Field Station at Mandan show that 80 percent of the moisture over a normal fallow period of 21 months is lost, largely because of evaporation.

In a typical 21-month period, 32 percent or 2.16 inches was saved out of a total of 6.76 inches received in the first 8 months, August to April. In the following 5 months, April to August, when 8.60 inches of moisture fell, 18 percent or 1.58 inches were stored in the top 6 feet of soil. In the next 8 months, August to April again, only 10 percent or .71 of an inch was stored out of a total of 6.93 inches received.

This land normally was plowed on June 1 and was kept black or bare. Runoff was small, weed growth was kept at a minimum and took little moisture. Moisture penetration to deeper than 6 feet was slight, so evaporation caused most of the loss. Only 4.45 inches of the 22.31 inches that fell were saved.

Summer fallow can be carried out on acreage reserve and other land by other means than leaving the land bare, however. Some types of tilage implements will conserve moisture to a greater extent while still preventing wind losses. Soil cloddiness, surface roughness, and crop residues are important factors.

SUBTILLAGE BEST

Residues, such as crop stubble, stalks, or weeds are best handled in many places with a sweep-type implement, because this cuts under the material and leaves it in an erect position which is most effective against wind. The greatest surface roughness can be created by a lister. If residues are meager or absent, the plow, under some soil moisture conditions, is a good implement for creating a rough, cloddy surface.

The next best implement would be a properly angled, one-way disk which leaves the residue in a partial standing position. It is advisable to use a sweep-type implement for the second and third operation after the one-way, to keep the residue on top and not pulverize the soil.

In this connection, an experiment carried out three fallow seasons is of interest. When the average rainfall during April to September amounted to 12.42 inches, the runoff on bare disked ground amounted to 1.97 inches, as compared with 1.39 inches when 2 tons of straw were disked in and with six-tenths of an inch when 2 tons of straw were subtilled. In the same experiment, 13.04 tons of soil were lost per acre on bare disked land, as compared with 6.24 tons when 2 tons of straw were disked in and with ninety-seven one-hundredths of a ton when the land was subtilled.

BENEFITS BEYOND PAYMENTS

All of this is by way of saying that, while most Dakota farmers deplore having to take good acreage out of wheat and corn production, some farmers will realize a measure of benefit beyond their acreage reserve payments. These will include those farmers who've felt that soil-improving practices were needed but couldn't afford not to farm to the limit every season.

In making the best of an acreage-reduction situation, they also may reap several side benefits of lasting importance in their farming business.

Young Indians Seek Wider Horizons

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Indian Students Do Not Plan To Return to Reservation," which was published in the Mitchell (S. Dak.) Daily Republic of April 2, 1957.

The article, which was written by Les Helgeland, State editor of the Daily Republic, is the result of surveys conducted among the Indian people of South Dakota, and gives some illuminating first-hand responses from some Indian students.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDIAN STUDENTS DO NOT PLAN TO RETURN TO RESERVATIONS

(By Les Helgeland)

FORT THOMPSON, S. DAK.—Indian youths attending the youth conference here last week were almost unanimously agreed that they would not return to the reservation after they complete their education.

In surveys made by the Daily Republic and the University of South Dakota Institute of Indian Studies, the more than 100 young people attending the conference indicated that they planned to leave the reservation after they had finished their education.

Those who m[illegible]e exceptions were those who thought that some industry should be

brought to the reservations and were willing to go back to the reservation provided that they could secure good employment in those industries.

But even the attraction of good money and better living conditions on the reservation did not appear to be an inducement to return to live on the reservation.

UNIVERSITY OF SOUTH DAKOTA SURVEY SHOWS SENTIMENT

A survey by the University of South Dakota group revealed that more than half of the young people answering their questionnaire would not return to live on the reservation even though they were to secure good pay for working there.

One Fort Thompson youth answered, "I think that I will probably finish high school and then start farming on the reservation."

Interesting was the fact that many of them doubted that there would be any reservation to return to. One youth, Bernard Drapeau, of Fort Thompson, said he questioned whether such a thing as a reservation would exist but added that he might return to the Crow Creek Reservation if some industry were brought to the reservation.

Mary Jane Eagle, of Fort Thompson, one of the young people selected for outstanding leadership during the conference, gave a "no" and "yes" answer to whether or not she plans to return to the reservation after she completes her education. She said, "It will depend on whether or not there is still a reservation. I would like to come back to my people and help them if I could."

Another Fort Thompson youth, 18-year-old Emery Loudner, of Fort Thompson, is of the opinion that the reservation will be a thing of the past. He says he plans to return to the reservation only for visits.

Where does he plan to go if not to the reservation? His answer: "Anywhere, but the reservation."

Loudner has hopes of going into engineering or teaching. He's a senior at Gann Valley High School this year.

Another youth said he wasn't planning to return to the reservation. "There's nothing to return for or to," he said.

Another student answered, "I plan to get out among the whites."

Wilhelmina Shields, of Fort Thompson, said, "No, I don't plan to return to the reservation. I hope someday to have a beauty shop of my own after finishing a course in beauty culture. I hope to establish my shop far enough away so I won't always be running back to the reservation."

Melvin Clifford, 17-year-old Pine Ridge student, said that he plans to return to the reservation only if he can get enough land to run a sizable herd.

STUDENTS SEE SOUTHWEST REHABILITATION

Sherman Cochran, 18-year-old student at Flandreau Indian Vocational High School, is another of those who makes no plans to return to the reservation. Cochran was 1 of the 2 Flandreau school students who were sent on a trip into the Los Angeles and other Southwestern States to study living conditions of Indian people and their rehabilitation.

Clarence St. Arnaud, of Austin, Minn., a senior at Immaculate Conception Mission, at Stephan, says that he has the ambition to continue his education and to enter the priesthood. He's among those who plans to return to the reservation.

The youth said, "Yes; if I reach my goal, I may be appointed to return to work with my people."

Shirley Apple, of Rapid City, a student at Holy Rosary Mission, at Pine Ridge, has hopes of continuing her education in medicine. She also hopes to return to the reservation to "help my people."

Likewise, June Crawford, a senior at Flandreau Indian School, plans to return to the reservation as a teacher—if reservations continue. She plans to get a degree in home economics.

Those are only samplings of opinions of the young persons attending the conference, but indicate the near unanimous views of this group of people—those in school and those already out of school.

They don't want to return to the reservation. They want to integrate themselves into the so-called "white man's community."

Opportunities for Continuing Study After College in the Fields of International Relations, the Social Sciences, and Education

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. SPARKMAN. Mr. President, a few days ago I received a letter from the American Association of University Women regarding certain matters of great importance to the welfare of this Nation. Generally, the letter urges favorable action on the administration's recommendations for funds for the United Nations International Children's Emergency Fund, the international educational exchange program, the United States Information Agency, and the mutual-security program.

This group, Mr. President, is one of the outstanding women's groups in America. Its recommendations deserve careful attention.

I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN ASSOCIATION
OF UNIVERSITY WOMEN,
Washington, D. C., April 19, 1957.

Senator JOHN SPARKMAN,
Senate Committee on Foreign Relations,
United States Senate,
Washington, D. C.

DEAR SENATOR SPARKMAN: The American Association of University Women, an organization of 140,000 women college graduates, is organized into 1,366 branches throughout the 48 States, the District of Columbia, Hawaii, Alaska, and Guam, and offers to its members the opportunity for continuing study after college in the fields of international relations, the social sciences, and education.

By convention directives, the AAUW supports economy in Government but we also believe that irresponsible cutting of the budget such as is advocated in current propaganda against the administration's budget proposals can jeopardize our Nation's well-being. We believe such cutting would represent in many instances false economy which at best would leave current problems unresolved, and which at worst could lead to multiplication of future expenditures and even endanger our national security.

Specifically, we strongly urge the Senate to restore the $36 million proposed by the administration as this country's contribution to international organizations including the United Nations. We recommend that funds earmarked for the United Nations International Children's Emergency Fund, the International Educational Exchange Program, and other cultural exchange activities be appropriated as submitted in the budget and that the program of the United States Information Agency not be crippled by indiscriminate slashing. It is our belief that these activities are a United States contribution toward world peace, hence an integral and indispensable part of our foreign policy, not to be endangered by budget cutting.

We support the President in his belief that the $4,400,000,000 asked for the Mutual Security Program is the minimum for the next fiscal year in terms of the safety of the world; we regard it as cheap insurance for our own safety.

We support the budget requested by the Office of Education. Our studies have convinced us that the Office cannot effectively serve the American people without the sums requested.

We believe the appropriation of Federal funds to assist the States in school construction is essential.

We regard the full sums requested by the Women's Bureau and such agencies as the Food and Drug Administration to be warranted, for the constantly increasing demands for services from such agencies require increased budgets.

Sincerely,

DR. KATE HEVNER MUELLER,
Chairman, Education Committee, AAUW.
DR. MERIBETH CAMERON,
Chairman, International Relations Committee, AAUW.
Mrs. GERTRUDE HOUK FARISS,
Chairman, Status of Women Committee, AAUW.
DR. JANET MACDONALD,
Chairman, Social Studies Committee, AAUW.
ISABEL H. KIDENEY
Mrs. James W. Kideney,
Chairman, Legislative Program Committee, AAUW.

The Middle-Point Stones of the Mason-Dixon Line

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. MILLER of Maryland. Mr. Speaker, in these days when so much of our attention is of necessity focused on grave problems of the present and future, it is well to pause occasionally and let our thoughts dwell on important events in the past. By so doing we may relax a little and at the same time draw renewed inspiration from our history.

The General Assembly of Maryland at its recent session passed a joint resolution—Senate Joint Resolution No. 30—which recalls dramatic events of colonial days and a controversy finally determined by the decision of a British court which has had a profound impact upon the development of at least 3 or our original 13 States.

It is rather startling to realize that had that decision been reversed the site of the great city of Philadelphia would be today within the boundaries of the State of Maryland. The crucial middle point

stones of the Mason-Dixon line still stand at the border of the district I am honored to represent where they were placed nearly 200 years ago. Our former colleague, Senator George L. Radcliffe, and the various historical societies and interested citizens, who have been active in preserving our ancient monuments are to be congratulated for performing a truly valuable public service. Likewise, we and posterity are indebted to those who have labored and expended large sums to restore some of our most cherished shrines. Notable among these is famous Old Trinity Church, in Dorchester County, Md., built about 1680, the full restoration of which is rapidly approaching completion as a result of the generous and painstaking efforts of Col. and Mrs. Edgar W. Garbisch.

Shortly after Old Trinity was built, a branch or Chapel of Ease was erected on Taylor's Island, for many years one of the most active and prosperous maritime sections of tidewater Maryland. This chapel now is also being repaired and restored by one of the organizations headed by Senator Radcliffe.

Much of the history-making controversy involving the Middle Stone and whether or not Taylor's Island was in fact an island, revolved around the parish and area of Old Trinity. Likewise the chapel was prominently involved in dramatic historical events, especially when the middle stone was being placed and during the War of 1812.

But for the untimely death of one of our great citizens, Fred W. C. Webb of Salisbury, Md., the Middle Stone doubtless would have been appropriately featured before this as a shrine marking the beginning of the world-famous Mason and Dixon's line. It was a project near to his heart.

Joint Resolution No. 30 succinctly outlines this interesting chapter of colonial history.

Under leave granted it is herewith included:

Senate Joint Resolution 30

Senate joint resolution requesting the proper preservation of the so-called middle point marking the boundary between Maryland and Delaware

Within the boundary lines of Wicomico County, there are two ancient stone monuments placed at the middle point of the historical Mason-Dixon survey circa 1760 and 1768.

These monuments and the Mason-Dixon line itself are enduring testimony to the long continued, and at times acrimonious, controversy between the Lords Baltimore and the William Penn family over the determination of boundary lines between the colonies of Maryland and Pennsylvania, and also between Maryland and what is now the State of Delaware. This controversy was dramatic in nature and highly momentous in result. Large areas of territory were involved in these disputes before the Mason-Dixon line, which is the most famous State boundary line in the United States, was finally agreed upon prior to the Revolutionary War.

The far-reaching nature of this controversy is evidenced by the fact that had Lord Baltimore's contention been sustained as to what should be the correct boundary line, a large portion of Pennsylvania, including the site of the city of Philadelphia, would today be part of the State of Maryland.

As part of the larger controversy, there was also a long and protracted difference of opinion over the selection of the middle point, now called the middle stone, between the Chesapeake Bay and the Atlantic Ocean for the purpose of determining the southwest corner of what is now the State of Delaware. In this dispute, the Penn family claimed that Taylor's Island in Dorchester County and the waters between Taylor's Island and the mainland of the Eastern Shore should be considered as a portion of the mainland. In the course of that controversy, a large map, the original of which is now in the possession of the Maryland Historical Society, showed clearly that Taylor's Island actually was an island. This map was prepared in the year 1751 by Lord Baltimore and the Penn family.

If that controversy had been settled favorably to Lord Baltimore's claim, the boundary line between the States of Maryland and Delaware would today be approximately 2 miles to the east of its present location.

No effort could or should be made today to change the present boundary lines, but the great historic significance of the result of this controversy should be suitably noted and marked.

The United States Government recently has made resurveys and relocations of the Mason-Dixon line between the States of Maryland and Delaware, including the so-called Middle Stone, which marks the southwest corner of the State of Delaware.

Efforts should be made to feature this Middle Stone and other points closely involved in the dispute involving recognition of the crucial role played in the controversy by Taylor's Island. On this island, the Chapel of Ease, now standing and being restored by various contributors, was the local center of the discussion. This chapel was a branch of Old Trinity Church, built about the year 1680 and now in process of most careful restoration by Mrs. Edgar W. Garbish. As part of any such restoration work, it is the hope of the General Assembly of Maryland that the Wicomico County Historical Society will give its hearty assistance. This society, since the year 1933 has had as its primary express purpose the preservation of the heritage culture and historic relics and monuments of Maryland's colonial background. The Senate hopes also that the Sussex County Archeological and Historical Association, in the State of Delaware, will lend its assistance in this project.

The site on which the two monuments at Middle Point are located is part of a privately owned farmland some distance from a public road so that access to the monuments is only by the indulgence of the owners of the land. It is the hope of the Senate of Maryland that they will be made more easily accessible; Now, therefore, be it

Resolved by the General Assembly of Maryland, That the Wicomico County Historical Society, The Dorchester County Historical Society, and the Sussex County Archeological and Historical Association use their good offices to acquire from the owners of the land on which Middle Point is situated, a right-of-way or easement from the nearest public road of sufficient area to allow the construction of suitable protective devices around Middle Point; and be it further

Resolved, That in this work the joint action be enlisted of the State archivist of Delaware, the chief engineer of the highway department of the State of Delaware, and the board of natural resources of the State of Maryland, which board is authorized and empowered to accept funds from any organizations, corporations, or any individual, and to expend such funds in cooperation with authorized agencies of the State of Delaware; and be it further

Resolved, That efforts should be made by the two States to erect suitable monuments around middle stone, securing the necessary land therefor, and also that some marker or other form of recognition should be set upon historic Taylor's Island at the Chapel of Ease; and be it further

Resolved, That the State roads commission of Maryland be requested to place a suitable historic marker at one or more points along the highways of Maryland calling attention to the location of the historic significance of the two monuments at middle point; and be it further

Resolved, That the secretary of state of Maryland be directed to send copies of this resolution under the great seal of the State of Maryland to the governors of the States of Maryland and Delaware and the Maryland Historical Society, the Wicomico County Historical Society, the Dorchester County Historical Society, the Sussex County Acheological and Historical Association, the chief engineer of the Highway Department of the State of Delaware and the State Roads Commission of Maryland.

The Aviation World

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 8, 1957

Mr. CHURCH. Mr. President, Dave Johnson is a veteran Idaho newspaperman, and probably the foremost writer on aviation in my State. His column in the Idaho Statesman of Boise is entitled "The Aviation World" and is widely read. Dave is a war veteran and an officer in the Air National Guard.

On April 22 of this year, Dave's column in the Statesman reflected something of the philosophical concern which the World War II bomber pilot must feel as the pushbutton age threatens a holocaust many times greater than any he had witnessed.

I ask unanimous consent to have this well-written and thought-provoking column printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE AVIATION WORLD
(By Dave Johnson)

The briefing was over and the lights on the map clicked off and the room itself flared into brilliance. The air was flat and wet and the cigarette smoke drifted in layers, dispelling around the opened door with a rush as they went out. Even the tropical steam blowing over the cliffs from the pounding surf felt good, after the briefing room.

The trucks were waiting and he tossed his parachute in with a jingling of buckles, clambered over the tailboard and went to the front of the vehicle. The others followed and they sat silently as the truck groaned and whined over the network of island roads to the field. In the darkness the headlights flitted from open space to tropical growth and the tension built up in him until in desperation he lighted a cigarette he didn't want and smoked deeply.

He hated trucks, and these quiet rides to flight line. If you could just walk from the briefing, a few steps, and be with the airplane. But the jerking, swaying truck ride,

with legs cramped back to avoid the parachutes piled along the center of the floor, was an agonizing, slow introduction to something that should move swiftly.

There was a peculiar smell in the truck. The sweat and dried salt in little white patterns on his flying suit mingled its odor with leather and a faint metallic tang from the heavily oiled automatic pistol stuck under his left arm. It was a smell that was familiar, and one that was part of the profession and at times it spoke of fellowship when they returned and crowded into intelligence. But sometimes it was a beginning.

The line was dark. The bulk of the B–29 was a shadowy substance, and suddenly a flashlight gleamed in the nose section and Birch, the bombardier, busied himself briefly and the light winked out but the aircraft had come alive. The 11 of them formed a human chain and lockstepped around the propellers, pulling them through to check each cylinder of the 4 engines for liquid lock. They counted the revolutions as they swung the propellers through and he remembered the day his father took him to a county fair and an Army pilot flew, and men started the airplane by swinging on the wooden propeller. He had a chance then to go for a ride but he squirmed and twisted and panted so trying to make up his mind that his father pulled him away and they went home.

They had the briefing at the plane, lined up in a row, rigidly at attention. The airplane commander went through the same routine ditching procedure, who does what, the parachute check, with each man cinching up his neighbor.

The start was easy. Number 2 coughed great quantities of smoke and flame and the ground crew moved uneasily forward with the carbonic gas bottles, but it settled down and ran smoothly.

All over the field the same thing occurred as the minute hand on hundreds of wristwatches crept over luminous dials. Position lights glowed and the four-engined monsters trundled into a long weaving line around the perimeter of the field and into takeoff position.

He moved the throttles forward and the aircraft gathered speed. They plunged into the night and the bomber stream unfolded behind and ahead of them. The B–29 thundered over the cliffs and there was a luminescent glimpse of the surf and they roared north to the Empire of Japan.

There was a lurid glow spreading over the nose of the airplane and a crackling, rippling blanket of purple electricity spread back around the cockpit. "I don't like that a damned bit," he murmured on the interphone and heard a laugh from the bombardier who sat in the middle of it all. They went to power condition two and the St. Elmo's fire vanished, rain drummed ferociously on the glass, and then there was nothing ahead but night.

The rendezvous was over a jewel-like island in a sparkling blue sea shortly after dawn. They gathered in the bombers and formed up the group and swept on to Tokyo.

Not a bomb was to fall. It was a show of strength. They were to see what they had done in the months past. The city was strangely hard to see at first. There was no skyline. It looked like a plain of red dust. Hardly stone remained on stone. An isolated white structure towered above the burned rubble. These were fleeting glimpses caught as he kept in the formation and tried at the same time to see. Another took the wheel later and he studied the city. Stark obliteration. Nothing.

Years later there is a frantic seeking to avoid the human element. They talk now about reentry problems, or how to keep a guided missile from turning to a cinder as it enters the atmosphere above a target after a flight through space. The horrors that could be wrought in an instant are fantastic compared to the simple destruction of a city through days and nights of pounding with conventional weapons.

The sweat that smelled in the truck en route to the flight line was produced of hours of wrenching and pulling at the controls of a lumbering bomber. The new odor is likely to be the acid breath of a tortured conscience as someone depresses a button and the down count to a new zero hour begins.

Mothers of Yesteryear

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Mothers of Yesteryear," which was published in the Dakota Farmer of May 4, 1957.

There being no objection, the article was ordered to be printed in the RECORD as follows:

MOTHERS OF YESTERYEAR

This Mother's Day, 1957, as we look across our greening Dakota prairies dotted with modern farms, let us pay tribute to the pioneer mother. Undaunted, she faced backbreaking labor, extremes of weather, and terrifying loneliness. With sturdy self-confidence and strong religious faith, she madedo with what she had to create a comfortable home for her family and to unite with others to develop a thriving community.

Think on her, as you motor in swift comfort on a crisscross of pavement. She jolted in a stagecoach down the faint prairie trail; jounced in a buckboard behind oxen on the unbroken plains; tramped tedious miles behind a covered wagon, or sloshed through shallow fords and scrambled up the slippery banks.

In every direction lay this same land—flat or rolling, sandy or mucky—it was hers for the choosing.

TRAVELING TO DAKOTA

A minister coming to serve communities in the Missouri Valley in 1866, wrote in his letters home: "The roads between the towns, to which I traveled, were lined with grass, often 10 feet high. To avoid mud in the summer, I would go up the Missouri and skirt the bluffs until they turned up for the James River, and then go for miles through the tall grass. It was higher than my head when I stood up in my carriage.

"My compass was a sighting point on the river when entering the grass, and a straight trail afterward. Dry matches in my pocket were my fireguard in the spring and autumn months."

Mrs. Lola Lindbo, Billings County, describes the experiences of her husband's mother, a pioneer of 1882, who came into the Dakotas from Minnesota: "Seven covered wagons started together with all their personal belongings stowed away inside. Andrew's mother walked all the way from Canby to the homesteading site, 30 miles northwest of Watertown. On the way one of the wagons tipped over as it lurched through a rock-strewn stream, but little damage was done. With all hands helping, it was no time at all before the wagon had been pulled out and again was on its way westward. When the group found the spot to settle, everyone slept in the shelter of the wagons and camped out as best they could until living quarters could be built."

Mrs. Emma Franke, McCook County, tells of the wedding journey of Aunt Jennie Larson: "Christian Larson homsteaded just east of Bridgewater in 1878. In 1880, he returned to the Wisconsin farm to claim his bride, Jennie Hansen. The wedding festivities lasted for 3 days and 2 nights; guests gossiped of Indian uprisings and warned the young couple of the dangers they must face.

"Laughing at all fears, the newlyweds loaded household possessions on wagons, and followed by their livestock, the caravan started the slow, tedious, and seemingly endless, journey to the West. Their first sight of Sioux Falls was not impressive; just a few shacks perched along the banks of the Sioux River. Beyond, as far as you could see in any direction, the tall grass waved in the sun. Not a tree broke the horizon. Just a few crude buildings and dugouts in the side hills marked the path of men."

EARLY HOMES OF SOD

Building that first home on the Dakota prairies was never an easy thing. Most early settlers had very little money. Some families lived in dugouts, a few in frame shacks, but the majority put up sod houses.

Aunt Jennie Larson was one of the fortunate ones. As Mrs. Franke relates: "They had $30 to buy materials for their house and other buildings—but $30 went quite a ways. Aunt Jennie and her husband put up a homesteader's shack, a foundation with one large room, which was enclosed by nailing the boards on the inside instead of the outside of the framework. Out of money then, they couldn't finish the house that first summer. Jennie became quite expert at nailing the boards back into place when the heavy winds blew them in."

With few barriers, the Dakota winds did have great sweep. Mrs. Gerhard Hanson, the daughter of an early Brookings County minister, writes: "I remember the awful winds that swept everything that was loose. One day a bed tick filled with straw landed right in our dooryard. It had traveled, unharmed, for a mile from our neighbor's place."

No door or window ever faced the north in these early homes. Why give the piercing cold a chance to find a vulnerable spot? Sod houses were a foot and a half thick in wall width by the time the sod strips had been cut from the prairie and laid up without mortar. Inside, the house was warm and cozy in winter and cool in summer.

Boards were laid for the roof and covered with tar paper. Often the sod strips laid over the tar paper would begin to sprout with roots growing down into the ceiling of the room. Some homemakers covered these ceilings inside with flour sacks or muslin material nailed to the rafters. After the walls had settled, the inside black dirt walls could be plastered.

INSIDE THE HOUSE

A commonly used cookstove was a burner something like an ordinary wash boiler, made of sheet iron with the bottom riveted on. This contraption was placed on top of the stove after the stove lids had been removed. The boiler section was filled with hay or flax, and then turned upside down and the fuel was ignited. The draft from the pipe would keep the fire burning and the ashes would drop into the firebox of the stove. It is said that it did a splendid job of cooking, but it kept mother busy trying to keep food prepared for a big family.

Mrs. Lindbo describes: "Flax straw seemed to burn best; in fact, if the stove was filled tight enough, it would hold fire all night.

"Andrew tells that fire got started in the roof of their sod hut while they were eating breakfast one morning. Since there was no water handy, Andrew's father grabbed the milk crocks from the shelf and doused the flames with milk."

The supply of water was and continues to be a problem for Dakota folks. Art Adrian, Turner County, tells: "My mother, Elizabeth Buller, was the oldest of nine children. Her father died when she was 15, and she had to work hard to help her mother keep the family together. She pulled water from a well using a rope and bucket. It was almost impossible in the winter."

Pioneer families never knew when they would have extra folks to make comfortable. Arthur J. Landon, now of Ward County, relates: "We had a good well on our place and there was a pretty good road going past between Watertown and Sisseton, so the soldiers who were stationed at Fort Sisseton used to stop for water and give their mules a drink."

Vast space often lay between communities, and many a settler went to bed on a stormy night leaving a lighted kerosene lantern in his window to guide weary travelers in snow and rain.

Only a very lucky pioneer homemaker had a floor of matched tongue-and-groove flooring. Many families lived on the dirt with rag rugs over paper as a floor covering; some had wide board flooring.

FACING TROUBLES

Those first years in a sod hut were often bitter ones. Hail came the summer of 1880 to damage the crops of corn, wheat, and potatoes. The famous snows of the winter of 1880 lasted late into spring. Families were forced to break ice on the sloughs each day for water in the house and for the livestock. The holes were carefully covered so that they would not freeze so hard before the next day. Food became scarce, and the coffee grinder was used to grind corn and wheat for bread. Steps had to be cut through the huge snowbanks to get into the cattlesheds and down to the door of the house.

From the recollections of Mrs. Hanson come these memories of her mother's work in times of sorrow. "Mother's custom was to make the floral pieces for each funeral. She had several nice house plants to help her out in the winter. Two arbor vitae trees always supplied the greens for the wreath or cross which she would fashion. Many times, mother's wreath was the only floral tribute.

"Father had a case of homeopathic medicine and a 'Doctor Book' which was eagerly searched for advice. We were quite used to having someone come to the door in the dead of night to ask for aid.

"Mother, too, became quite efficient at putting drops of aconite, belladonna, nux vomica, and such medicines, on sugar lumps. The lumps were then dissolved in a glass of water, and administered at intervals by the teaspoonful.

"She made a nourishing soup or 'kavringer' (rusks) to send when folks were ailing. Many times the relatives would come back and ask that she make some more because it was the only thing the patient could eat."

Thus, through good times and bad times, the pioneer family managed to survive and thrive, bequeathing a rich heritage of stubborn determination to the Dakota of today. On this Mother's Day then, we salute the mothers of yesteryear.

If I Were the Parent of a Teen-Ager

EXTENSION OF REMARKS

OF

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay:

IF I WERE THE PARENT OF A TEEN-AGER

(By Raymond W. Petkus, De LaSalle High School, senior, first prize (boy))

A child approaching the difficult period of adolescence has within him potentialities of becoming a useful citizen or a dangerous criminal. He may become the next President of our country or another Dillinger. What will he be? A tree swaying in the breeze or a solid oak with roots firmly in the ground?

A teen-ager desiring acceptance, knows not whether to join the ball team or the gang. The wise youngster would naturally select the team as a means of acquiring recognition. But what of the adolescent that joins the gang?

He is an affected individual who tries to win the admiration and attention of the gang by means of a bad reputation. He desires approval of the group and, at the same time, strives for independence. There is little place, however, for the egotistical and immature teenager.

If I were the parent of a teenager, I would keep his emotions controlled and directed. To make sure he is not depressed by life's sorrows, stampeded into premature and dangerous actions, or made cynical by the strange contradictions every day affords, I would bring the facts of everyday life together, assorting, sifting, and interpreting them to him so that he may form a real sense of values.

The need for affection is felt by teenagers; I would see to it that my child has ample opportunity for giving and receiving affection. I would fulfill his longing for companionship, understanding and acceptance, and respect his desires.

Teen-agers, whether they are timid, quarrelsome, boastful, or self-conscious, are usually victims of insecurity. I would insure security by including my child in the thoughts and plans of the family, thus assuring him that he belongs and is appreciated.

Serious conflicts within an adolescent—caused by lack of spiritual development—curtail his future happiness. I would take particular interest in the spiritual development of my child, as this bears directly on his character. And I believe that the family circle is the best place for establishing religious ideals, instilling reverence for God, respect for all His creatures, and appreciation of the moral laws.

If I were the parent of a teen-ager, I would develop him emotionally, give him affection and security, and above all, establish in him religious ideals. The teenager, having a mature outlook on life, would not fall prey to the infamous gangs that roam the streets of the city; on the contrary, he would have a fertile mind which, if developed, would be instrumental in the betterment of himself, the community, and the Nation.

The Voice of the People Against Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1957

Mr. GWINN. Mr. Speaker the great majority of the witnesses heard and statements filed in 1,300 pages of testimony before our subcommittee of the House Education Committee were against Federal aid to school construction.

Yet, the subcommittee, before the testimony was printed and before the committee had any opportunity to read it, voted out a bill providing $500 million a year for 4 years, or a total of $2 billion.

The Committee of the Whole should reject it, but it will no doubt vote out a bill for $300 million a year for 5 years, or a total of $1,500,000,000.

This means, if divided among some 60,000 school districts, that each district will get one-sixth of a schoolroom, or about 5 seats per district.

Obviously, this legislation is—as it has been charged over and over—intended by the proponents, to be nothing but a "camel's nose in the tent." It amounts to dishonesty to talk about meeting an emergency, a shortage of classrooms, by any such proposed legislation.

It shows that the people who need schoolrooms—and there is a need—could not have petitioned the Congress for such an inadequate program. Indeed, this is not the people's demand.

The Government itself is the propagandist for this Federal aid. It estimated the shortages, or guessed at them. Then it became its own publicity agent to drum up support for its own programs and to establish the idea that there was an emergency the people could not meet for themsleves. This bill is positive proof that the Government itself believes the people cannot manage their own affairs for themselves.

The United States Office of Education representatives testified that the efforts of the people for their own children were inadequate, and that they should be compelled by Government in Washington to do more. Instead of using the word "compulsion," they often substituted the words "stimulate the States by the Federal Government" to do what they should do in the judgment of Washington.

Our own Government itself has become the public fomenter of the people. It prepared this legislation and sent it by messenger to the Congress to carry out—not the people's wishes, not the Congress' measures—but its own compulsions over the people with regard to their education. And it spent the people's tax money to propagandize its own programs at the expense of the people, and at the expense of our children.

It proposes to weaken some of the districts by taking their money from them and rewarding other districts according to the Government's own formulas of favoritism in return for votes.

In this business the great overweaning, powerful, pretending Government brings its own satellites to its support. For example, there is marched into formation one of the greatest lobbies; viz., The National Education Association. It has advocated, in season and out, for at least 25 years, Federal aid to education.

Then there is the Council of Chief State School Officers. Then follow in line various groups of Government employees, beneficiaries of Government or public grants and aids, subsidies, or tax exemptions. Government maintains its power by bringing to its support those having a beneficial or natural tendency to help each other to stay on the gravy train.

There is no evidence of a rank-and-file support for this legislation. The hier-

archy of the CIO–AFL officialdom, and the hierarchy of the parent-teachers association (but not the rank and file in either organization) testified for this legislation.

Aside from those above-mentioned groups, the people were all against it; that is, businessmen, doctors, farmers, bankers, taxpayers, school-board members, the American Legion, great numbers of patriotic societies from one end of the country to the other, chambers of commerce, taxpayers' associations, industrial councils, women's clubs, and the rank and file of such organizations. They reported their opposition in a great number of meetings across the country.

The statements filed also reported rank-and-file opposition at the grassroots. The character of this opposition is quoted below. Many individual school-board members testified and filed statements in opposition; so did State and county school-board members.

Fear of control by the Federal Government was general and outspoken. There was bitterness, too, that the Federal Government should try to shove Federal aid down the throats of the people whether they wanted it or not.

They insisted that they, the parents, the producers of all the wealth of the country, are taking care of their children and are building the necessary schoolrooms for an increasing population. The school taxes, they said, are very burdensome, much more burdensome than they should be because of the intolerable and inexcusable Federal taxes.

NO SCHOOL DISTRICT ASKED FOR FEDERAL AID

It should be noted that not a single school district out of some 62,969 sent a representative to plead in favor of Federal aid to education because it was too poor to meet its own need with local and State aid.

BANKER'S TESTIMONY AUGMENTED

Mr. William M. Adams, of the Investment Bankers Association of America, advised the Subcommittee on Education after his testimony that the sale of school bonds had jumped upward again. He wrote:

The sale of school bonds (i. e., bonds for the construction of public elementary and secondary schools) during the period from October 1, 1956, through March 31, 1957, have included over 1,397 issues aggregating over $1,124,245,000. If this amount is increased by the approximately 30 percent of total school construction funds ordinarily obtained from sources other than the bond financing, the school bond sales during this 6 months' period should provide school construction of about $1,606,064,000, which at the usual estimate of $30,000 per classroom would provide over 53,500 classrooms.

If the next 6 months of actual school bond sales is as good as the last 6 months, then money will be raised for 107,000 classrooms. Add that to the 69,200 classrooms financed prior to October 1, 1956, and scheduled on that date to be built during the school year 1956–57, and we have all told 176,200 classrooms, or 17,200 more classrooms than the 159,000 classrooms which the United States Office of Education itself guessed or estimated would be needed for the school year 1956–57.

The Investment Bankers Association reports that school bond sales are running nearly double those for last year, and each month shows an accelerating rate of school bond financing. If there was a schoolroom shortage last year, that is October 1, 1956, when the United States Office of Education collected its estimates or guesses, then the increased bond sales by the States themselves have far exceeded the proposed additional $300 million to be furnished by the Federal Government. This shows that the States themselves are meeting the need. The States are making the Federal Government's efforts look picayune, which they are.

THE AMERICAN LEGION OPPOSED AFTER CONSIDERATION THROUGHOUT THE STATES

Mr. Richard C. Cadwallader, a member of the National Americanism Commission of the American Legion, pointed out that—

The tremendous scope of the youth and educational activities of the American Legion in about 18 programs have given it an insight and an informed opinion based on experience with the elementary and secondary schools in each of the several States through its 17,000 posts and the American Legion Auxiliary and have earned it the right to speak authoritatively on this matter.

He went on:

One of the primary objectives of the American Legion is to teach an understanding * * * of our American philosophy of government. * * * The American Legion believes that real freedom for the individual cannot be safeguarded unless the power of government is decentralized and restrained. * * * Federal aid is not the way to get good schools * * * the respective States have the capacity to meet their educational requirements if they wish to do so * * * it would seem impossible to have Federal aid * * * without at least the minimum of Federal control * * * and it invites the danger that in time the Federal agencies will want to prescribe the curricula, textbooks, other instructional materials, teacher qualifications, methods, and standards * * * and accounting and fiscal procedures. * * * History indicates that once Federal appropriations are made for any purpose, the tendency is for the affected groups to lobby for their continuation * * * the expenditures by States and local governments for education are already the largest and most expensive of any of their activities * * * State and local activities need no stimulating.

The conclusion of the American Legion is that—

Any objective analysis of the public-school system of the local communities * * * will inevitably lead to the conclusion that the pending proposals for Federal usurpation of the prerogatives of local school districts is unnecessary, unreasonable, unsound, and dangerous to the preservation of local vitality and initiative * * * if it should pass it would represent a tragic attack on the sovereignty of the States, the welfare of our people, our freedom as a nation, and our economic stability. * * * Above all, it would represent a surrender to the basic collectivist philosophy of communism. * * * The American Legion urges the Congress to reject * * * proposals to appropriate any Federal funds to general public education in elementary or secondary schools.

THE ASSOCIATION OF AMERICAN PHYSICIANS AND SURGEONS, INC., OPPOSE

Pointing out that this program is held out to cover an emergency—to cure a temporary schoolroom shortage, the statement of the doctors showed that this is pure deception. They pointed out that last year, Dr. William G. Carr, executive secretary of the National Education Association testified before the Senate committee that—

As long as our schools are cut off from the most powerful and efficient and productive form of taxation that we have (Federal taxation, of course) so long will they fail to receive a reasonable share of the great wealth and income of our country.

Does this sound temporary? They go on to quote Dr. John K. Norton, head of the department of educational administration at Teachers College, Columbia University, who said:

Even if $500 million (a year) were voted for school building aid, it would represent only a first step toward adequate Federal participation in the financial support of education in the United States.

To the planners, the emergency is always permanent.

Once the new educational bureaucracy has established its foothold in the Federal Government, the bureaucratic employees will perpetuate themselves in their jobs by employing statistics to prove the existence of new emergencies—

To show Federal control, the doctors cited an 108-page booklet, Administration of Vocational Education, and a sentence on page 4 which reads:

Each State is required to submit a plan which must meet with the approval of the Federal Office of Education.

THE AMERICAN FARM BUREAU FEDERATION

Mr. John C. Lynn, legislative director of this largest farm organization with a membership of 1,600,000 farm families in 48 States, said:

We recognize the problem * * * we are convinced that the people in the local counties and communities, we have farm bureaus in 2,600 of these 3,000 counties in the United States, can do this job * * * the result of intervention by the Federal Government could be to stymie initiative on the part of local people who will get the impression that if they wait long enough, the all-powerful Federal Government will come in and assist them. * * * Even though this legislation is labeled a temporary measure, we know from long experience that there is nothing so permanent as a temporary Federal program. Federal aid to education will certainly be followed by Federal intervention. * * * I cannot read pages 7, 8, 9, 10, and 11 without getting the impression that there is a tremendous amount of control there in every opportunity under the provisions of this bill for the Federal Government or Commissioner of Education to dictate who is qualified personnel.

The Virginia Farm Bureau's executive secretary, Mr. M. A. Hubbard, testified that—

Our Farm Bureau members have continued to express firm and undiminished opposition to Federal aid to education.

The Massachusetts Farm Bureau, Inc., sent its executive secretary, Mr. Carlton I. Pickett, who testified in part:

When the School Building Assistance Act expires on June 30, 1959, it is estimated that about $525 million in school construction in Massachusetts will have been approved and built * * * our century old * * * school foundation program will continue * * * the foundation is there to see that every last

child in Massachusetts gets a required standard of education and the State must help any city or town to provide it * * * my group flatly holds suspect the encroachment of big Federal Government as a solution to all local problems.

NATIONAL CONFERENCE OF STATE TAXPAYERS ASSOCIATION EXECUTIVES AND OKLAHOMA PUBLIC EXPENDITURES COUNCIL

Mr. Steve Stahl, executive vice president and representative of both organizations, made the trip to Washington to tell the subcommittee that Oklahoma does not need Federal aid to education and he carried a fistful of facts. Among them was the information that underprivileged Oklahoma has increased its school revenues by 50 percent in 5 years, raised teacher salaries by one-third, increased school-bond issues more than 300 percent. The Evening World-Herald of Omaha, Nebr., March 23, commenting on Mr. Stahl's testimony in an editorial entitled "Throw the Bum Out," recounted an old familiar story:

"A man who goes to Washington to reject a handout from Uncle Sam might expect at least a courteous hearing. * * * But Mr. Stahl ran into 2 hours of heckling * * * they interrupted his prepared statement at every comma with scathing questions," wrote Allan Cromley of the Daily Oklahoman Washington bureau. * * * Mr. Stahl finally sat down, thoroughly frustrated, much of his typewritten statement unread. * * * Back home * * * he reported to his fellow Oklahomans that people who go to Washington with a tincup in their hand are welcomed royally, while those who don't want anything are given the "bum's rush." We hope Mr. Stahl is not too disheartened, and that others will be encouraged to join in his fight. The day may come when the "bum's rush" will be given to those who deserve it.

Public Affairs Research Council of Louisiana, Inc., sent Mr. Edward J. Steimel, its executive director, to testify about the financial capacity of the State of Louisiana, district by district, for meeting its school-construction needs and of the willingness of the people to do that. He summarized:

I present information to show clearly that Louisiana—one of the poorest States according to the administration bill—not only does not need Federal aid but has unused bonding capacity after meeting its needs to equal almost one-third the total 4-year appropriation in the administration bill.

Mr. Steimel read a newspaper report quoting the assistant superintendent of schools of Louisiana as saying:

Louisiana can support her schools without Federal aid * * * of course, we would take it * * * but the control issue is very much present.

Connecticut Public Expenditures Council's executive director, Mr. Carter W. Atkins, showed that Connecticut was producing "a surplus of 547 classrooms for the school year starting September 1959 and a surplus of 521 for 1960. Connecticut has been and is now taking care of its school building needs without Federal aid. There is not the slightest doubt that it can and will continue to do so."

The Southern States Industrial Council was represented by Mr. Tyre Taylor, who stated this was an organization of industrial and business concerns in 16 southern States from Maryland to Texas, including Virginia, West Virginia, and Oklahoma:

The council opposes Federal aid to education, including Federal aid to school construction * * * because public education is a matter which should be controlled by the States and localities and not by the Central Government. We think the Federal Government is already too big * * * and that what is needed is some regard for the provision of the Constitution reserving the rights that are not delegated to the Federal Government to the States or to the people * * *. The council believes that Federal aid for schools, in whatever amount and however applied, and irrespective of the number and kind of so-called safeguards adopted, is the first step toward the nationalization of the schools * * * assuming the need * * * the States and localities are in a far better position to supply it than is the Federal Government—quoting Senator BYRD—"which is mortgaged to the hilt."

The United States Chamber of Commerce, was represented by Mr. Thomas A. Ballantine, chairman of the committee on education, and Dr. John R. Miles, manager of the education department. Mr. Ballantine testified in detail and Mr. John S. Coleman, president of the chamber of commerce, showed in a letter that as a result of a series of legislative clinics, and discussing this Federal-aid issue with thousands of businessmen, it was the overwhelming consensus of every group that—

The States and their communities are responsible for, and able to, finance the development of the school systems required of their citizens.

The national chamber regards as unwise and unnecessary the legislation now being considered by this committee * * * neither local reports nor the research of the national chamber indicates that an emergency now exists which would justify nationwide Federal intervention in the construction of school facilities * * * our investigations indicate * * * that no critical national shortage in classrooms has been or can be demonstrated to exist.

The New Jersey Chamber of Commerce spokesman was Mr. Leonard E. Best of the education committee. He pointed out that—

New Jersey does not need Federal aid, since it is one of the highest spenders on education among the 48 States.

Indicating that New Jersey does not want Federal aid, Mr. Best said:

In fiscal year 1955 Federal funds for education cost New Jersey $2.93 for each dollar received * * *. Federal tax relinquishment would provide a permanent source of Federal aid for school construction without the danger of Federal control over education * * * and would render unnecessary the creation of a Federal unit to administer the program.

The New Jersey Taxpayers Association, Inc., said:

There is no gainsaying the fact that much of the drive for Federal school aid comes from those who think the funds will be devoted * * * to equalization between the States. Most of the funds would not be used for such equalization.

They reported:

Of the $3.3 billion distributed in Federal aid programs in fiscal 1956, only 23 percent was channeled into the stream of equalization. The rest—77 percent—merely took a roundtrip to and from Washington.

The Illinois Chamber of Commerce was represented by Mr. Joseph W. Cavataio, who described in detail the Illinois need and the school problems commission recommendations to meet the need. He summarized by saying:

Illinois plans and is able to take care of its own problems.

The Wisconsin State Chamber of Commerce general manager, Mr. Frank A. Hausheer, said:

The job can and will be completed by those who know Wisconsin's needs best—State and local governments working in concert with the citizenry * * * we do not want this assistance at the expense of our neighbors * * * may not aid be solicited next to provide funds for school maintenance and teachers' salaries?

The Sheboygan County Taxpayers Association and Sheboygan Falls Chamber of Commerce, Wisconsin, was represented by Mr. Andrew J. Houwers, vice president of the former and president of the Sheboygan Falls School Board. He left with the subcommittee a study made to refute a national study purporting to show Wisconsin deficient in its ability to finance school construction. Wisconsin amended its constitution to liberalize local school-debt limitations and "recognizes its responsibilities toward its children. I believe your function is to develop that recognition and willingness in the States that may be lagging. Handing out Federal aid will not do it," he said.

The Ohio State Chamber of Commerce research director, Mr. Arch D. Schultz, presented a 61-page booklet, Facts About Ohio Schools, by Dr. C. J. Botte, of the research department, and a legislative report, Financing Ohio's Public Schools. Both indicate that Ohio can and will solve its own school problems.

The West Virginia Chamber of Commerce managing director, Mr. H. A. Stansbury, said:

The estimates of need are grossly exaggerated * * * 42 percent of the total present enrollment are housed in schoolrooms less than a dozen years old * * * the program continues during the current school year with $3,800,000 of county bond funds in hand on July 1, 1956, with $2,066,000 of such bonds having been approved and issued subsequently, and with more than $6 million of current or special revenues budgeted for buildings all of which adds up to another $12 million being expended by the 55 county school boards for school construction during the 1956–57 school year. The people of West Virginia are fully facing up to the responsibilities * * * of building their own schools without Federal help.

The Empire—New York—State Chamber of Commerce witness was Mr. Phillip C. Wolz, chairman of their education commitee. Mr. Wolz has been a commissioner of education in Rochester, N. Y., for 14 years and past president of the New York School Boards Association, Inc., so he speaks with experience and research knowledge of his subject. He points out that:

One of the bills you have under consideration proposes to make available $15.7 million of Federal funds that we do not need for school buildings that we are going to build anyway. To get the $15.7 million you propose to impose a tax of $48.1 mil-

lion upon our citizens as our share of the $325 million program. * * * In order to qualify for the aid we do not need we are required to appropriate an additional $32.4 million in matching funds. * * * Last calendar year the residents of our State spent $282,569,800 which was used to build 4,660 classrooms in 366 projects. * * * The whole proposal is a political hoax as far as providing additional education facilities for New York. Under the terms of this bill we would be able to provide 309 additional classrooms, which would cost us, under the tax burden we would be called upon to assume, $155,700 per classroom. * * * Without the benefit of Federal aid we are providing classrooms at an average cost of $51,000 * * * the aid formula * * * perpetuates the fiction that through such Federal aid the States with the highest per capita income contribute heavily to the needs of other States. * * * The fact is * * * that less than one-third of these funds actually will be channeled from some States to others, while more than two-thirds just makes a round trip to Washington and back * * * and they shrink on the trip, as the cost of administration is deducted.

A supplemental statement by the department of governmental affairs of the Empire State Chamber of Commerce, in answer to specific questions of mine, showed that all New York school districts are able to meet their own needs.

The New York State Federation of Women's Clubs' president, Mrs. William S. Shary, testified that 15 States do not levy a corporation income tax and 13 of these do not levy a personal income tax either—16 other States although they tax their own industry, will grant 5- to 15-year business tax exemptions to firms in New York and elsewhere which move to or expand within their borders. She said:

If tax money is collected in New York and spent for schools in other States, it would enable those States to build their schools partly at our expense and thus keep their own taxes low. * * * They use the lure of those low taxes to induce taxpaying, jobmaking business and industry to move from New York State. * * * Another danger * * * it could lead to Federal control * * * as in vocational education as set forth in House Document No. 529 of the 75th Congress * * * (this) "federally supported program has to a considerable degree become a federally dictated program * * *" until it is demonstrated that other States have exerted similar effort, there is no justification for a Federal aid bill which would take millions of dollars away from the people of New York and give to other States.

The Defenders of the American Constitution, represented by Lt. Gen. Pedro DelValle, and the Constitution Party of Virginia, represented by Mr. B. M. Miller, were opposed. They feared control and felt the States were willing and able to do their own school-construction jobs.

Mrs. Edith Stafford, president of the Los Angeles School Board of Education, and Mrs. Ruth C. Cole, member of the Board of Education of Los Angeles, Calif., reported:

We have a very great building program * * * we may be taxing ourselves more than other States are doing. Is it fair to be called upon to support programs in other States?

Mr. Carruthers A. Coleman, member of the Fayette County (Ky.) Board of Education:

The Fayette County Board of Education has gone on record as opposed to any further extension of Federal aid in the common school education system of our country * * * we have a * * * problem * * * we intend to settle it in our own State in our own way. * * * We feel the State of Kentucky has the means within its boundaries to furnish the kind of education its people want * * * and the kind of education which has produced some of our country's greatest people * * * some of whom never had any schoolroom at all * * * it is not our intention to shirk * * * responsibility * * * nor is it our intention to abdicate these powers by seeking Federal aid.

Mrs. Earl Maughmer, Jr., secretary, board of education, Houston, Tex., testified:

The Texas official delegation to the White House Conference on Education went on record unanimously in opposition to Federal aid to education. * * * We in Houston have * * * been passing enough bond issues * * * for school construction.

Mr. George P. Whitman, Jr., chairman, State School Building Authority of Georgia, and Mr. John Sims, director, State school building authority, State of Georgia, said:

We have either under construction or completed at the present time 14,461 schoolrooms and our present needs are 5,340 which we estimate will cost the State of Georgia approximately $88 million beyond the $200 million program we already have financed. Now, we plan to finance that program ourselves. I speak for the State board of education and the State administration. We do not believe in Federal aid to education in Georgia * * * we believe that when we come up with our hands out to Washington * * * that who controls the pocketbook controls the operation in the end.

Mr. Louis H. Schimmel, president, board of education, Pontiac, Mich., after explaining a unique plan for financing schools by the State of Michigan, said:

I feel that every State should make the effort to demonstrate that it is doing all it can to solve its own problem, such as Michigan has done; and if they do that, they may discover, as Michigan has, that they can do the job without any outside assistance.

The only evidence we have on the hearing record from any local school boards or districts is that they do not want or need Federal aid to school construction.

It is significant that when a resolution in favor of Federal aid to school construction was presented to the National School Boards Association meeting in Atlantic City, N. J., in February 1957 it was tabled by a 4-to-1 vote. This association is made up for the most part of nonprofessionals. They are the local officials whom the people elect or appoint to manage and finance the school districts in which they found the money for classroom construction.

In addition to the witnesses who appeared in opposition, the following national organizations and individuals entered statements on the hearing record of our committee in opposition to more Federal aid to school construction:

The National Association of Manufacturers' statement said, in part:

The heart of the matter is whether the financing, direction, and control of the public-school system shall remain in State and local hands, close to the people and responsive to their wishes and needs, or shall eventually be transferred to a central government authority.

The inadequate case for Federal aid they cited as follows:

The increase of school-age population is commonly cited to justify general Federal aid. The inference is that the school-age population has far outrun the growth in economic capacity. If it were true that the population as a whole were increasing faster than the Nation's economic capacity to grow, the result would be a declining standard of living. But this is not true. Nor is it true that the recent increase of school-age population has outrun our economic growth. The following figures show the relative increase of personal income and of children aged 5 to 17 years from 1950 to 1955. For this comparison, the States are ranked according to per capita personal income:

	Personal income[1]		School-age population, 5 to 17[2]	
	Increase 1950–55	Percent increase	Increase 1950–55	Percent increase
Highest quartile	$44,296,000	38.0	3,527,000	30.0
2d quartile	15,542,000	32.0	1,394,000	21.6
3d quartile	9,272,000	30.6	957,000	19.0
Lowest quartile	9,517,000	33.8	809,000	11.2

[1] Department of Commerce, Survey of Current Business, August 1956.
[2] Bureau of Census, Current Population Reports, Series P–25, No. 151, Feb. 11, 1957.

Whether we take the 12 States with highest per capita incomes or the 12 States with the lowest per capita incomes, the figures show that income has increased faster than children. The 12 lowest income States have had the smallest increase of school-age population, both absolutely and relatively, and they have had next to the highest rate of increase in personal incomes. This group of States is coming ahead fast. The relatively small increase of school-age population is to be accounted for in part by the heavy migration out of these States in the preceding census decade. In the period 1940–50, the 12 States with highest per capita income in 1940 gained 4,595,000, and the 12 States with lowest per capita income in 1940 lost 3,032,000.[1] The relative shift continued to 1955. In the period 1950–55, the highest income States gained 7,308,000 and the lowest income States gained only 841,000. In the whole discussion of need and capacity there has been a confusion of two quite different things. * * *

The entire statistical case for Federal aid has been built on Circular 490 (of the United States Office of Education). The estimate of 80,000 classrooms needed to provide for excess enrollment and 79,000 rooms needed to replace unsatisfactory facilities, which has been set out in the statements of Secretary Marion Folsom to congressional committees and the press, is based on the data in this circular. In view of the irregularities and internal inconsistencies of the figures in this basic document, it is impossible to accept them for the purpose of proving statistical magnitudes.

The National Society Daughters of the American Revolution; the American Coalition of Patriotic Societies—100; and the Thirty-first Women's Patriotic Conference on National Defense, Inc.—18, inserted their resolutions in opposition to Federal aid to school construction in the hearing record with accompanying letters.

[1] Study Committee Report on Federal Responsibility in the Field of Education, p. 131.

Listed by States, the following statements in opposition to Federal aid to school construction were entered in the record:

Alabama State Chamber of Commerce, quoting State Superintendent of Education: "We do not know how many school classrooms are in use in Alabama."

Arizona Farm Bureau Federation.

Dr. George S. Benson, president, Harding College, Searcy, Ark.

California School Boards Association.

California Taxpayers Association.

Facts in Education, Inc., Pasadena, Calif.

Educational News Service, Fullerton, Calif.

C. T. Richardson, teacher, San Mateo, Calif.

California State Chamber of Commerce.

California Farm Bureau Federation.

Colorado Public Expenditures Council.

Colorado Farm Bureau, Denver.

El Paso County Republican Women's Club, Colorado Springs, Colo.

Connecticut Chamber of Commerce.

Karl E. Brandt, Wilmington, Del.

Georgia State Chamber of Commerce.

Associated Taxpayers of Idaho, Mr. Max Yost, executive manager: "the above information clearly shows Idaho does not need Federal aid for construction of * * * school facilities."

Taxpayers Federation of Illinois.

Illinois PTA Study Group.

We, the People, Mr. Harry T. Everingham, vice president, Chicago.

Association of American Physicians and Surgeons, Inc., Chicago, Ill.

Indiana Legislature, memorial of, against.

Dr. D. L. Sharp, Anderson, Ind.

Henry Weis Mfg. Co., Inc., Elkhart, Ind., Mr. Paul W. Kerr, president representing.

Indiana State and Indianapolis Chambers of Commerce.

Iowa Taxpayers Association, Mr. Lyle R. Mercer, president: "Iowa has the borrowing capacity to finance the construction of these 550 classrooms, and many more."

Sioux City Journal Tribune editorial February 13, 1957: But Either Way the Richer States Lose. Same February 14, 1957, Woodbury Co., Taxpayers Conference Against.

Kansas State Chamber of Commerce.

Associated Industries of Kentucky, Inc., Mr. Rayburn Watkins, managing director: "Here are the facts that demonstrate * * * Kentucky not only can, but * * * already has faced up to its * * * problems."

Mrs. Paul L. Young, Kentucky teacher.

Free Men Speak, Mr. Kent Courtney, editor, New Orleans, La.

Madison Parish Farm Bureau, Tallulah, La.

Public Affairs Research Council of Louisiana, Inc.

Louisiana Farm Bureau Federation.

Baton Rouge Chamber of Commerce, La.

Baltimore, Md., Association of Commerce.

Massachusetts Federation of Taxpayers Associations.

Greater Lansing Chamber of Commerce, Michigan.

Citizens Research Council of Michigan.

Detroit Board of Commerce, Michigan.

Missouri State Chamber of Commerce: "State is creating a temporary school building construction fund to demonstrate that Missouri is able, ready, and willing to take care of its own school construction shortages without any control, interference, or assistance from Washington."

Missouri Public Expenditures Survey.

Mississippi: Telegrams from Lt. Gov. Carroll Gartin; Mr. Louis Alford, chairman, State educational finance committee; Mr. Wm. B. Neal, director of finance, State educational finance commission, Jackson, Miss.: "All districts can meet needs with State aid. * * * Federal aid not needed."

Mississippi Daughters of the American Revolution.

Mississippi Economic Council.

Clarion (Miss.) Ledger and Daily News editorial, March 17, 1957, the Folly of Federal Aid.

Montana Taxpayers Association, Mr. S. Keith Anderson, executive secretary, lists unused bonding capacity and comments: "Needs have not been great enough to put before the people for their vote."

Bozeman Chamber of Commerce, Montana.

Chamber of Commerce, North Platte, Nebr.

Hastings (Nebr.) Chamber of Commerce.

Nebraska Citizens Council, Inc.

Nevada, Ely White Pine Chamber of Commerce.

New Jersey Taxpayers Association, Inc.

Kingston Area Chamber of Commerce, Kingston, N. Y.

Glens Falls Chamber of Commerce, New York.

Citizens Public Expenditure Survey, Inc., New York.

North Carolina, Chatham Motors, Inc., Siler City.

McDaniels Lewis of McDaniels Lewis & Co., supporting Investment Bankers Association testimony, Greensboro, N. C.

Mooresville Chamber of Commerce, Inc., Mooresville, N. C.

Editorials, the Plain Dealer, January 29, 1957, Too Costly; February 7, 1957, They'd Have To Take It (Ohio).

National Federation of Independent Farm Organizations, Lucas, Ohio.

Editorials, Columbus (Ohio) Dispatch, January 31, 1957, Congress Well Advised To Kill School Bill; Columbus (Ohio) Citizen, January 29, 1957, More Schools, at More Cost.

Oklahoma City Times, March 5, 1957, editorial, The Federal Aiders' Sorry Case.

Pennsylvania State Chamber of Commerce.

Pennsylvania Farmers Association, Mr. G. A. Biggs, president, Lemoyne, Pa.

Editorials in Catholic Standard and Times, by Archbishop John F. O'Hara, Philadelphia.

Mr. Graham Miller, Meriod, Pa.

Indiana (Pa.) Chamber of Commerce.

Associated Industries of Rhode Island, Inc.

South Carolina's Governor, George Bell Timmerman, Jr., made a strong statement against Federal aid.

Sumter (S. C.) Chamber of Commerce.

South Carolina Chamber of Commerce.

Governor Price Daniel, of Texas, a telegram and memorial of legislature against.

Angelina County Chamber of Commerce, Lufkin, Tex.

Catholic State League of Texas.

Texas Manufacturers Association.

Anderson County Chamber of Commerce, Palestine, Tex.

East Texas Chamber of Commerce.

West Texas Chamber of Commerce.

Utah Taxpayers Association, Mr. M. H. Harris, executive secretary: "Report of the Utah Conference on Education * * * and informed opinion is that Utah can and will take care of her own school building needs."

Salt Lake City Chamber of Commerce, Utah.

Virginia's Gov. Thomas B. Stanley opposed.

Virginia, Arlington School Board member, Mrs. Helen S. Lane.

Virginia teacher, Suzanne R. Dickson, Falls Church, Va.

West Virginia, Southern Coal Producers, Charleston, Mr. Walter R. Thurmond, secretary: "Disturbed by huge budget * * * (it is) outside province of Federal Government and need for school construction has been tremendously exaggerated. * * * Governor Underwood * * * said what West Virginia needed was not a tremendous building program so much as it needed improved teaching."

Wyoming, Gov. Milward L. Simpson, and a joint memorial of the State Legislature of Wyoming, against.

Casper (Wyo.) Chamber of Commerce.

In addition to these witnesses and statements of record before the Subcommittee on Education, there have come to me letters, editorials, reports, and telegrams from individuals and organizations in about 40 States in opposition to more Federal aid to school construction. I have received more than 200 letters urging reduction of the $71.8 billion budget, many of them growing out of this Federal aid controversy.

Governor Timmerman, of South Carolina, in flatly refusing Federal aid to schools is outraged by Washington which he says is possessed "with a blind prejudice against representative government, with which the moguls of centralization go left-winging along in a frenzied rush to outdo the other side of the Iron Curtain in nationalizing everything presently involving a free people's choice." Referring to the quickie questionnaire the United States Office of Education put out to prove that the generous, and most-kind Uncle Sam taxpayers' own money, should build our classrooms, he said:

> The figure 1953 (classrooms needed reported on Circular 490 of the U. S. Office of Education) is not a statistic of a shortage that is not being met. * * * In no sense does it reflect a need for Federal aid * * * it is an estimate of a need which was being met. We in South Carolina are opposed to Federal aid for education.

His testimony describes what he calls the guess-estimate figures and how, if the questions answered by the States did not suit the United States Office of Education, it fired back the questionnaire maybe to someone who would give the United States Office the kind of answer it wanted. This is one case in point. It happened in other States. Some of these were North Carolina, South Carolina, Colorado, Michigan, West Virginia, and Oklahoma.

A copy of a letter from the superintendent of Pinal County schools, Superior, Wis., to the president of the American Association of School Administrators, March 20, 1957, confirms the suspicion that some pressure was put on school superintendents to report maximum need which would result in a panic starter:

> I do know that our own State department of public instruction used its best persuasive powers to encourage local superintendents to paint as dark a picture of the school housing situation as possible here in Arizona. This was done with the avowed purpose of encouraging Federal aid for school building and at the same time establishing as high a claim as possible on any Federal funds that might be set aside for school building. * * * If the United States Chamber of Commerce has challenged the veracity of some of these statistics and of some school men by inference, perhaps you should be a bit careful calling their hand. It just could be that they could prove their position. * * * When it comes to inflating a minor fact into a mountain of fancy, our brothers in education do not have any trouble holding their own with a California real estate salesman or even Arizona dude wranglers.

GOVERNORS AND SOME LEGISLATURES HAVE SAID "NO"

Gov. James E. Folsom, of Alabama, a so-called poor State, is strictly opposed, saying:

Federal school aid would mean they'd try to control our schools.

Gov. William G. Stratton, of Illinois, publicly declared:

We do not need Federal aid for schools in Illinois.

Gov. Price Daniel, of Texas, in his message:

I shall continue to fight with all the vigor at my command against further encroachment by the Federal Government upon the rights of our State and our people.

In a telegram to me he said:

Texas is meeting the problem * * * without reliance or help from Washington.

The Texas Legislature has memorialized Congress in opposition to Federal aid to school construction.

Gov. Harold Handley, of Indiana, told the legislature that the shortage of classrooms is not as critical as the advocates of Federal aid to education have indicated:

We are providing these new classrooms twice as fast as the advocates of Federalized education say we should be building them.

The Indiana Legislature memorialized Congress against this legislation.

Gov. Milward L. Simpson, of Wyoming:

We do not need any more Federal aid to education, and memorialized their legislature against Federal aid.

Gov. Thomas B. Stanley, of Virginia, said in New York, February 2, 1957:

I am vigorously opposed to any Federal-aid program in this field under whatever guise it may be offered. The States and localities are capable of meeting their needs at much greater economy to the taxpayer without Federal aid or intervention in building and operating their public schools.

The late Congressman Lesinski, of Detroit, Mich., a former chairman of the Education and Labor Committee, said as chairman of the committee when it refused to vote out a bill:

It is impossible to draft a general Federal-aid bill which will not contain a great degree of Federal control over local school systems. * * * I am convinced, after the hard study we have put to the question, that no acceptable bill preventing Federal domination of local schools can be drawn. I reluctantly come to that conclusion, but I had to face the facts.

The weight of the evidence on the hearing record, by the citizens who must pay the bills, and the sentiment expressed in messages to me from all over this country, is against further Federal aid to school construction. It is not needed. It is not wanted.

Let us reduce the budget instead of raising it. Let the people back home, who want freedom, manage their own schools.

Those who have not testified may want to tell their Congressmen and Senators their position in this matter.

Mentally Retarded Children

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1957

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I am including 4 articles written by Blair Justice and published by the Fort Worth Star Telegram as part of the noteworthy series on mentally retarded children. In these articles, Mr. Justice explores the difficult environmental adaptations confronting these children.

The articles follow:

THE TRAINABLE—VII: TWO BOYS ACCEPT RESPONSIBILITY, FIND HAPPINESS IN ACHIEVEMENT

(By Blair Justice)

"Cullom bathes and dresses himself. He can tie his shoes and shine them. He fixes his own breakfast on Saturday and Sunday—fries bacon, eggs, and butters his toast."

Mrs. Sue Jones, of 407 N. W. 12th St., was talking about her grandson whose guardian she is.

Cullom Jones is 14 years old and for 5 years has been in a locally supported class for trainable mentally retarded children at West Van Zandt Elementary School, University and W. Lancaster.

When last tested, Cullom's I. Q. was believed to be about 41 (the "average" child's I. Q. is around 100).

"He shows a sense of responsibility now and consideration for me," continued Mrs. Jones.

PRESENTED PROBLEMS

"He mows lawns in the neighborhood and baby sits for 50 cents an hour. He goes to the Boys' Club alone—about six blocks from home—and works under supervision making models of boats and airplanes.

"He can walk alone to Sunday school, which is about five blocks away.

"I don't consider him a problem but a real joy."

Cullom Jones was not always a joy to his grandmother. Five years ago he presented problems.

When his teacher, Mrs. Lelia Siemoneit, first took charge of Cullom and four other retarded children still with her, this is the way she said he was:

His coordination was so poor he was afraid of steps and would hold on to the rail with both hands when using a stairway.

His speech was limited to single words; he used no sentences.

He couldn't follow directions.

He was stubborn and hard to discipline; he possessed a great fear complex and cried easily.

RESPECTS AUTHORITY

The picture a parent or guardian has of his child and the picture that the child's teacher has is different in many cases. This applies to so-called normal pupils as well as the retarded children being presented here.

Cullom's grandmother frankly says that 5 years and more ago the boy was in fact hard to discipline and did have a bad temper.

Now, says Mrs. Siemoneit, the boy respects "proper authority and has a sweet disposition. He has overcome his fear complex and is very lovable.

"His coordination is greatly improved and he walks upright up and down stairs. His attention span is long enough to listen to stories, music and watch picture shows.

"His speech is greatly improved and he talks in sentences. He follows directions well and he can take messages to different rooms in the school," said the teacher.

This is a before-and-after vignette on one of the original five children who started in the trainable class when it was first organized by the Fort Worth Independent School District.

Here is another child, Monte Young:

Unlike Cullom, Monte has physical manifestations of his retardation. He is a mongoloid. Like Cullom—and most other retarded children in the trainable group—he had problems with speech, coordination and behavior, shyness in his case.

(It should be remembered that when a brain is damaged or improperly developed, as is the case in mental retardation, then more than just intelligence is likely to be affected. The brain areas believed to control speech and motor function—coordination—may also be involved.)

Monte, says Mrs. Siemoneit, "respects authority now and comes in the room by himself, most of the time hugging his teacher's neck." (Mongoloids, some authorities generalize, are likely to be affectionate.)

TIMIDITY OVERCOME

"He plays games well and square dances. He listens well to stories and music. He can say his name and many words," said the teacher.

Monte can take care of his personal needs now and go on errands to the school office, Mrs. Siemoneit added.

When he first joined the class, the teacher said he was—

"So timid and shy he would stand outside the schoolroom door until he was led in.

"Afraid of steps because of poor coordination.

"Had an attention span of practically zero.

"Had no speech in class, uttered only 'boo-boobooboo.'

"Had to be assisted in toileting."

At home, according to Mrs. Siemoneit, who gets reports from Monte's mother, "he now talks all of the time in sentences. He gets much pleasure out of watching television.

"BOTH BOYS HAPPY

"He can now bathe, dry himself and use powder. He can dress himself and buckle his shoes. He is helpful around home, carries out trash, looks in the oven to see if bread is done, pops his own popcorn, fixes his own cereal, refills the sugar bowl when it is empty, fries sausage, helps his mother in the kitchen.

"He can also mow the lawn under supervision. He behaves perfectly in church and respects his own and neighbor's property."

Monte, 12, is the son of Mr. and Mrs. Homer Young, 4210 Broadway Ave. He has 2 older normal brothers and 1 older, normal sister.

These achievements, when compared with those of an average child the same age as Cullom and Monte, may appear small. But to the boys' families, they are enormous.

What they mean to the boys themselves can only be measured by the happiness that each seems now to possess.

THE TRAINABLE—VIII: ACTIVITY LIMITED, BUT RETARDED MASTER LIVING WITHIN ONE CIRCLE

(By Blair Justice)

What is the aim of education?

Are classes for trainable mentally retarded children just "baby sitting" as some critics—including some teachers of the so-called normal—charge?

The second question can't be answered without an answer to the first.

Here's what Dr. Elise Martens has said on the subject as chief of the department of exceptional children and youth in the United States Office of Education:

"Education for the mentally retarded is not different in its aim from education for any group of children.

"This aim is to teach the individual how to live better; to teach him to use all his capacities; to teach him to become a useful and contented member of the social group.

"The aim is always to make him a better and more efficient member of the group in which he lives."

HAPPY AND CAPABLE

The group in which the trainable child lives is largely confined to his family or to the residential school (institution) at which he might be enrolled.

Because he has less than half the intelligence and capacity of the "average" child, his world is necessarily limited. But he can become more useful and efficient within that world.

Here is how Jean Backes, 16, an original member of the trainable class at West Van Zandt Elementary School, has become more useful and efficient:

"Jean washes dishes thoroughly," says her half sister, Miss Margaret Heron, a checker at a supermarket. "She can prepare herself a meal from easy-to-cook food. She takes deep interest in chores around home. She sanded and varnished apple boxes for book cases." (Her class does handicraft work.)

Jean lives with her sister and mother, Mrs. Gussie Backes, at 2737 Merrimac.

"She is a happy child and affords mother and me much joy," the sister said.

"She has become capable of staying alone. She has a deep interest in movies on television and she dances to—and tries to sing—some of the musicals."

HELPFUL TO OTHERS

Jean has a paralysis on the right side, which affects her speech.

Again, what she can do now may not appear significant when compared with the performance of an average child her age.

But take a look, from the viewpoint of her teacher, at Jean Backes 5 years ago:

"She didn't respect proper authority," according to Mrs. Lelia Siemoneit's case history on her. "She giggled a lot, she tried to discipline classmates.

"Her coordination was very poor; she displayed little interest in anything. She used single words, which were hard to understand. She couldn't follow direction and she didn't get along well with classmates. She did have a good sense of rhythm."

The 1957 Jean Backes, according to Mrs. Siemoneit's report, is like this:

"She respects proper authority and she has gained a lot of self-control. She handles herself well and is very active. She shows much interest in stories and music and picture shows.

"Jean's speech has improved, but she is still difficult to understand. She does use sentences.

"She follows directions well and she gets along with classmates much better. She is a wonderful room helper. She is helpful to less capable children."

HEED CAUTIONS

Jean, said Mrs. Siemoneit, also can write her name without a copy and recognizes 15 to 20 sentence strips, although these things are not considered among the most practical needs of the trainable child.

Jean Backes rides unassisted on a public bus to school, as does John Castro, 12, of 2512 Pearl, who even transfers en route. John is another of the original five in the trainable class.

When the world of the retarded child is expanded to the world of public conveyances and crowds, it is necessary for him to be trained to cope with it.

Jean and John and others in their class of nine recognize such words as "Stop," "Go," "Walk," "Exit," and five can tell their teacher what each means.

The children in the West Van Zandt class also are given practice in recognizing—and saying—other simple words such as dog, cat, sheep, horse, school, slow, pig, rabbit, baby, cow. Two in the class show no recognition of any of the words.

Jimmy Wrinkle, 16-year-old mongoloid son of Mr. and Mrs. Vivion Wrinkle, of Axle, can do down a list of a dozen such words without missing more than 1 or 2. He also is an original member of the class.

MUSIC GREAT HELP

Jimmy, as do 1 or 2 other boys in the class, makes himself a litle money on Saturdays performing small tasks. He wraps coathangers at a cleaning establishment.

Jimmy also is a good square dancer, his teacher says. The trainable do considerable dancing and listening to records and this may partially explain the belief of some that such classes are simply baby sitting and entertainment to relieve tired mothers at home.

Mrs. Siemoneit, whose original five children couldn't even perform London Bridge 5 years ago, thinks that promenading, Virginia Reeling and doing the schottische develops coordination—something most of the trainable need badly.

The dances also give training in following directions and doing things in proper order.

As for listening quietly to music, part of being useful is knowing how to entertain oneself.

THE TRAINABLE—IX: EXPERTS APPRAISE ENVIRONMENTS BEST SUITED FOR RETARDED CHILDREN

(By Blair Justice)

Where is the best place for the trainable mentally retarded child?

Most authorities believe the retarded child, like any other, is an individual and what is perferable for one may not be for another.

One trainable child might respond best in a public school atmosphere. Mingling with normal pupils in the corridor, restroom, lunchroom, and playground might not hamper him in the least.

For another the more sheltered environment of a children's opportunity center might be more suitable.

There, during school hours, he would associate only with his kind (except for teachers and visitors). Meeting and mixing with others more fortunate would come only after hours in his neighborhood and wherever his family might take him.

A THIRD CHOICE

There is yet a third environment that is open to the retarded child, the trainable child in this case.

This is the environment of a residential school, private or State. The trainable constitutes approximately 65 percent of the admissions at the Austin State School, one of the four State institutions in Texas to which the retarded are admitted. (The other three are the Austin State School Farm Colony, Mexia State School, and Abilene State Hospital.)

As of last June, admission records show there were 200 persons from Tarrant County in the 4 institutions, and about 65 percent are assumed to be in the trainable group (the "middle" group, made up of cases that fall between the most retarded group and the least retarded group).

If the trainable are to be given greater opportunities through State support, a number of authorities think some decision should be made as to which of the three environments is best for the biggest number of trainable children.

A $60,911 study has been started by the University of Texas to help in this decision.

Under the supervision of the educational psychology department, the study will compare the advantages of each of the three environments: public school facilities, local segregated facilities, and State residential centers.

Children's Opportunity Centers fall under local segregated facilities. Fort Worth has one at 3208 Ivey; the one to be used in the study is the Austin Children's Opportunity Center.

The immediate problem to be investigated in the study is the feasibility of including the trainable child in the public school program.

A bill is before the legislature to include the trainable in school funds received by local districts for classes for "exceptional children"—meaning handicapped children who cannot attend regular classes.

PUBLIC SCHOOL CLASSES

Many persons assume that under this bill classes for the trainable would be in public school buildings.

Senator Bracewell of Houston, one of the authors of the bill, says there is nothing in the law under which the trainable would be included requiring that classes be established in public school buildings.

This is one reason that it is important to study the trainable child in an atmosphere outside the public school building.

This series so far has presented a look at some members of the trainable class at West Van Zandt Elementary School. This class, under the direction of the special education program of the Fort Worth Public Schools, is financed strictly by local tax money and cannot, under present law, draw State support from the so-called Gilmer-Aiken funds.

Only a 2½-year study such as the one being directed by Dr. John R. Peck at the University of Texas can come, even close to an answer in comparing the public school classroom, the Opportunity Center atmosphere and the State residential school.

This series will make no attempt at concluding which is best for the trainable child. Such conclusions can be made only in a controlled study—one in which all factors but the atmosphere are essentially the same—conducted by authorities in mental retardation.

However, since the Children's Opportunity Center here provides programs for the largest group of trainable children in Fort Worth, it will be useful to take a look at some of them.

THE TRAINABLE X: BEHAVIOR FIRST MAJOR PROBLEM WITH SOME RETARDED CHILDREN

(By Blair Justice)

Judy Ann Shipp, now 9, threw her shoes out of the window of the Red Cross station wagon taking her to the Children's Opportunity Center. She bit and pinched the volunteer driver.

David Lee Roberts, now 7, was so hyperactive that he couldn't sit still in class for even a few minutes. He was constantly on the move in the classroom and seemed not to listen when spoken to.

These are reports from the files of the Children's Opportunity Center, 3208 Ivey, on 2 of the 46 boys and girls attending classes there for the trainable mentally retarded.

This, according to case summaries, is the way the two were when they started attending classes.

This is not the way Judy and David are today.

The two were picked to illustrate a vital part of the training of middle group retarded children (the group between the least and most retarded cases).

Training for children such as Judy and David so often must start with helping the child's behavior.

If society's stigma against the retarded is to be broken, authorities feel that certainly behavior of the child must be made as acceptable as possible.

This, of course, is not the only reason that emphasis is placed on behavior in training of retarded children.

OBSTREPEROUS CASE

In 1954 Judy Ann, daughter of Mr. and Mrs. William F. Shipp of 2807 Rosen, was enrolled at the Opportunity Center as a mongoloid child with no previous training.

She was provided transportation to and from home by the American Red Cross Motor Corps.

"Judy was loud and obstreperous in the station wagon," her case summary reports.

"Red Cross displayed pure courage in line of action when the volunteers made it to school with her. She threw her shoes out of the window, she hollered, bit, pinched, and hit.

"She used the uproar method of getting attention. This, of course, continued in the class group. It was terribly effective.

"We used isolation and consistent discipline. * * * She was shown love and security no matter how negative her actions.

"It took 6 months before she responded."

That was the 1954 Judy Ann Shipp.

This, according to her case summary, is Judy now:

"She sits as an attentive member of the class and can perform with her hands, can follow directions and get along with other children.

NOW ATTENTIVE, HAPPY

"She cares about it all—Judy is happy. The teacher's patience and understanding have been rewarded. The volunteers have been paid in 24-carat fees. And the parents? Just as no one can place an estimate on the depth of their problem, no one can measure the magnitude of their joy and appreciation."

Many of the trainable are called hyperactive, David Lee's designation when he entered the Opportunity Center in September 1955. This description is most frequently applied in so-called brain-injured cases, a vague term that medical authorities in mental retardation refuse to use. The hyperactivity is believed to be a product of injury or damage to the brain.

David Lee began having convulsions at 3 months of age and still is on medication, which has spaced the seizures to about 1 every 14 weeks, according to his files.

When his parents, Mr. and Mr. B. L. Roberts, of 2412 South Jones, were asked what they wanted most in the way of improvement in their child, they replied: "Self control, obedience, and getting along with other children."

David, who has no physical manifestations of retardation, could not profit from training at the center as long as he failed to sit still and listen to the teacher.

Slowly David has reached the point of being able to sit still.

"Self-control continues to be a problem," his file says, "but his negative attitude has changed so that instead of being on the move to avoid following directions or participating, we know that he is now so interested that he is quick to accept a situation, learn it, and quickly move on to another project."

David's IQ is believed to be on the borderline—considered arbitrary by some—accepted as separating the trainable from the educable mentally retarded. The trainable are considered to have IQ's below approximately 50 (but no lower than 25 or 30) and the educable, IQ's above 50 (but not higher than 70 or 75).

Parents of David and Judy, as well as parents of all children at the center, receive periodic report cards on their sons and daughters.

No effort is made to grade the child. A summary is provided in attitudes and behavior and skills (music, speech, motor coordination, habits in self-help, and others).

Children's Opportunity Center, which has grown from 2 mothers working with 6 retarded children in classes held in a garage in 1953, is supported by the United Fund, tuitions and direct contributions.

Its white one-story frame building is provided by the Fort Worth Independent School District.

Address by Secretary Benson at Minot, N. Dak., May 7, 1957

EXTENSION OF REMARKS
OF

HON. OTTO KRUEGER

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. KRUEGER. Mr. Speaker, in no State of the Nation are the problems of agriculture of more concern than in North Dakota. None has an economy which is so dependent on the condition of its farmers. Today these farmers, and in particular the wheat farmer, face a real crisis. While the answer to their problems has not yet been advanced, the nature of them has been clearly stated. Secretary of Agriculture Ezra Taft Benson, in a speech delivered last night in Minot, N. Dak., before a gathering of the Greater North Dakota Association, summed up the problems, particularly those of the wheat farmer. Because this is something of concern to all the Members, herewith is the text of Secretary Benson's address:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON BEFORE GREATER NORTH DAKOTA ASSOCIATION OF NORTH DAKOTA CHAMBER OF COMMERCE, MINOT, N. DAK., MAY 7, 1957

This opportunity to meet with you of the Greater North Dakota Association is not only a privilege. It is a challenge—and I welcome it.

I like the aims of your organization. You speak of North Dakota as a land of new frontiers. Your eyes and your hopes are fixed on the future.

It is about the future prosperity of your agriculture that I want to talk with you tonight. Of all the States, none depends more on agriculture as the source of its wealth than does North Dakota. You lead the Nation in the production of hard red spring wheat, durum wheat, barley, flaxseed, and rye. The plain fact is that North Dakota can be prosperous only when its farmers are prosperous.

With increased income from wheat, potatoes, dairy products, and other sources your realized net income per farm in 1956 was 12 percent higher than in 1955—and 41 percent higher than in 1954.

You are not out of the woods but things are looking up.

I hope in my address tonight first to impress upon you that we in the Department of Agriculture—deeply—sincerely—earnestly—want to serve you and all the farm people of this land, and secondly to share with you some thoughts about how all of us, working together, can help to develop the expanding, prosperous, and free agriculture we all seek.

We must not hesitate to talk facts frankly and honestly.

I am aware that Government actions in Washington—no matter how sound, well-intentioned, and calmly reasoned they appear to us—sometimes increase blood pressures out here in the Middle West and elsewhere.

Permit me to report a few vital facts.

Prices received by farmers have turned upward and today are 3 percent above a year ago. The high prices of the war and postwar periods were due to war and the insatiable demands of war. They were not due to price support at 90 percent of parity. Much of the time prices were above the support level.

Farm real-estate values in North Dakota are now at an alltime peak, 11 percent above the level which prevailed when the present administration came into office. Evidently a good many North Dakota farmers feel confident of the future.

Sixty percent of the much-advertised decline in the parity ratio took place before the present administration took office. Ninety percent of the decline took place while high rigid wartime price supports were in effect.

The much-publicized decline in net farm income began 10 years ago. Incomes have declined every year since then but two. One was the wartime year, 1951; the other year of peace, 1956. Last year net farm income rose 4 percent. A further modest increase is expected this year, 1957.

The peak of net farm income was reached in 1947. Gross cash farm income from marketings is higher today than it was 10 years ago. The reduction in net income is a result of higher costs, not lower gross income.

I know that farm people are in a price-cost squeeze, and I do not minimize its difficulties. I farmed myself out in Idaho during the period after World War I and I know from personal experience what it means to be squeezed by rising costs.

Some things farmers need always to remember. A Government warehouse is not a market. Once a commodity gets into a Government warehouse there are only three things you can do with it—force it into the domestic market, which lowers the price structure; get rid of it abroad, which may upset delicate international relationships; or let it spoil, which the American people will not condone.

Tonight I want to talk about the road ahead for agriculture, and primarily about wheat, which brings in 40 percent of North Dakota's farm income.

To use a well-understood phrase, "Let's get down to cases."

About 2 weeks ago, the Department of Agriculture announced the minimum national average support price for 1958-crop wheat in the 36-State commercial area at $1.78 per bushel, if quotas are approved.

Though the wheat carryover is being reduced this year by more than 100 million bushels, it is still tremendous. The wheat supply for the 1958–59 wheat-marketing year is now estimated at 41.8 percent above the normal supply. Under the law, if the total supply is more than 30 percent above the normal supply, a support level of 75 percent of parity is indicated. This figures out to be the minimum national average support of $1.78 per bushel.

Some people have asked, Why not continue price support on wheat at the $2 level applied to the 1956 and 1957 crops?

Price supports for wheat at levels which have prevailed in the past have had a trial. They have not produced conditions satisfactory to many farmers.

Support levels of the past have stimulated unneeded production. Last year, 1 out of every 3 wheat farmers in the United States considered it profitable to plant more than his wheat allotment, and did so. More than 100 million bushels of wheat were produced on farms which exceeded their allotments. In most cases this occurred on farms with small allotments, which are permitted to grow up to 15 acres without penalty. Many of these farms were in areas not naturally well adapted to wheat, where added wheat production should not be encouraged. In come cases, large producers found the price sufficiently attractive so that they deliberate-

ly overplanted their allotments and paid a penalty of $1.12 per bushel. The overplanting of allotments weakens the effectiveness of controls. Overplanting diverts wheat production to uneconomic areas. Specialized, adapted areas like North Dakota lose out. During the past quarter century, North Dakota's share of the Nation's wheat acreage has fallen from 15.3 to 12.4 percent.

Support levels of the past have encouraged continued wheat production in areas, such as parts of the western Great Plains, which normally should be in grass. These lands were plowed and seeded to wheat with the high prices and abundant moisture of the war and postwar years. High price supports have kept these areas in wheat. This has often worked to the disadvantage of the farmers themselves in these areas. Certainly it has worked to the disadvantage of wheat producers in efficient areas like North Dakota.

The level of price support has been a major incentive for overplanting allotments, for planting merely to protect existing allotments and for excessive stimulation of yields.

Support at recent levels has been very costly. Presently we are subsidizing wheat at a rate of about 80 cents a bushel in order to reach the world market. Speaking in terms of programs for supporting prices and raising farm incomes, those for wheat have been the most expensive the Department has had. The net realized cost of the wheat programs this past year were the highest in history, $530 million. This can be compared with gross receipts from wheat marketings last year of $1,742,000.

These costs undoubtedly would be accepted willingly if they were solving the problem.

For all commodities legally subject to formula pricing, supports are being set at the level indicated by the formula in the basic legislation. Wheat is not being singled out either for favorable or unfavorable treatment.

During this past year there have been times when wheat sold well above the loan. This is now true for some grades and classes in North Dakota. It may well be true again; the administration views price supports as a floor above which prices may be expected to rise, not as a ceiling which holds them down.

We set the support level at $1.78 because it was indicated by the law and because it is in the best longtime interest of wheat farmers.

North Dakota wheat farmers may be interested in prices received by their Canadian neighbors just across the border. There are several interesting comparisons. One is that the United States price runs more than half a dollar above the Canadian price. Another is that the United States wheat grower already knows the support price for the crop to be grown in 1958 while the Canadian wheat farmer does not yet know what he finally will receive for the crop he grew in 1955.

I know how well actions of the Department of Agriculture are publicized in this area when these actions are considered unfavorable to wheat farmers. Just for the record, let me enumerate some of the actions the Department has taken with respect to wheat, beyond any requirements of law, which have been helpful to wheat farmers.

We cooperate with the North Dakota Agricultural Experiment Station in developing Langdon, Yuma, Ramsey, Towner, and Sentry, the new rust-resisting or rust-tolerant varieties of durum wheat now seeded in this area.

We liberalize the grade specifications for supporting wheat, permitting loans on wheat which would not ordinarily have qualified for the loan. This meant added dollars in the pockets of wheat farmers.

We purchased bins to make storage space available to wheat farmers, and privoded low-cost credit for farmers to build their own storage. Thus more wheat farmers were given an opportunity to take advantage of the loan.

We have in operation a subsidy program for wheat exports which, for liberality, is not approached for any other commodity. This year we are exporting approximately 475 million bushels of wheat, the third highest level in history. Wheat exports are subsidized by the United States Government, a subsidy not required by law under present conditions but put into operation administratively by the Department of Agriculture.

We recommended, and the Congress enacted, Public Law 480, to dispose of surpluses. Under this law we have programed the export movement of more than 600 million bushels of wheat.

We put into effect a wheat-export program which utilizes the facilities of the private trade and has had the effect of boosting the domestic price of wheat.

We recommended and the Congress enacted a soil bank program. The acreage reserve part of the soil bank is a temporary, emergency program that was made necessary by the shortcomings of production controls. In effect, it pays wheat farmers for acreage reductions which, it was originally contemplated, would be made without compensation under the acreage allotment and price support program. The 1956 wheat acreage reserve program resulted in payments to North Dakota wheat farmers which totaled about $13 million. This year's wheat acreage reserve payments in North Dakota are expected to total about $21 million.

We permitted wheat farmers in drought areas to graze their wheat acreage reserve land, thus enabling them to maintain basic breeding herds.

If you do not hear enough about actions of the Department of Agriculture which are favorable to wheat farmers, it is not because these actions are nonexistent. It is because in the Northern Great Plains you are subjected to a barrage of carefully prepared propaganda. You hear most of what is bad and little of what is good. I grant everyone a full right to his own opinion. I ask only that the people study all the facts, not just one side of the story, before they form their opinions.

I shall lay before you as clearly as I can the economic and legislative situation as it pertains to wheat.

But first let me say that farm policy with respect to wheat is confronted with a new dimension. The new dimension is a revolution of farm technology. Since the beginning of World War II the man-hours needed to produce 100 bushels of wheat dropped from 67 to only 26. Yields per acre have increased around 25 percent. The onrush of technology has outmoded earlier ideas about production control and price policy. Effective restrictions on production are now virtually impossible with the type of controls acceptable in a democratic society.

The basic ideas in governing farm legislation were laid down before World War II before the technological revolution had reached anything like its present magnitude. The Agricultural Act of 1954 eliminated price support at 90 percent of parity as a mandatory requirement, but retained it as an objective. It retained all the machinery of acreage allotments and marketing quotas, with the intention of reducing the supply so as to achieve price supports at 90 percent of parity. The Agricultural Act of 1954 was a forward step, but not a very long step, toward a program that would relax restrictions on wheat farmers and regain market opportunities.

The Agricultural Act of 1956 defended the changes made in 1954 and added the soil bank. But the main ideas embodied in basic farm legislation are still the ones hammered out a quarter of a century ago to meet the problems of a general depression before the technological revolution had fully developed.

Let us see how this legislation works out for wheat in today's world.

First, what are the chances for increased wheat allotments? If 90 percent of parity remains the price-support goal, as it is at present, with rigid formulas as in the old law, it is impossible to foresee the time when total acreage allotments will exceed the 1957 level. This is the prospect in spite of the soil bank and in spite of surplus disposal programs.

A high price is not a satisfactory single objective for farm program. Farmers are interested in income which takes account of volume as well as price. It is income, not price, that farmers spend.

The prospective carryover of wheat at the end of the present marketing year is 906 million bushels. If we were not to harvest a single bushel of wheat in 1957, there would still be nearly enough for a full year's needs. The supply is so great that if it were not for the minimum national allotment the 1958 acreage would be forced down by the formula in the law to 23 million instead of 55 million acres.

When the 55-million-acre minimum allotment was originally enacted, it was expected that this would produce our domestic requirements. But, with acreage limited and price supports at an inducement level, farmers chose their best land and used modern technology to increase yields per acre. The 55-million-acre minimum now produces enough wheat for both our domestic and export needs, allowing very little opportunity to reduce surpluses.

Foreign nations, thinking about bread for their teeming millions, look at our high price and restrictions on production. They then expand wheat production even on rocky hillsides, while wheat production on our fertile prairies is prohibited. From 1925–29 to 1954–56, United States wheat production increased 18 percent, while production in the rest of the world increased 42 percent. And much of the United States production during 1954–56 went into storage or was exported with the assistance of Government programs.

Back in 1925–29, before the control program, wheat brought in 7.5 percent of cash farm receipts in the United States. After nearly a quarter century of controls and supports, this percentage had fallen to 6.1 percent.

Many wheat farms have too small an allotment to be efficient or to earn a satisfactory income. Advancing technology makes it possible—indeed, almost imperative—for small wheat farmers to increase their acreage. But this will be practically impossible so long as we restrict production in an effort to achieve a high level of price support.

And what are the chances of price supports being increased under governing legislation?

With modern methods, the 55-million-acre minimum national allotment can be expected to produce so much wheat, despite the soil bank and the surplus-disposal program, as to keep the support level far below 90 percent of parity for as far ahead as we can see.

That all this poses a serious problem for wheatgrowers, I am well aware. Wheat farmers are being subjected to the forces generated by the technological revolution. Their markets are burdened by surpluses which result at least in part from past wartime programs continued in peacetime. They produce a commodity which is declining in per capita consumption. They are sharply restricted in the acres of wheat they can grow. The prices they pay have gone up and the prices they receive have come down. Other countries have captured most of the growth in the world wheat market.

Farmers have the established right, in cooperation with Government, to undertake programs which increase the price of their products if they wish to do so. As much as

any other group, they have the moral right to influence supply and price in what they deem to be their own interest. They are entitled to the sympathetic help of their Government in meeting their economic problems, the same as any other group. These rights have been fought for and have been won. I applaud and defend the victory.

My question is this: Is it wise to use their hard-won rights in behalf of a program which imposes irksome controls in an effort to reach what seems to be an unobtainable price objective? Particularly is this question appropriate with respect to a program which has lost markets and stimulated production in many countries abroad and in areas not well adapted to wheat at home.

In our present difficulties, all kinds of remedies will be put forward. Some of these remedies would make what are called production payments to wheat farmers from the Federal Treasury. Others would divide the domestic market from the world market.

Still others would move—to the degree that it can be accomplished—toward more freedom to produce and toward prices that are more competitive. Such a price would shift out of wheat production some of those areas which have other and better opportunities. It would open outlets for feed wheat. It would broaden markets generally. It would curb uneconomic expansion of wheat production abroad by indicating to foreign nations that we intend to produce wheat, and to sell it.

Together with revisions of the price-support and production-control machinery, we must continue and strengthen program to aid wheat exports, to bring about needed changes in land use, to provide needed credit, and to reduce the costs of production. Thus we can help lift the problems of the farmers who produce the staff of life.

Wheat farmers should ask themselves earnestly and honestly whether a program of restriction and scarcity can possibly mean as much to them in the long run as a program involving more freedom to plant and more freedom for market growth.

I have given you no slogans. I have promised no cure-all, no secret weapon. I have chartered no easy solution to the problems of wheat producers. There are none. Some paths are merely less difficult than others.

My counsel is this: As wheat farmers choose the path they propose to follow, they should take account of where the path leads as well as how pleasant they may find the first step.

Another chapter of the continuing debate on farm policy lies ahead of us. Debates on farm policy, like the old kerosene lamp, sometimes generate about as much heat as they do light. It is my hope that we can have a little more light and a little less heat.

Farm people are the salt of the earth. They have sound judgment. They can be trusted with the facts. The job is to see that they get them. It is of utmost importance that they do. May God speed the day when decision is based on sound judgment and sound judgment is based on fact.

Inequity Rules the Soil Bank

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. HARRISON of Virginia. Mr. Speaker, the periodic reports of the Department of Agriculture on participation in the soil bank make startling reading. For example, a study of the figures for 1957 acreage reserve signups through April 5, 1957, and conservation reserve signups through March 15, 1957, reveals that one State, Kansas, with a population of 2,060,000, stands to receive more money for this crop year than 25 other States, having a population of over 70 million people.

Based on signups through the dates mentioned, the figure for maximum benefits for Kansas is $86,798,281. Here are the maximum payment and population figures for 25 other States:

	Payments	Population
Rhode Island		845,000
New Hampshire	$4,145	557,000
Vermont	35,302	378,000
Nevada	76,037	225,000
Maine	191,719	905,000
West Virginia	273,775	2,002,000
Wyoming	843,891	306,000
Delaware	934,728	387,000
Massachusetts	967,923	5,016,000
New Jersey	1,432,993	5,420,000
Connecticut	1,619,442	2,241,000
Maryland	2,349,825	2,669,000
Florida	2,403,230	3,452,000
Utah	2,803,074	781,000
Virginia	3,330,904	3,579,000
Oregon	3,478,832	1,669,000
Pennsylvania	4,043,307	11,159,000
New York	4,352,217	16,124,000
Idaho	5,236,647	609,000
Arizona	6,256,266	890,000
Washington	6,485,135	2,570,000
Montana	9,362,452	633,000
Wisconsin	9,489,356	3,694,000
New Mexico	9,296,043	795,000
Tennessee	9,869,508	3,417,000
Total	85,136,751	70,408,000

Using the same reports, we find the following to be the 16 highest States in monetary benefits available for this crop year:

Kansas	$86,798,281
Texas	80,366,125
Nebraska	45,001,702
Iowa	34,687,663
Missouri	25,943,538
North Dakota	25,806,897
Oklahoma	25,283,976
Colorado	25,161,337
Georgia	22,351,640
South Dakota	22,043,141
Ohio	19,448,200
Illinois	19,242,740
Indiana	18,860,806
Mississippi	18,586,157
North Carolina	18,423,353
Alabama	17,642,587
Subtotal	505,648,143

As the total for the entire United States is $686,465,646, it will be seen that one-third of the States stand to receive 74 percent of the money.

Let us add eight more States:

Minnesota	$16,576,387
California	15,227,083
South Carolina	15,225,822
Arkansas	14,673,712
Michigan	12,962,615
Louisiana	11,040,579
Kentucky	9,974,554
Tennessee	9,869,508
Grand total	611,198,403

Thus, it is shown that one-half of the States are eligible for 89 percent of the benefits.

If I Were the Parent of a Teen-Ager

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay:

IF I WERE THE PARENT OF A TEEN-AGER

(By Phyllis Marciniak, St. Joseph High School, junior, first prize (girl))

Today many parents are frantically attempting to establish better relationship between themselves and their teen-age offspring. Flanked by numerous current articles, they are endeavoring to undertake this belated project for fear that their teen-agers have already fallen subject to that threatening and dreaded malignant social cancer—delinquency. Unfortunately, the efforts of some parents seem doomed to failure simply because they are much too late. How can this tragic picture be averted?

In my estimation, teen-age training should begin, not at 13 or 16 but in the flexible years of infancy. From then on there should be a watchful concentration on the proper bringing up.

If I were the parent of a teen-ager, I would primarily desire to become my child's friend, someone to whom my son or daughter could come freely with his fears and troubles, as well as his accomplishments. I would always find time to help him iron out his difficulties and praise him for his triumphs. Tender, loving care would be bestowed on him at the earliest possible age. That time-worn maxim, "Spare the rod and spoil the child," contains an abundance of truth, but would be employed only in cases of serious and deliberate disobediences. Other small punishments would be meted out in accordance with the degree of misdeeds. My child would automatically develop love and respect for his parents, if he were piloted by a firm but kindly hand.

Another basic fundamental which would accent my child's rearing would be love of God and, consequently, love of neighbor. Religious instruction would be of prime importance in my home, if I want my child to possess a strong sense of morals, high Christian ideals, and an unprejudiced tolerance of persons of any race, religion, or creed. The unity of my family would be assured, because the members would go to church together every Sunday.

It is this unity in the family that would be all important in teen training. Besides giving the teen a sense of security, it would make him want to stay at home and enjoy an evening with the family, rather than roam the streets and perhaps engage in acts of vandalism.

Provisions would also be made for social recreation right at home. My child's choice friends would always find a "welcome mat" on my doorstep. If my teen desired outside recreation, he would be taught to make a wise choice of places, with the right companions.

Harmony between parent and child would further be developed by family excursions. Sharing the same experiences helps immeasurably to keep the family together.

My dream for a happy and God-fearing family is to make it a united, self-sufficient unit. This oneness could be likened to the atom, certainly an important unit of structure in this day and age. The nucleus would

be the love and respect the teen-ager has for God, his parents, and his fellow men. The electrons rotating around the nucleus would be the incidents and experiences, both joyful and tearful, which enrich family life. Thus, the family, like the atom, would be a loving, perfect whole.

Much Credit Is Due Arthur Summerfield

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. JENSEN. Mr. Speaker, now that your mail deliveries are back to normal, like all good Americans you like to have the facts. I believe that right now is a good time to make public the following facts and figures.

There is one outstanding fact which must be considered above all, which is that the Postmaster General has only 4.3 percent of the appropriated funds over which he has full control, the other 95.7 percent must be expended in accordance with specific directives in laws which Congress has previously passed.

Now let us ponder over these following facts and figures.

How much does the Post Office Department spend in a year? About $3,250,000,000; 78.4 percent for postal employees' salaries and fringe benefits set by Congress; 15.5 percent for transportation of mail set by Government agencies; 1.8 percent for rents, utilities, and communications set by FCC; only 4.3 percent left for controllable items over which the Department really exercises any control—use money to print stamps, buy trucks, pens for 38,000 post offices, and hundreds of other items needed to operate post offices.

Why did the Post Office Department need additional funds? To give accustomed service; none of this money to pay past bills. Three reason why it is costing more to give the American people the mail service they deserve, expect, and pay for: First, more mail than estimated by about a billion pieces. And this increased volume of mail does not provide funds to operate the Post Office Department since all revenues go directly to the Treasury Department; second, increased mail service to 1.3 million new homes; and, third, higher wages to employees by law.

All three of these reasons beyond control of the Department.

Has the Post Office Department ever asked for more money before? Yes; but only once in past 4 years. In 1956 needed and got $166 million more, of which $150 million was for pay increases under Public Law 68, effective March 1, 1955; the remaining $16 million is the only supplemental appropriation the Department has received in 4 years for additional operating expenses. However, in 2 other years spent less: In 1954 turned back $105 million; in 1955 turned back almost $50 million.

Post Office Department

Fiscal year	Supplemental appropriation for operating funds	Surplus funds returned to Treasury
1947	$93,000,000	
1948	172,700,000	
1949	140,800,000	
1950	71,400,000	
1951	29,400,000	
1952	250,000	
1953		$83,574,247
1954		108,724,572
1955		42,903,628
1956	16,000,000	
1957	41,000,000	

Are you cutting costs in the Post Office Department? Yes; now carrying 20 percent more mail with fewer employees than 6 years ago.

How many postal employees are there? In 1952, 523,757; 1955, 511,613; 1956, 508,587.

How is mail volume increasing? In 1952, 49.9 billion pieces; 1956, 56.4 billion pieces; 1957, estimated, 58.8 billion pieces; 1958, estimated, 59.7 billion pieces.

Is the Post Office Department satisfied with mail service today? Of course not; better than it was but still not good enough.

What is the Post Office Department doing to improve service? Spending over $4 million this year alone on research; set up first Office of Research and Engineering in history; working with 9 engineering firms and Bureau of Standards; developing mechanical and electronic devices to speed mail through post offices; over 1,500 obsolete post offices replaced in past 4 years with new ones built by private capital. Objective: Next day delivery of mail anywhere in the United States.

The Soil Bank—An Expensive and Disappointing Experiment

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. HARRISON of Virginia. Mr. Speaker, evidence is accumulating that the costly soil-bank plan is a failure. When viewed from the standpoint of its original purpose, results have been disappointing to its sponsors, and many of the farmers it was supposed to help have found scant attraction in it. In short, it is becoming clear that the soil bank is unworkable, inequitable, and unproductive of benefits to agriculture generally.

Under leave to extend my remarks in the Appendix, I include an article appearing in the May issue of Nation's Business—only one of many which have been published recently in responsible newspapers and national magazines—pointing up some of the defects in this expensive experiment. The article follows:

WHY FARM PLAN WON'T WORK—SOIL-BANK IDEA USING UP $600 MILLION IN TAX MONEY, HOLDS LITTLE HOPE FOR RESULTS

(By Charles B. Seib)

The Government soil bank, in its first full year of operation, already gives evidence of being far from a smashing success.

This plan pays farmers in cash for depositing part of their farmland with the Government in the form of a nonproducing reserve. Although the bank has cut into production of the surplus crops it covers, it is also clear that:

It is an extremely expensive device.

It will have no more than a temporary restraint on mounting farm production unless it is constantly made bigger and costlier.

Some farmers are being treated unfairly—getting less soil-bank acreage or less generous payments than other farmers.

Some farmers are treating the Government unfairly—using the soil-bank program in ways its authors never envisioned.

The fact is, it is hard to find anyone in Washington who will go far in praising the program. The general line of comments is: "Well, it may do some good—temporarily. But we certainly have no faith in it as it now stands for the long run."

A major aspect of the farm problem is to find means of adjusting farm output to levels that will yield satisfactory prices to farmers—prices in line with the cost of farm production.

The soil-bank program was put forward as a new tool to promote such an adjustment.

It was recognized that even if successful, the adjustment would be only temporary—would buy time for other fundamental adjustments.

It was, even among its stanchest supporters, advocated as at best a step in the right direction.

As a tool, its limitations are becoming increasingly apparent. The outlook for its success is less than bright even if the program were to work effectively to achieve its intent of reducing crop acreage.

By the end of 1957, about $1 billion of the taxpayers' money will have been paid out to farmers under the soil-bank program—upward of $20 for every American household. Here is an interim report on how it operates and some of the headaches and complaints being encountered by the men who are trying to make it work.

WHAT IS IT?

The soil bank is a device designed to withdraw farmland from production in order to cut down on farm surpluses which now tie up more than $8 billion in Federal funds, cost $1 million a day to store, and which depress farm prices. A secondary purpose is to increase soil fertility by conservation and soil-rebuilding practices.

Under the soil-bank law, the Agriculture Department can spend up to $1.2 billion a year on the program. The bank actually has two parts. The first is an acreage reserve program of $750 million, for acreage actually taken out of production of six specific crops—wheat, upland cotton, corn, tobacco, peanuts, and rice. Because peanut supply and demand are in balance, the Agriculture Department has not included that crop in this year's program. The second part is a conservation reserve program of up to $450 million, for payments to farmers who contract to devote part of their general cropland for 3 to 15 years to grass, trees, water storage, or other long-range conservation uses.

The acreage reserve part of the program is the more important one so far as choking off current production is concerned. Under it, farmers receive an amount equal, in theory at least, to the profit they would have made by cropping the land taken out of production, plus a small bonus that was designed to encourage participation. A complex system

of State and county prices, based on average local yields, determines the per acre payment to farmers.

WHAT IS IT COSTING?

Because the maximum participation has not been achieved, the program will probably cost less than $1 billion this year. That includes an estimated 68 million administrative cost. This fact has permitted the President to tell Congress it can cut $254 million from the budget request. Last year, when the program got off to a late start, it cost $260 million. (One department official said recently, about last year's experience: "We could have done better if they'd just given us the money and told us to spread it among the farmers.") Of course, no one can estimate how much the soil bank is saving by reducing the cost of price support and other Federal farm programs.

The latest reports from the field give this picture of the 1957 program. More than 21.3 million acres have been signed up for the acreage reserve in close to 1 million separate agreements. (Some farmers have several contracts, so less than that number of farmers are involved.) If these cooperating farmers comply with all regulations, they will receive this year, for taking this 21.3 million acres out of production of 5 basic crops, more than $600 million. The withdrawn acreage breaks down into 12.8 million acres of wheat, 5.2 million acres of corn, 3 million acres of cotton, 216,000 acres of rice, and 80,000 acres of tobacco.

The conservation reserve has a later closing for signing than does the acreage reserve, and the sign-up is far less complete. The most recent Agriculture Department report showed nearly 4.8 million acres already put into the program under contracts with some 56,600 farmers. For installing long-term soil and water conservation practices or wildlife habitat improvement measures, these farmers will receive this year an estimated $32.7 million to offset up to 80 percent of the installation costs. In addition, if they stick with the program, they'll receive this year and each succeeding year another $42.3 million in rental payments. Final figures on the conservation reserve are expected to be substantially higher than these interim figures.

WHAT ARE HEADACHES?

The problems fall into two main classes—difficulties inherent in the concept of the soil bank and operational difficulties encountered in putting it into effect.

Probably the most basic objection to the concept of the soil bank is the ease with which productivity per acre can be increased by modern scientific farming methods. This prevents any system of acreage control from being an effective production control for more than a brief period, experts assert. This objection was heard from virtually every official consulted in researching this article—even from key officials within the Agriculture Department.

"It simply can't work," a top Department official directly concerned with the soil bank declared in a remarkable burst of off-the-record frankness. "They've taken a production control method already proven a flop in the allotment program and given it a new twist. There's no question but that it will fail as a curb on production in the long run."

No responsible official will say just how much production the soil bank is choking off. Agriculture Department experts say the soil bank will cut United States cropland in production this year to the lowest point since the mid 1930's. They earlier made rough guesses that for 1957 the bank would cut wheat production 175 million to 225 million bushels, cotton, 2.25 million to 2.5 million bales, corn by 175 million to 225 million bushels, rice by 450 million to 560 million pounds, and tobacco by 130 million to 160 million pounds.

But now some officials admit these estimates may turn out to be on the high side. Even if they should turn out to be correct, Department officials fear, the drop may be only temporary—until the farmers get the knack of using their manpower, machinery, fertilizer, and other production items to turn out more and more on the acres not in the soil bank.

The alternative would then be to enlarge the program still more, making it still more expensive.

"The soil bank," declares a spokesman for the National Grange, "will provide some automatic conservation, although not really on a selective or intelligent basis. But as for reducing production—I doubt it. Take a farmer who normally raises 100 acres of wheat, and who goes into the soil bank for 10 acres. I'll gamble every time on his ability, within a year or two, to produce as much on the 90 acres not in the soil bank as he was producing on the 100 acres before."

Another basic fear expressed by the program's administrators is that the soil bank, in cutting into some surpluses, will merely increase other surpluses—surpluses of crops not covered by the acreage reserve.

The acreage reserve in 1957, as noted, covers only five basic crops. It does not cover feed crops, which are also in surplus supply. Under present regulations it is possible for many farmers, particularly those who customarily allow part of their land to lie fallow each year anyhow, to put the land they have withdrawn from production under the soil bank.

For example, a farmer in the Northwest with a 200 acre farm customarily puts 100 acres into wheat and allows the other 100 acres to lie fallow, alternating the planted and fallow acreage each year. He decides to go into the soil bank for 50 acres of wheat, which would leave him only 50 acres still in wheat production. But he can designate as his soil bank wheat acreage half of the 100 acres that he planned to fallow. Then he can put into other crops the 50 acres of productive land he has withdrawn from wheat.

This situation is at least partly responsible for the unusual trends reported in a recent Agriculture Department survey of prospective plantings for 1957. The report predicted that corn plantings would be the smallest in 70 years and spring wheat plantings the smallest on record. But at the same time, it also disclosed that barley plantings would be almost one third above average and nine per cent above last year, while sorghums would be three fourths above average and up 23 percent from 1956.

Buried deep in this report are revealing sentences: "The barley acreage in North Dakota and Montana is expected to increase 20 percent and 31 percent respectively * * *. Increases over 1956 are also expected in other Western States."

Department officials are now looking for a way to tie up the specific acreage withdrawn from production under the soil bank, to avoid this switching to other crops. The law as it now stands makes the present practice legal. This danger that the soil bank will encourage new surpluses in nonbank crops is strengthening the demand of some farm organizations that feed grains and all other surplus crops be included in the soil bank. Of course, this, too, would make for an enormously expanded, expensive program. John Stephenson, a Washington State wheat farmer and a leader in the National Association of Wheat Growers, was recently quoted in the Christian Science Monitor:

"The program defeats its own purpose of an overall reduction in grain supplies. In the heavier production areas, where a cutback in acreage would really make some dent on surpluses, the payments are not high enough to enable the farmer to participate. In the light production areas, the soil bank serves as a crop insurance program for the continuance of uneconomical wheat farms. In the intermediate production areas, the compensation the participating farmer receives comes in two parts—an acreage reserve payment for leaving acreage out of wheat production and the payment he gets for the sale of alternate crops produced on the same acreage. These alternate crops—generally barley or alfalfa—in turn glut the market the soil bank was established to help in the first place, since wheat has to compete with other grains in the feed market."

Still another production problem is this: Even if the soil bank succeeds in cutting surpluses of some crops, this could merely create new headaches. As the surpluses drop, prices will rise, and the Government would likely have to bid higher and higher for soil bank land to prevent new overproduction and surpluses.

Here are some other aspects of the soil bank which raise questions about its value:

1. The soil bank is frequently a depository for poor land. Most Department officials concede that the farmers who participate put their least productive land into the acreage reserve—the sloping, gravelly, worn out or otherwise marginal land that's the least economical to farm. Department officials point out that payments to the farmer are based to some degree on the productivity of the land he takes out of production.

2. The eventual productivity of the idle land is increased. The Agriculture Department cites this as an advantage of the program in its promotional literature; its leaflets to farmers urge participation, among other reasons, because of "increased future productivity capacity for land removed from production. No crops except those that conserve the soil may be grown." This is all well and good, but it means more productivity on the total farm the next year. This could be such a serious problem, if farmers annually change the acres they put in the soil bank, that the Department offers a 10 percent bonus each year for keeping the same land in the bank.

3. The soil bank is being used for private financial gain in ways the administration or Congress never envisioned: There have been reports, for example, that some investors are buying up farms, putting them entirely into the soil bank, and coming out ahead on the rental payments from the Government. The Agriculture Department concedes this is probably being done—reports show almost one-fifth of the 56,600 conservation reserve contracts are for entire farms—but argues that "a farm is a farm, and it doesn't matter who owns it, as long as it is out of production."

More seriously, some farmers are using the the soil bank to get payments on land they were just about ready to stop planting anyhow. For example, many elderly farmers are reported to be taking advantage of the plan either to withdraw entirely from farming or to cut back on their workload. Chances were that, in many cases, they would have withdrawn or cut back their planting even without the soil bank. This way they're getting paid for it. Reports also indicate that some farmers with sons called to service have found the program a heaven-sent means of getting payment on land they would have been forced to stop cultivating anyhow.

4. The soil bank has been widely used as a form of free, sure-fire crop insurance: The Agriculture Department promotes it that way. Among the advantages claimed for the program in a recent Department publication is this: "Protection against crop failure. Farmers who put land in the acreage reserve will receive payments based on normal yields from these acres even though drought or some other natural disaster lowers production on other land."

There is no question that many farmers in the drought area seized upon the 1956 soil-bank program as a type of crop insurance. Under it, they were able to collect a normal return on at least part of their land, despite the beating they took from Mother Nature. Farmer Edgar Ulbright, of Brewster, Minn., an enthusiastic supporter of the soil bank, recently told a touring House Appropriations Subcommittee:

"It's cheapest insurance you can get."

The insurance is good not only against drought but against frost, insects, plant diseases, and other typical agricultural calamities.

5. There's a strong tendency to view the soil bank as a supplementary price support or even as a relief program. Some Congressmen have tried to pump out soil-bank money to more farmers by adding other types of crops to the acreage reserve—feed grains, soybeans, flaxseed, even grazing land. After the administration ordered some additional cuts in farm price guaranties early this year, there was an immediate move in Congress to tack on to the soil bank a subsidy program for other crops that might have cost an additional $500 million to $1 billion a year.

6. The administration of the program has hurt many farmers. Differences in the per acre rent payment between neighboring counties and neighboring States have caused many complaints. During the hastily set-up 1956 program, there was almost war between North and South Dakota. A South Dakota stabilization and conservation committee set the appraised yield figure for one county lower than a North Dakota county committee set it for a county just across the State line.

Southern cotton representatives complain that too much of the soil-bank outlay is going to Midwestern corn and wheat growers. "No national farm program makes sense," the Atlanta Constitution recently said in an editorial, "when a State such as Georgia is allocated less than $11 million for cotton acreage while Kansas is allowed more than $81 million for wheat."

WHAT IS THE OUTLOOK?

As of the moment, the administration is talking about a 1958 soil-bank program on the same scale as this year. It may propose some changes—for example, some Agriculture Department officials feel that legislation may be needed to block farmers from using land withdrawn for the soil bank to produce other crops in already heavy supply. More important, there will be tremendous pressures in Congress to expand the bank. And all of the major farm organizations have proposals for changes—some overhauling administration of the program, some restricting it, some enlarging it.

Human Depletion

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. ZELENKO. Mr. Speaker, on April 15 I introduced H. R. 6912, a bill to provide a tax reduction for the depletion of human resources.

The necessity for such a measure has long been recognized by many outstanding citizens.

One of the sources of my inspiration has come from the thoughts of Mr. Eric Sevareid, one of the great news analysts and commentators of this generation, which appeared in an article in the Reporter dated January 24, 1957, and reads as follows:

HUMAN DEPLETION
(By Eric Sevareid)

No doubt the fact that the little quarterly slip marked "Bureau of Internal Revenue" lies on the desk has something to do with it, but we can't get the image of Joe Louis out of our mind: The greatest fighter of them all shoving into subways because he can't afford a taxi or a car. Joe Louis owes the Government over a million dollars in taxes. He isn't sure exactly how much; neither is the Government. And his is not the only such uncertain equation. This is one of the great shocks of adulthood, anyway—finding that even figures aren't exact, but have to be interpreted and guessed at, like a cubist painting. So don't feel guilty if you aren't quite sure what your tax bill should be. The august Government isn't either.

Well, there is Joe, shoving into the subway, which we figure he can manage all right, and there is the Government figuring they might let Joe have the first $10,000 he earns each year to live on and take everything over that for the rest of his working life. So hail Joe Louis, Federal tax ward No. 1, pensioned off by the Government, not to quit work but to go on working. As it is, Joe's tax bill gets bigger each year because of the interest charges, and every year Joe's strength and abilities to meet the bill get smaller. An open-ended vicious circle that has to be closed, like the vacuum in the Middle East.

Maybe all boxers, writers, dancers, actors, singers, and others whose sole capital is youth, energy, or inspiration ought to have a new deal from the tax office. Something like the 27-percent depreciation allowance the oilmen get on the premise that oil wells exhaust themselves in time. It's the same with all the above-mentioned individuals; a man has just so many fights, performances, or books in him. The well of his spirit or his strength is depreciating all the time, every year that passes. But he doesn't get a 27-percent writeoff enabling him to pass his twilight years in a cozy 48-room bungalow with 12-car garage attached, as they do in Texas.

It's all very mysterious. As close as we can figure it out, the effect of the tax system is to encourage the investment of capital, not its expenditure, which is what life is all about, especially the expenditure of sweat, skills, and talents. Under the tax system, additional expenditure of these precious capital holdings brings, not additional return, but declining return. The Government doesn't say, "Give and ye shall receive." It says, "Get and ye shall get still more." Somewhere along the line, Government got mixed up and decided that human tissues last like iron while machinery wears out like human tissues. That's why a machine gets a depreciation allowance in its tax bill and your nerve ends don't.

Of course, people like boxers or writers or singers get into tax trouble for another reason. Figuring your taxes as you go along has become a complicated business and they just aren't businessmen. Their business is boxing and writing and singing and if they're worth their keep to society, their minds are on their business, all the time. And that's where society ought to keep their minds. They can't balance a personal checkbook, anyway, and in the ideal society wouldn't be expected to. As things are, thousands of them end up in a tax mess. Like Joe Louis.

Or like William Saroyan; Saroyan is one of the most celebrated, and—some think—most gifted of American writers. Saroyan isn't on the civil-service rolls, hasn't taken any Government loyalty test, but he works for the Government—full time. As fast as he can produce them in his shack on the California beach, his poems, his stories, his memories and dreams are collected by the Government. For taxes.

But he has his moments. He hung a wacky, worthless smudge of oils called a painting in his shack one day. The gimlet-eyed revenue agent paid his regular call, pointed to the canvas and said, "What's that worth?" "Ten thousand," said Saroyan. "We'll have to take it," said the agent. "Monster," said Saroyan with the best imitation of a sob he could produce at the moment.

Seafarers Union Urges Protection for American Industry

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. SHELLY. Mr. Speaker, under leave to extend my remarks I ask that two resolutions adopted by the Seafarers International Union of North America at their recent Biennial Convention in San Francisco be inserted in the CONGRESSIONAL RECORD immediately following these remarks.

The resolutions, expressing the sense of the Seafarers Union that the legitimate interests of certain of our domestic industries and their employees are not now properly protected against injurious competition from abroad, are a strong indication of increasing resentment in many sectors of American life. I know personally that this union was among the original supporters of the reciprocal-trade principle, as I was myself. I believe that their basic attitude has not changed. However, these resolutions are a sign of dissatisfaction with the way in which the administration of our reciprocal-trade agreements by the executive agencies concerned has been twisted to a point where it appears that reciprocity is forgotten and the interests of foreign competitors rather than American industry hold first claim on those responsible for our foreign-trade relations.

My own experience on the several occasions when I have taken up the problems of various domestic industries with the present administration bear out the need for a reappraisal of our foreign-trade policy. I sincerely hope that corrective action will be taken within the administration so that United States interests will not be completely disregarded and that Congress will not be forced to act to put a stop to pro-foreign discrimination in import-export trade negotiations and agreements.

The resolutions follow:

RESOLUTION NO. 3 RE ORGANIZATION FOR TRADE COOPERATION (OTC)

Whereas the conditions under which imports are admitted to this country are of vital importance to all who are employed in the production of goods or in providing services with which imports compete, because wages and working conditions in other countries are generally inferior to those prevailing in the United States, and in some instances shamefully inferior; and

Whereas the control or regulation of import trade determines in great degree the

extent of injury that may be inflicted on the American worker by unfair foreign competition; and

Whereas it is, therefore, of the utmost importance where and in whose hands such control or regulation is lodged; and

Whereas Congress is empowered by the Constitution of our country to regulate foreign commerce and to lay and collect duties (tariffs); and

Whereas Congress is an elective body and is therefore responsive to the people who elect the Members; and

Whereas the United States has signed an international agreement to set up the Organization for Trade Cooperation, known as the OTC, subject to approval by Congress; and

Whereas such Organization would administer the General Agreement on Tariffs and Trade, known as GATT, and would give full effect to the purposes and objectives of GATT; and

Whereas among these objectives is the objectionable one of abolishing and banning the use of import quotas no less than the renunciation of any means of regulating foreign trade by any method other than the imposition of import duties; and

Whereas the so-called 50–50 cargo law could easily be interpreted as a restriction on trade and therefore in violation of GATT should a member nation of GATT challenge that law; and

Whereas any such decision by GATT could be by majority vote of the 35 members, with the United States having only 1 vote; and

Whereas United States membership in the OTC would in such case and in many other instances of foreign disagreement with United States trade policies deprive Congress for all practical purposes of its authority to regulate our foreign commerce: Therefore be it

Resolved by the Seafarers International Union of North America, AFL–CIO, in convention assembled, That the Seafarers International Union strongly oppose congressional approval of United States membership in the Organization for Trade Cooperation, and do hereby call on the Congress to defeat any bill proposing such membership and to recapture its constitutional function to regulate our foreign commerce; and be it further

Resolved, That copies of this resolution be widely publicized and forwarded to all Members of the United States Senate and House of Representatives, President Meany of the CIO–AFL, Andrew Biemiller, director of the legislation, AFL–CIO, plus all State federations of labor and the maritime trades department of the AFL–CIO urging their support.

RESOLUTION 4 RE H. R. 2815, IMPORT QUOTAS

Whereas foreign competition, if not properly regulated, may inflict great damage upon the workers in American industry and service trades, such as shipping, by reason of the lower wages and less favorable working conditions prevailing in other countries;

Whereas experience has shown that the regulation of imports by the tariff alone is not satisfactory because imports often come from foreign sources that differ widely in cost and price levels with the result that a given tariff rate while effective with respect to the imports from one or more countries may be wholly inadequate when applied to imports from low-wage-cost countries;

Whereas an import quota properly designed can be used to share our domestic market equitably with imports, thus permitting a maximum of trade without exposing our workers to the injury inflicted on them by unfair and inadequately regulated import competition;

Whereas an import quota bill has been introduced into Congress containing provisions that call for sharing the domestic market on an equitable basis with imports but presenting the progressive capture of our market by imports, thus driving out, destroying or severely crippling our own producers and visiting upon their employees unemployment, lay-offs, reduction of take-home pay, and similar undesirable consequences;

Whereas such import quota bill offers an incentive to foreign producers to raise the wages paid to their workmen, thus narrowing the wage gap and therefore the competitive gap between foreign countries and the United States;

Whereas said bill would reestablish the supremacy of Congress in the regulation of our foreign commerce, as provided in the Constitution of our country, and prevent such powers from becoming vested in an international trade organization: Therefore be it

Resolved, That the Seafarers International Union assembled in its eighth biennial convention:

(1) Urge the passage by Congress of import quota legislation as embodied in H. R. 2815, known as the Lanham bill; and be it further

Resolved, That copies of this resolution be widely publicized and forwarded to all Members of the United States Senate and House of Representatives, President Meany of the AFL–CIO, Andrew Biemiller, director of the legislation, AFL–CIO, plus all State federations of labor, and the maritime trades department of the AFL–CIO, urging their support.

Are We Getting Our Money's Worth Out of Foreign Aid?

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following address made by Mr. Edward S. Van Rensselaer who is Research Director of the Citizens Committee for the Hoover Report. This speech, entitled "Are We Getting Our Money's Worth Out of Foreign Aid?" was made before the Detroit Economic Club on April 22, 1957.

ARE WE GETTING OUR MONEY'S WORTH OUT OF FOREIGN AID?

(Address made by Mr. Bernard S. Van Rensselaer at the weekly luncheon of the Detroit Economic Club, April 22, 1957)

I deeply appreciate this opportunity to discuss with you one of the most difficult and controversial problems confronting our Nation—our efforts to assist three-quarters of the world with American financial and material resources.

For, like it or not, that is exactly what we are trying to do.

To travel here I boarded an airplane in Washington, D. C. at 2:40 p. m. yesterday. I arrived in Detroit 3½ hours later. In that very brief space of time our Federal Government spent $1,500,000 for military and economic aid to foreign countries.

I mention this because I think it illustrates two of our national characteristics. We move fast, and we do things in a big way.

In little more than 100 years we overcame every imaginable kind of human and material obstacle and forged a bright new world from millions of square miles of tangled wilderness and open plains. By faith and relentless efforts we created a new way of life and made it the best mankind could offer.

We believe so much in this way of life that we have fought for it in nearly every part of the globe. American cemeteries in many countries are moving evidence that Americans, more than any other people, have proved it really is a small world.

With the highest of motives and with our usual superabundance of energy and optimism, we are today contributing to the economies and welfare of some 60 countries. For a time at least, ours is a necessary mission. Foreign aid has become, in just 10 short years, an important part of our foreign policy. We are now so deeply committed that we simply cannot pull out in the foreseeable future.

This entire program is being conducted with a great sense of urgency. We are constantly led to believe that if we don't move fast the roof will fall in—that only our dollars can save the world from communism. If large sums of money are squandered, it's unfortunate—but the Communist threat must be overcome.

At this point, however, the situation loses focus. We're told in effect that we can only fight communism successfully if we lift up all the underdeveloped areas of the world by their bootstraps, and change their ways of life, and make them over into what we think they should be. Thus the idealism and emotions of a generous people become involved and practical considerations tend to be brushed aside.

I personally believe very strongly in the principles of American aid to needy countries. But this must be done within our own ability to pay the bill and administer the program efficiently. It must also be kept within the capacity of the recipient countries to absorb and make good use of what we give them.

And we must be realistic and admit frankly that we have a self-interest motive: Specifically, gaining and holding trustworthy friends in the family of free nations.

When we first launched a formal program of assistance to other nations, back in 1947, our primary concern was the relief and rehabilitation of war-torn Europe. We poured money and materials and technological know-how into the area, and in a very short time our European friends were back on their feet.

Then we branched out—into the Middle East, Africa, Southeast Asia, the Far East, and Latin America. We approached this worldwide undertaking with the same formula that had worked so well in Europe—do it big and do it fast. And here we ran into trouble. The old formula didn't work any more.

It is obvious now that the methods that had rescued Europe simply could not produce the same results in the arid deserts of North Africa and the teeming areas of Southeast Asia and the remote back country of Latin America. Our efforts to do big things in a hurry in underdeveloped countries has resulted in chaos, confusion, and dollars down the drain.

Unfortunately, this lesson remains unlearned within the high councils of foreign aid planning in Washington. Evidence of this abounds in thousands of pagees of congressional reports and transcripts of hearings.

Between July 1, 1945, and September 30, 1956, the United States paid out $56.8 billion for military and economic assistance to other nations. Besides this staggering sum, $10 billion more had been appropriated by Congress but was still unspent. For fiscal year 1957 Congress granted $3.75 billion for foreign aid, both military and nonmilitary. For fiscal 1958 the President is asking a foreign aid budget of $4 billion, a modest increase over the current year.

In addition to all this, we have provided overseas aid totaling $2 billion in the form of surplus agricultural commodities.

I do not intend to comment on the purely military phase of foreign aid. This is a highly technical and complicated program which the average layman if not qualified to discuss. When the President and the Joint Chiefs of Staff tell us that our national security will suffer unless we continue to provide military hardware, training, and logistical support at present level, we are in no position to argue, and few members of Congress care to assume the responsibility of trimming military aid dollars in the face of such authoritative pronouncements.

However, I think the American taxpayer is directly concerned when military aid becomes interwoven with economic aid, when civilian planners are allowed to influence the programing and day-by-day conduct of military assistance, and when complicated economic projects are disguised in military garb.

The need for a clear-cut separation between these two basic forms of foreign aid is strikingly illustrated by a half-billion dollar project to rehabilitate and expand the British Royal Air Force.

In 1953 and 1954 hundreds of millions of American dollars were committed to add new aircraft to the RAF. It was known that these planes, when and if they were finally delivered, would be greatly inferior to the supersonic planes then in production in this country and in Russia. But the effect of this grant-in-aid to the RAF was to release British Government funds to subsidize the development and production of commercial jet aircraft in competition with American air frame and engine manufacturers.

In short, what purported to be purely a military program was actually a fiscal maneuver to ladle more American dollars into the British economy and fortify that nation's budget. For this the then Director of Mutual Security and his economic planners were really responsible. Furthermore, Congress was not fully informed about the nature of this transaction when the funds were requested. It's quite probable, that if Congress had known all the facts, it would have refused to grant the necessary funds. But as it turned out, the disguise worked—and as usual, the American taxpayer paid the bill.

Even disregarding military assistance entirely, our present economic aid program is vastly more complex and far-reaching than anything contemplated under the original Marshall Plan 10 years ago. Economic aid today includes point 4 activities; the economic development of backward countries; a nebulous sort of thing called defense support; budget support; and the sale of surplus agricultural commodities for local currency which is then returned in the form of grants or loans.

Regardless of the terminology and sometimes confusing categories, it all adds up to one thing—economic assistance on a grand scale. In one form or another, this program covers more than 2,000 projects in virtually every field of human activity as well as all kinds of commodities, services, and even United States Treasury checks. No less than 8,000 persons are employed by the Government to plan and administer this program.

What do these people do to keep busy? Sometimes even Government officials wonder. An official visitor to one of our Asian missions reports that he asked an attractive young woman the nature of her assignment. She explained that she was revising the third reader for the local schools. The visitor expressed in the project and asked if she had any help. "Oh, yes," she replied, "I have nine assistants."

Here are other examples of what we are providing for a large part of the world: Engineering and technical services; factories; dams; power stations; highways; the procurement, transport, and distribution of huge quantities of machinery and basic commodities such as food, raw materials, fabricated steel, medicines, and hospital equipment; and railway rolling stock.

Obviously a program of such magnitude involving the expenditure of vast sums of money—not to mention the welfare of millions of people abroad—requires a high degree of careful planning and efficient management if it is to operate successfully.

Is this what we're getting? Let me illustrate the kind of careful planning that goes into our foreign-aid program:

A few years ago it was discovered that out of a $14 million allocation for the country of Burma, only $8 million had been obligated by June 1. Only 30 days remained before the fiscal year would end. Following standard procedure, a rush meeting was called to discuss new ways to commit the remaining $6 million without delay. I attended this meeting.

After several possible projects were discussed and summarily dismissed, one of the planners present suggested importing blacksmith equipment into Burma. Someone quickly pointed out that you couldn't put much of a dent in $6 million with these items. But the planner had big things in mind; he wanted enough blacksmith equipment to put a complete unit in every town and village in the country. This, he said, would use up a million dollars or more.

But one of those present opposed the idea. Rather cynically, he asked his colleague: "What are you trying to do, shoe every elephant in Burma?"

This little story, however, has a happy ending. Eventually enough projects were improvised to commit all of the $6 million before the fiscal deadline and it was spared the fate of lying around gathering dust in the Federal Treasury.

Now I think we will all concede that in any large institutionalized undertaking, whether private business or government, we must expect a certain percentage of human error. It's inescapable. But the disturbing fact is that available evidence of bad planning and mismanagement in our foreign-aid program transcends anything that might reasonably be expected or forgiven. This is all a matter of public record. And the sad truth is that we were making the same costly mistakes in 1956 that we made in 1952, indicating that somewhere along the line of command there is an inability or unwillingness to learn from experience.

The brief history of American foreign aid provides a lesson in itself in the intricacies of bureaucratic nomenclature. We started with Economic Cooperation Administration, progressed through the Mutual Security Agency, the Technical Cooperation Administration, and the Foreign Operations Administration to what we now call the International Cooperation Administration.

But while the titles have changed, there have been too few new faces on the policy-making and planning level, except at the very top. In the past 7 years the economic-aid program has had five directors. None has been on the job more than 2½ years and one stayed for only a few months.

Repeated congressional investigations of our foreign-aid program have failed to turn up anything resembling a well-defined governing policy. And so we sometimes find ourselves offering aid before it is even requested. Or on occasion being forced to sell the need for economic aid to the recipient country when it becomes obvious to our aid planners that the Nation we are dealing with just doesn't know what is good for it.

It's a matter of record that some of the countries which accepted our aid were so little interested in the grand projects we had planned for them that they failed to contribute their agreed share of the cost and frequently benevolent, generous old Uncle Sam wound up paying the entire bill.

Now let me quote from the findings of a congressional subcommittee: "A 1954 United States contribution of $300,000 to the agricultural services in Brazil was held up for 2 years because Brazil failed to make a matching contribution. Another $150,000 set aside in 1952 for a rural education program was carried over as an expended item year after year because the Brazilian Government never put any matching funds into the program."

Does this sound like the reaction of governments sincerely interested in the kind of projects we were promoting?

This penchant of ours for picking up the tab, this apparent overanxiety to demonstrate to one and all that we are ready, willing, and able to foot the bill for everything from blacksmith tools to hydroelectric projects, runs sharply counter to the fundamental concept of foreign aid: that our mission is to help others help themselves, and to cement lasting international friendships in the bargain.

It is difficult, indeed, to reconcile this concept with a policy of helping those who haven't asked for help simply in the hope that after they receive what we can give them, they will be everlastingly grateful because they will see what they have been missing.

I have strong doubts, however, that we encouraged this reaction when we helped construct sugar plants in Iran, where there is little sugar, and when we helped erect cotton mills in Korea, where there is no native cotton, and when we helped put up flour mills in Korea and Formosa, where there is little or no wheat.

We have constructed industrial plants, but failed to install the needed power. In Iran we helped finance a textile factory. We spent some $500,000 for American-made looms and installed them in the plant. Unfortunately, the looms required high-grade cotton—of which there was very little—and skilled operators and maintenance helpers—of whom there were none available in the native population. But we installed a half-million dollars' worth of looms anyway, then didn't provide the power machinery to run them.

The deplorable situation in Iran, as you know, has been widely explored by Congress. Perhaps you are not aware, however, that in 4 years the Industry Division of our foreign-aid mission there had six directors. In order, they were: a weaving technician; a fishery expert; a retired industrial consultant who had never been overseas before; a former investment counselor; a graduate forester; and a mechanical engineer who specialized in engine design.

Little wonder, then, that our foreign-aid planners, when taken to task, have defended many of our projects, technical and otherwise, solely on political grounds when economic justification was impossible.

I believe the evidence is clear—and you may have reached the same conclusion as you watched the development of our foreign-aid program—that the planners and theorists in the State Department and the International Cooperation Administration have been too preoccupied with the outflow of dollars and too little concerned with the things for which the dollars are spent.

A big program isn't necessarily a worthwhile program, just as a big budget isn't necessarily a justifiable one. This, too, is a lesson still unlearned in many Washington offices. Can the tax-paying public think otherwise when a member of our aid mission in Pakistan is reproved for planning a limited technical education project which his superiors rejected on the grounds it was too modest? In this particular case, the planner was assured that his idea would be aproved if he expanded it to national scale.

Unfortunately for Congress and the country-at-large, the true cost of this free-

wheeling, irresponsible approach to a program of tremendous scope, the true cost of mismanagement and lack of direction and just plain bungling is extremely difficult to compute. It shouldn't be, but it is. There is a startling scarcity of reliable information available to those trying to bring the entire program under close scrutiny and review.

Early last January, the Comptroller General of the United States wrote a letter to the Director of the International Cooperation Administration enclosing a General Accounting Office memorandum calling attention to certain operational deficiencies in the economic aid program and suggesting remedial action. Among other things the memorandum stated that ICA had asked for new appropriations to meet the expenses of specified projects, although funds previously allocated to these same projects had not been fully used or even obligated. The memorandum also observed that there were no systematic records in ICA to enable anyone to say how or why aid levels were established in Washington for given countries or projects. It further noted that ICA's presentations to Congress in support of appropriation requests were inadequate and that ICA headquarters failed to maintain sufficient information regarding the progress of field projects and the use of funds.

After a lapse of 3 months during which ICA paid no attention to the letter and memorandum of the Comptroller General beyond an acknowledgement of their receipt, the matter came to the notice of the Hardy Subcommittee of the House Committee on Government Operations which opened public hearings. The Director of the International Cooperation Administration testified that he had instructed his people to reply to the Comptroller General within 2 months and was surprised to learn that it had not been done.

This is indicative of the difficulties that confront Congress and the public in obtaining reliable information regarding the foreign aid program.

Congress is disturbed by this situation, as it should be. My good friend, Representative GEORGE MEADER of Ann Arbor, and others are calling for a top-to-bottom review of our foreign aid structure. This concern in Congress is pushed forward by each new committee report unearthing new instances of waste and chaotic conditions in this program.

Let me read a particularly significant passage from a report issued only a few months ago by the House Government Operations Committee. Here is what the committee concluded after questioning the top policymakers in the International Cooperation Administration:

"The overwhelming reluctance which key ICA officials have displayed in laying their cards on the table before this subcommittee, indeed the apparent intent of some of the principal witnesses to snow the subcommittee under with irrelevant and gratuitous side issues, has shaken the subcommittee's confidence in the soundness of the reports on which Congress has based its judgments of the entire foreign aid operation."

That's tough talk. And not to be taken lightly. These are the views of some 30 Members of the House of Representatives, a bipartisan cross section basing its conclusions on documented evidence and direct testimony from the administrators of our foreign-aid program.

In the light of such authoritative opinion, I for one am not inclined to laugh off the remark of one government official of a country in which we have spent many hundreds of millions of dollars, to the effect that American aid projects were "wasteful but"—and get this—"inoffensive indulgences." In this man's mind we were literally tossing our money out the window, but we weren't hurting anybody, so what's the harm? Nor am I disposed to applaud the comment of a foreign aid official, still on the job with ICA, who said, in referring to a last-minute obligation of aid funds, "We told them we would give them the money. What difference does it make how it's spent?"

I hope, in these few minutes, that I have been able to convey to you my grave concern with our foreign-aid program, even though in many instances this program has performed a useful service. Some of our technical assistance projects have yielded excellent results; the Fulbright and Smith-Mundt training programs have proved truly useful; and I have nothing but admiration for our anti-malaria project in a number of nations. I also wish to pay tribute to many able and dedicated people in the program, from the rank of mission chief down the line.

As I noted earlier, we are committed indefinitely to a foreign assistance operation of substantial proportions. We can't abandon it—but we can—in fact, we must—improve it.

What we need most today is a realistic recognition by all concerned—and that includes every American taxpayer—that our assistance was never intended to be perpetual, that the indiscriminate expenditure of dollars in one country after another on projects that are too costly on one side and unwanted or inappropriate on the other can only lead to a state of mutual distrust and frustration.

Our original conception of foreign aid was to help others help themselves, and then let them stand on their own feet. It's a splendid idea; and it's high time we put it into practice.

I profoundly believe that unless we quickly and vigorously overhaul the foreign-aid machinery we have put into motion, work the kinks out of an engine that has been lubricated too often with too many American dollars, we will find ourselves saddled with an international WPA of frightening dimensions, with all its implications of State socialism and economic imperialism and with a fantastic bureaucracy of reckless planners and irresponsible spenders.

The effect of such a state of affairs upon our foreign relations would be nothing short of disastrous. And in these days of uncertainty and international tensions, it's a disaster we cannot afford to risk.

The foreign-aid program is 10 years old. The Marshall plan, in spite of waste and mismanagement, had happy results. The emergency was met and dealt with. Since then, under the pressure of other emergencies, a new set of programs has blossomed all over the world. The end has not been reached.

This program has taken on the characteristics of a mushrooming improvisation. It seems to be impelled in part by the noblest motives and in part by an apparent belief that enough dollars, enough dams, enough power plants, and enough steel mills, if provided rapidly wherever there is poverty, illiteracy, brutality, corruption, and suspicion, will somehow save the souls of men and rescue the world for our type of democracy. Of course, this isn't true. Nevertheless, we are permitting ourselves to be pressured into the continuing expansion of a program that has already gotten out of control and has exceeded the ability of its administrators to manage it properly.

This country has always been, and I pray always will be, ready to assist other less fortunate countries in realizing their legitimate aspirations and improving their lot. But we cannot live in a dream world, and many things we would like to see accomplished in other parts of the globe will take a long time and must be done bit by bit within the capacities of the struggling nations to carry their own load. They can be helped—but not permanently subsidized. What we are doing at present encourages a spirit of dependence rather than independence among a number of young countries that have only recently thrown off their colonial ties and are just learning to stand on their own feet. This can defeat our purpose by embittering the people we are trying to help. As a high Pakistan official told one of our economic aid officials when he learned of the size of our prospective staff in his country, "We have just got rid of the British because we didn't like to have them ordering our lives, and we have no intention of permitting the Americans to move in and replace them."

It's time to create rigid policy framework for our foreign-aid program and stay within it. Let's commit ourselves to a useful and sensible point 4 program doing a few significant things in each country. Let's assist in industrial development within realistic limitations, to the extent that hard-bitten judgment justifies a given project from our point of view as well as the other fellow's. And when I say hard-bitten, I mean the reasoned opinion of experts, not dreamers or promoters. Let's cut out grants-in-aid except in the most unusual circumstances, remembering when we lend that loans beyond a certain point can break a country, not make it. Let's stop, or at least reduce, a lot of the so-called budget support which is advancing rather than controlling inflation. When we decide to render such support, let's do it in a straightforward and businesslike manner.

Management is another problem. Foreign aid is the greatest merchant banking and engineering business in the world. There are few commercial banks in this country big enough to handle all of ICA's banking business. As in any vast enterprise, the need here is for practical, realistic, experienced management. Until the invaluable asset of sound administration is added, we cannot hope to wipe out the waste and extravagance which has beset this program for 10 years.

A final word. We have not sought leadership in this troubled world. It has been forced upon us, and to the best of our ability we have tried to respond to the call. We have made mistakes and we have absorbed a lot of criticism, but when the chips were down we did our best—and I think every one of us has the right to be proud of the part the United States has played to bring about a better world.

But I sometimes wonder if we haven't been a little oversold on our duties to the rest of the world and if, perhaps, we might not be entitled to a greater degree of cooperation from some of the people we are trying to help. I would like to regard it as a two-way street, with our representatives, both here and abroad, acting just a little bit tougher in defending the interests of Uncle Sam and the American taxpayers.

We must discard, once and for all, the notion that foreign aid can ever become a substitute for diplomacy and a realistic foreign policy. We cannot hope to win respect or affection by ever being jockeyed into a position of paying tribute, bribery, or even blackmail to accomplish our objectives. After all, we are dealing with some very realistic and tough-minded people. We'll help them out, but we don't want to be exploited and we don't want our generosity to be regarded as a sign of weakness. Let's encourage stiffer trading on the part of our own people, to insure that what is good for the rest of the world is in fact good for the United States.

Programs like foreign aid never remain static; they expand or contract; they improve or deteriorate. If our economic-aid program continues on its present course, I believe the ultimate results will be most unhappy for every one concerned, and the cost will be terrifying.

Our real hope for reforms in the foreign-aid program rests in the application of the

democratic process. It is everyone's business. To the extent that opinions exist, they should be expressed to those in authority. In so doing, it is my firm belief that a great service will be rendered both to the United States and to the world.

Ira E. Bennett: Last Editorial on "Architect of the Constitution"

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, in a stirring eulogy of Ira E. Bennett, former consultant of the Committee on Foreign Affairs of the House of Representatives, of which I am a member, Senator THOMAS E. MARTIN, of Iowa, in the RECORD of April 10, 1957, mentioned that Mr. Bennett had written his last editorial in bed shortly before his death.

As one closely associated with Mr. Bennett over a period of years, I came to know him and his works well. He was one of the greatest exponents of the Constitution of the United States—a subject to which he devoted a lifetime of study and on which he has written extensively.

It is notably fitting that his last editorial, supplied me by his widow, Mabel Fyler Bennett, concerned James Madison, the distinguished Virginian, described by Mr. Bennett as the "Architect of the Constitution". Published in the March 1957 issue of the National Republic, a well-known magazine of the Nation's Capital, of which he was managing editor, this editorial stands as the uniquely appropriate end of one of the great editorial careers of our time.

Under leaves granted to extend, I include the editorial:

ARCHITECT OF THE CONSTITUTION

To the month of March is due the immortal honor of presenting to the world one of the men who established for all time the liberty of Americans in this country. He was James Madison, born at Port Conway in King George County, Va., March 16, 1751. He began college life at Princeton in 1769 and was graduated in 1771. Apparently he then expected to become a teacher under John Witherspoon, studying theology and Hebrew, but the Revolution was already stirring, and Madison soon entered into politics. He drafted the constitution of Virginia and served in the Continental Congress during much of the war.

Virginia and Maryland could not agree to questions affecting the Potomac River. A conference under the Articles of Confederation was held at Mount Vernon and Alexandria in March 1785. Several questions relating to the regulation of commerce led to a conference at Annapolis in 1786, and this led to the Constitution Convention at Philadelphia in 1787. In April 1787 Madison wrote to George Washington an outline of his opinion that no confederacy could endure unless it acted directly upon individuals. This letter was the basis of the Virginia plan presented to the convention by Edmund Randolph, and it is still the heart and soul of the American Constitution.

No one in the convention equaled Madison in tireless attention to details. He spoke frequently and made innumerable notes which were published in three volumes by Congress in 1843. The most important influence in promoting popular approval of the Constitution was The Federalist, a series of 85 papers, of which 20 were certainly written by Madison, and probably 9 more. Others who wrote in the series were John Jay and Alexander Hamilton. The now-famed document stands as the best attainable contribution to the American philosophy of government.

When ratification was in doubt, Madison promised to do his best to secure passage of the Bill of Rights. He selected 10 fundamental amendments and they were ratified. They include certain rights and immunities, but these were already the heritage of Americans under the Declaration of Independence. The United States Congress and the States are prohibited from violating rights already conferred.

Madison lived until 1856. His service as fourth President was severely criticized because he believed that economic pressure alone upon the United Kingdom would prevent another war, but British forces entered the Capital in August 1814, and set the Capitol on fire while Madison retired to Leesburg, Va., without seriously fighting. Yet, despite this inglorious record, the name and fame of James Madison will stand as a glorious memorial of "the more perfect Union" that establishes the liberty and independence of the United States.

Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. VAN PELT. Mr. Speaker, the pages of history show that in periods of world crisis some men are mysteriously inspired to rise above the crowd and, often at great personal sacrifice, provide leadership needed to preserve the security and advance the welfare of their fellow men.

Such a man, in our times, was the late Senator Joseph R. McCarthy.

When he died May 2 he was in the prime of life. He had gained success and had every reason to anticipate years of happiness with his beloved wife and daughter. However, destiny decided otherwise. In many respects he was a man of genius, certainly a man of great personal courage, a man apart, one of those rare persons who seem to be on earth with a special, if dangerous, mission.

Fate sent him to the United States Senate at a time when our Nation was slipping into the sinister grip of a fearful force of evil—atheistic communism. Unforgivably, and to our shame, this false ideology was nourished, even helped to world power with American blood and American gold. In its most charitable light, the evil nature of communism and its masters must have been grievously misunderstood by those then in high office who elevated fellow travelers to places of prestige in our Government.

Patriots tried to sound an alarm but they were quickly crushed. But Joe McCarthy was an extraordinary man and he cherished an extraordinary love for America. He risked his life for this Nation in a terrible World War, and arriving on the Washington scene saw the danger, accepted the challenge, and fought with all his might. He refused to be crushed, even when stoned by persons from whom he had a right to expect assistance.

Finally, deserted by colleagues who in conscience should have shared his concern over this treasonable subversion, his spirit was broken. I can well imagine that Joe McCarthy died of a broken heart. Possibly, he did not realize it, but I believe his mission was accomplished; his special assignment completed. He aroused America from complacency and put us on guard. I sincerely hope that this courageous man from Wisconsin will not have died in vain.

Interest-Free Loan to Idaho Power Co.

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mrs. GREEN of Oregon. Mr. Speaker, this week's issue of Labor, dated May 11, carries an excellent editorial pointing out clearly exactly what is involved in the recent fast tax writeoff granted to the Idaho Power Co. for 2 of the 3 dams which it seeks to construct as an inadequate substitute for the high Hells Canyon Dam which I—and a number of my colleagues—have proposed and for which we are fighting. Under unanimous consent I include this editorial in the CONGRESSIONAL RECORD:

THEFT FROM TAXPAYERS TO ENRICH POWER TRUST

President Eisenhower was right in saying it's immoral for a labor leader to take an interest-free loan from his union, Senator WAYNE MORSE said the other day. But, he asked, is it any more moral for the Government to give a far bigger interest-free loan to a power trust company, at the expense of the taxpayers?

MORSE was talking in the Senate about the "rapid writeoff" which, as Labor reported last week, the administration granted to the Idaho Power Co. He recalled that the Federal Power Commission in 1953, before it was "packed" by Ike, "characterized these tax writeoffs as follows:

"That has the precise effect of a grant by our Government of an interest-free loan."

In the case of Idaho Power, MORSE said, this loan will be about $30 million. By having the use of this interest-free Government money for at least 50 years, the company will make extra profits totaling $339 million, the Senator declared.

Those huge figures, MORSE pointed out, dwarf the approximately $300,000 "loan" teamster chief Beck is charged with taking from his union. Isn't the giver of the far bigger interest-free loan, from money "stolen from the taxpayers," he asked, even more immoral than the taker of the smaller loan from money belonging to labor union members?

MORSE recalled that the Eisenhower administration gave away the Snake River to Idaho Power for construction of two low private dams, and thus blocked construction of a high public Hells Canyon Dam which

would provide far more electric power and flood control. At the time it was claimed that "this plan will save the taxpayers money," because the company would pay for its dams. "But now the cat is out of the bag," the Senator said. "The United States Treasury will subsidize those inadequate private dams."

MORSE pointed out that the Senate Finance Committee was starting hearings on rapid writeoff tax subsidies to utilities, and had asked the administration to hold off its decision in the Idaho Power case until the issue was aired at these hearings.

Nevertheless, MORSE said, the administration acted. "They wanted to jump the gun. They wanted to get ahead of the Senate committee," he pointed out.

"As with all the other administration actions in the Hells Canyon case, the grant of the taxpayers' money to Idaho Power has been characterized by an unwholesome rush to bull the giveaway through. The repeated acts of favoritism to Idaho Power bring to mind the series of actions to put across the Dixon-Yates deal.

"The record of the administration on Hells Canyon," MORSE added, "shows utter bias against full public development and for private underdevelopment that wastes resources. The administration has shown again and again that it has no use for facts, no interest in the merits of the issue—only political expediency, sellout, and immorality."

Some other Senators and Congressmen condemned the rapid writeoff subsidy to Idaho Power in equally strong words. The smelly situation, they pointed out, it seems to Labor, has lessons for the public and for Congress.

For the public, the lesson is this: The outcry against a few labor leaders who enrich themselves at the expense of the members of their unions is justified, but don't let it divert your attention entirely from an administration which far more lavishly enriches special private interests at public expense.

The lesson for Congress is this: The Senate Interior Committee has approved a bill which would authorize construction of the high public dam in Hells Canyon, and thus stop construction of the inadequate low private dams. By passing that bill, Congress can wipe out the Snake River giveaway and the interest-free loan to Idaho Power—and open the way for full development of natural resources vital to the Pacific Northwest.

Last Full Measure of Devotion

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. MUMMA. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared on the front page of the Lebanon (Pa.) Daily News on the occassion of the passing of Senator McCarthy. This newspaper was always intensely interested in the late Senator's efforts to apprise the country of the communistic infiltration into our American institutions.

The editorial follows:

[From the Lebanon (Pa.) Daily News of May 3, 1957]

LAST FULL MEASURE OF DEVOTION

The tragic death of Senator Joseph R. McCarthy yesterday might have gone down in history as a great day for international communism and a black one for the cause of freedom.

But such was not the case. Senator McCarthy was once the most courageous and valiant fighter against the Red conspiracy throughout the length and breadth of the free world. But Senator McCarthy did not die on May 2, 1957. Senator McCarthy's spirit, his will to live, his selfless devotion to his native land was assassinated nearly 3 years ago on that infamous day in 1954 when the United States Senate voted to censure him for being too vigorous in his efforts to keep the Stars and Stripes flying above the hammer and sickle.

When those Senators, whose adherents included Dave Beck's counsel, the erstwhile and not lamented Jim Duff of Pennsylvania, voted to censure their colleague, they might just as well have signed his death warrant. For from that day on his vigor began to fade, his health to decline. Those Senators should now feel smugly proud.

Of course, there will be those who will say that Senator McCarthy was not the first foe of communism to have been subjected to a smear campaign by the egg-headed apologists for that evil doctrine. There can be no denying that. But McCarthy was the only one to have been crucified by the very body which should have given him its strongest support—the United States Senate. And like President Andrew Johnson, who was impeached by an equally irresponsible Senate, he never recovered from the blow.

He devoted all his strength to battle the enemies of his beloved country. But he was betrayed by his fellow Senators. And now he has given his last full measure of devotion.

More than any other individual, Senator McCarthy focused the spotlight on the hideous menace of communism and the real motives of the criminals and traitors who hide behind the fifth amendment.

For that, this Nation owes him an undying debt. He will be mourned by all who prefer Red, White and Blue to unadulterated Red.

But despite his death, the United States will continue to flourish. In times of crisis, America has never failed to produce patriots who have been equal to the task. This land of George Washington and Abraham Lincoln, of Patrick Henry and Nathan Hale, of Paul Revere and Joseph McCarthy will keep on bringing forth sons to whom the cause of liberty is a sacred trust.

Whenever the Stars and Stripes are lowered to half mast, they rise again to wave majestically in their unchallenged grandeur.

If I Were the Parent of a Teen-Ager

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay:

IF I WERE THE PARENT OF A TEEN-AGER

(By Larry Petri, Kelly High School, sophomore, second prize (boy))

A firm understanding of the principles of righteousness, the difference between right and wrong, and a respect for authority, all should begin in the home before a baby takes his first step. A young child is like a block of putty; you can mold it into any shape or form when fresh, but let it go too long and get settled and then try to give it a new twist. When I said a respect for authority, I took it for granted that the boy or girl has firm religious training. A respect for authority is not only an instilled fear of God; it also concerns the necessity for an adolescent to obey the laws that are made for his own good and protection. If a teenager breaks these laws, he should get and expect punishment. This would be one of the first principles which I would teach my boy or girl.

In my opinion, there are a lot of beliefs about the handling of teenagers in our time that are wrong. I have read articles in which the author states that parents are not supposed to punish or restrict their child in any way or else they will turn out to be frustrated individuals. If a child deserves punishment, he should get it; for as the saying goes, "Give them an inch and they'll take a mile." Firmness, guidance, love and understanding should be inseparable components in the attitude of a parent with his child. No matter how rich or poor the parents are, the material things that are bestowed upon a child should be earned and deserved, through good behavior, respectability, and helpfulness rather than lavishly bestowed upon the child solely because income permits. To cite an example, a teenager of mine will get the use of the family car only after he has proven to me that he is able to assume full responsibility for his actions.

Like one of Leonardo Da Vinci's great masterpieces, into which his diligent efforts poured all but the breath of life, a child at the hands of a master, using these same efforts and loving guidance, can blossom forth into something comparable to a work of art.

Communist Effort to Discredit Dr. Schweitzer

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. ROOSEVELT. Mr. Speaker, I have today received a letter from Mr. Norman Cousins, editor of the Saturday Review, which, together with my reply, I would like to call to the attention of my colleagues and clear-thinking friends.

The kind of tactics disclosed in Mr. Cousin's letter need to be the subject of constant alertness on the part of all those of liberal and progressive thought.

It is equally important that fair-minded critics should not be deluded into false accusations, as has too often happened in the past.

The letter follows:

THE SATURDAY REVIEW,
New York, N. Y., May 6, 1957.

The Honorable JAMES ROOSEVELT,
House of Representatives,
Washington, D. C.

DEAR MR. ROOSEVELT: Friends of Dr. Albert Schweitzer in this country are deeply distressed at the way the Communist Daily Worker has exploited his statement about nuclear testing in an obvious effort to serve its own cause. I was shocked to learn, for example, that the Daily Worker published excerpts from the Schweitzer statement on its front page, and has sent copies of that issue to all Members of Congress.

What the Daily Worker neglected to say is that Dr. Schweitzer considers communism the greatest danger faced by the world's peo-

ples today. It has neglected to say that he believes communism to be an unscrupulous attempt to dominate the world's peoples. And in calling upon people to send protests to President Eisenhower and Members of Congress against nuclear testing, the Daily Worker said nothing to Members of the Communist Party about writing or wiring to the Kremlin. In fact, there is not a single reference to the fact of hydrogen bomb testing by Soviet Russia, or to the fact that the Soviet leaders have resisted for themsleves the same unilateral measures which the Communists have been urging on the United States.

What is even more significant is that the Daily Worker omitted that part of the text from Dr. Schweitzer's declaration which recognizes the need for enforceable provisions if any ban on nuclear testing is to work. Dr. Schweitzer wrote that "there must be guaranties preventing the agreement from being signed by anyone intending to win important tactical advantages foreseen only by him."

So that you may see the difference between the two versions, I am taking the liberty of sending in a few days the full text of Dr. Schweitzer's statement as it will appear in the Saturday Review for May 18.

I trust you will not allow the merit of Dr. Schweitzer's statement to be diminished by the exploitation of his name by the Daily Worker. What he has to say is based on a lifetime devoted to the moral community of men.

Sincerely,

NORMAN COUSINS.

MAY 8, 1957.

Mr. NORMAN COUSINS,
Editor, the Saturday Review,
New York, N. Y.

DEAR MR. COUSINS: Thank you very much for your letter of May 6. I join with you in your dismay at the unwarranted and shameful use of Dr. Albert Schweitzer's words on the important topic of nuclear testing.

Unfortunately, this is an old Communist trick which people perhaps have forgotten. You do a great service in calling it to the public attention.

The Communists have all too frequently attempted to attach themselves to honest and liberal points of view, hoping, I suppose, to get some emotional credit from those whose idealism outruns their analytic perspective.

It is a misfortune that in many cases, otherwise wholly worthwile purposes have been fatally damaged by unsolicited and unwanted Communist support. One may wonder at times whether this in itself is perhaps not done deliberately.

Very sincerely yours,

JAMES ROOSEVELT.

The Story of Professional Football

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a short résumé of professional football compiled by Mr. Bert Bell, commissioner of the National Football League.

Bert Bell has been commissioner of the National Football League since 1946. He has been connected with football since his father played this game with the University of Pennsylvania in 1883. Because of his belief that the public in general knows little of professional football, the following brief was prepared on the little publicized organization of the National Football League:

A FEW WORDS ABOUT COMMISSIONER BELL

Football has been the life work of Bert Bell who has, since 1946, been commissioner of the National Football League. This is a heritage handed down to him by his father who played football at the University of Pennsylvania in 1883 and 1884. The elder Bell was next in seniority to Walter Camp on the college football rules committee when Mr. Camp was chairman of that committee. He served as attorney general of the Commonwealth of Pennsylvania under Gov. John K. Tener who was president of the National Baseball League from 1913 to 1916. Commissioner Bell's brother, John C. Bell, is now associate justice of the Supreme Court of Pennsylvania.

Following in his father's footsteps, Bert Bell also played football at the University of Pennsylvania He was captain of the team and played in the Rose Bowl.

After graduating, Mr. Bell coached at Pennsylvania and Temple University and later coached and owned the Philadelphia Eagles. The majority interest in the Philadelphia Eagles was, at that time, held by 3 wealthy men who, after losing about $80,000 in 3 years, decided to retire from professional football. Mr. Bell was able to purchase the club at auction.

In those days, there were 4 top teams and 6 poor teams in the league. The former were the New York Giants, Chicago Bears, Green Bay Packers and the Washington Redskins (formerly the Boston team). From 1933 to 1946, the championship was almost always won by one of these four top clubs. The other six teams usually won only 2 or 3 or 4 games each year. There was no real competition between the top teams and the poor teams because good college football players all wanted to play with the winning clubs, irrespective of the amount of salary offered by the poorer clubs.

Commissioner Bell recalls that in 1939, his Philadelphia team played Brooklyn to 100,000 empty seast in the Philadelphia Municopal Stadium. The advance sale of tickets had brought in only $1,100 plus. Then it rained the day of the game and the few spectators who put in an appearance sat in the press box.

It is of particular interest to recall that in 1938, the payroll of Mr. Bell's Philadelphia Eagles was less than $30,000 annually, whereas today, the average annual payroll of each of the 12 national league clubs is approximately $300,000.

Subsequently, Mr. Bell proposed the player-selection system and the league approved this plan for equalizing the strength of the teams. This system, which is in effect today, makes every game a hard-fought, thrilling, competitive contest, the outcome of which can never be forecast with any accuracy.

Of equal importance to the success of professional football, according to the Commissioner, is the reserve clause which reserves to the club the player's services under a one year contract with a one year option in the club on the player's services . If at the end of the year the player does not sign a new contract and plays out the option, he then becomes a free agent. The success of this type of contract and reserve clause is due entirely to the fact that the club assists the player in securing a position with a future where he can work while playing football; and also helps him financially and otherwise, thus keeping the player satisfied.

Commissioner Bell is convinced from his many years of experience that the player selection system and the reserve clause are absolutely vital to the existence of professional football as we know it today. He believes that the surest way to maintain the keen competitive spirit that permeates every club and every player is to continue the highly successful methods now used to equalize player strength among the 12 league teams.

Commissioner Bell also believes that little is actually known by the public or by the fans of the nation at large about the structure of professional football today. Due to the apparent confusion in thinking, he believes the time has come to set forth in some detail the precise type of organization which is the National Football League, and the constantly increasing contribution which it is making to the enjoyment by the public of this truly American sport.

Mr. Bell has served as Commissioner of the National Football League from 1946 to date, and on January 29, 1954 was given a new contract for 12 years thereafter.

JOE LABRUM,
Director of Publicity,
National Football League.

BALA-CYNWYD, PA., May 1957.

THE STORY OF PROFESSIONAL FOOTBALL IN SUMMARY

(By Bert Bell, commissioner)

The Supreme Court of the United States has ruled that professional football is subject to the antitrust laws, but that baseball is not.

This recent decision jeopardizes the continued existence of professional football in that it raises questions as to the legality under the antitrust laws of both the player selection system and the reserve clause. If either of these were held to be an unreasonable restraint of trade, organized football, the highly competitive and colorful sport that we know today, would come to an end. It would inevitably revert to its former state when four top clubs won most of the games and the public refused to support the poor teams which were unable to acquire good players, even though the poor teams offered the players more money.

The National Football League was organized in 1921. Its offices are now located in suburban Philadelphia. Member clubs are: Baltimore Colts, Chicago Bears, Chicago Cardinals, Cleveland Brown, Detroit Lions, Green Bay Packers, Los Angeles Rams, New York Giants, Philadelphia Eagles, Pittsburgh Steelers, San Francisco 49ers, Washington Redskins.

Some years ago, it became obvious that to prevent the ultimate destruction of professional football (42 clubs had gone out of business since formation of the league in 1921), methods had to be devised which would stimulate competition by enabling the less successful clubs to engage and retain for a reasonable length of time, the services of the better college players.

The methods adopted, which have worked successfully over the past 11 years, are (a) the annual player selection system, commonly known as the "draft," and (b) the reserve clause.

(a) The player selection system: Unlike baseball, professional football has no farm system or minor league affiliations. It makes use of an annual player selection meeting at which players are selected by the various member clubs.

Before the selection meeting is held each year, each club sends a questionnaire and/or talks by telephone to each player in whom it is interested. Among other questions, the club asks each player if he desires to play for that club if it should choose him. A player who does not care to play with a particular club is rarely selected by that club. This is natural, because football requires genuine competitive spirit

and the desire of each player to win for his team. In other words, the competitive spirit with which the player has been imbued in college, must be sustained throughout his professional football career.

Briefly, the actual selection of players operates in any given year in this manner:

The team which finishes the season in last place in the league is the team which is given the first choice of the players at the next annual selection meeting. The selection round proceeds until the league champion has made the last choice. Each team selects one player per round continuing in the same order. That is, the last place team chooses first and the first place team chooses last until all eligible players have been selected. Thus each year the teams are "re-equalized," making for keener competition among teams, better games, greater spectator enthusiasm, (100 percent increase in attendance since 1945), and greater income for the player which, incidentally, over the past 11 years has increased on the average approximately 300 percent. Today, the average salary of a league football player, who devotes approximately 7 months full time and 3 months part time to his business occupation, is between $8,500 and $9,000 per season.

The recent experience of the Baltimore Colts provide a good illustration of the benefits of the player selection system. Formerly, this club had a miserable record of wins and losses. It lost about $600,000 in 5 years, 4 of which years were spent in the All-America Conference (1 year in Miami and 3 years in Baltimore) and 1 in the National Football League. Through proper scouting and the player selection system, the Baltimore club—being at or near the bottom of the league—received first, second, third or fourth choice of the college talent. The club was thereby enabled to obtain the services of such outstanding players as Shaw, Ameche, Dupre, and others. Today, Baltimore can compete on even terms with any other team in the league.

The competitiveness among teams produced by the player selection system makes the outcome of any league game as unpredictable as next month's weather. Many will recall a 1955 game between the Chicago Bears and the Cardinals. The Bears, who had won 6 straight games, were overwhelming favorites to defeat the Cardinals who had won only 3 out of 9 games. Yet the final score was 58 to 14—in favor of the Cardinals.

(b) The reserve clause: After a club selects a player, he and his club agree to a contract for 1 season with an option on the player's services for only 1 additional season. If, at the end of the first season, the player does not desire to enter into a new contract, his only obligation under the reserve clause is to play for one more season (the option year) for that team. After that he becomes a free agent.

As a general rule, prior to the beginning of the second season the club and player negotiate a new contract. The football player's contract, in my opinion, is the best in any sport from the standpoint of the player. It places him in a strong bargaining position.

There are many reasons why the reserve clause is necessary to the continued existence of professional football.

In football, competitive spirit and teamwork are the principal factors for success and are achieved only after lengthy periods of practice and play with 1 team under 1 system. For example, a quarterback or any other specialist transferring from one club to another in all probability will not reach his maximum value to the succeeding club for an entire season. The intricacy of play patterns and signals, the talents of his teammates, and the timing of play executions are not quickly learned. Unless a club can count on the services of a player for at least two seasons, it cannot develop a great team, and great teams are necessary to the continued success of the player and the sport.

POLICIES REGARDING PLAYERS

1 system. For example, a quarterback or that a college football player may not be approached to play professional football until 4 years after he first enters college; that is, until his class has graduated. With regard to the case of a high-school football player who drops out of high school or graduates therefrom and fails to enter college, such a player will not be permitted to sign a league contract until at least 1 year after the date of graduation of his high-school class.

Neither, perhaps, is it realized that in the National Football League, human relations are considered to be of great importance. Every year, I consider it a part of my responsibility to personally tell all players that the securing of a job is of first importance and that in conjunction with his playing football, he should make every effort to establish himself in a business or professional career. To this end, each individual club assists those players who are either temporarily or permanently relocating their homes, and helps them to become established in a gainful occupation in the city where they are to play. With the widespread publicity that a player receives, especially in the city in which his club is located, he is able to make greater headway than might otherwise be the case toward furthering himself in a future business career. Actually, this year over 30 percent of National Football League players are working in the city where they play.

Professional football is not a business for the player; it is a means of establishing himself in business. Certainly, in my opinion, it is not a business within the meaning of that term as used in connection with the antitrust laws. Of the 396 players in the National Football League last year, the average term of service was less than 3½ years. To reiterate, players use their football prowess to pave the way, both financially and public relationswise, to permanent and usually successful business or professional careers.

FINANCIAL ASPECTS

Professional football is chiefly an avocation. The vast majority of the club owners earn their livelihoods in other businesses exclusively. The combined gross receipts of the 12 league clubs in 1956 were approximately $10½ million. The 12 clubs netted approximately $600,000, an average of about $50,000 per club. The most successful club, the Detroit Lions, last season (1956) enjoyed 6 sellouts at home with over 50,000 spectators per game. Their gross receipts from ticket sales at home, their receipts on the road and preseason games, from radio and TV rights, etc., were approximately $2 million, but net profit amounted to only $119,483.22.

The Federal Government in 1956 collected more than $900,000 in admission taxes on professional football games—approximately 33 percent more than the combined net income of the 12 clubs comprising the National Football League.

The 12 league teams annually raise over a half million dollars for charity. The proceeds of 25 of the 36 preseason games played last season by members of the National Football League benefited charitable causes.

Each club of the National Football League rents its stadium, none owns one. No club even has control over the concessions in the park in which its team plays. Only one club that I know of participates in concessions.

The only major professional football league in existence today other than the National Football League is the Canadian League. The National Football League has no minor league affiliations and has never had any affiliation with the now defunct former rival, the All-America Football Conference. Nor has our league ever had any affiliation with the Canadian League. However, our teams do compete with Canada for college players.

PLAYER SELECTION SYSTEM AND RESERVE CLAUSE VITAL

In conclusion, I should like to repeat my firm conviction which is based on many years of experience in both college and professional football—that the player selection system and the reserve clause are absolutely vital to the very existence of this sport as we know it today. It is in the best interests of the public, the player and the team, which interests, incidentally, are inseparable, that the keen competitive spirit that permeates every club and every good player, be continued through the employment of the highly successful methods now used to equalize and maintain player strength among the 12 league teams.

Mr. Speaker, there are 46 additional pages in this brochure. These pages contain analyses of the Court's decisions involving football, baseball and boxing, prepared by the National Football League's Washington counsel, Clinton M. Hester. Also included are the complete text of these Court decisions and of the conclusions of the House Judiciary Antitrust Subcommittee based on extensive hearings conducted by that subcommittee in 1952 on professional baseball and a full study of the reserve clause used by that sport. The subcommittee, which was headed by House Judiciary Committee Chairman EMANUEL CELLER, concluded in its report that baseball could not operate successfully without some form of reserve clause.

Broadcast Concerning a Colleague

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. ROOSEVELT. Mr. Speaker, my attention has been called to the following broadcast concerning my distinguished colleague, the Honorable HERBERT ZELENKO, made recently by Eric Sevareid, noted CBS radio and news analyst. Due to the widespread interest in Mr. ZELENKO's bill, H. R. 6912, I thought my colleagues would enjoy the transcript:

CBS RADIO NEWS ANALYSIS, MAY 3, 1957

(By Eric Sevareid)

Good evening. Representative HERBERT ZELENKO, of New York City, is a chipper man of 50, not much given to dark broodings on the mortality of man, for all that Grant's Tomb lies within his district; but years as a lawyer representing the side of human organisms injured while in contact with inanimate machinery have produced in Mr. ZELENKO misgivings about the respective values government places upon human bodies and machines.

Mr. ZELENKO, it appears, was privately pondering this strange inequity about the time we were publicly doing the same, via this microphone, last January, wondering out loud why the tax laws which allow a depletion allowance for an oil well and depreciation writeoffs for a truck or a tractor, refuse to acknowledge that the human body, the

only capital equipment most of us own, depreciates just as surely, is depleted in its earning capacity just as remorselessly with each passing year.

Ergo—H. R. 6912, a bill, introduced by Mr. ZELENKO, I quote, "to amend the Internal Revenue Code of 1954 to provide an income tax deduction for depletion of human recources."

It is a short bill, a simple bill, and for hard working people of 45 or over, a sweet bill; what it say, in effect is this: At the age of 45 anyone who earns may deduct 1 percent of his earned income, for income-tax purposes, at age 46, 2 percent, and so on, up to 50 percent of his earned income but no further; a modest accommodation for human depletion compared with the 27½ per year that an oil well operator can often get for the depletion of his oil.

As we were saying last January the effect of the tax system seems to be to encourage the investment of capital, not its expenditure, which is what life is all about, especially the expenditure of sweat, skills, and talents. Under the tax system, additional expenditure of these precious capital holdings brings, not growing returns, but declining returns.

Mr. ZELENKO appears to agree; he is arguing in Congress that his bill would encourage those of the middle age and over to work more, not less, to stay longer on their jobs. Well, economists may scoff; the Treasury may throw up its hands in horror, but Mr. ZELENKO is in dead earnest. And so, incidentally, are some 85 newspapers that have published editorials endorsing his scheme; so are some 4,000 citizens who have flooded his office with approving mail, including 1 petition from Buffalo signed with 300 names.

The Ways and Means Committee has pigeonholed the bill, plans to have no hearings on it at all; but ZELENKO is not discouraged. "I'm an amateur at legislation," he says, "but I have a notion this idea is so simple, so appealing and so fair it could snowball over the country."

This is Eric Sevareid in Washington.

Manpower Crisis in Federal Labs

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include excerpts from an article written by Joseph A. Grand, chairman, professional relations and status committee, Washington section of the American Chemical Society. This article appeared in the April 1 issue of Chemical and Engineering News:

MANPOWER CRISIS IN FEDERAL LABS
(By Joseph A. Grand)

Government laboratories are losing out in the keen competition for scarce scientific manpower. The critical situation now facing Government labs results from two things:

The Federal service is not obtaining its fair share of new science graduates.

It is unable to retain a considerable portion of its better scientific personnel.

How serious is the problem? As one offical of a prominent Government laboratory put it—"We are withering on the vine, and if we don't get help soon, we will be dead." This is an extreme view, and the seriousness of the situation varies with the character of the employment. Defense Department laboratories, employing a higher percentage of physical scientists and engineers, undoubtedly feel the pinch more severely than other departmental laboratories.

Compared with industry figures, the hiring and separations statistics for Federal scientists do not indicate an alarming turnover rate. However, considerations of quality and source of employees tell a different story. Influx of new graduates into Government service, vital new blood in the lifeline of a laboratory, is a mere trickle. One recent survey shows that 75 percent of the industrial firms surveyed reported 25 percent acceptance of employment offers to scientific personnel. Another survey shows that 27 percent of the firms reported 50 percent acceptance. The Federal Government acceptance rate is only about 10 percent.

MORALE PROBLEMS

The prestige of many Government laboratories is built around a hard core of senior scientists hired on a highly selective basis in less inflationary years. In general, these men are devoted to their work, and salary has not been the predominant consideration. But, in recent years, with rapid inflation, their relative economic position has become painfully clear to them. Today, approximately one-third of the total separations of scientific employees from the Government are senior grade personnel.

The combination of high quality employees leaving and lack of young graduates generates a lower morale and lower productivity. The prestige and sense of dedication of the Federal scientist that held him to his job possibly more than anything else can be sensibly dulled. The obvious end point of this reaction is the loss of scientific leadership and prestige of the Government laboratory and its ultimate demoralisation.

What has caused this aggravated condition? Fundamentally, the scientific manpower shortage is to blame. The immediate cause is the disparity of pay scales for professional employees in the Federal Government and in industry.

Some contend that the fringe benefits of Federal service—retirement, insurance, liberal vacation, and sick leave—tend to lessen this differential in pay. In addition, the prestige of Federal service, stability of employment, association with senior scientists, excellence of equipment, and nature of work may be presented as "fringe-fringe" benefits tending to lower the differential.

To both the young graduate and the professional pondering separation from Government service, these benefits are not too difficult to evaluate. Many of today's industrial giants have fringe benefits similar to the Federal Government plus such extras as medical and health insurance and profit-sharing or stock-purchase plans. News of private industry's modern laboratories and equipment punctuates nearly every issue of C. & E. N. The ability of industrial scientists is well attested by their publications in scientific journals.

CIVIL SERVICE VIEWS

Phillip Young, retiring Chairman of the Civil Service Commission, recognized Government's present lethargy with respect to fringe benefits when he said before the Engineers Joint Council, "Whereas the Government was once considered a leader in this field, private industry has been moving ahead in recent years faster than we have."

It should seem conclusive that if Government laboratories are to compete with industry in recruitment and retention of professional personnel, they must compete with comparable pay.

WHAT SHOULD BE DONE

Immediate interim legislation is needed to remove the present pay inequities. This would call for hearings in Congress now. For long range, permanent legislation a study group or subcommittee should be set up.

This problem of the growing discrepancy between Government salaries for scientists and those paid by private industry must be solved either by the Federal administration or Congress, or both. Unless Members of Congress and top administration officials are made aware of the facts and the need to correct a situation leading to deterioration in the quality of research in Government agencies, nothing will be done. It is becoming evident that unless this situation is corrected, the welfare of our Nation can be jeopardized.

Effect of Appopriations Cut on International Educational Exchange Activities

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mrs. BOLTON. Mr. Speaker, some of us who are particularly interested in the Near East and Africa have analyzed the effect of the appropriations cut on the international educational exchange activities in that area. Into this picture has come a letter from two American surgeons who volunteer to go out to a section of Africa, where there are no surgeons available, for 4 months a year, if transportation and living expenses can be arranged. This is but one instance of which there are many.

It seems a tragedy that this infinitely valuable program of international exchange must be curtailed just when the needs of the Near East and Africa for professionals of all kinds are so great. Not only will the department be unable to expand its exchanges as planned, but it will be forced by the appropriations cut to reduce its present program in this vital area by some 26 percent.

Dollar programs in the Near East and Africa will be at 67 percent below the requested level and 26 percent below the current level. Programs in 27 of the 32 countries in this area are operated solely with dollar funds since foreign currencies are available in only 5 countries of this area. Most of the remaining 27 countries are on the African Continent. In spite of plans to double the program with Africa, where an increase is badly needed, the program will have to be cut below the current level.

Funds were requested to bring 590 influential leaders and specialists to the United States from this area. This number will have to be reduced to 222. No leaders can be brought from Uganda, Tanganyika, Somalia, Liberia, the Belgian Congo, or the African Trust Territories. Reductions in many critical countries will also be necessary. Exchanges with Ghana will be reduced from 25 to 10, the Sudan from 14 to 5, Tunisia from 23 to 6, Morocco from 28 to 9. Only 3 leaders from Israel, 5

from Jordan, 4 from Libya, and 4 from Lebanon can be financed.

As to the exchange of students, 212 fewer grants than planned can be awarded for study in the United States. No students would be brought from Ghana, Iraq, Jordan, Lebanon, Liberia, Libya, Nigeria, Saudi Arabia, Tanganyika, Ugantia, or Yemen. Only 8 can be brought from Iran, 5 from Morocco, 3 from the Sudan, 8 from Syria, and 6 from Tunisia.

One hundred and four fewer teachers and professors can be exchanged than were planned. The Department's program to assist Ghana and other newly independent countries in their educational programs must be curtailed. Leader and specialist exchanges will be similarly reduced.

H. M. Baggarly, Editor and Publisher of the Tulia, Tex., Herald, Named Nation's Top Columnist

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. ROGERS of Texas. Mr. Speaker, one of the outstanding weekly newspapers in our great country is published in Tulia, Swisher County, Tex., which is located in the 18th Congressional District of Texas that I have the honor to represent.

The editor and publisher of the Tulia Herald is Mr. H. M. Baggarly who has been named the Nation's top columnist in the 1957 Better Newspaper Contest. He will receive the award at the fifth annual session of the National Editorial Association in San Francisco in early June. This fine newspaper has, for 5 successive years, been recognized for editorial, column and news writing by the journalism department of Texas Technological College at Lubbock, Tex. The selection this year of Mr. Baggarly's "Town Topics" column, as the Nation's best from 1,900 entries, is distinct and warranted recognition of his journalistic ability and integrity. In every instance he approaches fearlessly and honestly the great issues of the day which confront Swisher County, the State of Texas and the United States. He further invokes his readers to the same consideration.

Mr. Baggarly is a native of Swisher County and his late parents were among the earliest Panhandle settlers. They built the first home in the community of Happy, Tex., and were instrumental in the establishment of that city. Mr. Baggarly is a gentleman of broad and varied talents and of strong character and judgment. He is a graduate of the University of Missouri and of West Texas State College in Canyon, Tex. He is an accomplished musician, a brilliant and understanding teacher, and he served with distinction as a Naval officer in World War II. His progressive outlook has been apparent in all of his undertakings and the reputation of his newspaper is firmly established as a sentinel for, and a protector of, the principles which are our democratic heritage. I take occasion to add my own congratulations to Mr. Baggarly and the Tulia Herald for this merited award, and I commend this son of Texas to this body as an example of real Americanism in its finest sense.

Woolen and Worsted Imports

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement of the Wool Manufacturers Council of the Northern Textile Association, Boston, Mass., together with a memorandum on the subject of woolen and worsted imports.

I believe that the Members will find this information on a matter of great importance to the American people, not only very interesting but also most illuminating.

The statement follows:

STATEMENT OF WOOL MANUFACTURERS COUNCIL NORTHERN TEXTILE ASSOCIATION, BOSTON, MASS., ON WOOLEN AND WORSTED IMPORTS

Increased imports of foreign woolen and worsted fabrics seriously aggravate the depressed conditions which have beset the wool textile industry of the United States for the past 10 years.

New England's woolen and worsted mills, despite prolonged and severe hardships, still produce more than half of the woolen and worsted fabrics of the United States, employ 40,000 textile workers in 170 mills scattered through cities and towns in all 6 New England States.

During the past 10 years, since import duties were slashed, total imports of low-wage foreign goods have increased by more than 800 percent, and are frequently so concentrated in certain types of fabrics that they absorb the greater share of the United States market. Such import concentrations depress fabric prices, wipe out mill profits, cause serious losses and unemployment, and eventually drive many American mills out of business.

Hundreds of American mills have been forced to liquidate and over 100,000 wool textile jobs have been lost in the past decade. During this period, when half of the weaving capacity of the United States has been lost, the principal foreign producers of woolens and worsteds have enjoyed a growing market in the United States. The Japanese have built a woolen and worsted industry which now operates almost twice as many looms as the United States. In the past 3 years Japan has increased its imports of woolens and worsteds to the United States by 650 percent.

The New England mills have borne the brunt of an attack which comes from many countries in increasing amounts. While United States imports of English wool fabrics have increased since 1954 from 50 percent in certain categories to 120 percent in other categories, Italy has increased her share of the United States market by even greater amounts, and United States imports of Japanese medium-priced goods have increased by over 600 percent, and imports of higher-priced fabrics by over 1200 percent.

In 1956 imports of lightweight woolen and worsted fabrics equaled about 60 percent of total United States production of such fabrics. Imports of these fabrics have almost doubled since 1954.

In certain types of quality goods, imports have risen from one-half to almost two-thirds of the domestic production of similar cloth. Many of the mills which a few years ago produced these fabrics are now out of business. The remaining mills are threatened, and losses are severe. While American production and employment in these types of goods has fallen by one-third, imports have increased by 3½ times.

Import duties on woolens and worsteds were cut by various amounts from 28.5 percent to 44.4 percent 10 years ago. As a result of tariff-cutting sessions with foreign low-wage producers, the duties on higher-priced woolens which require more labor to produce, have been cut by even greater amounts, thus discriminating even further against American labor and in favor of the lowest-wage foreign producers who pay wages as low as 12 cents an hour.

The woolen and worsted industry, suffering from serious readjustment problems, losses and unemployment, has been required to carry an undue burden of unfair competition from abroad. Among the textile industries, woolen and worsted imports are relatively 3 times greater than cotton imports, and 10 times greater than in synthetic textiles. Compared to many growing and prosperous nontextile industries, woolens and worsteds, like other textiles, bear a wholly disproportionate burden of imports.

A comprehensive program should immediately be undertaken by the Federal Government to bring about a curtailment of woolen and worsted imports, with particular reference to import ceilings on individual types of fabrics to prevent harmful concentrations.

WOOLEN-WORSTED IMPORTS AND DOMESTIC PRODUCTION

I. INCREASED IMPORTS—CLOTH

1. 1947–56: Imports have risen 800 percent in the past 10 years, while domestic production has been cut 40 percent, with the closing of over 250 mills and the permanent loss of over 100,000 jobs.

All principal wool-cloth-producing nations have increased imports into the United States.

2. 1954–56: Since 1954 imports have jumped by 92 percent, broken down as follows:

	Percent
Japan	648
United Kingdom	60
Italy	109
Other	74

3. The share of imports enjoyed by Japan has increased fourfold—from 4 percent of all imports in 1954 to 16 percent in 1956. In certain categories of goods she currently (1956) holds up to 43.4 percent of the import market. United Kingdom has dropped from from 67 to 56 percent. Italy's share has increased slightly from 10 to 11 percent.

4. Concentrations:

(a) Overall: Imports of all apparel fabrics amount to 7 percent of domestic production compared to six-tenths of 1 percent 10 years ago. This is much too high for a declining industry.

(b) Comparisons: Woolen-worsted imports as a percent of domestic production are 3 times greater than cottons, 10 times greater than synthetics, and 10 times greater than automobiles and steel products.

(c) Categories: Increasing imports of wool fabrics concentrate in certain categories with alarming trends for the higher value and

finer goods. Lightweight fabric imports (under 9 ounces) constitute 57 percent of total United States production of such fabrics.

	Square yards
Imports	23,473,000
Production	40,879,000

Sixty-two percent of all imports are concentrated in fabrics weighing 8 ounces or less per square yard.

Ninety-three percent of all imports are valued at over $2 per pound and 34 percent over $4 per pound.

It has been estimated that in quality fabrics imports constitute two-thirds of domestic production.

The extent of concentrations is not fully understood because of lack of comparative information on imports and domestic production. This need must be met.

(d) Trends: Japan has increased her exports of medium-value goods ($2–$4) by 641 percent since 1954, and of high-value fabrics (over $4) by 1,288 percent.

Italy and the United Kingdom, on the other hand, have increased imports in the $2–$4 bracket by a greater amount than in the over $4 bracket.

II. TARIFF REDUCTIONS

As a result of the Trade Agreements negotiations, ad valorem duties on woolens and worsteds have been reduced by 50 percent to 58.4 percent, depending upon value, and the specific duties have, in addition, been reduced by 25 percent.

1. Discrimination: Duty reductions have discriminated against the higher value fabrics with a higher labor content upon which original ad valorem duties were higher than for lower value fabrics. For example: On fabrics valued at more than $2 per pound, the ad valorem duty has been reduced from 60 percent to 25 percent, whereas the duties on lower value fabrics have been reduced from 50 percent and 55 percent, to 25 percent.

The same kind of discrimination against higher value yarns has also been pursued, with reductions up to 70 percent in some cases. Substantial cuts have also been made in pile fabrics, wearing apparel, wool blankets and similar articles.

2. Geneva reservation: The Geneva reservation of 1947 applies only to woolen and worsted fabrics, and then only after imports equal 5 percent by weight of the average annual United States production. Not only is the allowable amount too high, but despite the language of the reservation, nothing is done to prevent concentrations of imports in certain categories of goods within the allowable 5 percent. The higher duty of 45 percent does not apply until near the end of the year when the total of 5 percent has been landed. The result is that in the beginning of each year, the duty is automatically cut by 44 percent.

III. DOMESTIC INDUSTRY

1. United States: The severe decline in the woolen and worsted industry hardly needs repeating. Machinery capacity has been cut in half, employment has declined by over 51 percent, and hundreds of mills and thousands of jobs have been permanently lost. During the same period, foreign producers have increased their exports to the United States of woolens and worsteds, and Japan has built a new woolen and worsted industry with almost twice as many looms as the United States.

2. New England: New England has suffered the greatest unemployment and damage, although she still produces one half of the woolens and worsteds of the country, and still employs approximately 40,000 workers in 170 woolen and worsted mills in the area.

New England wool manufacturers urge that a comprehensive program be undertaken immediately by the Federal Government to bring about a curtailment of woolen and worsted imports, with particular reference to import ceilings on individual types of fabrics to prevent harmful concentrations.

Humane Leadership

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. McCORMACK. Mr. Speaker, it is encouraging to note that four of my distinguished colleagues, in the course of a visit to the Dominican Republic, formed the same favorable impressions of the broad, humanitarian policies of Generalissimo Rafael Leonidas Trujillo Molina, LL. D., that have been entertained by numerous United States leaders and citizens throughout the last 27 years. My colleagues discovered what the highest officials in our Army, Navy, and Air Force have known, namely, that good will, cooperation, and friendship are among the best ideals of the Dominican Government now headed by President Hector B. Trujillo Molina.

The gentlemen from the United States Congress visited the Susua colony which was established as a place of sanctuary for refugees from Nazi terror during and after World War II. The new Deputy in the Dominican National Congress is Mr. Alfred Rosenzweig, a Jewish immigrant, who is prominent in his home community. This member declared that he was happy about his new fatherland and delighted to be able to share in the splendid Dominican program of national reconstruction. This plan was described in the records of the United States Congress on Monday, June 13, 1955, under the meaningful title, "Twenty-five Years of Peace and Prosperity in the Dominican Republic."

It is right to add that the Dominican authorities, in their desire to help in Western Hemisphere defense, have been willing to permit missile-range installations on Dominican territory. Recently, equipment for a loran, important for navigation, was also installed. These are a few of the many acts of good will and affirmative action that continue to inspire confidence among the people of the United States and the rest of the free world with respect to the sound leadership and high statesmanship which have been noticeable in the Dominican Republic.

In other lands, there is bankruptcy with some consequent burdens on the United States taxpayers. The Dominican Government not only maintains order, but also constantly forges ahead. The result is that this friendly nation is an asset, not a liability in the current world crisis.

I am happy to see that the views of my distinguished colleagues support my own position on this important subject. It is for this reason that I am glad to include in the CONGRESSIONAL RECORD, and those who want to keep abreast of the facts, the experience described in the following United Press report which was published on April 25, 1957, in the Diario Las Américas, Washington, D. C., and Miami, Fla. The article follows:

JEWISH REFUGEE ELECTED DEPUTY BY DOMINICANS

CIUDAD TRUJILLO, April 24.—Alfred Rosenzweig, a Jewish immigrant who is manager of a colony of fugitives from Germany's Nazi persecution, was elected member of the Chamber of Deputies. Rosenzweig, naturalized Dominican, will represent the District of the Sosua Agricultural Colony, on the northern coast of the country.

The new deputy is at present entertaining four Jewish Members of the United States House of Representatives, who are visiting the Dominican Republic. He believes he is the only Jewish refugee who has won a seat in Parliament in predominantly Catholic Latin America.

In regard to his election, he affirmed that "it is proof of a complete absence of any form of discrimination in the Dominican Republic. I must point out that the great majority of the people who elected me are devout Catholics."

Rosenzweig declared he is proud of his new fatherland and of Israel "and even more," he added, "of participating in the great Dominican program of national reconstruction planned by Generalissimo Trujillo."

The Sosua colony was established by Generalissimo Rafael L. Trujillo, on a zone of more than 3,000 hectars. Thousands of fugitives from Nazi Germany found refuge there during and after World War II.

The United States Congressmen, EARL CHUDOFF, ISIDORE DOLLINGER, SAMUEL FRIEDEL, and HERBERT ZELENKO, all of Jewish origin, delivered a declaration in which they praise the Dominican Government for the opportunity given the Jewish refugees to restart their life in the Dominican Republic, especially in the case of Jews driven out by Egypt immediately after last year's Suez Canal events. In regard to it, they bring out the contrast with the United States attitude which, according to what they said, closed its doors to those Jews.

Later, Trujillo told the Congressmen that the only Jews not admitted in the Dominican Republic are those affiliated to communism.

Foster Wheeler Plant at Wilkes-Barre Plans To Expand Facilities

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of May 3, 1957, which discusses the Foster Wheeler plant and its plans for expansion:

Some of those in the know say they will not be astonished if Foster Wheeler before much longer carries out plans for further expansion. When Kenneth L. Walker, works manager, was asked about the prospect, he said that the Mountaintop plant is now operating at maximum capacity with 500 workers on a payroll amounting to $2½ million annually.

The occasion for posing the question was the receipt by Foster Wheeler of an order from the Luzerne Electric Division of the United Gas Improvement Co. for construction of a large capacity boiler for the addition to

the electric company's powerplant at Hunlock Creek.

It is no secret that plans have been drawn for expansion of the Foster Wheeler Mountaintop plant. Quotations on construction have been tabled for the time, but management is said to have embraced the view that, with an increased volume of work let out to subcontract, expansion sooner or later is all but inevitable. This evidence of industrial enterprise and attending progress is gratifying.

Sixteenth Antiaircraft Artillery Battalion, Fort Banks, Winthrop, Mass., Rated Best in the Nation

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. LANE. Mr. Speaker, Boston, Mass., would be a suicide target for enemy planes.

Moscow knows it.

For it is no military secret that Boston is defended against air attack by the Nation's best antiaircraft artillery gun battalion, with headquarters at Fort Banks, Winthrop, Mass., commanding the entrance to Boston Harbor.

The 16th Antiaircraft Artillery is a crack outfit with uncanny skill and superb morale.

It not only stands ready round the clock to sweep from the skies any hostile craft that may invade the air space over Boston but has already made a clean sweep of all the honors in competition with other antiaircraft gun battalions that guard our major cities.

The competition was held at various firing ranges throughout the country during 1956. The 16th Battalion accomplished its recordbreaking scores at Camp Wellfleet on Cape Cod. There the radar-directed 90-millimeter guns fired at sleeve targets towed by bomber-type aircraft and at radio-controlled target planes three different times during 1956.

The lowest high battalion score, or high battery score, racked up by the 16th Antiaircraft Artillery was 98.33.

The entire 16th Battalion was honored at a review held at Suffolk Downs on April 1. At that time Maj. Gen. Raleigh R. Hendrix, Deputy Commanding General of the Army Air Defense Command, presented a commendation ribbon to Major McManus. The battalion received a large trophy to mark its achievements, while each battery in the battalion received a unit achievement award for its part in the battalion's success.

To Col. David B. Routh, who was recently reassigned to the Washington, D. C., area, to Lt. Col. William B. Beavers, Artillery, commanding, and to all the officers and men of "the sky-sweeping 16th," we offer the Nation's congratulations.

For the RECORD, under unanimous consent, I include from the Boston Globe of March 26, 1957, the story of the 16th's high-caliber proficiency. It certainly is a triple-A outfit, that merits national recognition and national praise:

A No. 1 IN THE AAA—16TH IS BEST BY TEST—OUTSCORES ENTIRE NATION

Everybody at Fort Banks, Winthrop, knew it before, but yesterday it became official: The 16th is the fastest, smoothest and most accurate outfit in the whole Army Antiaircraft Command.

This was no mere local assertion, but an official announcement from Command headquarters in Colorado Springs, Colo., yesterday, which recognized the 16th AAA Battalion, Fort Banks, as the best in the business.

It was based on practice firings among all United States-based AAA units during 1956.

The 16th won top position in all three judging categories, and two of its batteries won the Nation's top spot in service practice and the Army training test.

The battalion fires 90-millimeter guns, four to a battery, on distance and speed calculations made by radar. In the competition it fired at a rate of better than 16 rounds every 20 seconds.

The battalion's scores were: Service practice, 98.33; Army training test, 98.66; combined score, 98.50. Its nearest competitor was the 451st, which scored 97.59 in the service practice.

Two of the 16th's batteries were high in the Nation: Battery B, Fort Dawes, Winthrop, 99.70 in the test, and Battery D, Newton, 98.87, service practice.

The battalion is commanded by Maj. Vincent J. McManus of Brooklyn, N. Y.

On April 1 a review of the battalion will be held at Suffolk Downs racetrack, where 900 troops will attend as Maj. Gen. Raleigh R. Hendrix, deputy commander of Antiaircraft Command, will present the award to the battalion and Batteries B and D.

Resolution Adopted by Conservative Youth Association of Brooklyn

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. DORN of New York. Mr. Speaker, the Conservative Youth Association of Brooklyn, N. Y., has sent me a copy of the resolution adopted at a formal meeting held on May 5, 1957, and I submit it herewith to my colleagues:

Whereas communism has spread its ugly tentacles over the whole world, and even our beloved country has not been spared this curse; and

Whereas our Government was duped into recognizing the atheistic Government of Russia, which conspires to impose itself on the world; and

Whereas many of our own citizens have espoused the doctrine of Bolshevistic communism and similar doctrines, which would destroy the freedom and integrity of the individual, and are militant in their support of these doctrines even to the point of subverting our Government; and

Whereas other investigations had failed to bring the Communist conspiracy in our Government into the scrutinizing light of public opinion; and

Whereas exceptional courage was required to uncover those who had betrayed the Nation they served, and to bear the vilification of the enemy and the misguided; and

Whereas in the face of many obstacles the late Senator Joseph R. McCarthy did reveal the extent of the Communist infiltration in our Government; and

Whereas because of his love of freedom and country, he willingly saw his own name and motives vilified; Now, therefore be it

Resolved, That the Conservative Youth Association expresses its profound sorrow over the loss the Nation and the world has suffered because of his untimely death. The Conservative Youth Association sincerely advocates that others in the Senate and other branches of the Government carry on the work of the late Senator Joseph R. McCarthy—the work of patriotism and God.

Mayor Bernard J. Berry To Lead Jersey City in Celebrating 75th Anniversary of the Founding of Congregation Sons of Israel on May 19, 1957

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. SIEMINSKI. Mr. Speaker, nothing gives me greater pleasure than to include in the CONGRESSIONAL RECORD at this time a most interesting letter from Mayor Bernard J. Berry, of Jersey City, N. J., in which Mayor Berry tells the fascinating story of the vigorous growth of Congregation Sons of Israel and the proper influence for good its members have exerted in the community over the past 75 years.

Mayor Berry's letter follows. I congratulate Mayor Berry and Congregation Sons of Israel for their outstanding record in this regard:

OFFICE OF THE MAYOR,
CITY HALL,
Jersey City, N. J., May 3, 1957.

Hon. ALFRED D. SIEMINSKI,
Member of Congress, House Office Building, Washington, D. C.

DEAR CONGRESSMAN: Congregation Sons of Israel, 294 Grove Street, Jersey City, N. J., the first and oldest orthodox synagogue in Jersey City and Hudson County, will celebrate its 75th anniversary on Sunday, May 19, 1957, at which time the early founders and pioneers of the congregation will be honored.

The members of the synagogue and many friends of the community of Jersey City and Hudson County will on this day assemble at the synagogue, and thereafter, to the Jewish Community Center, to pay tribute, with prayer supplication to the sacred memory of the first Jewish orthodox settlers of Jersey City who have laid the foundation for true orthodox Jewish spiritual and cultural life in the entire county of Hudson.

The growth of Congregation Sons of Israel parallels the growth of Jewish communal life in Jersey City. At the cradle of orthodoxy in this community, the congregation was the center of Jewish spiritual and religious life since the early days of the 1880's when it was first founded in the downtown area of Jersey City. Many of our present-day leaders in the synagogues and philanthropic institutions are descendants of the founders of Congregation Sons of Israel.

The synagogue was organized in 1880. Its official name was then: Chevrah Bnei Israel. Later it was changed to its present name of: Congregation Sons of Israel.

The first services of the congregation were held in the private homes of the members. As the membership grew larger the congregation purchased its first house of worship, in the year of 1888 at 181–183 First Street, corner Grove Street. In the year of 1918 the present structure at 294 Grove Street was purchased.

The spiritual leader of the synagogue is Rabbi Zvi H. Shurin. Under his leadership the congregation continues to serve devotedly the religious needs of young and old of the congregation. Its spiritual guidance exceeds beyond the boundary of the downtown community. The Congregation Sons of Israel always was and is a fortress of religious and spiritual life for the members of the Jewish faith of Jersey City.

The president of the congregation is Mr. David Seidman, of 258 Barrow Street, a very devoted and pious member of the Jewish faith.

May I ask that you see to it that the above facts are placed in the CONGRESSIONAL RECORD?

Thanking you for your cooperation and assistance and with every best wish, I am,

Sincerely,

BERNARD J. BERRY,
Mayor.

Henry Walser, of Hazleton, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hazleton Plain Speaker of April 30, 1957, on the passing of Henry Walser, who was an outstanding citizen, businessman and publisher in Hazleton for many years:

With the death of Henry Walser this morning, Hazleton has lost a citizen with an outstanding record of community service.

As publisher of The Plain Speaker—Standard-Sentinel and president of the First National Bank, he was a man whose work will long be remembered.

Certainly his foremost achievement was in newspaper publishing. A man of vision and enthusiasm he brought Hazleton its first Associated Press news service, and provided the most modern equipment to speed its printing and distribution.

The effect a newspaper has on community progress is something which cannot be measured. But we know that Henry Walser's influence did much to make Hazleton a bigger and better place in which to live.

As a banker he helped to stimulate the economic growth and development of Hazleton.

As a citizen he served ably in elective positions in the city and county although he long ago retired from active participation.

He gave service in other fields such as the board of trustees of the State Hospital and the Public Library. During World War II, he gave many hours to his duties as chairman of Draft Board No. 2.

In the cultural progress of Hazleton his influence was important and when the legitimate stage provided the only means of entertainment, he brought the Nation's finest productions here during the years he managed the Grand Opera House.

His stature in the newspaper publishing field proved that from small cities can come the leaders of a great industry and the Associated Press long since paid tribute to him as a man who helped make it the great organization it is today.

As an employer he was revered by the men and women who will ever honor him for his honesty and fair treatment.

As a banker he combined sound policies with a helpful hand.

No greater tribute can be paid a man than to say he did so much for the town in which he lived. Truly he helped to weave a pattern of progress for Hazleton.

Sparks Into the U. S. S. R.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. BATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

SPARKS INTO THE U. S. S. R.—THE STORY OF RADIO LIBERATION

Radio Liberation began its work on March 1, 1953, from studios in Munich and by means of one 10-kilowatt transmitter in Lampertheim, Germany. At first, there was one 20-minute program, repeated 12 hours a day.

In the last 3 years, Radio Liberation has upped its transmitting facilities to 11 at diverse spots on the globe to blanket the U. S. S. R. and its total daily (transmitting) time to 228 hours, to be available to Soviet citizens whenever and wherever they dare and can listen. From broadcasting only in the Russian tongue, Radio Liberation has branched out to speaking in 17 languages used in the U. S. S. R.: Russian, Ukrainian, Byelorussian, Georgian, Armenian, Azerbaidjanian, Tatar, Uzbek, Kazakh, Kirghiz, Turkmen. Ossetin, Adyge-Kabardin, Karachay-Balkar, Chechen-Ingush, Avar and Kumyk.

Ten minutes after it went on the air, Radio Liberation was jammed by the Soviets. As Radio Liberation stepped up its activity, the Soviets responded with ever-heavier jammings. Today hundreds of jamming stations, spreading from the western edges of Czechoslovakia and Poland eastward over the entire Communist orbit to Siberia, try to black out the message of Radio Liberation. On the whole, they fail.

Radio Liberation has combatted the jammers through technical improvement of antenna design and through flexible transmitter operation. To its transmitting facilities in West Germany it has added transmitters in the Far East. Radio Liberation has blanketed the U. S. S. R. from several directions, weaving in between the jammers.

This policy has paid off. Extensive long-range monitoring from a half a dozen points on the periphery of the U. S. S. R. has demonstrated that Radio Liberation delivers an intelligible signal to almost all parts of the vast country. And direct confirmation of this fact has come from Soviet citizens themselves. * * *

Here is some of the evidence:

From time to time, travelers with a knowledge of the Russian language come to Radio Liberation to volunteer their impressions of the country and its people. Most often they are prompted to contact Radio Liberation because they have happened upon persons who have reported to them that listening to Radio Liberation and other Western broadcasts is a daily habit. The Western travelers to the U. S. S. R. provide the staff of Radio Liberation with valuable information—how many listen in the Soviet Union—how the programs are getting through—and general listener reaction * * *.

A young Russian, now a political refugee in the West, reports that he heard Radio Liberation while he was a soldier with the Soviet occupation forces in East Germany. Together with two other members of his tank crew, he listened over the tank's receiver * * *.

Another Soviet soldier, now also in the West, heard Radio Liberation while stationed in Hungary. The station had been guardedly talked about by other members of his unit * * *.

In Vilna, the capital of Soviet-annexed Lithuania, a number of people listen to Radio Liberation. This is the testimony of an elderly woman whom the Soviets recently permitted to emigrate.

Sometimes anti-Soviet individuals hear of Radio Liberation from the Soviet police itself. One man, recently freed from a concentration camp in Soviet Moldavia, reports that his police interrogator was the first to ask him if he had ever heard of the station. When he replied that he was glad it existed, he was given 3 days' special punishment.

Soviet concentration camp inmates particularly welcome Radio Liberation's programs and take comfort and hope from them. A German recently released from the notorious Vorkuta camp in the Arctic Circle has reported that since the strike some prisoners are allowed to visit outside the camp zone and consequently could hear some foreign broadcasts. The German was told by a Russian prisoner who had begun to enjoy the visiting privileges that he had heard Radio Liberation and found its programs well informed on conditions in the Soviet Union * * *.

The German's report confirmed and elaborated on one made in 1954 by a Greek who had also been confined at Vorkuta. The testimony of the German and the Greek together indicate that Radio Liberation had been heard almost continuously for at least a year and a half in that explosive prison camp.

Not only at northerly Vorkuta, but in concentration camps deep in Soviet central Asia, Radio Liberation seems to be a force. A Hungarian released from a camp in Kazakhstan described how he and Russian inmates heard the station completely free of jamming, although there was occasional fading. Hearing anti-Soviet broadcasts, the prisoners declared, was like being treated to a glass of vodka.

In Stalin's own home territory, in Soviet Georgia, Radio Liberation is well known, according to borders crossers into Iran.

A 26-year-old bear tamer, Viktor Iljinsky, traveling with a Soviet circus in West Europe, escaped from the circus train at Aachen, Germany, January 26, 1956, and told of listening nightly to Radio Liberation after the show as the circus traveled.

Letters have been arriving for several years. This alone is noteworthy.

The volume of letters is not large. Certain trends, however, stand out clearly.

Some letters reflect the official Soviet propaganda line. There are warnings: "You are traitors to the Russian people and it is none of your business to bemoan Russia," writes a locksmith from Tambov. "If you traitors are thinking of again fighting the country of the Soviets, you will be given what you deserve. This time we shall be merciless." * * *

On the anti-Soviet side, one group of letters is cautious and only establishes contact. An anonymous post card came in from Minsk, hailing one of Radio Liberation's humorous commentators on Soviet life. Others ask Radio Liberation for signs that their cryptic message has arrived: "If you receive this letter, I beseech you urgently to sing to me your favorite song, We Met by Chance." * * * A Ukrainian living in Poland writes to the

cover address the names and locations of churches that have been defaced and destroyed. A woman from the Baltic sadly infers that her father and mother have been liquidated. A loquacious youngster from Kharkov describes the misery of peasants on the farms, hints that a new aristocracy of privilege is waxing fat in the U. S. S. R., makes fun of Soviet propaganda films, and prophesies that a man of his political leanings will probably wind up in Siberia. And a man writing from Lvov discreetly warns Radio Liberation staff members that "they had better not succumb to the blandishments of the Soviet redefection. Life here goes on as before, and nothing new has been added since you left." * * * "Many thanks for your dear letters," reads a post card. "Your relatives will be very grateful that you are young and strong enough to do intensive work for yourself and the everyday good," says a letter evidently approving the political programs of Radio Liberation.

All told, some 150 former residents of the USSR conceive, organize, and present Radio Liberation's programs to its vast and secretive audience. Each staff member has a personal history—and a profound personal insight based on that history—which enables him to speak in terms and tones convincing and compelling to listeners in U. S. S. R. Hundreds more contribute to the programing as free-lance writers and speakers.

These key members of Radio Liberation's Munich staff receive assistance from a small group of Americans who have an expert knowledge of the U. S. S. R. and a background of experience in information work. Radio Liberation's technical staff in Europe and the Far East is in a position to draw on the services of a group of American technical specialists in communications who have helped to design, set up, and operate the elaborate transmitting equipment which carries the words and spirit of the emigre broadcasting staff deep into the U. S. S. R.

WHO'S BEHIND IT?—THE HISTORY

Radio Liberation got its start in 1950.

That year a group of eminent Americans surveyed the cold war scene and found an appalling instance of neglect: No major or concerted attempt had been made to enlist the loyalties and passions of the anti-Soviet exiles from, and the anti-Soviet residents in, the U. S. S. R. against the Kremlin. An almost inexhaustible reservoir of political energy lay untapped, stagnant. No single-minded effort had been launched to appeal to the spirit that had led millions of U. S. S. R. citizens to desert from the Soviet Army and administration during World War II, and to choose the most desperate of alternatives—temporary alliance with Hitler—because they so terribly needed and wanted an alternative, any alternative at all to sovietism.

All the free world's energy in the cold war had been spent either on containing Soviet power or on encouraging aloofness from it, as in neutralism. The representative cast of characters in the cold war drama had not been assembled; the restive peoples of the U. S. S. R. had not been asked to choose. If they were offered an alternative to straight Soviet domination, how would they decide? Like the millions who deserted to the Vlasov cause in World War II? The initiators of Radio Liberation were determined to find out whether what they believed was true—that many citizens of the U. S. S. R. would, even if only by listening to foreign-originated and forbidden broadcasts, take their chances on freedom.

Out of this determination grew the American Committee for Liberation, with headquarters at 6 East 45th Street in New York. AmComLib, as it quickly became known, undertook two major efforts: First, to rally the emigration from the U. S. S. R.; and, second, to enable the emigration to speak to its countrymen in the U. S. S. R.

Setting up Radio Liberation entailed complex preparation not encountered by the ordinary broadcasting operation. The emigration from the U. S. S. R., scattered over many nations, had to be brought into cooperation with the venture, in order to give the broadcasts authority. The ablest emigres in the writing and broadcasting fields had to be located and teamed up as a station staff in order to give the programs quality. Negotiations had to be pursued with foreign governments for the location of studio and transmitter facilities on their soil.

Radio Liberation's effort has inevitably appeared to parallel that of the old Free Europe Committee, even though AmComLib is and always has been a completely independent venture and there is no duplication of mission or effort in their respective activities. The Free Europe Committee sponsored Radio Free Europe, which broadcasts to the Eastern European satellites in their languages, but not to the U. S. S. R. AmComLib, however, is the sponsor of Radio Liberation, which broadcasts to the peoples of the U. S. S. R. in their many tongues.

RADIO LIBERATION'S BACKERS TODAY

President of AmComLib is Howland H. Sargeant, a well-known American public servant and former Assistant Secretary of State for Public Affairs.

Mr. Sargeant is assisted by a small American staff of experts in Soviet affairs, broadcasting, radio engineering, and administration.

The trustees of AmComLib represent a spectrum of American business, scholarly and professional interests. They include: Mrs. Oscar Ahlgren, former president of the American Federation of Women's Clubs; John R. Burton, New York banker; William Henry Chamberlin, author of Russia's Iron Age, and other books on the Soviet Union, contributor to the Wall Street Journal, and other newspapers; Charles Edison, former Secretary of the Navy and former Governor of New Jersey; J. Peter Grace, chairman of the board, W. R. Grace & Co.; Allen Grover, vice president, Time, Inc.; H. J. Heinz II, president, H. J. Heinz & Co.; Isaac Don Levine, authority on Soviet affairs and author of the first major biography of Stalin; Eugene Lyons, author of Assignment in Utopia and Our Secret Allies, profound studies of the Soviet Union, and senior editor of Reader's Digest; Dr. John W. Studebaker, former United States Commissioner of Education; Reginald T. Townsend, former vice president and director of the advertising firm of Lennen & Mitchell; William L. White, editor, author, and publisher of the Emporia Gazette; Philip H. Willkie, president and attorney of the Rushville (Ind.) National Bank, onetime member of the Indiana Legislature.

UNIVERSAL SUPPORT FOR RADIO LIBERATION

To those who may wonder whether a positive American contribution to foreign affairs is often only the work of a few dedicated individuals, without genuine backing from the United States public, and especially without agreement from the thinking public in most of the non-Communist world's countries, it may be heartening to know that Radio Liberation has received wide support from distinguished individuals from many countries, not only the United States, but from churchmen, teachers, scientists, labor leaders, journalists, and statesmen everywhere.

United States Vice President RICHARD NIXON and the United States Republican floor leader in the Senate, WILLIAM F. KNOWLAND have spoken over Radio Liberation to the peoples of the U. S. S. R.

So has Mrs. Eleanor Roosevelt.

So have United States Gen. Omar Bradley, Argentine publisher Alberto Gainza Paz, and American publisher Bennett Cerf. Russian-born Alexandra Tolstoy and many other well-known exiles from the U. S. S. R. sat at Radio Liberation's microphones.

So has the chief of the British Labor Party, Hugh Gaitskell.

Here are others, from many countries: Andre Lafond, France; Ahmed Ben Salah, Tunisia; Mohammed A. Khatib, Pakistan; Igor Gouzenko, U. S. S. R.-Canada; Henry Peyre, France-United States of America; Rene Fuelop-Miller, Hungary-United States of America; Ignazio Silone, Italy; Albert Gamus, France; Jacques Maritain, France-United States of America; Eller Jensen, Denmark; Robert Bothereau, France; Sir William Lawther, Great Britain; W. H. Auden, Great Britain-United States of America; T. Nishimaki, Japan; John T. Tettegah, Gold Coast; Italio Viglianese, Italy.

Harold Willis Dodds, president of Princeton University; Henry T. Heald, former chancellor of New York University, now president of the Ford Foundation; George N. Shuster, president of Hunter College; Millicent C. McIntosh, president of Barnard College; and many other outstanding American educators have addressed messages to the peoples of the U. S. S. R. over Radio Liberation.

Among the scientists who have spoken over the station are Vannevar Bush, Nobel prize winner H. J. Muller (who worked at Moscow University from 1933 to 1937); Nobel prize winner Wendell M. Stanley; bridge designer David B. Steinmann; biologist Conway Zirkle, aeronautical pioneer Igor Sikorsky, and many more.

Among labor leaders whose voices have been heard in the U. S. S. R. through Radio Liberation are George Meany, president AFL-CIO, Jacob Potofsky, of the Amalgamated Clothing Workers; David Dubinsky, of the International Ladies' Garment Workers' Union; Charles J. McGowan, president of the Boilermakers, Blacksmiths, and Shipbuilders International; Walter Reuther, etc.

American writers whose messages have been used by Radio Liberation are too numerous to permit more than mere sampling of their names: John Dos Passos, Joseph Wood Krutch, and Lionel Trilling.

Among the American journalists who have endorsed Radio Liberation, David Lawrence singled out the unique feature when he wrote: "Unlike those broadcasting on other projects which (in the U. S. S. R.) are recognized as 'foreign,' the speakers on Radio Liberation use such terms as 'we Russians' or 'we Ukrainians' and when they criticize the Soviet system, they do it as members of the family and fellow citizens—not as outsiders."

Roscoe Drummond declared: "Radio Liberation cafries the story of freedom where freedom is in chains. This group counts itself the greatest possible friend of the Russian people because it is 'dedicated to the liberation of all mankind from the scourge of Soviet power.'"

Office of Defense Mobilization

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. VANIK. Mr. Speaker, three times within the last 2 weeks we have observed the Office of Defense Mobilization engage in activities and practices unrelated to the national security and contrary to the public interest. Just yesterday the Secretary of the Treasury,

George M. Humphrey, criticized the fast tax writeoff program which has been made possible only through the action of the Office of Defense Mobilization. The specific grant of authority just last week to the Idaho Power Commission to enjoy quick amortization of its investment on the low-level dams to be built in Hell's Canyon was as gross an abuse of authority as has been conducted by the present administration since its inception. It also appears that the ODM and the Treasury Department—separated only by the White House grounds—fail to communicate with each other.

This independent office, apparently independent of good judgment and elementary thinking, recently declared that oil imports to the United States should be curtailed in the interest of the national security, when just exactly the opposite is true. The American national security is imperiled by the dissipation of its domestic oil reserves when abundant supplies are available in other parts of the world for delivery to the United States. As a matter of fact, the Office of Defense Mobilization has established itself as an oil tariff commission, protecting the high prices of domestic producers of oil at the cost of the American consuming public.

The latest activity of the Office of Defense Mobilization took place when that Office purportedly for the administration threw its support behind the natural gas bill to "protect the consumers against unreasonable price increases" when the proposed legislation seeks to do just exactly the opposite. The proposed legislation would limit and freeze authority of the inert Federal Power Commission to a total inertia. The only purpose of the pending legislation is to seek complete pricing freedom to raise natural-gas prices at the expense of millions of consumers, principally in northern cities.

On these three counts alone, it is quite evident that the Office of Defense Mobilization has been selected to do this administration's "dirty work." It has stretched the once sacred term of "national security" to do the bidding of the steel, private power, and the oil and gas industries. The Office should be abolished, and its functions should be placed in the Defense Department on a "standby" basis.

If I Were the Parent of a Teen-Ager

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay:

IF I WERE THE PARENT OF A TEEN-AGER
(By Mary McInerney, Visitation High School, senior, second prize (girl))

If I were the parent of a teen-ager, I would try to make our home his favorite place—a place that would give him love and security. I would let him bring his friends home, and I would welcome them when they came. I would take an interest in his outside activities. If, for instance, he had a favorite sport that he liked to participate in, I would try to know something about it so that I could discuss it with him. Or, if my daughter were interested in sewing, I would try to know something about sewing, too.

I would give my teen-ager certain responsibilities. This would make him feel that he was an important part of our home.

I would not limit my interests to my home and thus become a one-sided person. I would take part in community affairs. I would take an interest in current novels. This would keep me up-to-date and aid me in advising my children. I would read good books and urge my children to develop good reading habits.

I would take an interest in my personal appearance. Teenagers do not expect their parents to be glamorous, but they like to be proud of them.

I'd try to remember that my teen-ager is an individual who has thoughts and ideas of his own. I would try to teach him that he is just as good as anyone else, but not better. I'd try to give him a certain amount of privacy. I wouldn't try to keep him tied to my apron strings. I'd let him make his own decisions, and, if he had a job, I'd let him manage his own money. I'd encourage him to be self-sufficient, but I'd let him know that if he ever needed help or advice, he could depend on me.

I'd try to make my teen-ager a responsible person, one who would accept his duties and rights and appreciate them. I'd show him his responsibilities and encourage him to accept them. I could best show him his civic duties by being a good citizen. I could show him his duties to his family by accepting my own duties to my family.

Finally, I would try to make him aware of his primal duty—the one he owes to God. I'd try to be a good example; I would practice my religion. If we had God in our home, we would have a common end—to serve Him better. He would unite us and a united home is an indestructible one.

The Freezing of International Boundaries

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. CURTIS of Massachusetts. Mr. Speaker, a farsighted editorial in the Boston Herald of May 6, 1957, draws attention to the problem resulting from the freezing of international boundaries.

To appreciate the importance of the problem, one need only consider what the present state of the world would be had this policy prevailed over periods of past history.

Believing that this problem should receive wide consideration, I ask that this editorial be printed as part of my remarks. It reads as follows:

One of the paradoxes of our atomic age is the way the political map has been frozen. Now that we have the capacity to blow nations and even continents off the map we dare not move so much as a single border marker in the desert.

Not since the days of the Holy Alliance has the status quo been so jealously insisted upon.

The prime example, of course, is the Middle East, where the big powers have lately expended great efforts to restore and/or maintain frontiers which in Disraeli's time would certainly have been abandoned or redrawn.

Israel's present borders are absurd and Jordon has no real excuse for existing at all, but we dare not face the consequences of changing either.

The same situation prevails in many other areas. Where the free world borders the Communist world there is a special rigidity. The division of Korea at the 38th parallel and of Indochina at the 17th makes no sense geographically, economically, or politically, but we are stuck with these demarcations so long as the cold war stays cold. The same is true of the East-West split in Germany.

In colonial disputes we are more ambivalent. The United States continues to show a nominal sympathy for subject peoples who seek self-rule. But we no longer insist on the principle of self-determination, particularly where doing so would threaten our allies or provoke an open revolution. We dare not.

Last Tuesday the United Nations received a report from a special envoy on the Kashmir issue. His verdict: After 10 years India and Pakistan are no closer to an agreement on the disputed area, which means that a totally irrational cease-fire line will continue to divide it. More recently still a deputation representing the Council of Organization of American States has been rushed to the scene of a border dispute between Honduras and Nicaragua with the purpose, not of helping to redraw the frontier according to right and justice, but of stopping the dispute at all cost and fixing the line where it is.

The freeze is definitely on. Nothing must change. No nation, large or small, with good motive or bad, must be allowed to upset the applecart.

In a way this is not too bad. If the threat of all-out nuclear war is making the West walk on tiptoe, it is also curbing the expansionist urge of the Communists. For the time being, at least, major as well as minor aggresions are ruled out. And, as a peaceful nation with no territorial ambitions, the United States stands to gain greatly by such a moratorium.

The trouble is, however, that the world can't be made to stand still. Nations grow and diminish. People's attitudes and needs change. And sooner or later something is going to have to give. If we try to hold the line too firmly, we may merely be building up for an explosion.

We are carrying out a holding action now, because we seem to have no other choice. But somehow we must make ourselves another one, because the status quo cannot be maintained forever. We must find a way to accommodate normal growth and even conflict in our society. The present holding action is merely buying time. The real challenge of peace keeping has still to be met.

Peaceful Applications of Atomic Energy

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. WHITENER. Mr. Speaker, on Monday, May 6, 1957, our colleague, Hon. CARL T. DURHAM, chairman of the Joint Committee on Atomic Energy, delivered an address to the North Carolina Pharmaceutical Association at its annual convention in Charlotte, N. C. His address was entitled "Peaceful Applications of Atomic Energy."

We are all familiar with the valuable public service of our distinguished colleague in the field of developing an atomic-energy program. It occurs to me, therefore, that the Members of this body, as well as the public generally, will find the address of Mr. DURHAM to be of great interest and value.

The address follows:

PEACEFUL APPLICATIONS OF ATOMIC ENERGY

(Remarks by the Honorable CARL T. DURHAM, chairman, Joint Committee on Atomic Energy, before the North Carolina Pharmaceutical Association, Charlotte, N. C., May 6, 1957)

It's good to be back here again with you today. I remember my last visit with great pleasure, and I am honored that you have asked me to join you once again. As an old-time pharmacist myself I might say that I couldn't feel more at home than in the present company.

There was a time when a speaker could get up and talk for a few minutes about the peaceful applications of atomic energy and sit down again with confidence that he had said all there was to say. Today this same subject has become so vast in scope that a speaker is tempted to ask himself: "Where do I begin?"

The advances which have been made in peaceful applications of atomic energy in the last few years have been nothing short of extraordinary. I think most people who aren't familiar with the atomic-energy business would be amazed at the large number and variety of ways in which the atom is being put to use to better the lives of all of us and to promote the economic well-being of this country.

This large-scale development of the peacetime atom has not happened by accident. It has been the result of much hard work and effort by thousands of scientists, engineers, and technicians working under a program of cooperation between industry and Government. I think this cooperative arrangement between Government and industry has in general worked very well in the past, and I am confident that continued cooperation of this sort will yield increasingly large dividends in the years to come.

Among the various areas of peacetime atomic development, I suppose the greatest attention in recent years has been focused on the field of atomic power and of nuclear propulsion for naval vessels. This is only natural and appropriate in view of their importance to our future economy and our relations with other countries abroad. But while the public spotlight has been directed primarily on these areas, there has been a quiet revolution going on with regard to development of other peaceful uses of atomic energy which may in the long run prove equally important. It is to these other areas of peacetime atomic development that I would like to direct a few remarks today. I would like to mention especially the growing uses of radioisotopes, the so-called byproducts of our atomic reactors.

Isotopes have been called the wonder tool of the atomic age, and well they might be. In the past several years there has been a dramatic upsurge in the number and variety of things for which they are being used. Existing applications include everything from clinical examination to oil drilling, from agricultural experiments to spot-checking welds, and the surface has just been scratched.

The annual savings to American industry through the use of isotopes is already estimated at something like a third of a billion dollars, and increased savings are confidently predicted in future years as more and more uses are developed. It is entirely possible that over the long run these savings and benefits from the use of isotopes will more than repay the huge investment we have made in our atomic-energy program.

I thought you might be interested today in hearing about a few of the things which are being done with isotopes in the field of medicine and in the pharmaceutical field. It would be hard to describe in dollars and cents just how much benefit we are getting out of our experiments in this area. You can't very well measure in material terms the essentially priceless knowledge we are gaining on how the body functions, on earlier and better diagnosis of human ailments, and on more effective treatment of these ailments. The only certainty is that the benefits are very large in terms of relieving human suffering and of adding to the productive life of thousands of individuals. As a measure of the number of people being affected by these new techniques, it has recently been estimated by the Atomic Energy Commission that between 800,000 and 1 million persons are being diagnosed or treated with radioisotopes each year by some 1,500 hospitals and private physicians.

As pharmacists, you are, of course, particularly concerned with new procedures which are being employed in the medical and pharmaceutical fields. Many of you are probably already aware that considerable research activity is going on at the present time with drugs which have been tagged with radioactive compounds. Much of the current experimentation is of a preliminary nature and is aimed at finding out more about the distribution of the body's metabolism and its special characteristics. Of necessity, most of the experiments are being done on animals, but in some areas, at least, advances in research have made it possible to begin experiments with human volunteers. Such is the case with radioactive iodine, which is administered to thyroid patients to measure iodine uptake in the thyroid gland and to arrest excessive thyroid activity in some cases. Scientists at the Abbott Laboratory and at the Hanford atomic facility have been doing interesting research work in this area, which has resulted in a number of fundamental discoveries about thyroid metabolism. It is interesting to note in this connection that 10 years ago only one thyroid hormone was known to medical science, whereas today as a result of these experiments several additional types of hormones have been discovered.

Similar experiments are being conducted with radioactive iodine on older people whose hearts have become overburdened through overactive thyroid conditions. While study in this area is still in a preliminary phase, there is hope that through utilization of such techniques life may be prolonged for older persons who would ordinarily succumb to heart attacks occasioned by strains placed on the heart by thyroid conditions. Incidentally, such treatment is not recommended for younger persons or for young women of childbearing age in view of possible deleterious results.

Speaking about older people, interesting experiments utilizing atomic tracing techniques are being carried on with regard to the aging process or what makes people grow old. These studies are carried on in a field called geriatrics, which I find from my Webster's dictionary means old age and its diseases. It doesn't take much imagination to visualize the importance to individuals and to the Nation at large, if through these studies of the body's functions and the aging process, we can gain some clue as to how to extend the effective life of man and slow down the inevitable process of deterioration of the body which comes with old age. Of course, I always have believed in the quotation from the Bible which says "Honor thy father and thy mother that thy days may be long upon the land." But it wouldn't hurt if we knew a little more about the physical processes of the body as well.

Some firms are currently experimenting with a radioactive-labeled tranquilizer with a view to finding out more about the actions of such tranquilizers and their effect on the human system. Work is also being carried out on tagged T. B. drugs. Most of these experiments have been carried out on animals, but some experimentation is now being tried out on human beings.

At the Argonne National Laboratory outside Chicago, scientists have set up what they call an "isotope farm," which is devoted to a study of the life process of plants through means of irradiation. No attempt is being made at Argonne to develop genetic mutations in plants through successive generations. Primary emphasis is on finding how plants synthesize drugs through a study of the alkaloids which are produced as a result of plant irradiation. It is hoped that these studies may some day give us a lead on how chemical reactions in drug-producing plants come about. Once we learn this, we may be on the track of how to produce some of these drugs synthetically, which cannot be done under conventional techniques.

You are all undoubtedly familiar with the problem of sterilizing drugs for public consumption, but you may be interested to know that new techniques involving sterilization by irradiation are now being studied by several drug firms. As you know, certain drugs are most difficult to sterilize by the conventional heat process, and there is always the packaging problem to contend with. Now, using atomic accelerators, laboratories will be able to sterilize these drugs right in their containers through high-level irradiation. Although accelerators are most commonly used for this type of treatment, there is no reason why smaller, less bulky, irradiation sources developed as byproducts of our atomic reactors cannot, in some instances, be used for the same purpose.

Finally, just a word about progress which is being made on the dread disease of leukemia through utilization of atomic techniques. No one pretends that medical science has yet found the complete answer to this terrible scourge. But some success has been achieved in preliminary experiments in which patients have been given radioactive phosphorus orally. While this process has not achieved a permanent arrestation of the disease in any of the cases so far treated, it has, in some instances, resulted in temporary alleviation and the extension of the victim's life span by several years. A chief advantage of this technique is that it is much easier to administer the X-ray treatments and is a good deal cheaper as well.

It is sometimes hard to realize that just a scant few years ago only select members of the scientific community and a few outsiders were much concerned with the peacetime uses of isotopes, and then only in an abstract sort of way. Today, with the rapid advancement of atomic techniques and particularly the mass production of isotopes, people by the thousands are becoming acquainted with this area of knowledge. A typical example is our pharmaceutical laboratories where the use of isotopes is becoming almost routine and commonplace. As more private firms come into the business and as more and more uses are developed for these new techniques, we can expect to see a rapid expansion of activity. Perhaps some of you have already felt the impact of the new technology in your businesses. I think it behooves all of us to keep up with the developments in this field and to lend encouragement to an effort which holds much promise for the future of mankind.

Thank you, once again, for asking me to join you today. It has been a pleasure to be with you.

Unjust Immigration Law

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. MADDEN. Mr. Speaker, when I was home over the Easter recess, a number of persons and committees called upon me regarding the necessity of amending and repealing the inequities of the present immigration law.

The Judiciary Committee of the House is now considering this legislation and I hope we can get favorable action in a short time so that the changes in this law can become effective before adjournment in August.

The following is an article from the Gary Post-Tribune, setting out one of the thousands of inequities and hardships the present law inflicts upon so many of our citizens.

[From the Gary (Ind.) Post-Tribune of April 29, 1957]

IMMIGRATION LAW FORCES GARY DAD OVERSEAS TO SEE FAMILY—WAR VET SAYS QUOTA SETUP BAD

United States immigration laws are forcing a Gary steelworker to travel almost 5,000 miles to visit his two sons and daughter in Yugoslavia.

Alexander Elich of 933 West 11th Avenue has complained about his plight to Indiana Senators WILLIAM JENNER and HOMER E. CAPEHART.

Elich wrote both Senators that "something is radically wrong with our immigration laws when a man cannot bring his own children into this country."

SUPPORTS TWO FAMILIES

Elich, a veteran of World War II and an American citizen since 1943, told the Senators that the separation of his family has been heartbreaking and very expensive. He pointed out he has to support two families—himself and his wife here in Gary and his sons and daughter in Yugoslavia.

Elich said if his sons and daughter had been allowed to join him here in America they would now be contributing the American economy and he would not have to send money to Yugoslavia for their care.

"How can United States senators continue condoning year after year the assigning of so many thousands of quota numbers to Britain and Ireland where they are not used and are wasted while denying people like myself the chance to bring our own sons and daughters to this country?" Elich's letter asked of both senators.

Elich continued: "I implore you to correct this injustice in our laws and to throw your influence behind President Eisenhower's program for liberalization of the antiquated, discriminatory immigration laws.

HITS 1920 BASIS

"We do not drive a 1920 car. Why have immigration quotas based on the 1920 census when we have censuses from 1930, 1940, 1950 and are about ready for one in 1960?" asked Elich.

Elich told JENNER and CAPEHART that Indiana residents are "fed up" with the present immigration laws.

Elich has lived in America since 1934. When his wife joined him here in 1954, his sons were more than 21 years old and nonquota immigrants. Their age puts them in the fourth preference category. The list of sons and daughters like those of Elich's waiting to enter the country under this classification is so long that the category of the four preference is marked "unavailable."

The Yugoslav quota of 933 is halved by mortgages under the displaced persons law.

An example of the immigration quota system which distresses Elich is the fact that Great Britain (assigned 65,361 numbers) and Ireland (with its 17,756 numbers) have used only about one-third of their quotas while other countries (with small quota numbers) have long lists of persons waiting to enter the country.

Elich, preparing for his May journey to Yugoslavia, told the Indiana lawmakers, "I believe that my sons will never come to the United States unless our immigration laws are changed. The third preference is oversubscribed and persons long registered in the fourth preference are considered only after those in the third preference are taken care of."

Discontent Noted Among Czechoslovak Reds

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, datelined Prague, Czechoslovakia, which appeared in the New York Times of May 4, 1957, which discloses that there apparently is discontent among the reds in that country:

REDS OF SLOVAKIA NOTE DISCONTENT—POLISH AND HUNGARIAN RISINGS SAID TO HAVE HAD A DEEPLY UNSETTLING INFLUENCE

PRAGUE, CZECHOSLOVAKIA, April 29.—Further disclosures on hidden but evidently widespread discontent among Czechoslovak Communists have been made here.

Final resolutions of a three-day Slovak Communist Party conference concluded in Bratislava yesterday were published today. The resolutions and speeches made during the conference by party leaders made clear that the Polish and Hungarian revolts last year had had a deeply unsettling influence on Czechoslovak Communists.

Some Communists here, according to a resolution, have come to think that "democracy and the dictatorship of the proletariat are diametrically opposed." And these critics wanted more democracy.

The unrest has not been restricted to party members. The Slovak party, which is a branch of the nation-wide Czechoslovak Communist party, announced that the "greatest danger, in addition to revisionism, is the bourgeois nationalist influence of a nationalistic ideology among workers."

NATIONALISM ASSAILED

Thinly veiled warnings indicated that there had been a revival of Slovak nationalism seeking to pull away from a national union with the Czechs. During World War II the Nazi established an autonomous Slovak state under Andre Hlinka, whose followers now have been accused of seeking to infiltrate the state and economic apparatus and literature.

One clue to the possible cause of the renewed separatist feeling came in complaints about membership of the Slovak party. Its first secretary, Karel Bacilek, said "only 35.5 percent are industrial workers." Farmers apparently were even more reluctant to join since M. Bacilek said 528 village party organizations were without a single farmer member, and 674 others had only one or two farmers in them.

The remainder of the Slovak Communists were intellectuals, administrative employes and party functionaries. Since Slovakia is predominantly an agricultural region, this means that the party and bureaucracy must be nearly synonymous.

POLISH EXAMPLE EYED

In essence, the critics apparently have been making the same demands for liberalization that led to the crisis in Poland. However, this clamoring has been well concealed under an opaque cover of intraparty secrecy in Czechoslovakia so that the rest of the country has heard next to nothing about this subsurface debate.

It was announced that "measures for improvement" had been taken in the Slovak Writers Union and the outspoken Slovak literary weekly Kulturalny Zivot, both of which had been criticized for "wrong attitudes."

There was no indication that top-ranking Czech or Slovak Communists had been caught up in the spirit of turbulence. The Slovak conference confirmed all its party's politburo members in office without change. Nor were any personnel changes foreshadowed in the upper ranks of the parent Czechoslovak party.

Private Enterprise Is Invited To Offer a Slum-Clearance Plan

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. SIEMINSKI. Mr. Speaker, under leave to extend my remarks, I include an article on slum clearance that appeared in the New York Times, issue of May 8, 1957. The article invites private enterprise to offer a slum-clearance plan:

PRIVATE ENTERPRISE IS INVITED TO OFFER A SLUM-CLEARANCE PLAN

(By Albert L. Kraus)

BUFFALO, May 7.—Albert M. Cole, Federal Housing Administrator, invited private enterprise today to offer "any feasible plan" to help overcome urban blight. He said the problem was by far the most important one facing the economy in years to come.

If all the Treasury's funds were used to help solve the problem, he told the National Association of Mutual Savings Banks, there wouldn't be enough money to do the job.

Mr. Cole told the association's 37th annual convention that the Federal Government already had obligated almost $900 million for urban renewal with 433 projects either underway or in the late stages of planning. But, he said, the growth of slums is outpacing the Nation's ability to keep up with the problems.

The pertinent question, he said, is to what extent private enterprise can remake the cities it created.

THREE IMPORTANT OMISSIONS

Mr. Cole said compromise housing legislation scheduled to be debated in Congress today benefited from "three important omissions which I think good."

Omission of the use of National Service Life Insurance reserves to purchase mortgages for veterans, he said, would help preserve the integrity not only of the insurance fund but of all other Government trust funds.

Omission or the veterans mortgage program from Federal Housing Administration

procedures, he said would avoid administrative difficulties and remove from the FHA's responsibilities the difficulty of trying to administer price controls.

Omission of efforts to control price discounts on fixed-interest-rate mortgages, he said, was realistic. "So long as we have fixed-interest rates, there will always be discounts or premiums," he declared.

VIEWS DIFFER

George S. Goodyear, president of the National Association of Home Builders, and Thomas E. Lovejoy, Jr., president of the Manhattan Life Insurance Co., took opposite views of the effect of credit restraint on house building.

Mr. Goodyear accused the Federal Reserve Board of blithely pursuing a tight money policy and permitting housing starts to decline. "Our population," he said, "is growing faster than the vision of our leaders. Wedding bells are ringing louder than the carpenter's hammer."

By 1965, he forecasts, the Nation's population would hit 193 million with the worst housing shortage in all our history.

Mr. Lovejoy said that except for the years between the 1920's and now, the demand for funds to finance industrial growth had always exceeded the savings available for investment.

A BETTER JOB

"This has spoiled some of our people, including the builders, who in the last 8 to 12 months have had to learn how to operate under conditions where interest rates are higher," he said. "Many of these builders will survive, and those that do will learn how to do a better job than they did under conditions where interest rates were easier."

He forecast some easing of interest rates in the last half of 1957, with a possible lowering of mortgage rates.

Is Foreign Aid a One-Way Street?

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. FEIGHAN. Mr. Speaker, on Wednesday, May 1, the Cleveland News carried an editorial which asks the question: Is Foreign Aid a One-Way Street? That editorial points up that our foreign-aid programs are going sour with the American people because some foreign governments have come to demand that no conditions be attached to our gifts. The American people are willing to help those who try to help themselves, but they will not long tolerate demands made by ungracious and undependable beneficiaries. Under leave to extend my remarks, I include the editorial:

IS FOREIGN AID A ONE-WAY STREET?

The News carried a headline yesterday: "Jordan Wants Cash, Not Ike's Doctrine," which explained a lot.

The Associated Press story then went on to say that Jordan "indicated it will accept an offer of $10 million in United States economic aid as long as it doesn't commit the Arab nation to the Eisenhower doctrine."

Any idea that American financial assistance is actually buying friendship and loyalty is pretty well demolished by this attitude of the Jordan Government, which is quite typical of the position of most of those countries accepting our money.

It seems to us that fairness and a sense of gratitude would call for some favorable response from recipient governments. There should be an obligation to reciprocate, if only in a promise to be helpful and cooperative.

It is not enough for Jordan to say that it is against communism. In accepting a gift of $10 million, which even in these days of reckless spending is a sizable sum, the United States was entitled to expect more than a gruff demand that no conditions be attached to the gift.

It is this one-sided philosophy and lack of appreciation that is souring the American public and Congress on the foreign assistance program. The American Government has no desire or intention of interfering in the internal affairs of the governments it helps, but the extent of the aid warrants something in return. And that we are not getting.

Signs and Roadside Protection on the Interstate

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. DORN of New York. Mr. Speaker, with the widespread interest in the preservation of the beauty of the new national highways to be constructed, I believe it is timely to call the attention of my colleagues to an article published in the May 1957 issue of the American Motorist:

SIGNS AND ROADSIDE PROTECTION ON THE INTERSTATE—CONGRESS IS JUSTIFIED IN PROTECTING ITS HIGHWAY INVESTMENT, SAYS AAA PRESIDENT HARRY I. KIRK

Protection of the roadsides of the 41,000-mile National System of Interstate and Defense Highways against billboards and other types of commercial blight was provided for in several bills introduced in Congress not long ago. The new Federal Highway Administrator, Bertram D. Tallamy, was prepared to present to Congress a program outlining the views of the United States Bureau of Public Roads as to how the Federal Government can best protect the roadsides of this nationwide highway network.

The American Automobile Association, long an advocate of State and local action for roadside protection, is now urging Federal action to protect the Interstate System from billboards, uncontrolled commercial development, and unlimited access from side roads.

A statement issued by AAA President Harry I. Kirk, of Chicago, stressed that while ethetics and ability for motorists to enjoy the scenery were involved, there is an equally important dollars-and-cents consideration in protecting the huge investments being made in highway construction. He said:

PRESIDENT KIRK'S STATEMENT

"In view of the fact that highway user taxes, collected by the Federal Government, will pay for 90 percent of the cost of this interstate network, the Congress is fully justified in protecting the billions of dollars invested in these highways. Long and bitter experience has demonstrated that it is economically unsound to invest large sums in highway construction unless the roadsides are protected against blight that destroys a major part of roads capacity, safety, efficiency and enjoyment.

"Unregulated development along the roadsides, including uncontrolled erection of billboards, adversely affects the State, the community and the motorist. The highway user, whose taxes pay for the huge costs of highway modernization, has every right to demand not only safeguards for his investment in the highway itself but also adequate roadside protection."

Meanwhile, the AAA and its affiliated clubs continue to push for State and local action to preserve the roadsides on all highways, pointing out that favorable action by Congress on the interstate system would protect only 41,000 miles out of the Nation's total of 3,400,000 miles of roads and streets.

The national motoring body's booklet, Roadside Protection—A Study of the Problem and Suggested Approaches to Betterment, is a standard work in this field. In addition to stressing the need for adequate roadside protection, the AAA booklet points out the various ways by which this objective can be accomplished—wide highway rights-of-way, acquisition of special easements, highway zoning and so on.

SUPPORT BY UNITED STATES SUPREME COURT

Since the AAA booklet was published, the United States Supreme Court has upheld, in the strongest possible language, the right of Government, to make and enforce regulations in the interest of better appearance in addition to those aimed at contributing in other ways to the public welfare.

In the case of Berman v. Parker, Justice William O. Douglas, speaking for the Court, said: "The concept of the public welfare is broad and inclusive. * * * The values it represents are spiritual as well as physical, asthetic as well as monetary. It is within the power of the legislature to determine that the community should be beautiful as well as healthy, spacious as well as clean, well balanced as well as carefully patrolled."

AAA's action extending its roadside policy to the Interstate System through Federal action followed on the heels of announced intention of the Outdoor Advertising Association of America to battle against congressional action limiting billboards along these national expressways. Following is the way in which the AAA has summarized the major aspects of planned roadside development:

"The roadside is the most neglected aspect of the highway problem today. Yet it has a major bearing not only on the appearance of the route, but on the level of safety and traffic efficiency of the highway itself.

"Back in the horse-and-buggy and Stanley Steamer days, no one cared particularly if an enterprising huckster painted a farmer's barn and covered one side with a Bull Durham ad. Later—roughly in the era marked by the rise and fall of the Model T—there were loud outcries at the tendency of the sign painters to erect their boards at points of greatest scenic beauty.

"But the alarm of those who wanted to see unspoiled the Nation that the roads had opened to them was mild compared with the shock suffered by highway economists and the traffic analysts when they evaluated the cost of uncontrolled roadsides. The chaos and confusion along main-traveled ways does more than offend the eye. With roadside businesses of one sort or another crowding the highway on both sides, the outer lanes become glutted with stop-and-go traffic. What was designed as a high-speed highway becomes a low-speed congested road, with its outer lanes veritable invitations to disaster.

"But what can you do when the highway reaches such a condition? To widen it has become impossible; the cost of acquiring the property so intensely used for business has become prohibitive. So highway departments have been taking the only way out: they up and build a new, modern highway in an entirely different location. The old highway becomes a ghost road, the flourishing roadside businesses die on the vine.

Everybody loses—particularly we motorists who are paying our billions in taxes for road-building."

Advertisers don't lose out in this protection against unsightly signs and overly conspicuous and distracting billboards, motorists assert. They have the benefit of good newspapers and magazines for advertising, as well as television, radio, and the United States mail services.

No Comfort Here

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. ABBITT. Mr. Speaker, many misguided, good-intentioned people are insisting daily that the Congress enact the so-called Federal aid school construction bill. They fail to understand that there is no such thing as a Federal handout. No money comes from Washington unless and until it has first been extracted from the people back home, tolled heavily by the Federal Government and then posted back to the States and localities with stringent conditions attached. For every $100 passed down to the States, it cost the taxpayers approximately $140. This is a heavy toll to pay for Federal handouts: give up local control and initiative plus handling charges of one-third.

There is no such thing as Federal aid without Federal control. Federal aid is inevitably followed by Federal control as night follows day. There appeared in the Lynchburg News, Lynchburg, Va., of May 7, an outstanding editorial which points out the Federal control problem. It is entitled "No Comfort Here." The editorial is as follows:

NO COMFORT HERE

The Education Committee of the House of Representatives has defeated the Roosevelt amendment putting an antisegregation provision in the current big Federal school construction bill. This amendment would have denied any of the billions of Federal funds appropriated to any State of any school district in a State not conforming to some bureaucrat's idea of what constituted acceptance of the Supreme Court's antisegregation ruling.

The defeat of this first outright attempt at Federal control of public education will bring no comfort to those who have recognized from the beginning the threat of such control inherent in all Federal aid, because they know that there is no such thing as Federal aid without Federal control. They know, too, that those who attempt to persuade them otherwise are attempting to delude them or are deluding themselves, and they are not to be taken in by the fate of the Roosevelt amendment. They well understand—in fact, it is openly admitted—that the reason for its defeat is not opposition to Federal control but fear that such a naked display of the power of those who hold the purse strings would be to defeat the whole big spending project. The action of the committee was simply a parliamentary device to remove obstacles to passage and not a vote of conviction.

There is another and a far more important reason why opponents of Federal control of education are not reassured by this initial defeat of an overt attempt at its exercise. Even if the defeat in committee is followed by defeat on the floor and the bill goes through without amendment they know well that it means nothing. It means nothing because there will be nothing in the way of the introduction later of a separate bill fashioned on the lines of the Roosevelt amendment. That is will be introduced at this or at another session of the Congress no one can doubt. That it will pass there is grave danger. If defeated it will be by a filibuster. The one coming up now will be regrettable enough and defensible only on the ground of necessity.

It might be fortunate for opponents of another spending spree if some such amendment as that offered by the California ROOSEVELT were to pass. It might bring about the defeat of the whole bill, as some of its supporters fear and as it did last year. The only way to stop deficit financing is to stop big spending and the only way to avoid Federal control of education is to reject Federal bribes to the States to surrender State controls.

Hypocrisy Unlimited

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1957

Mr. FEIGHAN. Mr. Speaker, the Cleveland Plain Dealer of May 1 carried a most enlightening editorial on the latest propaganda campaign being carried on throughout the world by the international Communist conspiracy. It rightly points out that international communism has been scoring propaganda successes in vital areas that may well spell the difference between war and peace. It underscores the hypocrisy of the Russian leaders and points out that a hypocrite who believes his own lies and is able to persuade others to believe them can be dangerous.

I recommend this editorial to the reading of anyone who has been deluded into believing in that the threat of international communism to the survival of our way of life has subsided or that Russian propaganda is not an effective instrument in support of their many intrigues.

Under leave granted, I insert the editorial on hypocrisy unlimited:

HYPOCRISY UNLIMITED

In recent weeks the Kremlin has made no attempt to disguise the hypocrisy which is a major ingredient of its foreign policy. To understand how this works, it might be well to recall the dictionary definition of a hypocrite: "One who pretends to be what he is not; one who pretends to be better than he really is, or pious, virtuous, etc., without really being so."

In general, hypocrites evoke only loathing and contempt, and sometimes pity, because others see through their pretenses. But a hypocrite who believes his own lies, and its able to persuade others to believe them, can be dangerous.

So it is with international communism. Its leaders evidently believe they can fool some of the people some of the time. Thus, they are currently engaged in a vicious attack on the United States, claiming that we are responsible for bringing the threat of war to the Near East. It is only necessary to recall, however, that it was the Communists who fomented trouble in that part of the world by supplying arms to Egypt and Syria and sending infiltrators into Jordan. King Hussein himself has blamed Jordan's internal troubles on international communism and has rejected the Kremlin's claims that Jordan has "become the object of imperialist intrigues."

But still the Kremlin continues to rant and rave about American imperialists plotting aggression against Jordan.

As another example, the Kremlin is conducting a worldwide propaganda campaign to outlaw atomic weapons. Simultaneously it has been conducting a series of atomic tests in Siberia. The extent to which the Red propaganda has been successful is shown by the numerous protests in Britain and elsewhere against the projected British atomic tests in the Indian Ocean. Have the same protesters protested against the Russian atomic tests? If so, we haven't heard about it.

A recent Associated Press dispatch from London noted that Premier Bulganin's "let's be friends" note to Prime Minister Macmillan has scored "a tremendous propaganda success" in Britain. This is another example of the fact that people are inclined to believe what they want to believe. The people of Britain, as well as of the rest of the free world, want peace. So when the Kremlin says there should be no obstacle to peaceful coexistence they would like to believe that is true.

There is, however, one obstacle to peaceful coexistence, and one only, and that is the Kremlin's promotion of international communism and the intrigues that go with it. As long as this truth is recognized, the Kremlin will not be able to fool all of the people all of the time.

The United States and Its Costly Tax

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. METCALF. Mr. Speaker, in his column, Wall Street, U. S. A., Donald I. Rogers, business and financial editor of the New York Herald Tribune, discusses the unprofitable excise taxes on transportation and freight in the following words:

THE UNITED STATES AND ITS COSTLY TAX

Ever hear of a tax that actually costs the Government money—a tax which, instead of producing profitable revenue for Uncle Sam, virtually creates a loss in income? Such a tax has been in existence since 1941, has been renewed every year since, and is being pushed for renewal again.

It's the excise tax on transportation—10 percent on passenger transportation for hire and 3 percent on freight transportation for hire.

These taxes were enacted as emergency wartime levies. The need for revenue at that time was all-important; the vast increases in taxable incomes of individuals and corporations, which were to accompany the war effort and subsequent wage and price inflation, were not, at that time in sight, nor contemplated.

Besides being another graphic illustration of the fact that there's no such thing as a

temporary tax, this particular one is apparently uneconomic and unprofitable.

FIGURES BACK ARGUMENT

The public transportation carriers have worked up some figures, all but one based on actual reports, to show just how uneconomic this tax has become. They point out that:

Receipts from the excise taxes on the transportation of property (freight) last year amounted to $450 million.

Reduction in income-tax receipts from the common carriers of freight last year amounted to $202,500,000.

With only a slightly awkward method of bookkeeping, you subtract the loss in revenue from the excise tax receipts and come up with a figure of $247,500,000 for net receipts, last year. That is the "net" figure received by the Government in taxes based on the movement of freight. The net is reduced because in 1956 the carriers paid $202,500,000 less in taxes than they paid in 1955.

The Bureau of Public Roads estimates that a cost of service the total private untaxed highway transportation of freight last year came to $4,308,000,000.

The railroads estimate that, if they were not taxed, they would recapture a fifth of this $4,308,000,000—or, $861,600,000. This is the only "estimated" figure in the study and it is held by some experts to be a conservative one.

Following out the exercise, the carriers point out that on this recaptured business they would have to pay an income tax of $271,400,000—which is $24 million more than the net receipts for 1956 operations.

Thus it is concluded that by imposing the excise taxes—these temporary taxes levied to raise emergency funds—the Government is cheating itself out of at least $24 million.

There may be other industries which, being forced to levy excise taxes on their services, are actually producing less revenue for Uncle Sam than they might if freed from the tax yoke. For the sake of the exercise, then, here are the railroad's figures:

[Figures in millions]

Receipts from excise tax on transportation of freight 1956	$450.0
Reduction in income tax receipts in 1956 from 1955	202.5
Net receipts from rail freight	247.5
Total private untaxed highway transportation, at cost of service	4,308.0
Rails would recapture at least ⅕th	861.6
Increase in income tax	271.4
Net increase in Federal revenue	23.9

Mr. Speaker, Mr. ROGERS has well stated this argument for repeal of these taxes, if not outright, then in stages as proposed by the Montana congressional delegation.

Our bill would cut the discriminatory 3-percent tax on freight bills to 2 percent on July 1, 1957, to 1 percent on July 1, 1958, and repeal it altogether on July 1, 1959. The tax on shipment of coal and oil also would go on July 1, 1959.

As Mr. ROGERS points out, excise taxes on transportation and freight were imposed during World War II as temporary taxes to discourage unnecessary travel and freight shipments.

The two taxes bring in about $700 million a year; and even with a $72 billion budget, that is a lot of money. The administration is going to object to cutting a tax that brings in that amount of money in a year when the balancing of the budget may depend on about that amount of income. But the fact that we need the revenue is no reason for continuing a tax that is on its face an unjust tax. When something is bad it should go.

The impact of the freight tax is especially great on Montana, where we are suffering from high freight rates. The imposition of a tax as a percentage of an unjustly high freight bill results in what amounts to another discriminatory freight rate increase.

These taxes are injuring the economy of our Nation and are multiplying the inequities of our present system of freight and passenger rates. Both should be repealed.

United States Taxpayers Needn't Envy Relief Given British

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article:

UNITED STATES TAXPAYERS NEEDN'T ENVY RELIEF GIVEN BRITISH

(By Sylvia Porter)

"Britain is drastically overhauling her defense budget, is saving money, and is cutting taxes for everybody, particularly for the middle- and upper-income classes. * * *

"But in our country? Here, the Federal budget is bigger than ever, and here the income-tax load stays at monstrous levels. We haven't had an income-tax cut since 1954, and all we're getting now is vague promises of relief if the budget can be slashed. * * *

"We, Uncle Sam's unlucky suckers, are paying the taxes to save the world while our allies hand their people tax cuts."

TAX SHAKES

Surely, you have heard or read something along the lines of the above in the past couple of weeks. I have and since, along with millions of others, I've been having the tax shakes since April 15. I've listened to the refrain with understandable interest.

But in addition to listening, I have been searching for facts.

And, as a result of my digging I suggest it is high time some of today's loose talk about Britain's 1957–58 tax reductions be put into proper perspective.

There are lots of reasons to be glad you are a citizen of the United States and not Britain today—and not the least of the financial reasons is the comparative income-tax burden.

The tax relief Britain is handing her citizens today is really picayune, and for the average British worker it's not much more than a psychological boost.

NEW PROGRAM

Britain could cut and cut and cut income taxes, and her citizens still wouldn't be in nearly as favorable a position as you are—and that goes whether your job pays you $5,000 or $50,000.

Want the proof? Here it is from a compilation the United States Treasury worked out for me.

Under the new tax program of Britain's Chancellor of the Exchequer, Peter Thorneycroft, single persons or married couples with no dependents in the $5,000 and under bracket get no income tax cut at all.

The single person earning $3,000 will pay $657 in income taxes, $169 more than the single person in the same circumstances here.

The married couple with no dependents earning $3,000 will pay $538, or $178 more than a comparable couple here.

At the $5,000 level these same Britishers will owe $1,318 and $1,199, respectively—again hundreds of dollars more than comparable Americans.

At the $10,000 level income taxes are being reduced in Britain, but when you see what people in this bracket and above still will owe, you'll envy your British cousins no more.

A single Britisher with no dependents will owe $3,566—a full $1,130 more than his American counterpart.

A married couple with no dependents will owe $3,398—a full $1,510 more than the same couple in our land.

A married couple with two dependents will owe $3,002—a full $1,410 more than a similar family in America.

DRAMATIC GAPS

And the higher the income bracket, the more dramatic the gaps between the level of income taxes in Britain and the United States. At the $50,000 mark, for instance, the married British couple pays almost $16,000 more in income taxes than the married American couple.

Of course, we not only pay Federal income taxes but also State and local taxes of all types. British citizens, though, are hit by all sorts of extras, too. And we can't even begin to appreciate the burden of their sales taxes and credit curbs. They're rough—real, real rough.

Naturally, I want an income tax cut as soon as I can get it—and so do you. Naturally, I'll welcome even a modest reduction Jan. 1, 1958—and so will you.

But while we're working toward this, let's not weep any crocodile tears over how unlucky we are in comparison with Britain's taxpayers. The above facts may not help you recover any faster from your April 15 tax jitters, but maybe they will make you feel less sorry for yourself.

Saving the Planes' Engines

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Christian Science Monitor, Boston, Mass., on Friday, May 3, 1957, entitled "Saving the Plane's Engines":

SAVING THE PLANE'S ENGINES

Reports that President Eisenhower is prepared to do battle for his program are heartening. It will be especially helpful if he can continue to underscore the essence of the budget question: Savings can be made, but they should be made where they will not imperil the security and well-being of the United States.

The figure the President used in his talk to the National Council of the League of Women Voters is illuminating. He modernized the ship of state into the form of an airplane. Then he said the owner-passengers might decide they could get along without some furnishings, even without a navigator or an extra fuel tank.

They might go even further, thinking they could do without one of the engines—so called foreign aid. Foreign aid is like an engine, he pointed out, in that it provides a margin of safety. It lessens the danger of having to land in unfavorable terrain. Similarly foreign aid helps combat communism, reduces the chance of Americans becoming isolated in a hostile world and having to fight alone in defense of their own shores. He concluded with the eloquent plea: "So let's make all the savings we can in the carpets and the chairs and the extra personnel and all the rest of the things that we have been demanding, wherever we think it is safe and just and fair among ourselves to do it. But let's not throw away the engines of this ship of state."

Congress can very well insist that the engine of foreign aid be efficiently operated. The President conceded that mistakes had been made; the program is being conducted by human beings. Congress could well look into the fuel mixture—the proportion of economic to military aid. At present one is not adequately distinguished from the other.

Congress could reasonably ask whether the $600 million a year going to Korea is most advantageously spent. Two-thirds of it is to maintain the ROK Army which has taken the place of American troops that were withdrawn. Should that be cut? The remainder is not very effective in making South Korea a showcase of democracy in Asia. Should that be increased? Congress also could take a hard look at the $350 million allotted to Nationalist China and the sums which subsidize various undemocratic regimes.

Two decisions Congress should make. First, it should decide whether the United States should refuse to accept leadership of the free world, drop all the new obligations it has assumed, and withdraw into a fortress America position. If it can't bring itself to create such an obvious opportunity for aggressive communism, then it should try to determine what foreign aid is necessary and effective in combating communism and maintaining American security.

If this last function is to be carried out, the ship of state will require that foreign-aid engine. And let's not pretend that the way to make it efficient is to drop it or a good share of its essential parts.

South's Hall of Fame for the Living

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. THORNBERRY. Mr. Speaker, Mr. Hubert F. Lee, editor, Dixie Business, the voice of southern progress, Decatur, Ga., has called my attention to his nominations of the seven distinguished citizens of the South who have been added to the South's Hall of Fame for the Living, an honor group from which the man (or woman) of the South is elected each year.

Among those selected is a distinguished and grand citizen of Austin, Commodore E. H. Perry. Commodore Perry was nominated by the distinguished majority leader of the United States Senate, Senator LYNDON B. JOHNSON. All of us who know Commodore Perry recognize that he not only merits this recognition but it is our hope and feeling that he should be chosen as the man of the South.

For the information of the Members of the House, I submit the announcement contained in the encore edition of Dixie Business which describes the seven persons who were chosen for the South's Hall of Fame for the Living:

SOUTH'S HALL OF FAME FOR THE LIVING

The editors of Dixie Business have selected seven for the South's Hall of Fame for the Living. This honor group, limited to 200 living men and women, makes up the list from which the Man of the South is elected each year.

The seven for 1957 includes:

Harry G. Hastings, chairman, H. G. Hastings & Co., Atlanta, for half a century a leader in advocating diversification for farmers' farm income. He was a sparkplug in the Hen, Cow and Hog program of the early twenties. The South today is profiting by the work of such men as Mr. Hastings.

Thomas C. Law, Law & Co., president, board trustees Scottish Rite Hospital and past district governor of Rotary. He is Brother Scottish Rite to Masons over the Nation as he has been accorded most all honors of Scottish Rite Masonry, including 33-degree inspector general and sovereign grand inspector general of Georgia. He served as illustrious potentate of Yaarab Temple and was imperial potentate in 1941. He pioneered in the field of industrial chemistry and research.

W. R. Turner, Cordele Sash, Door & Lumber Co., Cordele, is a Silver Beaver Scouter, a founder of Chehaw Council, Boy Scouts. He has helped many youths get an education and been a wheelhorse in civic affairs. He encourages his employees to help on civic undertakings and gives them time off with pay while engaged in various projects.

Commodore E. H. Perry, Austin, Tex., was awarded the Gold Good Citizenship Medal by the Patrick Henry Chapter, Sons of the American Revolution, on February 20, 1957. This is the same medal presented to Senator Walter F. George December 17, 1956, at Albany, Ga., when Senator George was given the Man of the South for 1956 citation. Senator LYNDON B. JOHNSON nominated Commodore Perry.

Daniel J. Haughton, executive vice president of Lockheed Aircraft Corp., Los Angeles, who was for 5 years head of the Georgia Division of Lockheed at Marietta, Ga. Mr. Haughton was nominated by a Lockheed employee, W. J. Patterson, in which he wrote: "I know of no one better qualified to take the place on the Hall of Fame list of the late Glenn L. Martin than Mr. Haughton, who is a straight shooter and a real leader of men." W. J. Patterson signed my application when I petitioned to join the Masons, so his nomination would get top consideration and priority with the editors of Dixie Business.

One of the newspapers in Los Angeles asked the Associated Press for the story about Mr. Haughton being named. It moved all the way across the continent, Atlanta to New York and then westward. Mr. Haughton was born in Alabama. His nomination was seconded by such men as C. E. Woolman, pioneer aviation leader who heads Delta-Southern and is on the Hall of Fame list himself.

A. B. Simpson, vice chairman, National Bank of Commerce, Houston. Mr. Simpson was nominated in 1951 by Art Baum, and Associate Editor of the Saturday Evening Post. Mr. Simpson has been instrumental in helping build Houston into its present greatness.

William A. Smith, Houston, heads the William A. Smith Construction Co. and has built more railroad mileage than any living man. He is also chairman of the Citizens State Bank, is a big independent oil operator and rancher and has been in the forefront for everything helpful for many years.

Once named to the South's Hall of Fame for the Living, a man or woman is eligible all the years of his or her life to be elected man (or woman) of the South if they should ever get the most votes.

C. N. Martin, Sr., head of the Atlanta's Suburban Reporter and of the Martin-Johnson Printing Company, East Point, was one of the first named when the first roll was selected in 1949.

The 1957 poll to elect the 12th Man of the South is thus launched.

Foreign Aid Pays Dividends

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Concord Monitor, Concord, N. H., on Thursday, May 2, 1957, entitled "Foreign Aid Pays Dividends":

FOREIGN AID PAYS DIVIDENDS

The situation in Jordan has some lessons for those in this country who would slash foreign aid, so-called.

Foreign aid is divided between what is called military aid and what is called economic aid. Of the two the greater part is military aid.

In Jordan the British, in the past, had provided foreign aid, and particularly military foreign aid. The British had built up the tough Jordanian Bedouin Army of 18,000 soldiers.

In the crisis which has just occurred, in which the Communists tried to take over the Jordanian Government, the Jordanian king had to rely upon this army created with foreign aid to preserve his kingdom and keep Jordan from falling into the hands of the Communists, or being partitioned between its Arab and Israeli neighbors.

To help Jordan the United States proclaimed the rights of Jordan to noninterference from its neighbors, sent the Sixth Fleet to the eastern Mediterranean to emphasize the sincerity of its proclamation, and offered Jordan $10 million of economic aid, with no strings attached.

But had there been no Jordanian Army to support the King in putting down rebellion or aggression the United States would have been powerless.

The foreign-aid investment in the military in Jordan has paid handsome dividends. It has done so in other lands. In the Philippines it was the United States-aided Philippine Army which has put down the Communist Huks. It is the United States-aided Korean Army which has kept South Korea free. It is the same story in country after country.

These local armies have helped to keep the peace in many of the nations around the earth, at far less cost than had the United States or the United Nations put troops into them. Moreover, reliance upon local armies rather than upon foreign troops, our own or those of some other nation, has helped in itself to lessen international tensions.

Every nation needs an armed force of sufficient size to police its own territory and protect its borders. Such forces are potentially available if there should be a general war, just as the National Guard is in this

country. But by and of themselves they are not primarily forces of aggression, and are not so suspected to anything like the extent to which foreign troops are under such suspicions.

In Jordan the relationship of military and economic aid has also been made apparent in the recent crisis. The economic aid which we have now provided will help stabilize the nation's economy and lessen the possibility of further attempts at rebellion or aggression. It will help keep Jordan solvent, and it cannot remain solvent without such aid at this time.

Jordan lies between Syria and Egypt. They are the two most Communist-dominated nations in the Mideast. Had the Communist-Egyptian-Syrian coup in Jordan succeeded, a contiguous axis, Communist dominated, would have come into being and would have split the Arab Mideast in two.

Now there is some hope of not only keeping Jordan from Communist domination, but of lessening such domination in Syria and Egypt. The concept of nonaggression in the region has been strengthened. This having been done, there is greater hope of diplomatic negotiation of corrections to the many problems which plague the area, on the Suez, on the internationalization of the Gulf of Aqaba, on the correction of borders, on the rehabilitation of displaced persons, on sounder development of the several nations with greater trade between them and the rest of the world,. and on other matters important to the peace of the world.

A king who has kept his head upon his shoulders, with the aid of a tiny but well trained army of 18,000 made possible by foreign aid, plus a forthright position taken by the United States independent of the United Nations, or even of the Eisenhower doctrine, has confounded Moscow, Cairo, and Damascus and stopped a potential war

---

Shaping the Textile Future

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. DORN of South Carolina. Mr. Speaker, F. E. Grier, of Greenwood, S. C., is one of the greatest presidents any American manufacturers association ever had. He has done a magnificent job as president of the American Cotton Manufacturers Institute. We are all proud of his great work and doubly proud of his genuine Americanism. The following address by Mr. Grier will be of interest to every Member of the Congress:

SHAPING THE TEXTILE FUTURE

(Address by President F. E. Grier at the eighth annual meeting of American Cotton Manufacturers Institute, Palm Beach, Fla., April 4, 1957.)

Members and guests of American Cotton Manufacturers Institute, I take pleasure in welcoming you to this eighth annual meeting of the organization.

I believe it is entirely accurate to say that the 12-month period now coming to an end has been a significant year in the history of the United States textile industry and of ACMI. I am deeply grateful for the honor of having had a place at the helm during this this eventful time.

To everybody who helped achieve the accomplishments of this year, I express personal thanks. Our entire industry is indebted beyond measure to those leaders who put in long and often frustrating hours at emergency meetings in Washington; to committee chairmen and members; to the people of the ACMI staff; to our good friends in the Congress; to officials of Government; and to good friends in allied industries and associations, a number of whom I am glad to see with us today.

Without equivocation, I want to put it on the record that my work as ACMI's president during the past year has been a real eye opener to me. It corroborated what I have believed for a long time—that the investment a member makes in paying his ACMI dues is a very high yield investment indeed.

It is an inspiring experience to see this great organization at work on many fronts, giving leadership and exerting beneficial influence literally from coast to coast, in many different areas of interest and activity.

As your president, I was privileged to take part in numerous operations about which you will learn in more detail as the meeting progresses and from reading the excellent committee reports accepted by our board yesterday. Time does not allow anywhere near the kind of complete discussion of their work that they deserve, but I do wish to pay special tribute to our committees.

Made up of management people, these groups give unselfishly of their time and talents. The success of their work, carried forward from year to year and given continuity by the institute staff, adds up to real dollar savings for all textile manufacturing plants. Consider, for example, the outstanding job being done by our cotton committee in preserving orderly marketing of cotton and waging a never-ending battle to uphold the integrity of sound, official cotton standards.

The tax committee's achievements over the last few years have been substantial. Their annual tax seminars, incidentally, should be especially commended.

When you come to all the problems of international trade and the effort to cope with unfair competition from overseas, you find the foreign trade committee on the firing line. Or when legislation that may have important effects on our mills is introduced in Congress the national affairs committee arranges for presentation of testimony and in other ways insures that the textile manufacturer's position is made known.

Members of the research and technical service committee work closely with Government and private research agencies in tackling raw material and processing problems. Again, realizing the necessity of better cooperation between the industry and textile education, the education committee has embarked on a program with textile school deans aimed at helping turn out the qualified graduates whom many of our plants, laboratories, and offices need so badly these days.

Much of the effectiveness of the work of these and other committees and, in fact, much of the success of ACMI in its overall program operations, depends on how vocal our organization is—and by vocal I mean the authority and scope of our official voice. That is why the functions of our public relations committee and staff personnel are of highest importance. In this connection, I am pleased to report to our membership that in acocrdance with instructions given us a year ago, we have staffed and put into operation a broad program of public relations for our industry. In the opinion of many of us this program will become increasingly important to our industry as time goes by. Shortly following my remarks this newest activity of ACMI will be presented to you in some detail.

The audit, budget and finance, membership, and national cotton council committees concentrate on internal affairs of the institute and ACMI's relationships with other organizations. The traffic committee coordinates our relations with the traffic department activities in Atlanta which have provided the industry with cumulative annual freight savings estimated in the neighborhood of $20 million. The work of our committee on statistics, which has taken on increased significance each year, will be discussed in more detail shortly. Our representatives on the general arbitration council of the textile industry and on the board of appeals render valuable service.

Over and beyond all these varied activities which I have just barely highlighted, we see AMIC as the one instrument whereby textile manufacturers throughout the length and breadth of the land can pool their talents and consolidate their forces in order to cope with mutual problems—whatever they may be—confronting the vast majority of mills. This national organization, made up of those who spin, weave, and finish textile goods, provides not only a forum for arriving at unified points of view; it is also an agency for action.

ACMI can command almost incredible resources in energy, brainpower, and experience, as I found out for myself this past year. It also provides us with avenues for tremendously valuable liaison and collaboration with other national groups. I can tell you, likewise, that our institute has valuable international standing.

In that regard, I wish to mention the Munich Conference of the International Federation of Textile Industries which I attended last summer. It was most helpful to me to obtain the views of leaders of overseas textile industries firsthand. I strongly recommend that ACMI participate consistently in such international textile gatherings. Our industry is certainly not an island unto itself, as we all learned once again from the events of the last year. We cannot afford to navigate blind. We are open to economic storms from all parts of the globe and must, therefore, remain constantly on watch.

The past year saw two concrete and favorable developments in the realm of foreign trade: (1) Agreement on a 5-year quota arrangement controlling imports from Japan, and (2) beginning of equalization fee payments on our cotton textile exports as a partial offset for the raw cotton export sales program.

It is a great satisfaction to realize that the Japanese threat to our payrolls, sales, and investments has been substantially relieved. On the other hand, we are encouraged by our Government's recognition in its export equalization fee program, of the need for maintaining our cotton-textile exports. We should continue to play our traditional role in world textile markets. Every reasonable concept of foreign trade indicates that this should be the case. We have the world's most efficient and diversified textile production, catering to virtually every need and every taste. Furthermore, we are the world's leading producers of cotton and manmade fiber. Everything considered, it is just as natural for us to be net textile exporters as for us to be net cotton exporters.

Of course, there is much more work to be done in the foreign-trade field before United States textile exports can move into overseas markets as easily as foreign textiles come into this country. On the import side, there is no way to predict just when international economic and political interests, operating through GATT, will try to funnel huge textile imports into the United States from other overseas areas.

Beyond the cotton-textile import problem lies, also, the problem of imports of manmade fiber fabrics and apparel. So far there has been no great rise in imports of this kind, but we must be ready to move fast and vigorously to rectify any such situation that might arise. The precedent established in the cotton textile arrangement with Japan will stand us in good stead if and when we have to deal with the manmade fiber fabric import problem.

As a matter of fact, my own feeling is that perhaps the greatest significance of ACMI's foreign-trade achievements of the past year lies in how they were brought about, in the face of overwhelming odds. They climaxed many months of hard and, at times, seemingly hopeless work. They meant, first of all, getting clear understandings and solid positions within our industry; then enlisting the aid of allies in business and agriculture; then winning the support of many people in Washington who had either been uninterested in or opposed to the course we were taking. Indeed, our effort involved modifying a direction in official executive policy at the highest levels in Washington, a policy set by doctrines in force more than 20 years.

The concept of quantity limitations as a remedy for excessive textile imports has now at last been firmly established. Tariffs alone are clearly not the answer to Asiatic competition.

What we saw in the last 2 years or so was all branches and segments of our farflung industry working together as never before to solve a vital, mutual problem. We witnessed the establishment of understandings and working relationships among raw cotton, textile, and garment industries to a degree not previously considered possible. I am convinced that the experience we gained and the unity we achieved can similarly be brought to bear on other urgent problems. We now know beyond doubt that we have within the framework of our organization, through intelligent planning and effort, the means to influence the destiny of our great industry.

Now that the import problem has been alleviated, we find ourselves face to face with other basic, deepseated troubles which for years have plagued textile manufacturers: depressed prices; subnormal profits; inadequate new capital for maintaining a proper rate of machinery replacement and plant expansion, inadequate earnings for the sort of research, product development and sales promotion that we must have if our products are to attract their historic share of the consumer dollar. These are difficulties that come readily to mind. No doubt, you could add to the list without much prompting.

No doubt, also, you will agree that in the final analysis all these troubles are tied to one fundamental question, and that is: How can we, as individual companies, arrive at a more orderly, more aggressive, more intelligent system of producing, promoting and selling our products?

During the hectic years since World War II ended, the structure of our industry has changed radically. The changes have been so swift and confusing that even those who have spent a lifetime in the trade find it hard to measure their effects, or guess the future significance of these changes. I am convinced we must start now to research these trends more wisely, more scientifically, and in much more detail.

One of the noteworthy changes is the sharp decline in the industry's spindleage. For the last 30 years, spindleage has been dropping off steadily. In just the past 10 years, 2.2 million spindles were scrapped.

Of course, an increase in output per spindle has offset this loss in numbers. This is partly the result of modernized and new-type equipment. But more important has been the extension of running time. In 1956, for instance, spindles averaged 6,172 hours of running time—more than double the rate of 1926. Even a short 10 years ago spindles averaged only 4,843 hours of operation per year. In short, the industry's production has been approaching ceiling limits, since even a 6-day week with 3 full shifts can yield only 7,200 hours on a 50-week-per-year basis.

This is the kind of trend which I fear many of us are overlooking as a guidepost. It seems to me that too many people in the trade are haunted by the tragic upheavals of the twenties and thirties. Many of us seem inclined today, in efforts to solve current problems, to apply methods and practices which may have been valid enough in the thirties, but are not geared to present conditions. My feeling is that manufacturing and merchandising policies ought to be based on the fact that potential overproduction is vanishing. There is no good reason why markets and profits should not reflect this better balance between the forces of supply and demand.

My definite impression is that the pipelines between the grey mills and retail outlets are rapidly emptying. The short-range prospects for market improvement are favorable. For the longer outlook, there is also reason for optimism. The decline in productive capacity that I spoke of has been a sound adjustment. Also, it is a favorable fact that population in the United States continues to grow very rapidly, as does consumer income.

In the years just ahead there is no reason why textile profits should not be at least comparable to the average rate earned in other American manufacturing industries. A healthy industry in a free society must be a profitable industry. Indeed, if we are to continue supplying the expanding textile needs of the American consumer, if we are to provide a dynamic market for American cotton, if we are to be equipped and ready to turn out the production that a military crisis would entail, it is essential that we become a reasonably profitable industry. That is the only way in which we can safeguard the futures of our employees and contribute substantially to the progress of the communities in which they live.

We face, for the first time during peace in a generation, the opportunity to create a profitable textile industry in the United States. This could be our best chance in many years to climb to the level of reasonable earnings and stability where practically all other major industries of the American economy have been established for many years now.

This is the time—today, this very hour—to think soberly of what we as individual businessmen can do to gain that level. I am sure that we must put into positive use, for the common good, much more market research, economic analysis, and statistical forecasting. Our progress along these lines, as a total industry group, strikes me as all too slow and haphazard up to now, certainly not in line with other major industries.

True enough, certain companies are moving far out in front with new ideas about packaging and advertising and retailing their products so as to capitalize on sales outlets which were never dreamed of a few years ago. They are the exceptions to the rule, however. The big need, as I see it, is for the industry as a whole to gear its developmental laboratories and production operations much more precisely to market trends.

No longer can we afford to expand facilities faster than market conditions justify. The time is long gone when we dared just grind out goods, store them in warehouses and then, later on, do our market planning on the basis of rumor, hunch, and financial pressures. If it's dangerous to blind ourselves to what's going on overseas, there is much greater danger in bulldozing along blindly here at home.

To earn money consistently this industry must be market conscious as well as production conscious. In that development—and it is on its way—I am convinced our industrywide organization can play a more significant role.

The urgent necessity of events has forced us to spend practically all of my year in office fighting a desperate defensive action against Japanese imports. We did succeed at last in stabilizing that situation. But when ACMI's history is written, I covet for my administration most of all a note of constructive advance. To that end I want to tell you briefly what I recommended to the ACMI board of directors yesterday afternoon and something of my thinking in connection with that recommendation. I proposed:

1. The creation of an economic research division, within ACMI, to be given full-time responsibility for the development and advancement of a much broader program of economic and statistical service to our industry than we have known heretofore.

2. The establishment of a new, high-level committee, composed of some of our industry's top leaders and thinkers, to be known as the economic policy committee. The purpose of this committee will be to give to the new economic research division of ACMI, and to the rest of the staff, careful guidance and direction regarding the types of information needed by the industry, procedures for getting the facts and, most important, methods of disseminating the information to the industry and to the public in a forceful, meaningful way.

While some expansion of professional staff, as well as some staff reorganization, is involved in this recommendation, it is not indicated nor proposed that dues be increased. Our existing financial structure will be adequate for the time being.

The purpose of this expansion may be stated briefly as follows: To help individual members of our industry increase profits through more intelligent and intensive use of industry statistics and economic analyses along the lines already successfully employed by other major industries.

We are fortunate in being able to build this new program on the foundation of the long-established, highly useful ACMI statistical service program, inherited from our predecessor organizations, and developed and expanded through the years by William Shymanski, under the guidance of our committee on statistics. According to our thinking this statistical program would be given added significance as it becomes geared to a broader concept.

Both as individual textile management and as an industry we have lagged far behind other important industries in getting, analyzing and using pertinent facts about our own products and our markets. Certainly we are terribly behind in our ability to analyze economic facts and trends, and apply our findings as a factor in making individual judgments.

Obviously we cannot expect any miracles from this or any other program that ACMI might conceive in this field, because in the final analysis each of us as individual managements will make the decisions that add up to our successes or failures. But it is my firm conviction that such a program—carefully planned, carefully and painstakingly executed and then presented to our industry in the most meaningful manner possible—will provide each of us with a new set of tools for use in the more intelligent planning of our operations.

The moment is most opportune for such a program. The trends of spindleage and population have already been mentioned in this regard.

It is our objective to coordinate closely with our counterparts engaged in the manufacture of products from man-made fiber. Thus we should have the advantage of a more complete picture.

It is foolish for us to accept the notion that the textile industry is doomed to a below-average earnings status; that we cannot offer to our employees and stockholders a future comparable to that offered by other major industries; that we cannot share proportionately in our Nation's expansion. We can do something about it ourselves.

Let us go forward with confidence and imagination, with determination and unity of spirit.

Statement of Hon. Robert C. Byrd Before Senate Committee on Banking and Currency

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1957

Mr. BYRD. Mr. Speaker, I wish to call to the attention of our colleagues the following statement which I presented on April 12, 1957, to the Subcommittee on Production and Stabilization of the Senate Committee on Banking and Currency during the recent hearings on area assistance and redevelopment:

STATEMENT OF HON. ROBERT C. BYRD, PRESENTED TO THE SUBCOMMITTEE ON PRODUCTION AND STABILIZATION OF THE SENATE COMMITTEE ON BANKING AND CURRENCY

Mr. Chairman and honorable members of the Subcommittee on Production and Stabilization, I appreciate and am grateful for the opportunity to appear before this subcommittee to present testimony in support of the bill, S. 964, which has been introduced by the distinguished Senator from Illinois, for the purpose of establishing an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas. Specifically, the areas to be benefited are those urban and rural areas that have been experiencing continuing low income, and continuing unemployment and underemployment—areas in which local initiative and enterprise cannot be drawn upon to alleviate the economic distress.

As the Representative to Congress from West Virginia's Sixth District, I can vouch for the urgency and justification of the program of assistance proposed under the Douglas bill. In my opinion, the measures proposed in this bill will displace the despair, the want, and the suffering overtaking the many unemployed areas in my State.

The bill, in brief, would accomplish the following:

1. Creation of an area redevelopment administration, under the supervision of an administrator, appointed by the President and confirmed by the Senate. Authorization to administrator for establishment of local and regional committees.

2. Assistance to industrial areas which have had unemployment of not less than (1) 12 percent of labor force for preceding 1-year period, (2) 8 percent for 15 months in preceding 18-month period, or (3) 6 percent for 8 months in each of preceding 2 years.

3. Assistance to rural areas having largest number and percentage of low-income families and a condition of substantial and persistent unemployment or underemployment.

4. Loans: Administrator to make loans for financing (a) purchase or development of land for industrial usage; (b) construction or rehabilitation of plants or facilities; (c) purchase of machinery or equipment. Loans shall bear interest at 0.5 percent per annum, shall not exceed 75 percent of total project cost, or extend beyond 40 years. Authorization of $100 million for industrial redevelopment loans and $100 million for projects in rural redevelopment areas.

5. Public facility loans and grants:

(a) Authorization of $75 million to administrator for public facility loans. Such loans shall not exceed 75 percent of aggregate cost with interest equal to rate paid by administrator on funds obtained from the Secretary of Treasury, plus 0.5 percent per annum.

(b) Authorization of $50 million to administrator for making grants for public facilities if funds not otherwise available.

6. Authorization of $4.5 million to administrator for technical assistance to redevelopment areas.

7. Declaration of policy to be followed by governmental agencies to award procurement contracts to redevelopment areas.

8. Housing and Home Finance Agency authorized to use slum clearance and urban renewal projects in redevelopment areas for industrial and commercial rebuilding without regard to existing residential requirements for such projects.

The necessity and need for legislation to carry out the program outlined above has been succinctly stated by the Senate Committee on Labor and Public Welfare in reporting out similar legislation during the 84th Congress. That committee, in its report on July 12, 1956, stated (S. Rept. No. 2555, p. 2):

"More than 10 years ago Congress recognized the continuing responsibility of the Federal Government to utilize its resources in order to establish conditions which would assure that maximum employment, production, and purchasing power would prevail throughout the United States. It did so through the enactment of the Employment Act of 1946 (Public Law 304, 79th Cong.).

"Nevertheless, a large number of communities within the United States has failed to share in the prosperity that has generally prevailed throughout the country during recent years. Regardless of the cause, the fact is that many labor market areas have been classified as suffering from substantial labor surpluses continuously since 1951, when the Labor Department stated its current labor market classification system. During most of this time the rest of the Nation enjoyed economic growth, prosperity, and stability."

The findings made by the committee are reflected in many areas within my State of West Virginia. Because today our Nation as a whole is experiencing full employment and economic prosperity, we are prone to disregard or to be indifferent to the fact that some areas of our country have been facing the problem of continuous unemployment because of the loss or decline of a major industry. While the term, "depressed local labor market," is comparatively new, the existence of such markets, however, has been a problem recurring many times in our American economy. For example, the ghost towns arising from abandoned mines are a well-known part of the history of our West. The plain and simple difference, however, is that today there are so many factors that go to make up the economic climate of each and every labor-market area. The local methods resorted to in the past cannot always be employed today to resuscitate an economically distressed area.

Since the early days of World War II, the Department of Labor's Bureau of Employment Security has been studying labor-surplus areas. As you know, the Bureau surveys at bimonthly intervals 149 mapor labor-market areas—each consisting of a central city or cities and the surrounding territory within a reasonable commuting distance. The area takes its name from the central city or cities, but may have many other communities within its boundaries. Each major labor-market area has at least a central city with a population of 50,000 or more. These 149 areas account for about 33 million nonagricultural wage and salaried workers—nearly 70 percent of the Nation's total. The Bureau also reports on smaller areas in a special listing. These are the areas with a labor force of not less than 15,000, of which the nonagricultural employment must be at least 8,000.

Since May 1955 the 149 major areas surveyed by the Bureau have been grouped into 6 major labor-supply categories, according to the relative adequacy of labor supply. Nineteen of the major labor-market areas are today confronted with labor surpluses, and 57 smaller areas at the beginning of the year were classified as having a relatively substantial labor surplus.

In my State of West Virginia, our capital, Charleston, is classified as a major area of substantial labor surplus, and classified as smaller areas are Beckley, Fairmont, Logan, Point Pleasant-Gallipolis, Ronceverte-White Sulphur Springs, and Welch. The population of West Virginia in these labor-surplus areas numbers 787,400—or 39 percent of the entire population of the State. The 1 major and 6 smaller labor-surplus areas in the State cover 15 of its 55 counties. All these areas have been continuously included in the Department of Labor's labor-surplus classification since March 1954 and some, since March 1952. Over and above these specified areas, there are many other areas of labor surplus in West Virginia. The labor force in these areas does not come within the classification set by the Department and, therefore, such areas are not surveyed by the Bureau of Employment Security. The reason for the labor surplus in West Virginia can be traced to the long-depressed coal-mining industry.

The facts responsible for the decline of the coal industry are well known, and since World War II various congressional bodies have made studies of the condition of the industry. The findings and reports of these studies have only confirmed the known existence of the factors responsible for the industry's decline. The important factors, for example, have been the dieselization by the railroads, the imports of huge quantities of residual oil, and mechanization in the coal industry itself. The following tabulation shows production and employment in West Virginia's bituminous coal industry since 1947, the peak year in coal production:

Year	Short tons	Average number of men working daily
		Thous.
1948	168,862	131.7
1949	122,610	120.0
1950	144,116	117.5
1951	163,310	118.9
1952	141,713	108.9
1953	134,105	92.1
1954	116,251	71.3
1955	139,168	70.4
1956	155,507	75.8

Although the figures on employment in West Virginia's coal mining areas show an increase for 1956, the employment picture is not bright. The seriousness of West Virginia's employment problem is emphasized by the fact that from 1950 to 1954 while the population of the United States increased by an estimated 6.3 percent the population of West Virginia declined by an estimated 2.9 percent.

As of June 30, 1956, the total number of persons in West Virginia receiving commodities on welfare, as certified by the State department of public assistance, was 250,136, exclusive of school lunches, institutions, and summer camps. In January of this year the number of persons eligible for such commodities was 209,556. In February the number increased to 214,526. In other words, almost 11 percent of the population of my State is keeping body and soul together by means of Government surplus food.

In my opinion, these facts are convincing proof that the methods and practices employed thus far have failed to alter the continuing economic distress prevalent in the areas that will be reached if the legislation here under consideration is enacted.

I am not unmindful of the objections to this proposed legislation—a principal one being that the measure characterizes an act

of the welfare state. Such objections are without merit. Do we not have many Federal domestic programs with economic or social objectives, for which we make provision each year in our appropriations? Permit me to name a few: the price-support program; the agricultural-conservation program under which farmers are paid for compliance with specified practices; the Sugar Act program—most of the cost of which consists in payments to cane and beet producers who meet specified conditions; the rural-electrification program; farm ownership loans. There are aids to business, such as assistance to air navigation, grants-in-aid for airports, airmail subsidy payments, the President's fund under the Defense Production Act of 1950 for loans and other costs in financing an expansion of productive capacity for strategic metals. There are aids to veterans in the form of compensation and pensions, education and training, and hospital and medical care. There are loans and grants for housing construction and for slum clearance and urban renewal projects. There are grants to the States for public assistance and administrative costs; for maternal and child welfare; for programs of public health service; for highways; for school-lunch programs.

The direct beneficiaries under many of the above economic and social programs are limited in number and small in comparison to our entire population. This fact has not served to lessen or obscure the responsibility of the Federal Government to provide these necessary forms of assistance. The legislation here under consideration is no less important than any of the above programs.

In my opinion, the problem is one of such importance as to warrant the establishment of a single agency to coordinate all the Federal aids that may be called upon to assist and support local efforts. A single agency will encourage, strengthen, and assist local efforts. The needs of the distressed area can be better evaluated through a single agency, with the result that the necessary assistance will be coordinated so as to effectuate the greater national interest, in keeping with the Employment Act of 1946, which states: "It is the continuing policy and responsibility of the Federal Government to coordinate and utilize all of its plans, functions, and resources for the purpose of creating and maintaining maximum employment."

It appears to me that the comprehensive program envisaged under the Douglas bill will do much to stimulate local efforts.

I particularly give my endorsement to the provisions for assistance to rural redevelopment areas. So far as farming in West Virginia is concerned, for the most part the farms are too small to provide a satisfactory family income. Insufficient capital and the topography of the State make impractical the use of many labor-saving devices, and many farm families are necessarily dependent upon some off-farm employment. I receive many letters from constituents in rural areas who are not able to take advantage of the existing farm-loan programs because their farms are not large enough or are not sufficiently productive to provide the necessary security for such loans. The Douglas bill will overcome many problems in these areas, and it will permit the needed economic improvements so long necessary in the many small rural communities of my State.

I might also direct your attention to the disheartening experiences of other persons who have written to me concerning their applications for small-business loans to undertake new business ventures aimed at improving the local economic situation. Their requests have been turned down simply because an unemployed mining town is not the kind of security upon which money is loaned.

I am in favor of the proposed provision urging Federal procurement agencies to award contracts in redevelopment areas. The Senate Committee on Education and Public Welfare called attention in its report of July 12, 1956, to the effectiveness of the ODM manpower policy No. 4, which was announced in 1952 for the purpose of focusing attention on the desirability of awarding contracts in surplus-labor areas. The report points out that for the first 9 months of the fiscal year 1956 the total volume of supply procurement contracts placed in areas with surplus manpower totaled $2,700,000—not even 1 percent of the total volume of supply procurement contracts.

The facts set out above are some of the reasons why I feel that the Douglas bill or similar legislation must be enacted now if we are to meet the problem of labor-surplus areas. I sincerely hope that this subcommittee will consider the matter favorably.

The Economic Plight of Our Farm People

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. WEAVER. Mr. Speaker, I take this opportunity to again call to the attention of the membership of the House, the serious economic plight in which our farm people find themselves today. This is true not only in Nebraska, where our basic industry is agriculture, but it is also true in every other farm State of the Nation.

Benson's decision to lower the support prices for wheat is in line with his theory that lower support prices on all crops will gradually decrease production and eliminate surpluses. This premise is absolutely false and contrary to the laws of human nature. With certain fixed expenses to the farmer that are high, along with continually increased costs of the many services he must buy for himself and his family, the burden rests squarely on the shoulders of the farmer to meet this situation. Lower prices and increased costs will not reduce surpluses. Quantity will be the objective, instead of quality, and the net result—a further deflation of our entire farm industry.

For your information, legislative resolution 22, which was passed by the Legislature of Nebraska on May 2, 1957, by a vote of 31 to 1, is quoted below. The sentiments expressed by this resolution properly reflect the sentiments of the majority of citizens of the first congressional district and of my State:

Legislative Resolution 22

Whereas farm operating costs have risen continuously for several years, resulting in the placing of farmers, including wheat growers, in a serious financial position; and

Whereas the proposed reduction in the wheat price support level will have serious and disastrous impact not only upon farmers but also upon urban people and all who serve the farmers as merchants in every town and village in Nebraska; and

Whereas the loss of farm income is already being felt in most trade areas in this State; and

Whereas the cost of living has continued to rise despite repeated lowering of support prices of agricultural products, indicating that lower support prices will not produce a lower cost of living; and

Whereas Nebraska wheat growers have had to reduce their wheat acreage by one-fourth since wheat acreage allotments became effective with the 1954 crop and have been in effect each year thereafter; and

Whereas the average price received by Nebraska farmers for a bushel of wheat has declined by 23 cents per bushel, or about 10 percent, from 1947 to 1956; and

Whereas the Secretary of Agriculture has announced a further reduction of 22 cents per bushel in the minimum national average support rate for 1958 crop wheat at $1.78 per bushel, compared to $2 per bushel for 1957 crop wheat; and

Whereas this reduction in the 1958 price support rate on wheat combined with the reduced wheat acreage allotments will result in a very serious reduction in Nebraska farm income at a time when the costs of producing wheat have been gradually increasing, thereby unduly penalizing Nebraska farmers; and

Whereas the theory of the Secretary of Agriculture that reduced price support levels will discourage agricultural production is false, the actual effect being to increase production; and

Whereas Nebraska hard red winter wheat has earned an enviable reputation throughout grain and milling industry circles in the United States and has been in exceptional demand for blending with other wheats in the production of flour for bread; and

Whereas history shows many farmers of Nebraska normally plant more wheat in periods of dry years and since there is no surplus of the high-quality milling wheat produced in Nebraska: Now, therefore, be it

Resolved by the members of the Nebraska Legislature in 68th Session assembled:

1. That the Nebraska Legislature go on record in protest of the reduction of 22 cents per bushel on the 1958 wheat support rate.

2. That the Secretary of Agriculture be requested to consider these factors in setting the State wheat acreage allotments for Nebraska in 1958.

3. That a copy of this resolution be transmitted by the Clerk of the Legislature to the Secretary of Agriculture and to each Member from Nebraska in the Congress of the United States.

DWIGHT W. BURNEY,
President of the Legislature.

I, Hugo F. Srb, hereby certify that the above is a true and correct copy of Legislative Resolution No. 22, which was passed by the Legislature of Nebraska in 68th regular session on the 2d day of May 1957.

HUGO F. SRB,
Clerk of the Legislature.

The Soil Bank Grab

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. ANDERSON of Montana. Mr. Speaker, the Montana congressional delegation is introducing legislation to put a $10,000 annual limit on soil bank payments to individuals. The maximum payable to any producer in 1 year for participation in the acreage-reserve program would be $5,000, with a like limitation for participation in the conservation-reserve program.

BASIC FAULT REVEALED

I should like at this point to print the editorial appearing in the Western Farm Life, issue of April 15, 1957, which reveals how nonresident firms can under present regulations gain huge benefits from landholdings in connection with the program. The editorial follows:

A recent Washington, D. C., announcement reveals a Kansas enterprise received a check for $61,000 for placing 10,000 acres of Colorado wheatland in the soil bank. This was the largest payment made under the soil bank in 1956.

This transaction represents the basic fault of the Government program. We would like to see some Washington official try to explain how this $61,000 payment is aiding the so-called "family-sized farm" we heard so much about during election campaigns. The fact that the money was paid to a Kansas enterprise for Colorado wheatland is proof that the money did not go to a farm family in need; a family unable to make a living from the soil they till.

It is one thing to be taxed to give agricultural charity in the form of soil bank payments to a man who could not make enough money to feed his family. It is something quite different to give $61,000 worth of charity to someone who isn't even living on the land.

We wonder just how long our city cousins will hold still for this sort of thing; how long will it be before the city clerk or office worker making $4,000–$5,000 per year demands that his legislator stop voting for taxes which gave a poor wheat farmer $61,000.

Isn't it time for a limit on payments? Wouldn't this $61,000 have done a lot more good for agriculture in Colorado if 12 farmers had got $5,000 each instead of one farmer getting $61,000? Why should any farmer or anyone else be guaranteed more than the average family income, which is about $5,000? Some may even question the latter figure.

Payments to people who actually lived in Colorado ranged from a low of $20 to a high of $13,068 in 1956. The average payment was $669. The average number of acres placed in the reserve in Colorado was 140 acres.

It's time farmers and ranchers demand some system for placing a ceiling on farm payments. If farmers, ranchers and their organizations don't do it themselves, their city cousins are going to wake up one of these days and do it for them. Whom do you think will give agriculture a better deal?

A Legacy From McCarthy

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. DORN of South Carolina. Mr. Speaker, the following article by David Lawrence is worthy of the attention of all Americans:

A LEGACY FROM MCCARTHY—SENATOR LEFT CONTROVERSIAL ISSUES IT MAY REQUIRE YEARS TO RESOLVE

(By David Lawrence)

Senator Joseph R. McCarthy is gone—but he has left behind a legacy of controversial issues that it may take years to resolve.

The Wisconsin Senator was a relentless fighter for what he believed to be right. He might have won the censure battle in the Senate in 1954 if, while under severe strain during the proceedings, he had not tactlessly antagonized many Senators who were disposed to be objective about the issue.

For the Senate was dealing with a delicate question—the right of free speech in Congress uninhibited by threats of punishment. Never in the history of the Senate had any Member been censured for expressing his opinions, no matter how distasteful or unpopular they were. The Senate finally abandoned the word "censure" with its historical connotation of punishment and substituted the milder word "condemn." Even so, the Senate resolution set a bad precedent of interference with free speech. For to condemn a man because of the opinions he expresses is what has been called "McCarthyism at its worst."

If ever a man was hounded to death because of his beliefs, it was Senator McCarthy. His health was impaired by the strain and tension arising out of the tactics and methods of his enemies. They ganged up on him from the days when they saw he was making headway with his crusade against communism in Government. The Communist newspaper, the Daily Worker, in New York was the first to give persistent publicity to the word "McCarthyism."

There was no limit to the innuendoes, baseless charges, and whispering campaigns directed against Senator McCarthy in an effort to discredit him. For it was assumed by many of his opponents that, if McCarthy, the man, were discredited, the whole drive against Communists in the Government would collapse.

Some strange chapters remain yet to be fully explained. One is the vicious spread of rumors that Senator McCarthy had cheated on his Federal income tax returns, though it turned out in the end that the Treasury Department owed him money and sent him a refund check for overpayment of his taxes. Yet, before the Internal Revenue Bureau could complete its investigation, the campaign to maneuver McCarthy into a public hearing in which his enemies would have a chance to impugn his honesty was participated in by a Senate subcommittee consisting mostly of his opponents. Although McCarthy was reelected Senator by the people of Wisconsin in November 1952, after his refusal to testify before that same committee, his opponents in 1954 nevertheless used that refusal—which had occurred in a previous teerm of office—as a basis for the start of censure proceedings.

Another episode, still unexplained, is the case of Paul H. Hughes, who posed as a member of McCarthy's staff and, over a period of several months, collected big sums of money from various sources high up among the so-called "liberals" with the promise of "revelations" derogatory to McCarthy personally. At any moment during that long period, the fact that Hughes was not an employee of any congressional committee could have been established through the careful inquiries of an alert newspaper man. But the record in the perjury case that followed in the courts reveals a paradoxical example of McCarthyism in reverse. So is the current persecution of Scott McLeod, once a close friend of McCarthy and a stalwart fighter against communism in the Government, who has been nominated by President Eisenhower to be Ambassador to Ireland. Vice President NIXON has also been a victim of the same kind of tactics by the so-called liberals, who in 1952 spread false accusations about him.

Senator McCarthy made many errors in judgment, sometimes lost his temper, and at times ignored the counsel of his best friends. He didn't, however, mind fair criticism. This correspondent in his dispatches at the time expressed strong disapproval of the Wisconsin Senator's attacks on General Marshall and of the ill-mannered treatment given General Zwicker at a committee hearing, and denounced McCarthy's break with President Eisenhower as a grave blunder. Looking back at all aspects of the tragic controversy, however, this writer remains convinced that it was most important to the cause of true liberalism in America to defend the right of a Senator to express himself freely rather than to see him deprived of that privilege by the coercive action of those who disagreed with his views. Principle is too often disregarded under the stress of emotion, inside as well as outside of legislative bodies.

Senator McCarthy's great contribution, of course, was to dramatize the necessity for a vigorous battle against Communist infiltration. The record shows a sad neglect by the State Department in the 1940's of the intrigue carried on there. This was repeatedly called to the Department's attention in confidential communications from Senate committees and in FBI reports long before the Wisconsin Senator in 1950 brought the fight out into the open.

Incidentally, even after death, they still vilify McCarthy in Great Britain. Yet, had there been in the British Parliament only a fraction of the alertness which was generated by the Wisconsin Senator's crusade here, the treason of Burgess and MacLean and the transmission of atomic secrets to the Soviets by Klaus Fuchs—who had been "cleared" for work in an American laboratory by British officials—might never have occurred. Indeed, the whole history of the "cold war," with its costly budgets, might then have been different.

Time, of course, changes many things. It sometimes makes martyrs out of men who were pilloried during their lifetime. The elder Robert La Follette, Senator from Wisconsin, also refused to testify before a Senate committee. He was being investigated because of public speeches—regarded by many people as traitorous—which he made while America was engaged in World War I. The two houses of the Wisconsin legislature—controlled by his own party—formally called on the United States Senate to expel him. But the Senate took no action. Only last week, the elder La Follette was selected by a Senate committee to be 1 of the 5 in the Senate's "Hall of Fame." The lapse of time seems to furnish a different perspective on the record of Wisconsin Senators and maybe, many years hence, history will repeat itself.

Radio Moscow's "tribute" to Senator McCarthy is to denounce him as responsible for "the preparation of new military ventures by the United States." To have helped alert America to the menace of communism is to have earned Moscow's hatred—which is the most eloquent epitaph that could be written for Joe McCarthy.

USIA on the Spot

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting editorial published in the New York World-Telegram and Sun of Tuesday, May 7, 1957. From all the circumstances heretofore developed in the House of Representatives with regard to the United States Information Agency this seems like an

editorial which should be brought to the attention of Mr. Arthur Larson, the Administrator of that Agency. Those of us who want an efficient, sensible USIA have been alarmed at the inadequacy and the unrealistic expensive programs of that Agency.

The editorial follows:

USIA ON THE SPOT

Congress has put the United States Information Agency on the spot. That is where it belongs.

Nobody familiar with the foreign situation doubts the need for our Government to tell the facts about American life and American policy to peoples abroad. That would be true in any case. It is far more essential now, because the Kremlin and its agents everywhere are doing so much to poison the minds of the world against us.

Just why the United States—which has poured out $62 billion in foreign aid since the war—has been unable to get a sympathetic hearing is not altogether clear. After all, our deeds are supposed to have been the best propaganda. And when it comes to words, we are supposed to be the world's best experts in advertising.

Whatever the other reasons, one at least is obvious to those who have studied the operations of USIA abroad. It has been trying to buy quick results with large budgets, many employees, and multiple grandiose programs, but with no clear target and no adequate check.

Most of the testimony of administration officials has been beside the point. It has been a repetition that the job needs to be done, rather than an objective appraisal of how the job is being done. There is the same old illusion that more men and more money is the answer.

We are convinced of the opposite. Smaller staffs, concentrating on fewer projects, operating somewhat like the much smaller but more successful British Information Service, should produce better results.

We agree with Senator MIKE MANSFIELD, of Montana, a recognized expert in foreign relations and one who recognizes fully the need for telling the American story abroad. He proposes that USIA be made an integral part of the State Department under an Assistant Secretary. He suggests that, in preparation for this transfer, USIA spending plans be cut below the $105 million agreed upon by the House, which is 25 percent under the administration's request.

We want the USIA saved. Unless it can be reformed soon, Congress under taxpayer pressure is likely to wipe it out altogether in 2 or 3 years.

Meritorious Civilian Service Award to Edward J. Long

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. BOSCH. Mr. Speaker, it has been my privilege as well as that of many of my colleagues, particularly from the New York City area, to meet with representatives of the employees of the New York Naval Shipyard. One of the most active of the committee who has presented the problems of the employees to us is Edward J. Long. He has performed outstanding service on behalf of his coworkers and the Department of the Navy and has received the Meritorious Civilian Service Award from the United States Navy in appreciation of his services.

Under leave to extend my remarks, I am pleased to include the text of the award presented to Mr. Edward J. Long:

NEW YORK NAVAL SHIPYARD,
February 18, 1957.

From: Commander, New York Naval Shipyard.
To: Edward J. Long, leadingman electronics mechanic, check No. 67-4002.
Subject: Meritorious civilian service award.
Enclosed: (1) Meritorious civilian service certificate; (2) meritorious civilian service lapel emblem.

1. The incentive awards committee has recommended that you be given special recognition for the exemplary manner in which you supervised the cryptographic repair and supply facility of the New York Naval Shipyard.

2. This assignment, which is a top secret function of the Navy Department, encompassed a responsibility of tremendous magnitude with which you were concerned for approximately the past 4 years. You have consistently been the guiding and directing force behind the efficient and economical supply, maintenance, repair and installation of cryptographic equipment on numerous vessels of the Atlantic Fleet and Shore Commands within the Third Naval District. You have greatly contributed toward enabling the cryptographic repair and supply facility to meet immediate and urgent commitments with an absolute minimum of military or civilian supervision. Because of your superior knowledge, perpetual drive and ingenuity, you have been able to successfully carry out various modifications on cryptographic equipment as requested by the Bureau of Ships in a minimum of time and at reasonable cost despite a shortage of manpower.

3. Your performance in this project of significant importance has produced extraordinary results of great value to the Navy Department and the shipyard and are deserving of special recognition. I therefore take great pleasure in presenting you with the second highest honorary award bestowed by the Navy, the meritorious civilian service award.

4. A copy of this letter will be filed in your official personnel folder.

L. A. KNISKERN,
Rear Admiral United States Navy,
Commander, New York Naval Shipyard.

Max Abelman, Brooklyn's Ambassador of Good Will

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. MULTER. Mr. Speaker, it is with pleasure that I commend to the attention of our colleagues the following article, written by Madeleine H. Loeb, about one of Brooklyn's ablest citizens, Max Abelman:

MAX ABELMAN, BROOKLYN'S AMBASSADOR OF GOOD WILL, STARTS 70TH YEAR BY PARTICIPATING IN DIAL-A-THON FOR FEDERATION OF JEWISH PHILANTHROPIES ANNUAL APPEAL

(By Madeleine H. Loeb)

Max Abelman, officially designated as Brooklyn's ambassador of good will, just celebrated his threescore and 10 years with a capital F—for Flatbush, fund-raising and the Federation of Jewish Philanthropies. Turned 70 on January 26, 1957, he was on hand the following week to participate in the final Dial-a-Thon telephone marathon to help raise $18,100,000 for federation's annual appeal to help maintain its 116 member agencies in Greater New York, Westchester, and Nassau Counties.

Commuting from Brooklyn to federation headquarters, 130 East 59th Street, Manhattan, where he manned one of the 40 telephones installed to call in pledges and contributions, Max Abelman truly lived up to his surname, and proved himself to be an able man as one of the most persuasive fund-raisers in federation history and someone who played an active role in its development.

The federation campaign goal did not perturb Mr. Abelman, who has devoted 50 years to fund-raising for good causes in general, and federation's institutions in particular. Twenty years ago, when the Jewish Federation of Brooklyn Charities merged with the New York Federation, thus bringing the number of institutions in the federation family to its current 116, Mr. Abelman had already established himself in the Brooklyn picture, both as an administrator and fund-raiser, and was called in by the late Felix M. Warburg, who was first president of the newly formed Federation of Jewish Philanthropies of New York, to help in its organization and fund raising. Mr. Abelman had made a reputation by netting $1 million in pledges in 1 night for the Brooklyn federation, with Fritz Kreisler, the prominent violinist as one of the stars willing to volunteer his services.

According to Brooklyn records, Mr. Abelman has raised more than $100 million in the borough during the past 50 years. At one event he organized for 44 banking institutions at the Brooklyn Academy of Music during a Liberty bond drive, he chalked up a collection of $43,900,000 in Government bonds in 1 evening by staging a tableaux and having the leading opera stars and celebrities of that era sell kisses for a good cause.

Mr. Abelman's career goes back to his association with the father of the founder of Abraham & Straus and to another well-known Brooklynite, Nathan S. Jonas, who was president of the Brooklyn Federation of Jewish Charities. He persuaded Mr. Abelman to help in organizing the Brooklyn Federation of Jewish Charities and the Jewish Hospital of Brooklyn, where he served as executive director of the Brooklyn federation for 14 years. Through Mr. Jonas he became associated with the Manufacturers Trust Co. Here again, during the 1920's he planned elaborate events with the leading opera stars of the "Met," and including one instance when he had an orchestra of 200 and some of the greatest voices of the opera world vying with live canaries singing throughout the room.

On the philanthropic side, he was instrumental in founding the Big Brother and Big Sister movement with such noted personages as the late Mrs. Madeline Borg, founder of the Federation Women's Division and its only woman president, the late Lady Armstrong and Mrs. Charles Dana Gibson and working in other interfaith activities in which he brought together such religious personages as the late Bishop Manning, Rabbi Stephen S. Wise and Cardinal Hayes.

In 1932 until his retirement in 1954, Mr. Abelman served as secretary to the president, secretary to the Board of Trustees, and public relations director at the Jewish Hospital of Brooklyn. During his tenure there he was instrumental in getting Albert Cugat, brother of noted "rhumba king," Xavier Cugat, to design special murals depicting the children of many nations for which Mr. Abelman had secured a $20,000 donation from Mr. and Mrs. Louis M. Rabinowitz. He

received testimonial letters and visits from such noted persons as the late Mayor Fiorello LaGuardia, Mrs. Eleanor Roosevelt, the Duke and Duchess of Windsor, and such nationally known political figures as Gov. Thomas E. Dewey and Senator Herbert H. Lehman.

On the Army side, he received the support of such Generals as George C. Marshall, Omar N. Bradley, and Walter Bedell Smith.

On the Navy side, he interested Vice Adms. Louis E. Denfeld, Walter S. Delaney (retired) and H. Roscoe Hillenkoetter. Such internationally known personalities as Viscount and Lady Halifax, Lord Marley, Jan Masaryk, Carlos P. Romulo and Ralph C. Bunche also were included among his supporters.

A new honor was conferred on Max Abelman on December 8, 1955, when he received a special diploma of honor from the University of Manila in the Philippines personally presented by Ambassador Romulo for creating better understanding and reciprocal esteem among all people without regard to race, creed, color or national origin. He was responsible for having Philippine doctors complete their residencies and internships in New York and Brooklyn hospitals.

A grandfather of two, Mr. Abelman made a resolution on his 70th birthday to pass on his tradition of tolerance and philanthropy "even unto the third generation." He wants to continue being active in Brooklyn and in Federation, where he has participated in every annual "Dial-A-Thon." And as he phrased it, as his "life began" at 70.

"I want to do a kind act to each one each day."

Life in Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sydney Gruson, which appeared in the New York Times on May 8, 1957, describing life in present-day Poland:

POLES GRUMBLING OVER SLOW GAINS—WOMEN IN WARSAW'S QUEUES WAITING FOR SCARCE BUTTER TYPIFY NATION'S TASK

(By Sydney Gruson)

WARSAW, May 7.—A young mother engaged in the eternal queue's chatter outside a delicatessen shop in Nowy Swiat said, "Maybe it will be better after a while."

"For you young people perhaps," replied an old woman, "but not for me. I haven't much time left."

It was a little after 1 p. m. They had been waiting with a hundred others since 11 a. m., protected from the cold drizzle only because the delicatessen is in an arcade. All over Warsaw there have been similar queues, and presumably similar conversations, for nearly 2 weeks.

The queues are for butter. Butter has suddenly become a symbol of the discontent, malaise and impatience of the people of this weary capital. At best butter is difficult to find. Sometimes it is impossible. According to reports, things are no better in the countryside.

No one knows why butter has disappeared from the shops. Lacking an official explanation, people make up their own in the increasing bitterness over the difficult economic situation.

LOTS OF WHYS IN POLAND

"Why is there no butter?" a reporter asked as he took a place in the queue.

"Why?" replied a woman. "That's what we ask. There are lots of whys in Poland."

The answer that a taxi driver gave was the one most frequently heard—and the one that made least sense.

"It's gone for the festival," said the taxi driver. "The festival" was not further identified, but he meant the gathering of youth planned for Moscow in July. This was the kind of remark heard all the time in Poland during the worst days of the Stalinist era. Its popping up again was a measure of the disillusionment setting in here.

The taxi driver, chortling, recited a couplet in another comment on the situation. "Staline, Staline, oddaj swinie," he said. Translated, it goes, "Stalin, Stalin, return our pigs," another hangover of the not so long ago when whatever evil befell Poles was attributed to the Russians.

Some people say butter is short in Warsaw because great quantities have been sent to Poznan and other western areas to quiet workers' unrest there. Another explanation of the streets is that peasants now find it more profitable to sell milk than to make butter.

Many people go back to a speech made some months ago by Wladyslaw Gomulka, who became the hero of the people of the queues when he defied the Russians last October and was restored as the Polish Communists' First Secretary. In that speech M. Gromulka advised the Poles to save butter imports by eating lard. Now some people say butter is being deliberately withheld to make people buy up lard supplies.

Not only butter has been short recently. There is difficulty in getting meat as well, and sometimes vegetables and even milk, though peasants now are paid 2 zlotys (8 cents) a liter for it instead of the 90 groszy (3½ cents) paid when milk deliveries were compulsory.

PATIENCE WEARING THIN

A hard life has become increasingly harder, people say, though no one contends he is worse off economically than before M. Gomulka came back. Thankful though they are for the increased freedoms that M. Gomulka symbolizes, the Poles seem less and less inclined to heed his pleas for patience and sacrifices in return for hope of a better life in the still unsighted future.

This impatience tinged with despair, most noticeable among the women who must work and tend houses as well, has seeped into industrial workers. No other explanation is possible for the spate of strikes and strike threats with which the government and the ruling Communist party have been faced in the last 2 months.

"Before we had no money and could not talk," said a middle-aged engineer. "Now we have no money but we can talk. That is better of course"—and the sentence trailed off.

It is in the queues and among the underpaid workers that the credit of confidence given to M. Gomulka last October is running out. How to check the run is a problem for which no one seems to have a solution at this moment.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

The Tower of Babel

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an address delivered by me before the Daughters of the American Revolution on April 16, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE TOWER OF BABEL

SUMMARY

The American people have erected a government within a government which bears no resemblance to that established in the Constitution.

The success of the English people in compelling their rules to operate under law came from their insistence on imposing restraints on his spending through the Parliament which represented them.

We must do honor to these early Members of Parliament. It was not easy to tell the Kings they could not collect taxes, and spend money, as they liked, but must take only such taxes, only for such purposes, as Parliament decreed. They knew the rack, the screw, and the executioner's block were the penalty of failure.

Parliamentary resistance to the Stuart kings ended in clear establishment of two principles: Legislative control of the purse and legislative control of the sword. The Constitutional Convention made these principles the foundation of our Constitution. Congress alone was given power to set taxes, and to decide by statute for what purposes the money must be spent. Congress alone had power to raise and support armed forces, and to decide when and if they should be used in war.

Twenty-five years ago the American people and their Congress surrendered the power of the purse, to the ancient bait of an emergency. When Congress gave the executive branch money for emergencies, it in effect let the executive branch spend as it wished. All limits were off. But to abandon limits on spending, through statutory restraints, is to surrender the power of the purse. Unlimited government is here.

The growth in the national budget from $7 billion in fiscal 1934 to $72 billion for the coming year measures the growth of our Tower of Babel.

Today we face a greater danger. In the Middle East resolution, Congress gave the President a virtual blank check for use of American Armed Forces. This is surrender of the other crucial element in government by law, the power of the sword.

In addition, the President has the power, by the foreign-aid legislation, and the precedent of the Korean war, to assign American fighting men to the command of international agencies.

Will any fighting forces be left to guard America if we wish to go our own way, regardless of the majority in the United Nations?

"I am willing to devote the rest of my life to demolishing any and every attempt to destroy American sovereignty by putting American fighting men under any military command other than the United States," said Senator JENNER.

Congress and the American people working together can demolish our Tower of Babel, and make sure that government shall never again, on our soil, grow higher than the law.

TEXT

It is always a pleasure for me to speak before the Daughters of the American Revolution both here in Washington and in Indiana.

We are concerned over the same dangers to our country.

Americans love their country.

Our patriotism has, so far, been free of that cynicism which corrodes love of country when government has, for too long, been an instrument to exploit the people.

I know you were pleased, as I was, to read recently how the greatest traffic jam in the history of Washington was caused by the presence, at Haines Point, of three little sailing ships, replicas of the ships which sailed the stormy Atlantic, 350 years ago.

On the Saturday morning on which the *Susan Constant* was first open to the public, an official of the bus company called the police department and said, "You don't know what you're in for."

It seems as if everyone in Washington had started out to see these three gallant ships on which the little band of intrepid voyagers landed on the shores of Virginia to plant the seeds of the American Republic.

Americans also love their Constitution.

You would have to travel far to find a document more difficult to understand. Even the most brilliant lawyers have disputed over its meaning. The Constitution relies on no drama, emotion, rhetoric, slogans, or any attempt to win the mind by arts noble or vulgar.

It is as free from ornamentation as a Greek temple. Yet, the American people understand their Constitution, with the insight that love intuitively brings.

Last January we, in Congress, were asked to vote the President a new grant of powers called the Middle East resolution. Most of the supporting arguments dealt with talk of communism, the Arabs, oil.

But the people who wrote me were not bothered by side issues. Their letters said this measure would take control of the Armed Forces from Congress, and they were against it. They wanted Congress, and Congress alone, to make the decision on whether or not their sons were to be sent to war. A vivid awareness of the architectural form of government established in our Constitution, is deep in the minds and hearts of our people.

BUILDING OUR TOWER OF BABEL

How, then, can we explain the fact that, in the last 25 years, we have erected, on American soil, a new government—within a government, which bears no relation, whatever, to the Republic laid down in the Constitution.

The answer is simple.

A handful of people saw, in the great depression, a chance to carry out in secret their revolutionary plans to change our governmental system from American liberty to the strong, centralized executive of Continental Europe.

Under cover of relief and welfare, they built up our monstrous executive establishment. The people were too stunned to resist. Just when their hold might have been weakened by public disillusionment, the war gave the planners vast new opportunities to extend their rule. With the end of the war they turned to global welfare, as the best method of perpetuating reckless spending. They built their power even higher on a global basis.

Like the descendants of Noah, in Genesis, they said, "Go to, let us build us a city, and a tower whose top may reach unto heaven, and let us make us a name, lest we be scattered abroad upon the face of the whole earth.

"And the Lord came down to see the city and the tower which the children of men builded.

"And the Lord said, behold the people is one and they have all one language * * * and now nothing will be restrained from them, which they have imagined to do.

"Go to, let us go down, and there confound their language, that they may not understand one another's speech.

"So the Lord scattered them abroad from thence upon the face of all the earth, and they left off to build the city.

"Therefore is the name of it called Babel, because the Lord did there confound the language of all the earth, and from thence did the Lord scatter them abroad upon the face of all the earth."

Here is the perfect model of the centralized control tower, which all ambitious self-seekers set out to erect, whenever the bonds of society are loosed. Our Tower of Babel operates behind a curtain of almost complete secrecy, but our people know well that its builders are trying to build a tower whose top may reach unto heaven.

Our people know nothing will be restrained from them which they have imagined to do, unless this Tower of Babel, like the other one, is cut down to the ground and its builders scattered abroad upon the face of the earth.

The Lord finally destroyed the earlier Tower of Babel, and confounded the language of the builders. The Bible tells us none of the details, but I am sure the Tower was not demolished until brave men appeared ready to do the work of the Lord, though the timid said, "It is too late to destroy the Tower of Babel.

"Its top has reached to heaven.

"Nothing can restrain its rulers from that which they have imagined to do."

WHAT DOES THE CONSTITUTION MEAN TO OUR TIME?

A handful of men built our present-day Tower of Babel, and a handful of men can destroy it. But we cannot destroy the Tower of Babel if we do nothing. We must gird our wills to destroy this monument to men's arrogance. We must laugh in disdain at their claims that they are "the wave of the future," that bigness is "here to stay" and so we might as well get in on the ground floor.

Those are only the incantations chanted by their medicine men, to make us afraid to use the strength with which we could destroy them.

We must have courage. But we must also have wisdom, if we are to destroy this tower in our midst. On what ground can we take our stand to dismantle our Tower of Babel? You will say, "We must take our stand on the Constitution." With that, of course, I wholly agree, but I must ask another question, "What does the Constitution mean to us today?"

It is not enough for us to chant incantations to the good old days. The Constitution comes out of the political struggles of the 17th and 18th centuries. We have been taught to understand it, in terms of Charles the First, George the Third, George Washington, and Thomas Jefferson.

But do we understand the meaning of the Constitution for the 20th century? Of course, we do not believe the nonsense that our Constitution is now outmoded, because people used to travel in stagecoaches and sailing ships, and now they travel in jet planes.

The Constitution is concerned with eternal principles. It was made for the ages. It is almost completely free from restrictions which bind it to the problems of the day. But let us not forget the law of life. Human beings are not permitted to lean on the wisdom of the past, to meet a crisis of their time. They must be willing to work as hard, to preserve that wisdom, as their forefathers worked to distill it from their own painful experience.

Americans of our generation are not going to save our Constitution and hand it on, unimpaired, to succeeding generations, unless they achieve the devotion of the men who signed the Declaration of Independence, and dedicated to their country their lives, their fortunes, and their sacred honor.

We are not going to preserve our Constitution, through the world political crisis, unless we also reach the high level of intelligence which our revolutionary leaders needed, to create out of English experience, an even more perfect instrument for liberty under law.

THE SEPARATION OF POWERS TODAY

The grand design of our Constitution rests on the principle of the separation of powers.

What does that mean today?

In civics class we learn the Federal Government is divided into three branches, legislative, executive, and judicial, and each is independent of, and coequal to, the others. Logically that is true, but logic gives us nothing of the political wisdom in that principle we call the separation of powers.

Only history can tell us why the idea is so important, how much it cost our forefathers to establish it, and in what way it is important to us today.

The executive must be stronger than any individual in the city, State, or the Nation. Only the English-speaking people found the way to bring executive power under restraint. They knew the chief executive could not be deprived of police power. So it must be deprived of some equally important power. They chose the power to tax. The English took the power to tax away from the men who controlled the armies, and set up a body, representative of the people, to study the country's needs and decide when the head of state could collect tax funds and how much. Obviously, they soon had to decide what he could and could not spend the money for.

Parliamentary control of the purse, defining, by statute, the purposes for which tax funds may be spent, established that political miracle, government under law.

THE HEROIC RESISTANCE OF PARLIAMENT

Let us never forget what we owe to those early Members of Parliament. They had to tell their King he was not going to spend money for what he wanted, but only for what the Parliament told him he could spend it for.

Henry VIII was not a docile man. Those members of Parliament who told Henry VIII, Queen Elizabeth, James I, and Charles I they were not going to do as they liked knew the rack, the screw, and the executioner's block awaited them if they failed. When the Members of the Continental Congress dedicated their lives to winning independence for the Colonies, they were not using literary phrases.

The hangman's noose was the price of failure.

Our Constitution embodied the two heroic victories of the English Parliament over their power-seeking Kings in provisions that the Congress should lay all taxes and make the laws governing how they were spent, and also that the Congress should have complete control of the money for the Armed Forces, and of the decision whether to send our men into war.

In 1795 James Madison wrote—and I quote:

"Of all the enemies to public liberty, war is, perhaps, the most to be dreaded, because it comprises and develops the germ of every other. * * *

"War is the parent of armies; from these proceed debts and taxes; and armies, debts, and taxes are the known instruments for bringing the many under the domination of the few. * * *

"The Constitution expressly and exclusively vests in the Legislature the power of declaring a state of war, * * * the power of raising armies, * * * the power of creating offices. * * *

"A delegation of such powers (to the President) would have struck not only at the fabric of our Constitution but at the foundation of all well-organized and well-checked governments.

"The separation of the power of declaring war from that of conducting it is wisely contrived to exclude the danger of its being declared for the sake of its being conducted.

"The separation of the power of raising armies from the power of commanding them is intended to prevent the raising of armies for the sake of commanding them.

"The separation of the power of creating offices from that of filling them is an essential guard against the temptation to create offices for the sake of gratifying favorites or multiplying dependence."

These are the tables of the law of American liberty.

WE THE PEOPLE SURRENDERED POWER OVER THE PURSE

From 1789 to the mid-20th century, American Presidents adhered to the letter and the spirit of our two great political safeguards—congressional control of the purse, and congressional control of the sword. We should stop blaming our President for the loss of our liberty. It is time to point the finger where it belongs. We, the people, through our representatives in Congress, had full power to stop it. Our power to preserve our institutions was given us in trust, in the Constitution.

We had no moral right to surrender that responsibility. But we did. What did we do? We fell victims to a simple trick. We were asked to vote large sums of money to the President for an emergency, and we swallowed the bait.

By voting emergency spending laws, Congress said to the executive branch:

"We have just voted to free you entirely from the restrictions of government under law.

"We have made the law so elastic, so shapeless and formless, that it has no limits.

"Go as far as you like."

President Roosevelt's budget for his first year, in the aftermath of the great depression, was for not quite $7 billion. Our proposed budget for fiscal 1958 is $72 billion. Every step in the growth of Government spending, from not quite $7 billion to $72 billion, is the result of that 1933 decision to surrender to the executive branch the hardwon power of the people, through their Congress, to lay down the law to their Government.

Every brick and stone in our Tower of Babel was put there with our help. We gave the builders the right to use our money as they wished, in spite of the painful efforts made by the English-speaking people over the centuries, to keep governments from spending as they liked.

Our Tower of Babel rose until its top reached the sky. It builders won the vast invisible powers that come from unlimited spending money.

DID WE SURRENDER THE POWER OF THE SWORD?

But, today, we face a new and greater danger.

Let me come back to the Middle East resolution. The resolution was called, frankly, an undated declaration of war. It was, in my opinion, an admission by the Congress that the President's authority over our military forces is no longer limited to the executive duty to carry out policy. It is now expanded to include the most precious of all legislative responsibilities—the right to decide whether or not our country should go to war.

Now let us be honest. This means unlimited government is here.

In 1933, the executive branch was freed from legislative restraints on spending. In 1957, the executive branch was freed from legislative restrains on the use of military force.

Congress, which first surrendered the power of the purse, has now surrendered the power of the sword.

The surrender of the power to decide on war was surrender of the great achievement of the supporters of Parliament in 1688, the keystone of limited government. This achievement was embodied in our Constitution, by agreement so universal that it is hardly mentioned at all.

Still the story is not complete.

Congress, also, added to the Middle East resolution, an amendment authorizing the President of the United States to give men and money to the United Nations emergency forces. Now what does this mean in terms of the law?

It is not the business of Congress to decide a President is, or is not, trustworthy. The legislature's duty is to define limits on power which apply to all.

The law does not vary for persons.

WHAT LIMITS REMAIN ON THE POWER OF THE SWORD?

What are the limits in the expression "United Nations emergency force?"

The answer is, that there are no limits—except those which, some day, may be set by the United Nations Security Council, including—you remember—the Soviet Union.

But that is not all.

The Mutual Aid Authorization Act gives the President power to transfer members of our Armed Forces, as well as civilian officials, to serve any international agency, as he decides.

What has been going on under this provision? We do not know.

You will remember how hard your society worked to find out how the President had transferred American soil at Norfolk to NATO.

Of course, the law says the assignment of American fighting men is only for peacetime, but the fighting in Korea was not war. It was a police action, that is peace.

All the killing of our men serving under United Nations military action, will be called peace.

UNDER WHAT AUTHORITY DOES THE PRESIDENT NOW ACT?

One more point.

You remember that in 1950, the President of the United States agreed to act for the United Nations in command of the United Nations forces fighting in Korea. He then proceeded to incorporate our fighting men into the United Nations forces.

Everything about this series of actions suggests careful advance preparation. We have never had a debate in Congress over the constitutional questions involved in this series of moves.

Does the President have authority, under the Constitution, to put our fighting men into a United Nations force? What constitutional protections go with them, when they are so transferred? When the President of the United States serves as an agent of the United Nations, or, as they say, when he changes to a United Nations hat, is he still bound by the limits set by the Constitution? Or does he acquire strange new powers without any limits in law? Now, I am certain our Presidents have had no slightest intention of violating the Constitution.

But we have had some able, ruthless Machiavellian men high up in the American Government who do not always tell our Presidents where they are going, by their apparently simple moves.

For better or worse, the Korean precedent still stands.

As I read this combination of moves, the American President can now direct our Armed Forces to any end, without any constitutional limitations and, furthermore, can direct them as an agent of the United Nations where he, himself, is not bound by the Constitution.

AMERICA'S THIRD CRUSADE

Is there hidden, somewhere, in the Middle East resolution and its counterparts, a plan for America's third crusade? Are we to send American youth to serve in multinational military units all over the earth, prepared to fight, at a moment's notice, any people who resist the peace the United Nations elects for them?

We speak with indignation of the children's crusade of the middle ages in which the boys and girls of Europe set out for the Holy Land, to fight the infidel, but were waylaid and robbed, beaten and enslaved by greedy men, before they could reach their destination. Where are the fighting men who will bear the brunt of this third crusade under the United Nations? Today they are in our high schools, studying algebra, practicing football, cramming for examinations in current events, getting together a little money to buy records, or take their girls to a dance.

If America is embarking on another crusade, to make the world safe for the United Nations, it will be a children's crusade.

I hope the American people will insist that Congress cut Government spending to the bone, and chain it once again with the chains of the law.

WHO WILL DEFEND OUR COUNTRY?

But our security as a Nation is more precious than our prosperity. Our children are infinitely more precious than our wealth.

If an American President can order American fighting men to serve in the United Nations fighting units, where will our national defense be 10 years from now? Who will protect the United States?

Will we have fighting forces to defend us, if we choose American answers which go against the decisions of the United Nations, including Soviet Russia and its satellites?

The builders of the Tower of Babel have taken from us more wealth than was dreamed of by any conqueror of the past. But if they take our right to defend ourselves, that will be infinitely more terrible. If they take our children, and put them into United Nations forces, under a United Nations command, above our Congress and the Constitution, that will be the end.

I am willing to devote the rest of my life to demolishing any and every attempt to destroy American sovereignty by putting American fighting men under any military command other than that of the United States.

THE ISSUE IS THE SOVEREIGN POWER

Control of armed forces is the sovereign power. Our Constitution put this power in the hands of Congress, as trustees of the American people. Not one of us can rest until that power is returned. Our Tower of Babel must be razed to the ground, if we are to live again by the laws of our forefathers. If Congress and the people work together, they can restore our fundamental law.

Congress can put our Federal Government under limits again, when Members of Congress are the spokesmen for an angry and tireless people, determined to save America. They will cut down our Tower of Babel and make sure government shall never again, on our soil, grow higher than the law.

This uprising of the American people can save our earnings and accumulated wealth from being scattered to the four winds, in the name of global welfare.

But infinitely more important, Daughters of the American Revolution, it can save our sons from being left to die on some distant field of battle, in the service of ruthless power, under a United Nations flag, in the name of a so-called United Nations peace.

Needs in Higher Education in New York State

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from a recent statement by the board of regents of the University of the State of New York on meeting the needs in higher education in New York State.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Two-year comprehensive community colleges, characterized by low cost to the student, geographical availability and direct responsiveness to community needs, offering both transfer and technical-terminal programs, are considered to be the best single means of (a) accommodating future demands for higher education, (b) embracing the increasing heterogeneity of abilities represented in the students graduating from the secondary schools, and (c) providing the education necessary for an emerging group of semiprofessional occupations. Community colleges have a meaning and a competence in their own right They can provide, as well as technical-terminal education, competent preprofessional and general education instruction.

As the first interim report of the President's Committee on Education Beyond the High School suggests, "The growth of community and junior colleges is a significant development of our educational system in this century and is probably the next logical step in filling in and rounding out our educational system."

Career Service Awards

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. CARLSON. Mr. President, the National Civil Service League presented its third annual career service awards at a dinner on Monday evening, May 6.

The career service awards were presented to 10 career employees of the Federal Government. These men exemplify in an outstanding manner the highest characteristics of the career service.

It is fortunate that we have so many outstanding men and women of exceptional ability who are willing to devote their life in service to the administrative operation of the Governmnet. Those in executive and legislative positions and our citizens generally are indebted to these dedicated people, who carry on the affairs of our Government with but one thought, namely, the improvement of the operation of our Government.

The career service awards this year were given to Mr. Dan B. Dyer, United States Air Force; Mr. John Fanning, Department of Defense; Dr. Harold A. Fidler, United States Atomic Energy Commission; Mr. Henry J. Holtzclaw, Department of the Treasury; Mr. George P. Larrick, Department of Health, Education, and Welfare; Mr. Schuyler Lowe, Government of the District of Columbia; Mr. John W. Macy, Jr., United States Civil Service Commission; Mr. Lawrence J. Powers, General Accounting Office; Mr. William Rountree, Department of State; and Mr. Roy D. Schlegel, Post Office Department.

The address of the evening was given by Hon. Meyer Kestnbaum, Special Assistant to the President, who spoke on the Career Administrators in Government Service, and urged that the Federal Government do more to recognize and compensate its top career officials on a basis more commensurate with their skill, ability, and competence.

I ask unanimous consent that the address by Mr. Meyer Kestnbaum be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CAREER ADMINISTRATORS IN GOVERNMENT SERVICE

The 10 career employees who are honored each year by the National Civil Service League are symbols of the devotion and competence of many thousands of our Government career employees. It is most appropriate that those of us who are assembled here representing widely different fields of endeavor should indicate by our presence that these awards are made in the name of the entire community. In publicizing these awards Look magazine renders a useful public service.

Allow me to offer a bit of personal testimony. I have found as have many other businessmen who have come to Washington that the large majority of those who choose Government employment as a career have a high sense of dedication. Our Government is fortunate in having so many men and women of exceptional ability who put their minds

and their hearts into their work, frequently under circumstances that their counterparts in business would find extremely discouraging.

That there are people in Government with only mediocre ability and with a minimum of interest in what they are doing I have no doubt. We have them in business, in the professions and in every other walk of life. I believe it is true that in business there is greater pressure on us than there is in Government to identify people with ability, to assign them to jobs to which they are best suited, to provide them with incentives and to reward them for accomplishment. Business faces fewer impediments in correcting mistakes. There are times when I feel that in the effort to provide safeguards for the security of Government employees we tend to be more concerned with protecting mediocre workers than with giving proper recognition to those who have exceptional ability. This could have serious consequences. To the extent that it is true it should be corrected. I am convinced that in all fields, including business and the professions, we have not been sufficiently conscious of the disparity between excellence and mediocrity.

It is because I have come to have such great respect for the ability of the men with whom I have worked that I venture to offer some observations this evening on the increasing importance of the functions that are being carried on by Government and the increasing need for trained and competent career administrators in the Government service.

We must recognize to begin with that we live in a world that is changing very rapidly. There are two factors which are in themselves interrelated and which are largely responsible for this change. I have in mind particularly the very rapid rate of economic development which has been made possible by scientific and technological progress and the drastic rearrangement of the political relationships that existed up to a very short time ago. These changes have had a profound effect on government in every country in the world. There are very few problems in the modern world which are beyond the purview of government. In most countries governments are exercising a larger degree of control over economic activity. We are fortunate in the United States of America in that policies of government are developed through the democratic process and are made effective to a large degree through nongovernmental institutions. Nevertheless, it is true in our country, as in every other country in the world, that people are showing an increasing disposition to look to government for the solution of economic and social problems.

I judge from reading the newspapers that some of our people and some of our legislators are beginning to wonder how much government we can afford. How much larger can government grow without changing the basic character of our society? I doubt that anyone knows the answer to that question but I should like to advance a few ideas.

There are certain functions essential to society and which can be carried on only by government. There was a time early in our history when many of our wisest people felt that operations of the National Government should be limited to these functions. This philosophy was expressed in the dictum "That government governs best which governs least."

However, it became clear early in our history and it has become increasingly clear during the last quarter of a century that there are certain services which advance the health and security of our society and the growth and stability of our economy which are not capable of being performed effectively by private means. There has been a marked change in our concept as to the range and extent of activities that are appropriately carried on by government, but I do not believe that the American people are less interested than were our forefathers in individual freedom and independence or in seeing to it that government action does not destroy private initiative. The Commission on Intergovernmental Relations expressed this view as follows:

"Assuming efficient and responsible government at all levels—National, State, and local—we should seek to divide our civic responsibilities so that we:

"Leave to private initiative all the functions that citizens can perform privately; use the level of government closest to the community for all public functions it can handle; utilize cooperative intergovernmental arrangements where appropriate to attain economical performance and popular approval; reserve national action for residual participation where State and local governments are not fully adequate, and for the continuing responsibilities that only the National Government can undertake."

It seems to me unrealistic to assume that the functions of the National Government will become less significant in the future. The ordinary activities of government will certainly go on and many of them will continue to expand. The increasing population and the growth and complexity of our economy makes this inevitable. But government should not be required to provide services that could well be managed by private means nor should a government which aims to be responsive to the needs of all the people accumulate too many programs which are designed to benefit special groups in our society. It seems to me that as new programs of vital importance are developed we must scrutinize and rationalize existing programs so that the total burden of government does not become too great.

There are some popular misconceptions about the power of government to manage or support the economy. In the final analysis it is not the government which supports the economy, it is the economy which supports the government.

The wise administration of government, particularly in a democracy, confronts us with a great challenge. Where are we to find in sufficient numbers the people who have the education, the training and the competence to administer the intricate processes of government? How will we keep them interested in government services in the face of the increasingly intense competition for administrative ability? It seems clear to me that in government as in every other activity we must make better use of the people that we have.

During the next few decades we shall see the greatest upgrading of skills that has ever occurred in history. Through the process of mechanization we have greatly reduced the need for unskilled labor. We are in the process of reducing the need for many types of clerical work, but as this process continues we have greater need for people with administrative ability who can think and plan and organize. Our failure to develop these people in sufficient numbers would severely limit our ability to perform satisfactorily the complex functions of government.

It is my judgment that in at least 9 out of 10 cases our top career officials have succeeded to their positions through a series of circumstances, that when taken together are unrelated, except in one respect—and that is, in each case the individual had potential and was a devoted and capable person, that he had the personal desire and courage to push a job through to completion and to come up with a sound answer to the problems which confronted him. Because of these capabilities on the part of many career people, we have had the good fortune to developed a group of well-qualified people in our top career jobs.

However, we have never had enough competent career people for top jobs. In 1946 when Dan Bell, whom many of you now know as the president of the American Security & Trust Co., here in Washington, left the Government service, after 35 years, he was asked by another longtime career man, "What do you consider the one most important thing the Government can do to improve itself in the personnel field?" Bell's reply was that to his mind the single most important thing needed in the Federal Government is the development of a good second man behind each topman, qualified and trained to act in his absence, and to move in when the topman moved out. It was 11 years ago that a career employee who worked himself up from a stenographer and bookkeeper to become Director of the Bureau of the Budget and Under Secretary of the Treasury, made this statement.

To do what Mr. Bell felt was needed would require the Civil Service Commission and the departments and agencies to make a conscious effort to select people with potential administrative ability and see to it that they receive the broad training and experience necessary to fit them to be top career managers. Actually Dan Bell's proposal of 11 years ago was never carried through on an organized basis, even though our need for well-trained career administrators and managers has increased.

At the same time the need in private business for capable managers has been constantly increasing. This has created a tough competitive market for people who are competent administrators. As a result many career people have left Government service for opportunities offered in industry and business. These people are hard to replace and their successors will be even harder to replace as time goes on. Their competence and skill in governmental affairs acquired after years of service and represent a real investment on the part of the individual and the Government.

It is difficult to generalize on why people do what they do. However, it is fair to say that had the Federal Government done more to recognize and compensate its top career officials on a basis more commensurate with their skills and abilities and competence that our chances of recruitment would be better and fewer career employees would look to private business for greater rewards.

What I have endeavored to suggest thus far is that because of social and economic changes the role of government in modern society has become increasingly important. This is particularly true in the United States because we have assumed a new position in world affairs. As our responsibilities increase, we will have to improve all the processes of government. We foresee a greater need than ever before for highly trained and highly skilled career administrators.

Now it seems to me that when we look at these facts we must—unless we have our heads in the sand—ask ourselves how we can meet the challenge that this situation and the future of our country place before us.

It is clear that this is a problem which cannot be met by any small group or by any simple program. The challenge extends to the Congress, to our people, in fact to democracy itself. The problems of government are never permanently solved.

We do know that if we are to improve the processes of government, we must pay more attention to the people who are administering these processes.

I am sure that many of you here tonight have thought long and hard about the problems involved in the recruitment development and wise use of our Government's people. Since I have been extremely interested in these same problems, I am aware that there are many different ideas about how we should meet them. However, there is one thing about which I am certain, and that is that we cannot successfully meet our great

responsibilities if we are afraid to tackle our problems.

It is clear that our civil-service system is not now geared to recruit, develop and facilitate the best use of top career administrators. I want to say again that we are fortunate in the number of career people of great devotion and ability now in our service. But I must say also that we should not, in the face of our experience and knowledge of the future, continue to rely on chance to develop their successors. Also, that we cannot in any sense get the full benefit of the experience and abilities of our top career people under a system which does not provide adequate recognition of their value. The present civil-service system tends to induce people to stay rooted in one job and in one agency. Also the personnel laws and regulations tend to impede more flexible use of people.

We have to decide how we will meet the problems that challenge our success in the future. Can anything be done and if so what, by whom and how.

One positive and constructive proposal has been made to improve the position of the Government in relation to top career administrators. The Hoover Commission, as you all know, proposed the establishment of a senior civil service group. The basic objective of this proposal was to establish a system for identifying men and women of exceptional capacity within the Government. Today there is no such system. The objectives of the proposal were "to always have at hand in the Government a designated group of highly qualified administrators whose competence, integrity, and faithfulness have been amply demonstrated" and "to make the civil service more attractive to able men and women." Today we have no system that will meet these objectives. The Hoover Commission went on and outlined what is believed should be the basic features of the senior civil service.

The President endorsed these Hoover Commission proposals in principle.

As was to be expected, the Hoover Commission's recommendation for a senior civil service and the President's endorsement of the principles and objectives of the recommendation stimulated a great deal of discussion of the problem.

I am sure that you will agree with me that the thinking of the Hoover Commission and its task force was in the right direction. Naturally many questions have been raised about the feasibility or need for the senior civil service. Many points of view expressed about the proposal and the President's statement clearly indicated misunderstanding of the proposals themselves and in many instances a lack of appreciation of the real need for improvement in this area.

This is not to say that some of the objections and fears expressed were without validity. It was helpful to have them expressed for they stimulated some important modifications of the original proposal.

To be sure that we understood the problems involved and the objections and fears expressed, an all-day meeting of top officials both career and noncareer was held to examine all aspects of the proposal and to see if a workable proposal could be developed. Among the career people were those who had voiced the strongest objections to the senior civil service idea. One encouraging fact, which really made the meeting worthwhile, is that so far as I know no one has yet, in all of the discussion of the recommendation, said that the objectives are not sound.

In our discussion many proper objections were made to certain features of the senior civil service proposal. However, there was and is unanimous recognition that improvements can be made both in our career civil service system and in the proposals of the Hoover Commission.

One of the fortunate things which came out of the discussion was, we found, that the connotation of the title "Senior Civil Service" placed the wrong emphasis on the kind of a program that it was agreed is really needed. This then led to the development of the term "career executive program" which is a more accurate description of what is contemplated.

The concept of a career executive program which developed out of our discussion is, that whatever is done to improve our recruitment, selection development and use of career employees should be accomplished as an integral part of our civil service system and not superimposed upon it. This means that our career civil service system must be improved with respect to the selection, development, and use of career personnel which means that the system needs some basic overhauling.

To meet our problem of a continuous supply of competent people for top career posts, the system will, of course, have to put greater emphasis on the qualification requirements for appointment, the development through training and experience of employees with outstanding potential, and the requirements for promotion to the top career positions. Also, it is clear that the standards for selection of career executive must be such that the people so designated are recognized as exemplifying the highest kind of professional spirit and competence; that their experience is such that they can be expected to deal effectively with the gigantic problems of government. They are deserving of proper recognition. Recognition might and should include a status which recognizes the personal competence of the individual, salaries which are more in line with the heavy responsibilities they carry, and possibly other forms of recognition might be developed. Although these ideas are by no means a total approach to the problem, I think they reflect some of the thinking behind the proposed Executive order now in the process of clearance with your departments and agencies. Specifically, the order would establish a Career Executive Board. This Board would report directly to the Civil Service Commission and would have the responsibility of developing a full proposal for a career executive program.

The Career Executive Board when established would be made up of outstanding men who have many years experience in the service of the Government and are fully familiar with the management problems and needs of the Government and with the career service. The recommendations of this Board should represent a good beginning, but the problem is one which cannot be solved by administrative decision alone.

To make the career service and the career executive program really effective will require the full cooperation of the Congress, the executive departments and agencies, and career employees themselves. My role tonight is a simple one. I ask that you consider the fact that the development of a sound career executive program can greatly improve the effectiveness of the Government in carrying out its tremendous tasks. A sound plan directed to that end seems to me essential. If accepted, it will offer greater opportunities for the development and recognition of top career administrators than has ever before been possible.

High Cost of Going to College

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an article by Dr. Benjamin Fine entitled "High Cost of Going to College Is Causing Concern Among Students and Schools," which appeared in the New York Times on May 5, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HIGH COST OF GOING TO COLLEGE IS CAUSING CONCERN AMONG STUDENTS AND SCHOOLS

(By Benjamin Fine)

The cost of going to college has doubled since 1940, a recent survey by the United States Office of Education points out. A student attending a typical public college will pay $1,500 for the academic year, while an average private-school student must be prepared to pay $2,000. This compares with $747 at the public college and $1,023 for the private-college undergraduate about 15 years ago.

The study, conducted by Dr. Ernest V. Hollis of the education office, found that 10 percent of the students came from families with annual incomes of less than $3,000. The average family in the lowest income group devoted one-fifth of its income to sending its child through college.

The families themselves supplied 41 percent of the money for the college students; 29 percent came from students' own savings, while students earned 17 percent after entering college; the remainder came from miscellaneous sources. Two-thirds of the men and one-half of the women worked while getting their degrees.

The high cost of a college education was considered in some detail last week by the President's Committee on Education Beyond the High School. Some 300 educators and laymen attended the regional conference held at New York University. One question cut across much of the discussion: How can the colleges meet the spiraling operating expenses? And this was matched with the corollary question: How can the students pay the soaring tuition fees?

Many colleges now charge from $800 to $1,000 for tuition, compared with half that amount 10 or 15 years ago. Even so, the colleges are barely keeping out of the red. The tuition pays for less than 50 percent of the cost to the college of educating a student.

TOO HIGH FOR MANY

An immediate danger has arisen. The high tuition fees, together with record costs for room, board, and incidentals, are freezing out potentially gifted boys and girls. Tuition and other costs at a good women's college can cost about $2,500 a year. Multiply that by 4, and the family must raise $10,000 to pay for the education of 1 member of the family. The rate for the education of a boy in a men's college is just about the same as in the women's colleges.

A study of 25 typical colleges and universities, made by this department, shows that

a growing number of officials are concerned at the upward trend.

This is the way the tuition fees (in some instances including room and board) have been increased in the last 10 years. It will be noticed that many colleges plan another round of raises this fall.

Institution	1946–47	1956–57	1957–58
Barnard College	$500	$900	$900
Brandeis University	[1] 500	800	900

Yale University	500	1,000	1,100

[1] For 1948–49, when university opened.
[2] Figure includes fees.
[3] Figure includes room and board.

Of course, it can be said that this only shows we live in an inflationary era, that while the cost of college has increased 100 percent since before the war, so have other costs and, indeed, incomes.

But today a broader spectrum of the population has become accustomed to the idea of going to college. The lower the income of a college student's family, the larger is the proportion required for tuition. If qualified students are frozen out of college because of financial problems the Nation will be the loser.

In addition, there has apparently been a lag in the colleges' investment income. This has not kept up with rising costs, so a higher portion of the colleges' income has had to come out of tuition fees. This places an additional burden on the student.

Here is what some of the college officials say about the high tuition fees:

Dr. John U. Munro, director of financial aid center, Harvard College: "We feel there is a serious danger that high tuition rates will discourage many good students from applying. The health of our democratic process requires that the colleges discover ways of keeping their doors open to young people of talent, even though they lack the means to pay the bills."

Dr. Millicent C. McIntosh, president, Barnard College: "There certainly is a great danger that high tuition rates are already making it impossible for qualified students to attend Barnard. Many students have been turned away because they do not have financial resources and we cannot give them scholarship aid. This is true of approximately one-third of this year's applicants."

GROWING STUDENT AID

Smith College makes another point: Present fees are not as high in dollar value as the fees were in 1949–50. Nearly 20 percent of the students today receive scholarship aid at Smith. At Yeshiva University in New York City, the ratio is even higher, with 75 percent receiving some financial help from the institution.

As tuition rates go up, the cost to the college of its scholarship program will increase, too. A vicious circle has been created: Higher tuition brings in more revenue; but in turn, this revenue must be used to subsidize student scholarships.

Dr. Abram L. Sachar, president of Brandeis University, notes that 40 percent of its total academic income goes for student scholarships. Nor is this an unusual proportion. Other colleges report an even higher percentage. One-fifth of the student body at Connecticut College receives help this term; the average scholarship award is $1,200 a year. Another 35 percent work on the campus; their earnings during the school year amount to $30,000. Also, students at Connecticut College, as elsewhere, may apply for loans, at low interest rates, repayable after graduation.

HARVARD EXAMPLE

Harvard University typifies the rising costs in a good Ivy League college. Ten years ago the tuition rate was $400. Now it is $1,000. The fee covers half the cost of the individual student's education. Harvard has just begun a 3-year campaign to raise $82,500,000. This will provide funds to add to the faculty, increase their salaries, strengthen the scholarship program, and in other ways meet the needs of rising prices. Today Harvard awards $1,850,000 a year in financial aid to 1,500 undergraduate students.

In 1949–50 Columbia University charged $12.50 a point, $375 a year. This has now jumped to $950. Income from fees in 1939–40 was $2,625,223. Today it is close to $9 million.

But the operating costs have more than eaten up this increase. A building constructed in the midtwenties cost 12.62 per square foot. The same building today would cost $63 per square foot. Fifteen years ago the university paid $194,207 out of general income for retirement benefits. In 1954–55 this had jumped to $746,628. During this same period, building and grounds maintenance charge increased from $905,732 to $1,998,854.

Library costs have jumped from $490,830 to $1,277,421 in 15 years. Despite the tripled increase of tuition fees, the university must seek outside funds to keep out of the red.

What is the answer? Educators have advanced, different solutions. All agree, though, that more money must be made available for higher education. They likewise agree that tuition fees cannot go much higher and still retain the democratic concept that has made higher education so distinctive in this country.

More corporate gifts are needed. More help from alumni and friends of the colleges must be obtained. Even that will not be sufficient to meet the problems. It may be necessary to provide the colleges with substantial State and Federal building and scholarship aid.

Welcome to the President of Vietnam

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. JOHNSON of Texas. Mr. President, today we have a welcome visitor, the President of Vietnam.

The New York Times in an editorial has summed up what I believe to be the sentiments of most informed Americans toward President Diem. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WELCOME, PRESIDENT DIEM

In Washington today our country has the pleasure of welcoming the head of one of the youngest of republics, Vietnam. President Diem's accomplishments in these past 2 years will assure him admiration and respect. We hope that he also can feel the friendly warmth of our reception as we greet a good friend.

Just a month before leaving for this country President Diem signed a further ordinance to strengthen the hand of his Land Reform Council and thus again to advance the movement through which he has been able to effect the resettlement of thousands of persons on their own land. The measures that he has taken have been practical as well as imaginative.

It will be a mistake if this trip is interpreted as just another visit to obtain more American aid. President Diem can show solid results for the help that has been given. He has no reason to appear as a supplicant. He is rather a substantial partner in a going enterprise on behalf of freemen in his country and in ours. We honor him and make him doubly welcome on that account.

Tours of Dizzie Gillespie and His Jazz Band

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me, which was in reply to an open letter from the editor of the Progress-Examiner of Orleans, Ind., in regard to the tours of Dizzie Gillespie and his jazz band, who were sent abroad as part of our Government's program to represent American culture.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FROM THE OFFICE OF SENATOR WILLIAM E. JENNER

Senator JENNER published some additional details of the world tour of Dizzie Gillespie and his jazz band under the American State Department for the improvement of international cultural relations. The Senator's statement was in reply to an open letter from the editor of the Progress-Examiner of Orleans, Ind., who asked Senator JENNER "why our tax money should be spent to pay a band leader more money than we pay our President to take his boys on a world tour."

Senator JENNER's letter follows:

APRIL 18, 1957.

The EDITOR, PROGRESS EXAMINER,
Orleans, Ind.

DEAR SIR: It is a great pleasure for me to give you and your readers fuller information about the tours of Dizzie Gillespie and his jazz band as part of our Government's program for the cultural enlightenment of foreign nations.

Your figure of $84,381 is not the full story of the cost. Mr. Gillespie and his band were sent on two world tours, one to the Near East and Africa, the other to Latin America. The $84,381 is the net cost of the Near East-African tour, but the tour also collected $16,400 from the sale of tickets. This income did not, like other Government receipts, go into the general fund of the Treasury to be spent only through new appropriations of Congress. It was paid directly to the project, which cost $100,838.55 for the Near East alone.

Let me give you a few of the items paid for by our Government on the Near East and African tour. We paid $511.90 for in-

oculations. That is $25 apiece. We paid $727.15 for passports and $887 for insurance. The booking agent was paid $5,000. We also sent with the band a lecturer, who was paid $1,905.13. His job was to lecture to the people who had come to hear jazz bands, about jazz as an art, but he spoke only English.

Mr. Gillespie's tour to Latin Amercian cost another $40,500 net. I do not know how much should be added for receipts from ticket sales, which went to the project instead of the Treasury. Altogether the tour gave away $35,000 worth of free tickets, plus other thousands for lunches and receptions.

In Argentina, on this trip to improve cultural relations with foreign countries, Mr. Gillespie dressed as a gaucho, and rode a horse through the streets of Buenos Aires. The State Department representative did not think that behavior interfered at all with Mr. Gillespie's contribution to cultural understanding with Latin America.

Instead, the State Department representative explained, Mr. Gillespie was extremely generous with young musicians, especially in Turkey, and gave a trumpet to a leading Turkish artist.

The Middle East and African tour naturally included Yugoslavia in this program of cultural exchange.

Some of the figures are a little confusing, but the program paid $19,000 a year for a general manager.

We are getting close to the total, but we still have to add the cost of overhead in USIA, and the State Department, and the time of our Embassy staff in the countries the jazz players visited.

This money comes from what is called the President's special international program, but the State Department is in charge of its operation, through the Assistant Secretary for Public Affairs.

The fund has had $9,704,300 so far, all of which is committed. The State Department is asking for $3,100,000 for 1958. This is an increase of $795,700 so they can send cultural programs to Poland and Hungary.

Much of the entertainment sent abroad by our State Department has been jazz bands. Wilbur de Paris and his Dixieland jazz band were sent to the independence celebration at Ghana. First the Department gave the cost of his tour as $26,600, but they later changed the figure to $65,000.

Of the 4 bands sent to Latin America, 3 were Negro.

A number of American Indians were also sent abroad to represent American culture.

Among the touring theatrical companies was one giving Porgy and Bess. This did have an all-Negro cast, it is true, but I doubt if it represented American Negro culture. The play, made from a very fine book, changed the emphasis to adultery, criminality, and slums. Many Negroes were very offended, and the papers carried stories of the anger of Moscow audiences at the choice of play.

It came out that some of these Negro performers were sent abroad to offset the effect of pamphlets published by USIA commenting on the poverty and slum conditions of Negroes in America.

So far as I know, nothing has been said to suggest the large number of hard-working, prosperous, successful Negro businessmen, professional men, and wage workers in the United States.

This program for cultural exchange is an outgrowth of the Geneva Summit Conference. At the time I said I thought the Geneva Conference was a catastrophic setback to American military power. I did not know we planned to send jazz musicians in place of military aid for national independence.

We could not find any way to use the majestic power of America to give a little help to the Hungarians when they were fighting for their freedom, but now that their struggles are over, we are going to send them Dizzie Gillespie or another jazz band.

Sincerely yours,

WILLIAM E. JENNER.

Authority to the Tennessee Valley Authority To Issue Bonds

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, May 9, 1957

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several editorials and articles commenting on S. 1855, a bill which I introduced, and which authorizes the Tennessee Valley Authority to issue revenue bonds to finance its necessary power expenses.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Louisville Courier-Journal of April 21, 1957]

SENATOR COOPER'S FINANCING BILL OFFERS COMPROMISE ON TVA

With an eye to the political realities of Washington today, Senator JOHN SHERMAN COOPER has introduced a TVA self-financing bill that must be considered a serious attempt at compromise. It will not force TVA out of business, as opponents of the agency, including some of the President's closest advisers, would like. Nor does it give TVA the fiscal flexibility that its administrators would like to have in order to insure expanding production to meet increasing demands for power.

Like most compromises, it is likely to please no one very much. The Cooper bill would permit TVA to issue up to $750 million in revenue bonds at one time. Enemies of TVA would like to see this permissible amount cut in half. The Cooper bill would require TVA to consult with the Treasury Department before issuing revenue bonds, in order to coordinate the issue with other Government issues, but would permit the Treasury to delay action only 90 days. The bill supported last year by the Bureau of the Budget, and usually considered the expression of TVA enemies within the administration, would have given the Budget Bureau veto power over TVA bond proposals.

THE EFFECT ON KENTUCKY

To this extent, at least, the Cooper proposal must be considered more lenient than many TVA supporters had feared. At the same time, it continues financing requirements that neither friends nor officials of TVA like. For example, it requires TVA to finance future power generation with revenue bonds, on which the current governmental rate of interest is to be paid; and at the same time, TVA would be required to repay to the Treasury all money invested in power generation by the Government, and to repay it at the same rate of interest as is paid on the revenue bonds.

The Kerr bill, favored by friends of TVA, would require payment of interest on the Government investment in power facilities, but would discontinue repayment of investment principal. The Cooper bill makes a gesture toward TVA, however, by permitting the agency to defer interest payments to the Government for any 2-year period in the event of natural or economic difficulties resulting in a serious curtailment of power distribution.

There is one section of the Cooper bill, unfortunately, that will be a sizable disappointment to a lot of Kentuckians; that is the section forbidding TVA to use any bond money outside of the region it now serves. This, of course, is a bow in the direction of TVA foes who have for years sought a law setting forth the precise territory that TVA may serve with electricity, and forbidding it to go outside these boundaries.

No responsible spokesman for TVA proposes to increase the service area of the agency. But many Kentuckyians have been working for many years to get TVA power for their towns or rural cooperatives. TVA lines, for example, extend to within 20 miles of Middlesboro, where many citizens have been fighting for 20 years to get TVA power for their city. Civil leaders in the Green River Valley have for years insisted that it would be more economical for TVA to build steam plants in the Green River Valley, with its huge deposits of coal, than to ship Green River coal all the way to Tennessee steam plants.

IKE IS THE BIG QUESTION

Such developments will be made all but impossible by the limitations on the use of bond money as proposed by Senator COOPER. TVA could, of course, use current revenues to extend its lines into areas now seeking its power. But the repayment sections of the Cooper bill would limit the availability of revenues to such an extent that little money would be left for expansion.

The big question about the Cooper bill now, however, is how the President and his administration leaders in Congress are going to regard the measure when it begins its struggle through Congress. If it is given administration blessing, friends of TVA will probably go along, for though it is not the bill that TVA supporters would like, it is a bill TVA can live with. If, on the other hand, the President takes a hands-off attitude, and permits the bill to be attacked and amended by the forces around Presidential Adviser Sherman Adams, the friends of TVA will have to gird themselves for another fight.

[From the Louisville Courier-Journal of May 2, 1957]

SENATOR COOPER SEEKS TO EASE THE STRAINS OF TVA'S DOUBLE LIFE

Since its inception almost 25 years ago, the Tennessee Valley Authority has lived a double life—loved at home and attacked abroad. To the people who have benefited by its farm, fertilizer, reforestation, and municipal development programs, or who have seen their way of life changed by its low-cost power, TVA is the perfect example of Government-citizen cooperation. To private power spokesmen and those who are unfamiliar with the way it works, the agency represents the threats and evils of creeping socialism.

Congress has for many years reflected this national split personality. Thus TVA finds itself one day furnishing low-cost power to vital atomic-energy plants at savings of millions of dollars to the Government. The next day it finds itself threatened by that same Government with slow starvation, as Congress refuses to appropriate funds to generate more power. At home, it is besieged with requests for power from customers living along the fringe of TVA territory, while in Congress attempts are being made to limit or even diminish TVA's service area.

Senator JOHN SHERMAN COOPER knows the difficulty of legislating in this confused field. He, too, is caught in the fight over TVA. There are counties throughout southern

Kentucky where the people want TVA power, and have asked Senator COOPER to help them get it. But the leader of Senator COOPER's party, President Eisenhower, has himself damned TVA as an example of creeping socialism, and tried to reduce its territory through the infamous Dixon-Yates contract.

Therefore, when Senator COOPER warns TVA-area Congressmen that they must be willing to compromise in their fight for TVA, he knows whereof he speaks. And it seems to us that his bill to give TVA self-financing power, offers about as good a compromise as we can hope for at this time, the temper of the administration being what it is. In return for the power to issue revenue bonds (up to $750 million) for power-generating purposes, the Cooper bill would limit TVA to its present service territory by forbidding the use of revenue-bond money to provide power outside the present service area.

This is far less than friends of TVA would like. But it is far more than the foes of TVA would prefer, and TVA foes, it has been repeatedly demonstrated, have a great deal of influence around the White House. They have been increasingly able, in recent years, to deny TVA Government funds for producing power needed for its present area, and at the same time deny the agency the right to provide its own financing through revenue bonds. The Cooper bill offers a middle ground between these two groups that deserves the consideration of Congress.

[From the Washington Post and Times Herald of April 28, 1957]

COMPROMISE ON TVA

Senator COOPER has proposed a constructive compromise between the plans of the Budget Bureau and the Tennessee Valley Authority for revenue bond financing of TVA's new powerplant requirements. The Cooper bill, on which hearings will be held soon, involves a postponement of some of the basic decisions that need to be made on regularizing the Authority's finances. But it would go far toward assuring TVA's ability to stand on its own feet and would help to eliminate the perennial debate over the future of this proven and immensely valuable agency.

To allay fears that self-financing authority for TVA might result in unchecked expansion of its power service area, the Cooper bill would limit initial bonding authority to $750 million, or enough for about 5 years. It also would provide that proceeds from these bonds could be used only for providing power within TVA's present area. In addition, the Treasury would have the right to control the issuance and recall, within 90-day periods, of TVA bonds.

Of equal importance the Cooper bill provides for payment of interest on the $1 billion Federal investment in TVA's power facilities, in addition to the continuing repayment of that investment to a level of some $750 million. This seems to be a rather generous stopping point, but the figure would be subject to further congressional review in 5 years.

TVA's tax status ought also to be reviewed, but this might well be done separately as part of a general overhaul of the exemptions provided for all Federal properties and enterprises. We hope the Senate and House Public Work Committee will give the Cooper compromise earnest attention as a first step toward establishing the Authority once and for all on a permanent, financially sound basis. The prime need is to enable the TVA to meet the legitimate requirements of the area through its own resources without having to combat the knives of those groups which still seek to destroy it.

[From the New York Times of May 2, 1957]

SENATOR COOPER'S SOLUTION OF THE ISSUE OVER TVA

(By Arthur Krock)

WASHINGTON, May 1.—For a number of years construction by the Tennessee Valley Authority of steam plants to supply power for public sale has had the approval of Congress. But resistance at the Capitol to this type of TVA facility has grown from a small minority opinion to a strong opposition and one that can no longer be identified as merely conservative.

This situation has led Senator JOHN SHERMAN COOPER, of Kentucky, to propose a compromise between (a) the advocates of unlimited expansion of TVA's power facilities and geographical scope, and (b) those who wish either to prevent further expansion or reverse the process.

Under the Cooper plan TVA would be permitted to finance additional power facilities, but the proceeds of this financing would be limited to their construction and use in TVA's geographical area. "My purpose," said Senator COOPER to his colleagues, "is to avoid a repetition of the fruitless and frustrating stalemate over the future of TVA that has had no constructive results. I hope a decision can be reached with due recognition of the great contribution TVA has made and is making."

THE FINANCIAL ARRANGEMENTS

The financing phase of the Cooper bill would permit the authority to meet future increases in demand from its present service territory and to maintain an integrated power system. The measure continues TVA responsibility for repayment of the Federal investment in its power facilities, provides a reasonable rate of interest on the unpaid portion of this investment, and seeks to make the agency self-sufficient as a Government corporation.

The sponsor of this measure, in his two separate terms as a Senator, has steadily endeavored to persuade Congressmen of both major parties that TVA is vital to the region and should be allowed logical expansion. This led him in 1954 to oppose the Dixon-Yates contract that had the President's approval, and warn General Eisenhower on aspects to the contract that soon plunged the administration into a controversy from which the President eventually was obliged to order a retreat. In the course of that effort COOPER became persona non grata at the White House to the point where he was rebuffed by the staff in an attempt to give his reasons to the President in person.

Defeated in 1954, COOPER, after a tour of duty as Ambassador to India, was again elected in 1956 and came back to the Senate to pursue his consistent course with respect to the TVA.

RELIANCE ON STEAM PLANTS

These are some of the points in his compromise of the views of the congressional blocs that are embattled over the future of TVA.

When hydro-power development through dams reached its limits, TVA turned to steam plants to meet a power demand in its area that has grown vastly in the last 8 years. (Incidentally, Federal atomic and other installations now absorb one-half of the total capacity of the agency.)

Steam must now supply two-thirds of TVA's generating capacity, and this will require substantial new plant construction. But since 1950 Congress has shown an increasing unwillingness to make the necessary appropriations. That is due in part to the feeling in other regions that TVA has lifted the valley States to an econmic status which makes them able to dispense with Federal appropriations.

A $750 MILLION FUND

But by 1954 TVA had demonstrated ability to repay the Treasury on a 40-year basis, and capacity to operate efficiently in meeting the needs of the service area. These prospective needs for the 5 years following the winer of 1959–60 call for new construction to care for an increase of 750,000 kilowatts annually at a total cost limited to $750 million.

Five years after the spring of 1960 TVA may return to Congress to request further financing and a broader area of operation. By that time Congress will have had ample opportunity to appraise the results of the Cooper bill.

To assist coordination with other Government issues TVA must consult the Treasury before offering bonds—other bills give the Treasury supervision—but the Treasury will have 90 days to determine the dates of issue, recall and maturity.

TVA'S TRANSITION

There are more features of the Cooper measure, but those listed above, and the limitation of expanded TVA service to its geographical area, are the major provisions. They are eloquent of the transition of TVA from the day in the thirties when, asked by Justice McReynolds whether a steam plant would be used to generate power for independent sale, John Lord O'Brian responded for the Government that, as he viewed the law, steam plants could be used only as a standby against a breakdown of hydro facilities.

But since that exchange Congress has regularly allowed TVA to make an ever-widening interpretation of its legal permissive.

[From the New York Herald Tribune of May 5, 1957]

EXPANSION OF THE TVA

For some time now the Tennessee Valley Authority has found itself in pressing need of expanding its facilities if the increasing demand for power in this region is going to be met. Waterpower, the TVA's original source of energy, has had to be supplemented several times over by steam generating plants. But such is the growth of the valley's industry, including Federal atomic plants, that by 1960 demand will outrun supply unless action is taken at this session of Congress.

The TVA is now established as a permanent institution essential to the economy of a large region. There is no question about that. But there is a very important question as to how much bigger it will grow and how that growth is to be financed. There has been a congressional deadlock on this subject for the last 2 years.

Now Senator JOHN SHERMAN COOPER, of Kentucky, has proposed a compromise bill which would make the TVA self-sufficient as a Government corporation. The Cooper bill would authorize the TVA to sell up to $750 million worth of bonds for construction purposes over 5 years and permit it to ask Congress for further authorization if it did well with the first. This provision would give the Authority the necessary flexibility by freeing it from yearly congressional action. It would also free the taxpayer from continued demands to subsidize the project further.

At the same time the bill would limit the expansion of the TVA to its present geographical territory, and safeguard private enterprise from unlimited encroachment by a Government agency. The bill would authorize a vertical expansion, so to speak, but not a horizontal one.

Since the TVA has become the sole supplier of electricity in the Tennessee Valley, it has

to assume the responsibility for meeting its power demands. But it should not assume any similar responsibility outside it. That is the sense of the Cooper bill. It represents a fair and reasonable solution to a pressing problem.

The Delaware Channel

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in this morning's Philadelphia Enquirer entitled "False Economy on Delaware Channel." The editorial points out the very real need for an additional appropriation of $7.5 million to complete the channel to a depth of 40 feet, as called for by the policy adopted by the Congress, a matter with respect to which the senior Senator from Pennsylvania [Mr. MARTIN] and I have just had the pleasure of testifying before a subcommittee of the House Committee on Appropriations.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

FALSE ECONOMY ON DELAWARE CHANNEL

The difference between the $16,500,000 which Army engineers estimate is needed for Delaware River channel improvements in the coming year, and the $9 million included in the President's budget—is $7,500,000.

Greater Philadelphia spokesmen, led by Mayor Richardson Dilworth and Harry G. Schad, put up a vigorous battle for that extra $7,500,000 before the House Appropriations Subcommittee yesterday.

That fight should now be carried to the White House, for either the President is being badly informed, or not being informed at all, on the real needs of Delaware Valley, United States of America.

By administration spending standards, $7,500,000 is small change. Scores of projects, of less value to the Nation, could be named which carry sums far larger. What is most important, penny pinching on the appropriation now will merely increase the cost of dredging the authorized 40-foot channel later on.

For inexplicable reasons, the White House and Budget Bureau proposed only $9 million for dredging the channel to an interim depth of 35 feet. As Mayor Dilworth made plain, such action will be shortsighted, because deepening the channel between Philadelphia and Trenton involves removal of a rock ledge. As he points out, it will be expensive and wasteful to drill away that ledge to a 35-foot depth, and then later bring back the same drilling equipment to cut another 5 feet deeper. To do the whole job at once would be economical—and in line with the obvious needs of the river, and the great industrial complex of which it is the heart.

The House committee was shown evidence of a great influx of new industries, including the planned new plant of the Phoenix Iron & Steel Co., near Burlington, which would sorely need a 40-foot channel.

Ours is a strange world. And there are strange ideas in Washington, D. C. Let the Communists point a finger at any little country on earth, and we are quick to find vast sums to save it. We are pouring $50 million a year, for example, into far-off Laos.

Maybe if Red submarines instead of ore boats were moving into Delaware Bay, the Budget Bureau might bestir itself to find the money for a channel which Delaware Valley's industries—most of them defense industries—obviously need.

The American West

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. ALLOTT. Mr. President, last Thursday the Senator from Arizona [Mr. GOLDWATER] and other friends of the West discussed on the floor of the Senate an article in the current Harper's magazine by Prof. Walter Prescott Webb, historian at the University of Texas.

Dr. Webb chose as his topic the American West, a subject about which he revealed a profound ignorance. Perhaps the professor, in his pursuit of history, has completely lost touch with the present. At any rate, he has strung together an amazing collection of biased hypotheses about the West, has recited a string of inaccurate facts, and then has leaped to wild generalities.

The Phoenix (Ariz.) Gazette suggests that the professor has been out of touch with reality since the turn of the century. At any rate, I am confident that any of the professor's history students who strayed as far away from the facts in an examination paper as the professor himself did in Harper's would be rewarded only with an "F" for his efforts.

A number of newspapers in the West have done a superb job of pointing out fact after fact as to which the professor has been wide of the mark.

I ask unanimous consent to have printed in the Appendix of the RECORD an article on the subject by Nello Cassai, outstanding reporter for the Denver Post, and a regional writer for Newsweek magazine; an editorial from the Denver Post; and an editorial from the Phoenix Gazette.

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

[From the Denver Post of April 28, 1957]

OASIS CIVILIZATION—HISTORIAN BRANDS WEST DESERT

(By Nello Cassai)

The American West is full of negatives, short on positives.

It produces comparatively few important men, has little interesting history, and by some standards is a depressed region.

Westerners have developed a talent for taking something small and blowing it up to giant size, as a photographer blows up a photograph.

So says a historian, Dr. Walter Prescott Webb, University of Texas history professor, in the May issue of Harper's magazine.

The reason for all of this, explains Dr. Webb, is that the West has been shaped by the great American desert.

He says Westerners have ben trying to deny existence of the desert ever since the name was striken from the maps when settlement began after the Civil War.

"It has hardly been mentioned in polite western society since, and never by the chambers of commerce," he adds "the West today is virtually an oasis civilization * * *.

"The chambers of commerce would not be pleased if we referred to such oases of elevation as Denver, Boulder, and Rapida City; of such river oases as Santa Fe and El Paso; of the pring-made oasis of San Antonio; of the manmade oasis of Boulder City, Nev.; or the well-based (and probably temporary) oasis of Lubbock, Tex."

The article discusses at length the growing shortage of municipal water in leading western cities.

Dr. Webb defines the West as that area west of a line drawn north from the southern tip of Texas. He devides the 17 States within that region into 8 desert States in the center and 9 desert rim States.

In the center are Arizona, New Mexico, Nevada, Utah, Colorado, Idaho, Montana, and Wyoming.

On the eastern rim are Texas, Oklahoma, Kansas, Nebraska, South Dakota, and North Dakota. On the western rim are California, Oregon, and Washington.

"The desert," says Dr. Webb, "permeates the plains, climbs to all but the highest mountain peaks, dwells continuously in the valleys, and plunges down the Pacific slope to argue with the sea."

"The heart of the West," he continues "is a desert, unqualified and absolute."

Dr. Webb listed what the West hasn't got, including the following negatives: Water, timber, cities, industry, labor, Negroes. Practically all the timber is in east Texas, Oklahoma, and the three Pacific States.

These are his positives: Land, grass, minerals, natural wonders, Indians, Orientals.

This historian says the West is the home of four-fifths of the surviving Indians, four-fifths of the Japanese, and three-fifths of the Chinese in this country.

[From the Sunday Denver Post of April 28, 1957]

US DESERT RATS IS DOING O. K.

Listen, Dr. Walter Prescott Webb, historian of the University of Texas, you better take off your glasses and your Ph. D. You've picked yourself a fight.

We read what you said about the Rocky Mountain States in the May issue of Harper's magazine, Doc. We don't mind your twitting us because we are so young that we don't have any history you think is worth writing about. We'll outgrow that.

It seems to us that a historian without any history to write about ought to put his typewriter away and go out picking Texas bluebonnets or counting oil wells. But not you, Doc. Oh, no. You were determined to write something about the Mountain States.

So you decide to turn economist and geographer and impose on the editors of Harper's your own version of that hoary, old canard that the West is nothing but one vast desert, fit for neither man nor beast.

Whatsthematter, Doc? You got dyspepsia? Did you get taken in one of those Las Vegas crap games?

Of course, you admit that the Mountain States—Montana, Idaho, Wyoming, Utah, Nevada, Colorado, New Mexico, and Arizona—can't qualify for the dictionary definition of a true desert, a place with less than 10 inches of rainfall a year.

But you are a man of determination, Doc. You have a thesis to try to put over. To heck with technicalities. You'll write your own definitions. You'll go Zebulon Pike one better. He called the Great Plains the Great American Desert. You'll expand the desert to take in all of the Mountain States. Texans do things in a big way.

It is too bad, Doc, that you coudn't find the average rainfall of the Mountain States in your reference books. If you had, you

might not have gone so far off the deep end.

But you say you couldn't find the figures so you took the average rainfall in a few cities in the Mountain States and came up with your own guess that the average for the entire region is only 12 inches a year.

Now it is a shady practice, doc, to use averages the way you do. Colorado's average rainfall, in case you want to know, is 16½ inches or 37½ percent more than your system gives us credit for.

Approximately 30 percent of Colorado gets more than 20 inches of precipitation a year, and some mountain areas get more than 40 inches. But to you all of the eight States are desert. Your figures prove it. You didn't even concede the existence of our vast national forests or our fertile valleys—like the Yampa.

Of course, by your method, doc, you could average the Mojave Desert with the Mississippi Delta and prove both places are short of water.

For the sake of argument, doc, let's say you are right, that the mountain region from Mexico to Canada is nothing but a desert dotted by Joshua trees and infested with sidewinders. How about your claim that our desert environment has ground us down economically?

You think we are miserable desert rats, doc, because banks of the eight Mountain States have assets of only $6 billion as compared with the $25 billion for the banks of Texas and California.

You look at the bank assets, doc; we'll look at personal income as a better barometer of economic prosperity. In 1955 personal income in the eight Mountain States ranged from a low of $1,430 per capita in New Mexico to a high of $2,434 in Nevada. The average for the United States as a whole was $1,847.

Colorado's income that year was $1,764 per capita which happened, doc, to be higher than the per capita income of 26 other States—including Texas and all other States of the Deep South. Colorado did better than such places of bountiful rainfall as Iowa, Minnesota, Vermont, and West Virginia.

Come clean, doc. Admit that desert or no desert, we are booming right along; that our income is growing faster than the income of the country as a whole. If you must worry about economic distress, doc, why not concern yourself with the $946 per capita income in Mississippi or the $1,181 income in Alabama.

And, doc, you really give us a laugh when you write that people shun the mountain States because of the desert Remember? You tried to prove this bit of invention by citing the fact that the mountain States have less than 6 million people as compared with 20 million in Texas and California.

Guess you haven't been in Albuquerque lately, doc. It is the fastest growing city in the United States.

As a self-appointed economist you know, doc, that industries make for large populations and we are just beginning to get industrialized. That's why we also are beginning to get urbanized, although you, doc, in your preverse way, want to believe urbanization is a result of people fleeing from the desert to a few oasis waterholes.

What you may not know is that the population of the United States has increased 24 percent since World War II but the population of the mountain States has spurted 39½ percent.

Does that sound as if people are shying away from the mountain States because of the desert? Incidentally, the mountain States have been growing percentagewise in population faster than Texas and just as fast as California.

You may have a point, doc, in upbraiding us for not producing more men of distinction. If you say only 16.7 percent of the persons listed in Who's Who are from the West although we have 22 percent of the population, we will take your word for it.

We won't try to excuse ourselves by pleading that we have been so busy taming the country and building our cities that we have not had time to participate in the pursuits which normally lead to recognition in the sanctified pages of Who's Who.

No. We have been remiss—but so have a lot of nondesert States which shall be nameless. We hope to do better in the future. We are developing cultural centers—at Taos, N. Mex., for example, and at Aspen and Central City, Colo. We are strengthening our educational institutions. There is every prospect that within a few years a good share of the men of achievement in the field of aviation will be products of the United States Air Academy in Colorado.

We don't mind, doc, when you say our hopeless struggle to conquer the desert has made us screwballs who try crazy ideas like rainmaking.

We are a hopeful and resourceful (we hope) people. We will try anything. But your slur that we are an unimportant region because there never was a battle of national significance in the mountain States seems an unnecessary insult.

We might remind you, a historian, doc, that there was a fracas down in northern New Mexico in 1862 which was called the Battle of Glorieta Pass.

Seems some Texans had marched up the Rio Grande, captured Albuquerque and Santa Fe and were threatening to add the west, including California's gold mines, to the Confederacy. After the Glorieta melee the Texans managed to retreat safely back home.

Of course, this was a conflict of only regimental size and since the Texans lost we suppose it was insignificant, although some northern historians have termed it the "Gettysburg of the Southwest."

If the Texans had won, doc, we imagine you would have considered it of national importance. To chide us because the Texans failed to turn Glorieta into a significant master stroke, sets some kind of new record for faultfinding.

Even the late Bernard DeVoto, for many years the west-baiter for Harper's, never went that far, doc. What a grouch.

[From the Phoenix Gazette of April 30, 1957]

AN INSULT TO ARIZONA AND THE WEST

A great many people in the Western States will challenge the intent and content of an article in the current issue of Harper's magazine—and they should. Rarely has any quality periodical published a more misinformed, misleading and prejudiced article than that which appears this month in Harper's under the title, "The American West—Perpetual Mirage."

The author is Walter Prescott Webb, a Texas historian and educator who, unlike most Texans, can't even find much that is good in his own State. That is his business. But when he misrepresents other Western States, including Arizona, in a national magazine, then his business becomes our business.

Clearly, Webb has a grudge against the West. Why this should be we don't know. But nothing else could possibly explain why a man who enjoys a reputation as scholar and historian would stoop to such distortions of fact as he does in the Harper's article.

The whole purpose of this amazing performance appears to be a personal necessity for "proof" that the West, and particularly its desert States, is an area of no importance or significance, sparse in population, resources, ingenuity, and competent individuals. This is quite an order, of course, and Webb is forced to use almost every type of misrepresentation in pulling it off. Perhaps the most amazing thing about the entire performance is its publication by an outstanding national magazine.

Having created a neat but not-very-original hypothesis, based on what he makes sound like a personal discovery, Webb fits his conclusions to his prejudices in such manner that anyone reading the piece without prior knowledge of the West would believe it to be a terrible region in which to live, work or play. The hypothesis? That much of the West is a desert. The conclusions? That because we live in an arid region which is "repelling to people and repulsive to wealth in nearly all forms" we produce comparatively few important men, have little interesting history and, by Webb's standards, occupy a "depressed region."

The author's sources of research for this piece of misrepresentation would be amusing if they were not ridiculous. To support his untenable position, he cites two major points. One is that in examining 10 standard school history texts, he found they devoted more space to the East than to the West. Secondly, he cites the fact that under the letter B in the current Who's Who, only 8 percent of the listed names have any connection with the West.

Even on the basis of his own flimsy evidence, Webb is wrong. Either he doesn't know or avoided mentioning that the publishers of Who's Who long ago had to issue a special volume, Who's Who in the West, which contains the names of thousands of distinguished westerners. A recent edition runs to almost 900 pages.

Webb gives the same type of treatment to the resources, history, industry, and cities of the West, grouping all of these in a category which he terms "negatives" and largely ignoring the great growth which Arizona and other Western States have experienced in the past decade. There is no mention of the Nation's largest single source of raw materials for atomic energy. Despite the fact that Arizona has the largest Ponderosa pine forest in the Nation and produced almost 13 billion board feet of lumber last year, we are told that we have no timber. Our copper production is brushed aside with the statement that miners long ago removed an irreplaceable resource.

Webb has spent too many years in cloistered academic halls. His entire article sounds like something that might have been written at the turn of the century. We suggest that he get out and have a look at the region which supports him. Even such deep-rooted prejudice as his might succumb if exposed to the virile, growing influence of the modern West.

Appeal to Youth by Sports Emissaries

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 9, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column entitled "Sports Emissaries Reach World Youth," written by Malvina Lindsay.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

SPORTS EMISSARIES REACH WORLD YOUTH

(By Malvina Lindsay)

Youth throughout the critical areas of the world is now the main target of nations or political systems that are trying to win friends for the future. This country's

sports ambassadors—world-famed athletes sent abroad on good-will missions—have been having dramatic success in getting to foreign peoples a new image of young America.

These Olympic champions have been reaching the masses in Southeast Asia, Africa, and other places as no other public Western figures have been able to do. Sent under the auspices of the State Department's International Educational Exchange Service, they balance the work of the exchange leaders and specialists who reach the educated adults.

Yet despite the tremendous success these athletes have had in fostering good will for this country and in changing the prevailing unfavorable image of American youth, this phase of diplomacy will be curtailed substantially if the drastic cuts of the House of Representatives in the appropriations for the exchange program stand.

Also reduced will be the exchange of leaders and specialists, generally regarded as one of the most effective foreign relations programs this country operates.

In the congressional economy drive the activities of some sports missions have been ridiculed and distorted. But nothing has been said of the fact that half a dozen countries in 1956 participated for the first time in the Olympic games as a result of technical assistance in coaching that the United States provided at their request. These nations, mostly new ones, received a great boost in self-confidence as a result of this, and have shown a gratitude and good will to this country such as no military or financial assistance could buy.

Here is one example of what a sports ambassador accomplished: Jack Davis, world champion hurdler, visited 67 communities in Africa at about the time Vice President NIXON was there, though as Davis points out, they "traveled in different circles." Davis met with school children and teachers in large audiences. He demonstrated American field and track techniques, lectured, and was photographed with native athletes and would-be athletes. Articulate, personable, and modest, he won such a following that in places young Africans were carrying placards with Jack Davis advice, as "Jack Davis says 'go back to school.'"

Another sports ambassador, Mal Whitfield, middle-distance runner, met a severe test before 60,000 natives of the Congo who awaited him in an amphitheater. After he ran they insisted there was magic in his spiked shoes. He took off his shoes and ran barefoot—just as fast. He still has sore feet.

A goodwill athlete who had spectacular success in southeast Asia is Dr. Sammy Lee, Olympic diving champion. Dr. Lee is the embodiment of the American story. Of Korean ancestry, he is an ear, nose, and throat specialist of Santa Ana, Calif., and was a major in the United States Army. Hundreds of thousands of Asians turned out to hear him tell the story of his life. Recently the Los Angeles Sales Executive Club named him salesman of the year for his contribution in "selling * * * the basic principles, ideals, and true significance of the American way of life."

Sports is a field in which many countries are begging for technical assistance. Many new nations are almost starting from scratch to develop athletic activities for their youth. They feel such programs will not only develop the bodies of their young people but give them outlet for energy that in many places finds expression in rioting.

This type of assistance generates more good will than any other because there are no political strings or suspicions attached.

Also the goodwill visits of athletes build bonds with groups that will provide the leaders of tomorrow. The Nation should not muff its opportunity to use to the fullest both these avenues of people-to-people diplomacy.

Proxy Fights and Stock Raids

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Proxy Fights and Stock Raids," by George Sokolsky, which appeared in the April 1 issue of the Washington Post and Times Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROXY FIGHTS AND STOCK RAIDS
(By George E. Sokolsky)

Whoever owns the shares of a company or enough of them to constitute control, can select the management of the enterprise. There may be a century or more of tradition behind those who imagined themselves in control, but they or their ancestors made the choice of borrowing from the public by selling the shares of the company to the general public, and when they took that step they limited their rights in their own business. Therefore from the standpoint of strict legality, the founder of a business has no ground for complaint if those whose only participation in a business was to buy some shares, unite to deprive him of his pride and joy whenever they can.

The tax laws have played a destructive role in the fast vanishing family-owned enterprises. It is dangerous to the heirs of an owner of a family business for the senior to hold onto his entire ownership, as he might leave his widow and children without sufficient cash to meet the inheritance tax on his death. Often a man sells off the whole or a part of his business for tax purposes. This is a direct application of the Marxian method of destroying capitalism as developed over the years in American tax laws. Some men solve this problem by leaving their businesses to a foundation which is more a legalistic than a moral solution because ultimately most foundations fall into the hands of professionals who expend their fortunes on other purposes than might have been desired or even designated.

So we have the picture of a man laboring through the best years of his life to erect a productive business enterprise with his own money, ingenuity, and initiative, facing a proxy fight during which newcomers, aliens or very recent Americans, ruthlessly seek to take over his enterprise and often succeed by methods rarely employed in this country since the days of the robber barons, Jay Gould and Jim Fisk.

This situation has been dramatized by the activities of Leopold Silberstein to take over Fairbanks-Morse, an operation which involves all the gambits of the takeover. However, the Silberstein enterprise is only one and not really the most significant although Silberstein and some of his associates and hired hands are as dramatic as Max Reinhardt and should really be in the theater. Silberstein focused attention upon himself and his activities by hiring a galaxy of press agents and fixers who attracted as much attention to themselves as to their principal. The number of companies taken over by proxy fights or by attrition leading to virtual abandonment is large and presents a very ugly picture.

It is pretty well known that certain investment underwriters in Wall Street, favorably known for their stability, have moved into the field of stock-market manipulation with a view to raiding and taking over well-established companies that are attending to their own business.

"Strike suit" lawyers, who used to read balance sheets to discover whether there was not a profitable lawsuit in an error of management or a smaller dividend, now look forward to the organization of raiding syndicates. Management suddenly finds itself with new partners, men of uncertain status and probity, men who are even known to have criminal records.

And there is nothing that can be done about it under the present laws, so far as one can judge from what is being done either by SEC or by the Attorney General's office.

The question really is: What should be done? And, as many of the raided companies are engaged in the national defense, this is a matter of national importance.

Proposed Limitation on Fast Tax Amortization

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. SPARKMAN. Mr. President, the Wall Street Journal of May 8, 1957, carried a story entitled "Humphrey Backs Byrd Bill to Limit Fast Writeoffs to Defense Needs."

Some of the views of Secretary Humphrey with reference to these rapid tax writeoffs on selected and favored industries are most interesting.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUMPHREY BACKS BYRD BILL TO LIMIT FAST WRITEOFFS TO DEFENSE NEEDS—TREASURY CHIEF CITES REVENUE LOSS, ASKS TAX CUTS FOR ALL, NOT JUST A FEW GROUPS

WASHINGTON.—Treasury Secretary Humphrey strongly supported legislation to limit 5-year amortization for tax purposes to facilities that are strictly for defense.

He testified as the Senate Finance Committee opened hearings on a bill by Chairman BYRD, Democrat, of Virginia, to cut back the emergency rapid writeoff program solely to "new defense items" only—items used in the defense program and for which existing production facilities are inadequate.

The Treasury chief estimated that fast amortization certificates issued since November 1950 would cost the Government roughly $3 billion extra in interest charges paid on money borrowed to replace the revenue deferred under the tax certificates.

More important, he said, a broad fast writeoff program tends to stimulate inflation and to give some industries or some companies unfair advantages over others. He added that the Byrd bill seemed in line with present administration policy of confining fast writeoffs to a very few industries.

TAX CUTS URGED

Mr. Humphrey conceded that current high tax rates make it difficult for many industries to save money or raise money for modernization and expansion, and declared that tax cuts should be made as soon as soundly possible. He again warned that tax reduction for favored groups would only postpone the day when general tax cuts could be voted.

Mr. Humphrey sidestepped questions from Mr. BYRD and Senator ANDERSON, Democrat, of New Mexico, for his views on the writeoff permit recently granted Idaho Power Co. for its Snake River dams. He said he believed these would be barred under the administration's present standards for tax certificates, but there were special circumstances in this case, and Defense Mobilizer Gordon Gray had better explain these to the committee himself.

Mr. Gray is scheduled to testify when the hearings resume tomorrow. He has explained that the Idaho Power Co. applications were filed in August 1953, long before the electric power expansion goal was closed, and that when the Government closed that goal it allowed for eventual approval of the Idaho Power Co. applications.

The Office of Defense Mobilization already has closed all but 8 of the 229 expansion goals set up since the Korean war to encourage production of defense-needed items and construction and expansion of production capacity for defense-related goods. Only Monday it ended fast amortization for new oceangoing tankers. Moreover, Mr. Gray has said that 5 of the 8 goals still open—steam turbines, steel castings, strategic mica substitutes, nickel, and roll-on-roll-off ships—are being studied to see whether they can be ended.

THREE GOALS UNTOUCHED

Mr. Gray has said he would not tamper with the three other expansion goals—construction of new research and development laboratories, new production facilities for goods to be procured by the military or Atomic Energy Commission, and a recently opened program to spur the expansion of output of liquid oxygen and liquid nitrogen, both used in guided missiles.

Recently Mr. Gray told a press conference he could see no disagreement between his own objectives and those of the Byrd bill. However, he said it might not be wise to remove ODM's power to reopen programs not strictly in the military category if a future need arose.

A similar argument was advanced by another witness before the Finance Committee, Stuart G. Tipton, president of the Air Transport Association. He argued that the Byrd bill would rule out pending applications for fast writeoffs on some $1.4 billion for 400 new jet transports which would be badly needed by the Defense Department in times of mobilization. He said ODM had agreed to consider reopening the aircraft goal. "The temporary postponement of full tax collection on these new aircraft is truly the best national defense bargain the Government could possibly obtain," Mr. Tipton stated.

He urged the bill be amended to authorize rapid amortization where the military mobilization requirements plus rock-bottom civilian needs exceed available supplies.

SUBSIDY TO PRIVATE POWER ALLEGED

The Byrd bill was supported by spokesmen for the National Rural Electric Cooperatives Association and the Virginia Association of Electric Cooperatives. They claimed the present program gives an unwarranted subsidy to private-power companies.

In his statement, Mr. Humphrey said that from November 1950 to March 20, 1957, almost 22,000 fast write-off certificates had been issued. Total cost of the projects involved was almost $39 billion, and about $23 billion of this or about 60 percent was made eligible for 5-year amortization, he told the committee.

He estimated the revenue lag from these certificates would be over $5 billion a year through 1960, and that the interest cost to the Government, over the entire period of the lag in tax collections, will be roughly $3 billion.

"Some degree of defense mobilization on a substantial scale may be essential for years to come," he declared. "But expansion of our growth, our basic defense capacity, except for a few very special items, cannot be separated from the broad base of our productive capacity.

"Artificial stimulants may well become artificial controls. Because rapid amortization is not applied universally, it could create a competitive imbalance in the sound, vigorous growth of our free economy. It is not the American way."

Mr. Humphrey said there were many industries whose production would be needed in war but whose continued expansion would be required by America's increasing population and productivity, even without war. He insisted these industries should not get tax help, and that such help should be confined to the few cases where facilities are required only for defense purposes.

Senator MARTIN, of Pennsylvania, ranking Republican on the committee, said he fully agreed with Mr. Humphrey and Senator BYRD. He said he was surprised at the cost cited by Mr. Humphrey.

Mr. BYRD again attacked the Idaho Power certificate, saying he could see no justification for rapid amortization for utilities. "They are guaranteed a profit," he argued, "and in this instance, construction already had started without this guaranty."

Senator ANDERSON said the utilities would have to raise billions of dollars in coming years for expansion. "Are we going to get a bill for fast amortization of all that?" he said.

"Not if I can help it," Mr. Humphreys replied. "Not if you pass my bill," said Mr. BYRD.

One Hundredth Anniversary of Oregon's Admission to the Union

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 9, 1957

Mr. NEUBERGER. Mr. President, in the year 1959, the State of Oregon will celebrate its 100th anniversary.

On February 14, 1859, Oregon was officially admitted to the Union as the first member of our Nation from the vast Pacific Northwest.

Extensive preparations are underway for a fitting observance of this great historic event in the annals of our country.

I have received from Mr. Morrie L. Sharp, secretary of the Oregon Centennial Commission, an article from the Oregon Journal, of Portland, Oreg., published on April 4, 1957, which summarizes some of the plans already underway to commemorate Oregon's admission to the field of stars in our flag.

Members of the Oregon State Centennial Commission, in addition to Mr. Sharp, are Anthony Brandenthaler, of Baker, a lumberman, as chairman; Bruce Bishop, editor of the International Woodworker; and Mr. Jack B. Lively, an attorney of Springfield, Oreg. These men are doing a capable job to prepare well in advance for the vast influx of tourists who will help residents of Oregon to celebrate Oregon's statehood.

For the information of the Senate, I ask unanimous consent that the article from the Oregon Journal be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CENTENNIAL SHAPES UP ON DRAWING BOARD—P–I SAID LIKELY SITE FOR 1959 CENTENNIAL

STATEHOUSE, SALEM, February 28.—A rehabilitated Pacific International building would provide the only facility available for housing the 1959 Oregon Centennial Exposition, members of the legislature were informed Wednesday night.

Anthony Brandenthaler, chairman of the centennial commission, said cost of rehabilitating the P–I building would be $500,000. This would be less than the amount which would have to be paid in rent if a similar structure was available.

Brandenthaler further stated that if contrary to present understanding, assurance could be made that the E–R Center or any other suitable facilities could be made available in time for the centennial commission's use, the new facility would receive thorough consideration of the centennial commission.

He added that this proposal was only offered to the legislature as a suggestion. This would be the largest expense of the $1,100,000 which will be requested from the State.

Of this amount $150,000 would be set aside to help establish fairs, rodeos, and other local events throughout the State put on even better centennial year programs as an increased tourist attraction.

Research into similar exhibitions in other cities has indicated that a conservative profit of $2,500,000 could be expected from the exposition and trade fair. Profit would go into the general fund.

Work on the P–I building would make the roof and bleachers safe along with other construction which could be used by the P–I for the next 20 years.

Originally plans called for a tie-in with the Portland E–R center. The P–I, however, has the needed 400,000 square feet of exhibit space, an arena holding 7,000 persons, and parking for 5,000 cars.

Brandenthaler said the Lewis and Clark exposition in 1905 received an appropriation of $500,000. Based on today's dollar and Oregon's population, a comparable grant would be $6 million.

Other members of the commission appearing were Morrie Sharp, Bruce Bishop, and Jack B. Lively.

Sharp, executive of the Oregon Journal advertising department, said a conservative estimate of the publicity which would result from an exposition would be $6 million. This is equal to the amount spent by the State Highway Department in 20 years' time.

He pointed out that according to advise from the convention committee of the chamber of commerce, plans for Oregon's centennial should be announced at the earliest possible date in order for the State to receive full benefit of attracting national conventions in 1959. Most of these groups plan for their meetings at least 2 years in advance.

Morrie Sharp added that a leading tour service with 33,000 offices or agents all over the world advise that plans should be announced during June of this year to receive a listing in their 1958 traffic books which are used as the basis of their assisting tourists in planning 1959 trips.

Additional tie-in advertising of Northwest companies and firms doing business in the region would add to the publicity value.

The plans include construction of an aqua-center grandstand seating 15,000 people for water sport and boating events and also a 10-acre midway.

The aqua center which many feel will prove an important additional drawing power would not have been feasible in connection with other sites that had received serious

consideration by the Portland E-R Commission.

Bruce Bishop, editor of the International Woodworker, said labor was solidly behind the exposition because it would bring in investors who would look over the region and see the opportunities available. This happened when persons visited the Northwest for the first time to see the Lewis and Clark exposition.

Jim Mount of Pacific National Advertising, said Oregon now gets 1 million visiting cars filled with tourists each year. An exposition could double this figure, he said, by providing something special for those who normally would not come to the Northwest.

Conservative estimates indicate that Oregon should double it tourist trade during the centennial year providing a major centennial exposition is put on and other recognized local events throughout the State conduct centennial improved versions of their particular show.

This would mean the expenditure of an additional $140 million of tourist money throughout the State and swell the highway department's collection of gas tax from tourists about $2,500,000.

Promotion of Oregon's industrial potential would be given a great boost by the fair, said Lively, Springfield attorney. He added that this was the time to show what the State had to offer.

Celebrations in other cities of Oregon would benefit from the exposition attraction to tourists, said Lively.

The commission also announced that it had received assurances from several departments of the Federal Government that they would participate in the proposed Regional Exposition and Trade Fair in 1959. Chairman Brandenthaler while in Washington, D. C., on two different occasions during the past year, called upon the Department of Commerce, the Atomic Energy Commission, the Department of the Interior and officials of the Army and Navy and was advised of their interest and desire to cooperate in bringing exhibits, which they would erect and staff at Oregon's Centennial.

These exhibits would include the outstanding features of the displays that have been built for the Trade Fairs of Paris, Rome, Brussels, and South American countries, by the Department of Commerce. In addition the Office of Technical Services of the Department has promised to provide an outstanding exhibit of new technological developments, similar to that which was provided at regional New England Exposition at Boston last year. It is probable that up to 100,000 square feet of exhibit space in the exposition building and an additional 100,000 square feet of outdoor space will be utilized to provide the Federal exhibits now assured.

Popularity and Power

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column entitled "Popularity and Power," written by Walter Lippmann, dealing with the relations between the President and Congress.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

POPULARITY AND POWER
(By Walter Lippmann)

The President has been at a loss to understand why after his enormous victory in November, he has run into such heavy opposition in Congress. His majority, he seems to think, was a national mandate from the people which ought to be obeyed not only by the Republicans in Congress but by the responsible Democrats as well. Yet, in fact, there is virtually no connection between the popular vote for Eisenhower in November and what the Congress is willing to vote for now.

The Republicans in Congress are led by men like Mr. KNOWLAND and Mr. BRIDGES who are opposed to the President on many of the critical issues of the budget and of foreign policy. The Eisenhower Republicans, as Senator FRANCIS CASE put it, are those who greatly admire President Eisenhower and resolve most of their doubts in his favor. They are a small minority. The Democrats, who gave the President such effective support after they won control of Congress in 1954, are now a partisan opposition preparing for the congressional elections of 1958. In Congress today the practical politicians who manage the two parties are acting on the assumption that the voters will not punish them if they oppose the President and will not reward them if they support him.

Thus, despite his great personal majority, the President has no party behind him, and he finds himself unable to translate his popularity into the hard cash of practical political power.

In the famous broadcast of February 29, 1956, when, after his recovery from his heart attack, he explained his decision to run for a second term, the President was already concerned with this problem. He knew he had not succeeded as he had hoped to, in rallying the Republicans behind him. "The work," he said, "that I set out 4 years ago to do has not yet reached the state of development and fruition that I then hoped could be accomplished within the period of a single term in this office." What was this uncompleted work? It was the conversion of the Republican Party to what it has since become the fashion to call Modern Republicanism to a program, as he put it in his broadcast, that "adapts governmental methods to changing industrial, economic, and social conditions."

He thought that he had not brought about this adaptation because 4 years were not a long enough time, and that he could bring it about in his second term. But, as a matter of fact, his political power is declining, not increasing, and he faces more trouble to drum up support now than he did in his first term.

The decline of his power is no doubt connected with the fact that he can never run again. But why is it that he has not been able to translate his great personal popularity into effective political power? Franklin Roosevelt became the undisputed leader of the Democratic Party in his first term. Why did not President Eisenhower?

There are, it seems to me, two main reasons.

The first is that he has never understood, or at least has never been willing to believe in, the measures by which practical politicians translate popularity into power. He has wanted to remake the Republican Party in the fifties as Roosevelt remade the Democratic Party in the middle thirties. But he has never been willing to break the eggs that are needed for the omelet. He has hoped that the Republicans who did not share his views would have a change of heart, that his own sincerity and geniality would win them over. He has never been willing to do what practical political leaders have to do, which is to fill the posts of command with men who share their views, to defend and to reward their supporters, and to put out or put down their opponents.

He has thought of himself as accomplishing his hopes for the Republican Party by standing above that party. From that eminence he would by the radiation of his popularity change the course of American political history. This image of the Presidency has in fact done much to increase his personal popularity. He has kept aloof from the controveries which arouse opposition and cause unpopularity.

But, though it has increased his popularity, it has diminished his influence. For men do not follow leaders who do not lead, and they do not care to be shot at while their commanders are appeasing their foes.

The second big reason why he has not succeeded in becoming the leader of a regenerated party is that, quite sincerely and genuinely, he has incompatible objectives. He would like to be a modern Republican in promoting welfare measures and an internationalist in foreign policy. But he would also like to be somewhere between Secretary Humphrey and Senator BYRD when it comes to paying for modern Republicanism.

On the one hand he would like, as he said in his acceptance speech to the San Francisco convention, to make the Republicans "the party of the future" and to meet the "new kinds of challenge to Federal and local governments: water supply, highways, health, housing, power development and peaceful uses of atomic energy. With two-thirds of us living in big cities, questions of urban organization and redevelopment must be given high priority. Highest of all, perhaps, will be the priority of first-class education to meet the demands of our swiftly growing school-age population."

But while meeting these big challenges, he would like at the same time to reduce rather than to expand the functions of the Federal Government to avoid somehow the rise in Federal expenditures which is unavoidable if the challenges are to be met.

This incompatibility within his own philosophy has come to a head in the present budget. As presented, the budget reflects a cautious and moderate attempt to meet the challenges and to act like the modern Republican Party which he desires. But as this means money, and therefore a big budget, it runs counter to the other side of his philosophy. As a result, he presented a modern Republican budget and then did not defend it against its unmodern Republican critics.

It is not easy for him to have his cake with George Humphrey and also to eat it with Arthur Larson.

Farm Legislation

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, May 9, 1957

Mr. BEALL. Mr. President, yesterday I called the attention of the Senate and of persons who may be interested to an excellent editorial from the New York Times on the ideas which have been expressed recently by Secretary of Agriculture Benson on farm legislation. At that time, I mentioned that Maryland's support of Mr. Benson's plans has stemmed, in large part, from the independent nature of our Free State farmers. Now I have another expression of support of Mr. Benson's actions. It is from the

Baltimore Sunday Sun, a newspaper with a tradition of "thinking" independently. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLUNT MR. BENSON

Secretary Benson acts increasingly like the right man in the right place at the right time. He is presiding over the Department of Agriculture just as the price-support policies of the last two decades come to their biggest crisis. And he is as nonpolitical a politician as has frequented Washington in a generation. Which means he is free to tell the bald and awkward truth without political fear or favor. That he is doing.

The awkward truth about the farm programs has been that Government supports brought out more produce than the market would absorb at the support price. The only way to deal with the resultant surplus (since dropping the price was politically unacceptable) was rigid Government controls of production. But as Secretary Benson says in a letter to Senator ELLENDER, farmers will not accept, legislators will not vote, and in practice administrators cannot impose the kind of controls which would be necessary to bring production into line with markets.

What, then, is the alternative? Mr. Benson isn't prepared right now to prescribe one. Certainly he doesn't proclaim himself among those students of the farm economy who insist with increasing confidence that the only reliable surplus-cutting device is the free play of prices in the open market. Even now any approach to this Spartan discipline is probably not in the political picture.

But the Benson letter comes at a time when the public shows quite an unusual interest in budgetary economies. Skillfully pitched to this new interest is the Secretary's reminder that net losses on the farm programs since 1932 have totaled some $11.7 billion, "but the problem has not been solved." Mr. Benson speaks, too, just after the big fight on new corn subsidies which split the corn farmers away from the cotton farmers in one of the major rifts in congressional farm bloc history. With its self-confidence shaken by this internal feuding, the farm bloc may be in a mood contrite enough to hear factual arguments against which it closed its ears in the years of arrogant unity.

As we say, right now Mr. Benson has no public answers of his own. But it is something to have phrased the questions at once so bluntly and so sharply.

Seven Hundred and Thirty-six Dollars and Forty-seven Cents for a Kansas Farm—One Dollar and Thirty-seven Cents for a New Hampshire Farm

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. HARRISON of Virginia. Mr. Speaker, the more one studies the Department of Agriculture reports of participation in the soil bank the more one is forced to the conclusion that it is being proved an unfair and unworkable experiment.

For the information of the House, I have consolidated available data on acreage reserve and conservation reserve signups for this year. The following table is based on the Department of Agriculture report of acreage reserve contracts signed through April 5, 1957, and the May 7, 1957, report of conservation reserve contracts signed through April 15, 1957:

State	Acreage reserve maximum payments	Conservation reserve maximum payments	Total
Alabama	$16,943,347	$1,227,000	$18,170,347
Arizona	6,209,976	162,000	6,371,976
Arkansas	14,027,678	1,263,000	15,290,678
California	14,834,556	526,000	15,359,556
Colorado	22,196,696	5,097,000	27,293,696
Connecticut	1,618,688	3,000	1,621,688
Delaware	917,074	35,000	952,074
Florida	1,565,691	968,000	2,533,691
Georgia	19,225,091	4,186,000	23,411,091
Idaho	4,916,880	608,000	5,524,880
Illinois	19,058,244	439,000	19,497,244
Indiana	18,661,043	634,000	19,295,043
Iowa	34,246,487	1,168,000	35,414,487
Kansas	84,811,159	3,689,000	88,500,159
Kentucky	9,622,338	698,000	10,320,338
Louisiana	10,906,870	235,000	11,141,870
Maine		677,000	677,000
Maryland	2,168,335	307,000	2,475,335
Massachusetts	964,847	15,000	979,847
Michigan	12,214,339	1,866,000	14,080,339
Minnesota	11,947,455	8,513,000	20,460,455
Mississippi	17,992,392	1,100,000	19,092,392
Missouri	24,207,921	3,637,000	27,984,921
Montana	8,775,620	1,179,000	9,954,620
Nebraska	44,583,257	1,668,000	46,251,257
Nevada	76,037		76,037
New Hampshire	279	14,000	14,279
New Jersey	1,375,441	136,000	1,511,441
New Mexico	2,610,900	7,335,000	9,945,900
New York	3,417,454	2,223,000	5,640,454
North Carolina	17,842,584	779,000	18,621,584
North Dakota	21,333,021	7,460,000	28,793,021
Ohio	19,250,801	699,000	19,949,801
Oklahoma	22,360,361	5,645,000	28,005,361
Oregon	3,157,523	1,069,000	4,226,523
Pennsylvania	3,862,702	626,000	4,488,702
Rhode Island			
South Carolina	13,726,068	1,892,000	15,618,068
South Dakota	15,972,521	6,947,000	22,919,521
Tennessee	8,774,959	1,502,000	10,276,959
Texas	54,924,190	27,277,000	82,201,190
Utah	1,873,328	1,208,000	3,081,328
Vermont	2,099	51,000	53,099
Virginia	3,262,171	144,000	3,406,171
Washington	6,364,748	352,000	6,716,748
West Virginia	266,110	18,000	284,110
Wisconsin	7,619,951	2,670,000	10,289,951
Wyoming	689,857	371,000	1,060,857
Total	611,469,089	108,317,000	719,786,089

How much does this mean to the average farmer? By all accounts, millions of average farmers have found nothing of interest or profit in the soil bank, and have passed it by. If we allocate arbitrarily the 1957 soil bank benefit payments among all the farms of the Nation, irrespective of actual participation in the soil bank, however, we find the following sharp variations in indicated benefits:

State	Number of farms [1]	Average
Alabama	176,956	102.68
Arizona	9,321	683.61
Arkansas	145,076	105.39
California	123,075	124.79
Colorado	40,749	669.80
Connecticut	12,753	127.16
Delaware	6,297	151.19
Florida	57,543	44.03
Georgia	165,523	141.43
Idaho	38,740	142.61
Illinois	175,543	111.06
Indiana	153,593	125.62
Iowa	192,933	183.55
Kansas	120,167	736.47
Kentucky	193,487	53.33
Louisiana	111,127	100.26
Maine	25,368	26.97
Maryland	32,500	76.16
Massachusetts	17,361	56.43
Michigan	138,922	101.35
Minnesota	165,225	123.93
Mississippi	215,915	88.42
Missouri	201,614	138.55
Montana	33,061	301.09
Nebraska	100,846	458.63
Nevada	2,857	26.61
New Hampshire	10,411	1.37
New Jersey	22,686	66.62
New Mexico	21,070	472.04
New York	105,714	53.35

Oklahoma	118,979	235.38
Oregon	54,441	77.63
Pennsylvania	128,876	34.82
Rhode Island	2,004	
South Carolina	124,203	125.74
South Dakota	62,520	366.59
Tennessee	203,149	50.58
Texas	292,947	280.60
Utah	22,826	134.99
Vermont	15,981	3.32
Virginia	136,416	24.96
Washington	65,175	103.05
West Virginia	68,583	4.14
Wisconsin	153,558	67.01
Wyoming	11,402	93.04

[1] 1954 agriculture census.

On this basis, we might ponder the relative worth of the labors of the Kansas farmer, $736.47, and the New Hampshire farmer, $1.37.

Hon. Leonor K. Sullivan, of Missouri

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. MOULDER. Mr. Speaker, the State of Missouri and our great Nation are fortunate in having Mrs. LEONOR SULLIVAN as a Representative in Congress. We in Missouri are proud of our first woman Member of Congress and we know that every Member of this great lawmaking body has the highest respect for her great character and ability. She is rightfully recognized as one of the most outstanding women of this Congress, and I know I am speaking for the entire delegation from Missouri when I say we are proud of her record in Congress and as being one of our most outstanding leaders in the State of Missouri.

Mr. Speaker, Mrs. SULLIVAN was recently invited to speak at a meeting in the assembly hall of the University of Missouri, and the following editorial printed by the Columbia Missourian, a nonpartisan journalism school newspaper, is an example of the recognition of her ability and understanding of national affairs:

[From the Columbia Missourian of April 26, 1957]

LITTLE LEADERSHIP

Mrs. LEONOR SULLIVAN, Missouri Congresswoman for the Third District, defined the problem of Presidential leadership rather well in a speech before the Columbia chapter of the American Association of University Women Tuesday night. The AAUW deserves thanks for bringing such an articulate and informative spokesman to Columbia.

What Mrs. SULLIVAN said is unusually true, when we remember that her examination of the President's lack of leadership did not

proceed on a partisan basis. Hers was a criticism frequently made in varying forms by representatives of left, middle, and right political positions. The present legislative situation in Congress would no doubt be changed were Eisenhower to stand behind his program. We can think of at least three situations in which this could be true.

One of them is that of the United States Information Agency, which is having a pretty rough time now from Senators and Representatives who show by their comments they do not understand USIA's function.

They object to its cultural exhibits, to the Voice of America broadcasts, to the personnel who run the organization, claiming as usual that they are incompetents who could not get a job elsewhere. And the charges are usually just about this in general.

Certainly USIA could probably use some tightening of its budget. We seriously question the value of a Government news agency taking over the function of the existing wire services abroad, or producing a motion picture with an anti-Communist slant to be shown in the United States as well as elsewhere.

The President puts up a feeble defense of this propaganda program, usually at his press conference. He no doubt thinks this is adequate. But from the going over USIA suffers in the hands of Congress, Eisenhower comments seem to mean little.

Similar things are true in the case of foreign aid, which as Mrs. SULLIVAN pointed out, any Representative in Washington can slash dangerously without hearing a peep from the interests in his constituency. The President knows this. Yet he and the Secretary of the Treasury tell Congress to go ahead and cut the budget. No strong defense of foreign aid has been forthcoming at the time when it is needed most.

The President could also have spoken out for his own Cabinet officer during the recent woes of the Post Office. But Postmaster General Summerfield was the one whose voice was heard and who took the action to get money from Congress.

Only after the Saturday without mail did the public learn that the President had agreed to the action beforehand. He could at least have helped Summerfield with more than private assurances.

Delegation of powers works well in the Army when directed by a skilled soldier such as Dwight Eisenhower. He also has the ability to lead in government, especially after nearly 5 years' experience. If this Congress is going to enact any progressive legislation, it will take more Presidential leadership than we have now.

Highway Accidents

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. AYRES. Mr. Speaker, one of the most serious problems faced by our country today is the ever-increasing toll taken in highway accidents.

A good writer and a good cartoonist can be every effective weapons against this killer. Two such men are Tom Horner and Ned White, of the Akron Beacon Journal. Recently the National Safety Council presented the National Safety Council public-interest award for exceptional service to safety to Tom Horner, Beacon Journal editorial writer. Mr. Horner is the second newspaperman in the United States to receive this award. It is usually awarded to newspapers.

The award went to Horner not only for his work in the newspaper field but also for his numerous talks and years of work in the safety effort. He started his crusade when his son was hit by a car on March 23, 1945. His editorials are widely reprinted and distributed by the thousands.

Ten years later, to the day, Horner was named Akron's first safety man of the year in recognition of his decade of safety effort. In February of this year he was the recipient of the Freedoms Foundation's top award for his July 4 patriotic editorial. Three days later he and his paper were awarded the Christopher medal for the annual Christmas Eve family prayer page.

Ned White, Beacon Journal editorial page artist, and the Beacon Journal were also presented with plaques by the National Safety Council at the third annual mayor's safety conference. Mr. White, who has had many of his safety cartoons reprinted and distributed, received his award for honorable mention in the annual Christmas safety cartoon contest sponsored by the National Safety Council. The cartoon, Slippery When Wet, depicted gasoline and alcohol mixed on an icy highway. The Beacon Journal's was for publishing the prize-winning cartoon.

The following editorials by Tom Horner, After Walking Together, Their Shoes Now Are Empty, and Losing a War, are examples of his fine work in a field to which the Congress may someday be forced to turn their attention, if the various States do not enact adequate traffic safety legislation:

AFTER WALKING TOGETHER, THEIR SHOES NOW ARE EMPTY

(By Tom Horner)

In life and in death—they walked together.

The small, scuffed shoes of a little boy.

The big, well-worn shoes of an aged man.

Together they walked through sunshine and rain—then stepped across the brink into eternity.

They were together often, this boy of 2 and this man 70 years older, in a bond of firm friendship and understanding that so often links the very young and the very old.

The boy's shoes are comparatively new. They're scuffed, as all little boys' shoes are scuffed, even with few wearings. But these were kept for special occasions, such as holidays.

Sometimes he wore his old shoes, with the toes turning up, from kicking at stones, and with deep creases across the toe which come from running and climbing. Sometimes he wore a pair of faded blue, worn tennis shoes, with the white shoestrings turned to gray.

The man's shoes were his only pair, soft and comfortable. He kept them polished and shining. They had been half soled; the heels are slightly run over.

Little Shoes and Big Shoes. Every day—and sometimes many times a day—Little Shoes raced from his home across the lawn and up onto the porch where Big Shoes waited, resting in a chair or swinging in the porch swing. Many times Little Shoes danced impatiently, waiting for Big Shoes to come outdoors.

Then Little Shoes would rest quietly while Big Shoes told of faraway places, of the many things to see in the city and in the country. Of man's work in field and factory. Of games to play, and dancing and parties.

Many questions—about sun and stars, wind and rain, grass and flowers, poured from Little Shoes. And for each question Big Shoes had a patient answer.

Most of all, Big Shoes and Little Shoes liked to walk together.

The slow, long steps of the man, the hurried 3-for-1 steps of the little boy, trotting to keep up, pausing when the man paused.

And a small hand grasping tightly and confidently the rough, calloused hand, grown too old to work.

And a small brown dog, running beside them, ahead of them.

Their route never varied. Big Shoes would pick up his cane, take the small boy by the hand and together they would start up Raymond Street from the place where their homes stand side by side. The boy always walked on the inside, away from the street and away from automobiles.

There are walls beside the walk, where a boy could balance; there is an unpaved driveway that must be crossed carefully. There are neighbors and children to greet.

At the corner of Raymond Street and Euclid Avenue, where the Centenary Methodist Church stands, they turned west. There, because of a bend in the street, it seems that the cars coming down the hill might run right over the sidewalk. But always they turned and followed the street. This part of the walk always left both Big Shoes and Little Shoes a bit frightened and they hurried to get to the place where the walk straightened out.

That is near Mrs. Bell's house—and Mrs. Bell is Little Shoes mother's cousin. Sometimes Little Shoes came here for cookies.

Then they turned down Mallison Street and walked along the oak-shaded sidewalk toward Wooster Avenue. There's a boat in the yard across the street that Little Shoes wanted to inspect more closely, but Big Shoes said "No," because it was across the street.

Little Shoes liked to walk under those big oak trees; he liked the rustle of the leaves and the shafts of sunlight that filtered through.

There are boys on Mallison who have a tent and sometimes Big Shoes would wait, while Little Shoes peered into its darkness.

Then on to Wooster Avenue, where they turned left again. Many times they would go even more slowly here, and listen to students playing the piano for their teacher. Or they would stop and watch the big trucks roar along the street.

In front of the Wooster Avenue Methodist Church is another wall that Little Shoes liked to walk on. But Big Shoes always cautioned his small friend to keep off the grass.

And finally, they turned up Raymond Street toward home. Big Shoes a little weary, for the circuit is a long walk for a man of 72. And Little Shoes, full of vigor, ready to make a dozen trips.

This was a safe route. No streets to cross. No hazards to catch a small boy and an elderly man unaware.

Then, on the Labor Day afternoon, Little Shoes and Big Shoes started their regular walk a little late. The boy was wearing his new shoes.

It was after five. Suppers would be ready soon. They spoke to friends as they walked along. The little brown dog was with them. Mrs. Bell, sitting on her porch at 544 Euclid, saw them pass.

Only a few feet further up the street, this man and this boy kept a rendezvous.

A car came down the Euclid Avenue hill. Witnesses said it was moving fast. The driver said another car pulled out of Mallison Street, striking his car and putting it out of control.

Up over the curb, the car plunged toward the man and the little boy. Mrs. Bell screamed.

And then there was Big Shoes, lying on the sidewalk and the lawn, his cane knocked from his hand, and the small boy torn from his protecting grasp.

And there was Little Shoes, crumpled up near a rosebush. His shoes had been torn from his feet and lay several yards away from his quiet and still form.

On the record, Donald Dandridge, aged 2, and large for his age, was Akron's first Labor Day holiday traffic victim of 1956—the 25th person to die in traffic in Akron this year.

Within 24 hours, William Starks, 72, became the 26th traffic victim.

Big Shoes—Little Shoes—
Both are empty shoes, now.

LOSING A WAR

The United States is losing a war.

This is a serious indictment against a Nation which has never lost a war against a foreign enemy. This is an indictment which should stir 170 million Americans into action.

The enemy we face is not a foreign invader. Our enemy is carelessness and recklessness in traffic.

We're losing the war against traffic. And traffic is killing Americans, young and old, at the rate of nearly 110 daily. Last year, 40,000 American lives were sacrified uselessly to traffic.

Paul Jones, public relations director of the National Safety Council, has called upon business and industry to devote special attention and effort to the winning of this war on our own streets and highways, just as business and industry have always helped to win our other battles. Industry already is helping with off-the-job safety programs in connection with industrial safety efforts.

Business and industry already sponsor many safety programs outside their establishments and factories such as safety councils, safety committees of various kinds and nationwide traffic safety campaigns. Typical of the latter is the voluntary motor vehicle inspection program, which has been provided motorists in the Greater Akron area for almost a decade by the automobile dealers and garagemen, in association with the safety council of the chamber of commerce.

Business and industry can do more by bringing their safety-trained experts and their safety techniques into direct application to traffic safety.

Most urgently needed are important weapons for the war which the lawmakers, not businessmen and industrialists must provide. At city and State levels there is immediate need for laws which will enable enforcement officers to keep unsafe drivers and unsafe cars off the streets and highways, and for laws that will permit only competent drivers to be licensed.

If we are to win the war against traffic, driver training should be compulsory for every high-school graduate.

Moreover, our lawmakers in city councils and State legislatures should provide adequate funds to insure good enforcement.

Business and industry will do their part, we are sure. We wish we could be equally confident concerning the lawmakers.

Foreign Aid Economy Begins at Home

EXTENSION OF REMARKS
OF
HON. JOSEPH F. HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. HOLT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of May 7, 1957:

FOREIGN AID ECONOMY BEGINS AT HOME

Under the prodding of Representative GLEN P. LIPSCOMB, Republican of California, the State Department has taken a step in the direction of economy. It has discontinued one strand in its spending from a million dollar a year "overseas emergency fund," administered without public accounting by the Secretary of State. We applaud this step, for which Representative LIPSCOMB doubtless deserves most of the credit, even though the economy takes effect not in Baluchistan, Britain, or Borneo, but right here in Chicago.

For 14 years the State Department has had the National Public Opinion Research Center of the University of Chicago under contract to provide reports on what the public thinks. One recent question, which has excited much comment and some controversy, ran, "Do you think we should or should not continue to send economic aid—like machinery and supplies—to countries which have agreed to stand with us against Communist aggression?" After 1,300 heads had been counted, it was concluded by some, more active wishers than thinkers, that the great majority of Americans favor the foreign aid program.

Representative LIPSCOMB felt that spending from the privy purse of the Secretary of State for statistics to use for domestic propaganda is not a proper expense. The State Department has moved to make the whole question more or less moot by discontinuing the program. Fortunately for it, it has other means of ascertaining public opinion.

In fact, we are pleased to volunteer, free, the following:

1. In a free country with a representative legislature, and with an unfettered right of petition, Congress can tell the State Department a good deal about public opinion. So can the press.

2. When the State Department is entrusted with a million dollars for overseas emergency use, the public does not want any part of the appropriation spent on self-serving publicity maneuvers.

3. If answers to a poll are to have any reliability, the questions should not be leading questions with a marked slant. Questions like the one quoted above, or like "Do you or do you not favor continuing to shovel money out the window?" do not yield valid statistics.

4. The continuance or noncontinuance of any Government spending program should not depend in any marked degree upon a head count of 1,300 unidentified persons.

This expression of opinion is offered the State Department without charge.

Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. HENDERSON. Mr. Speaker, in the few short days since the death of Senator McCarthy the press has been filled with articles and editorials concerning his life and his stormy career. The following is an editorial which appeared in the Daily Jeffersonian of Cambridge, Ohio, on May 6, 1957. It is an excellent commentary upon the controversial Senator from Wisconsin.

MCCARTHY POUNDED HIS THEME WITHOUT REST

Senator Joseph R. McCarthy, one of the most disputed figures in 20th century American politics, may have put an indelible mark upon our history in that brief span of years when his star flashed bright.

Gone from the scene at an early 47, he unquestionably will be the subject of major controversy among the historians as he was among his contemporaries at the height of his power.

Power is the right word. From 1950, when a timely anti-Communist talk catapulted him suddenly to center stage as a fighter against American Reds, until 1954, when the Senate condemned his tactics, he stood as one of the most powerful Senators seen in America.

In that period he ripped and flailed at Federal agencies, declaring his determination to root out communism in Government. He charged that not only preceding Democratic presidents but Mr. Truman and then the Senator's fellow Republican, President Eisenhower, were soft in assailing the Reds.

His rough-and-tumble tactics, his bristling energy won him hosts of friends in the Nation who appeared deeply troubled then over the menace of communism without our borders.

These same maneuvers, however, brought down on his head a ceaseless barrage of criticism—undoubtedly from many true Communists but also from countless others who believed the Senator's attacks were destroying the reputations of innocent men and actually helping communism by creating confusion and generating a kind of mental civil war in America.

In 1953, Mr. Eisenhower's first year in office and McCarthy's first as chairman of a Senate committee investigating communism, the Senator reached the zenith of his power. Running the group with what amounted at times to one-man rule, he pounded his theme without rest.

He learned at this time that he had enemies not only within the country but far and wide around the globe.

But by 1954, though no one realized it at first, this comet-like figure was starting a downward spin. Challenged by the administration in the celebrated Army-McCarthy hearings, he struggled through months of bitter fighting under the glare of television.

The censensus was that he lost both stature and momentum in that battle.

In November that year the Senate studied his tactics as a Senator and ended by roundly condemning him. From then on, he slowly sank from public view. His power crumbled, and he became almost a forgotten man.

But no one who looks back on the years 1950–54 would dare to hazard that he will not be remembered for the swath he cut through American affairs in that troubled time.

OTC and the United Nations

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. LANHAM. Mr. Speaker, since the State Department signed the Articles of Agreement on the OTC—Organization for Trade Cooperation—in Geneva in 1955 and the subsequent submission of the OTC to Congress for approval, a sharp controversy has developed over

the position that would be occupied by the OTC should it actually be set up. The signature of the Articles of Agreement was simply a formality and United States membership in the OTC was made subject to congressional approval.

The last Congress failed to act on the OTC but hearings were held before the House Committee on Ways and Means. The opposition contended that approval of OTC membership would in fact place great powers into the hands of the Organization—OTC—sitting in Geneva at the expense of the authority of our own Congress to regulate the foreign commerce of the United States. The United States, it was pointed out, would have only one vote. Should all present GATT members join the OTC, this country would have only 1 vote out of a total of 35.

The supporters of the OTC, on the other hand, claimed that the OTC would have no supranational powers; that in fact it would have no powers that are not now being exercised under GATT—General Agreement on Tariffs and Trade—and that OTC would merely provide GATT with an administrative arm.

On its part the opposition cited article 11 of the OTC articles of agreement as showing the real intent and direction of our proposed participation in the OTC. Article 11 provides that the OTC may be brought into relationship with the United Nations as a specialized agency. This could not be done so far as the United States is concerned without our own consent; and the Ways and Means Committee last year amended the bill that proposed OTC membership by providing that only Congress could give the consent of the United States.

However, the position of the United States would not be the ruling consideration. The OTC could bring itself under the U. N. "by an agreement approved by the assembly"—article 11 (b) OTC articles of agreement.

What does this mean? How would the OTC make an agreement with the U. N. to become a specialized agency thereof? The answer is to be found in article 5 of the articles of agreement—that is, a clue to the answer is to be found there, not a definitive answer.

Article 5 says:

The assembly (of OTC) shall establish its own rules of procedure.

Therefore the OTC could make an agreement with the U. N. by a procedure not yet known or established and such agreement could be approved by the OTC under procedures not yet known or established.

Thus it is obvious that the OTC could become a specialized agency of the U. N. without the consent of the United States unless procedures not yet adopted and the character of which must remain unknown until they are adopted, would make this impossible. This is most unlikely.

It could, of course, be said that the United States would not be obligated to recognize the subsidiary relationship of the OTC to the U. N.; but it is not difficult to foresee the position into which this would place us.

The outcome of such issues is often determined by the atmosphere under which particular steps are taken. With the other members favorable to the U. N. link and with our own State Department strongly inclined in that direction, the leverage on Congress would be very powerful.

As a sample of the climate in this matter nothing could be more revealing than a resolution recently adopted by the United Nations. There is no indication that the American representative to the U. N. either abstained or voted against the resolution. I call attention to the third numbered paragraph. It says the General Assembly of the U. N. "looks forward to the establishment of the Organization for Trade Cooperation and urges states members of the United Nations and members of the specialized agencies to act with a view to approving the agreement establishing the Organization for Trade Cooperation."

This affords a fair idea of the real intent with respect to the OTC and the real trend toward bringing the regulation of international commerce under the sway of the United Nations.

It will take more than executive denials in the United States to overcome the impression already created and thus confirmed by this U. N. resolution as to the underlying intent of the OTC. It is one thing for the Secretary of State to come before a committee of Congress and deny what appear to be clear implications of the intent of the OTC. It is something quite different to get the unguarded revelation of what is really in the minds of the moving forces behind the OTC.

In view of the great interest in the question of what would be the real status of the OTC if it were set up, I include the U. N. resolution referred to, as follows:

UNITED NATIONS ASSEMBLY RESOLUTION ON THE DEVELOPMENT OF INTERNATIONAL ECONOMIC COOPERATION AND EXPANSION OF INTERNATIONAL TRADE

On February 20, 1957, the United Nations General Assembly adopted a resolution (55 in favor, 7 against, and 4 abstentions). The substantive part of the resolution reads as follows:

"1. Urges the governments of member states to continue their efforts to reduce existing barriers to international trade in a mutually satisfactory manner for the purpose of expanding sucIf trade at the fastest feasible rate and, in particular:

(a) To continue to work toward this objective through the international organizations which are working successfully for the expansion of world trade, and to continue to avail themselves of services offered in the field of trade by these organizations;

"(b) To reduce or remove restrictions and/or discrimination with regard to trade and payments as soon as their balance-of-payments and reserve positions permit, having due regard to the special problems arising from the economic development needs of the less developed countries;

"(c) To conduct their trade policies with due regard to their possible harmful effects on the economies of other countries, especially countries which are dependent on exports of relatively few commodities;

"(d) To follow internal economic, monetary and fiscal policies which promote high levels of production, employment and investment, keeping in mind the relationship between such internal policies and the possibilities of expanding world trade;

"2. Endorses Economic and Social Council Resolution 614 (XXII) of August 9, 1956, and requests the council to continue to give particular attention to developments in the field of international trade;

"3. Looks forward with interest to the establishment of the Organization for Trade Cooperation and urges states members of the United Nations and members of the specialized agencies to act with a view to approving the agreement establishing the Organization for Trade Cooperation."

Housing Act of 1957

SPEECH

OF

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6659) to extend and amend laws relating to the provision and improvement of housing, to improve the availability of mortgage credit, and for other purposes.

Mr. SISK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, as I suggested a moment ago when the gentleman from Kentucky yielded to me, I had proposed to offer this amendment, because I felt it was a good amendment. The reason given by the ranking minority member of the Banking and Currency Committee for opposing this I do not believe is wholly in line with at least the statements that I heard from my home State with reference to the time that it takes to prepare these applications.

As I understand, out there the State legislature had to take certain action, and the procedure was moving along for the setting up and the preparation of plans for this college housing and the financing. The action taken by the State was predicated upon the belief that they would receive this money at 2.78 percent, and that was prior to March 15 and prior to the consideration of these bills.

But the thing is that they did not get their final applications in until sometime in April and, therefore, are going to be precluded from enjoying the type of financing on which they had theretofore worked their plans out. That is in line with the plans that they had been working on over a period of time.

I just feel that changing this date to May 10 is simply an equitable and fair way to grant to these institutions and to the States where it has to do with States, a fair and orderly way of setting up their program.

I still insist as I said a little while ago that what we are doing here is to make this retroactive, and in doing so we have upset plans that have been in preparation for months in connection with this college housing.

I certainly feel that if the Congress wishes to deal fairly with these people that we should make this date May 10, as has been proposed in the amendment. I think the gentleman from New York mentioned the fact a little while ago about whether or not I would support some subsidy with reference to this housing. So far as I am personally concerned I think that it is in line with some things that we have done here from time to time when we have given some assistance in the way of subsidies to higher education. I know there are a number of proposals with reference to assisting in the education and the training of engineers, of scientists, and of specialists in all fields; and I personally feel it might be a good proposition if we did not increase the interest rate at all, or that we grant the difference between the 2.78 and whatever the interest rate may be fixed at as a subsidy to these institutions. I think that it would be in the interest of the country and of the people, and of the boys and girls who will be educated in these schools.

But in view of the fact that most of us felt that that was not a proposition that we could get through the House at the present time I do feel in justice to these institutions that the date of May 10 is the only fair date. As I say, my own State, and I am sure this is true in other States, they have been working on these plans for a long time on the basis of 2.78 interest, and the cutoff date should not be earlier than May 10.

Mr. COAD. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Iowa.

Mr. COAD. In other words, if the date is changed to May 10 this particular loan that has already been filed will get in on the 2.78-percent rate?

Mr. SISK. That is correct as I understand it. I do not know the exact date of the filings that have occurred out there, but they were worked out before they knew what the provisions of this bill would be. It is to protect long-range planning going back many months before there was any kind of a bill proposed.

Mr. COAD. The very fact they have been filed will result in the previous date taking care of them?

Mr. SISK. Yes.

Mr. McDONOUGH. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from California.

Mr. McDONOUGH. Mr. Chairman, I support the pending amendment. I have a letter here, and I do not know whether the gentleman quoted from it in his remarks or not, from the Governor of the State of California which indicates that the change in date authorizing the increase in rate affecting a long-range plan for additional student facilities in the State colleges of California will amount to $2 million in added cost, that the student body would increase from 47,000 students to 76,000 students in 1967.

Mr. SISK. I thank the gentleman.

Harry S. Truman

SPEECH
OF
HON. PAUL C. JONES
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. JONES of Missouri. Mr. Speaker, I want to commend our colleague the gentleman from Missouri [Mr. CHRISTOPHER] for obtaining this time in which Members may pay a tribute to his most distinguished constituent and our fellow Missourian, Harry Truman, on this his 73d birthday.

I am glad to join with the gentleman from Missouri and my other colleagues in extending felicitations and best wishes to President Truman and to wish for him many more years of happiness, good fortune, and service.

It has been my good fortune to have known President Truman over a long period of years. I well remember his first visit to my hometown of Kennett, during his first campaign for the United States Senate, to which he was elected in 1934. He spent a good part of the noon hour visiting with my father at our newspaper office, and at the conclusion of that visit we were both convinced that here was a man who would devote himself to public service. From that time on he had the support of both my father and myself, as well as the newspaper which we published.

Outside of his own Jackson County, I doubt if there was any section of Missouri where Senator Truman was held in greater esteem, or where he had more close and devoted friends than in the 10th Congressional District, particularly in the extreme Bootheel section. The feeling was mutual as indicated by the fact that even after he became President, he came back to Caruthersville to attend the American Legion district fair, just as he had done each year beginning in 1934.

Harry Truman has always found time for his friends.

I have never known a man who I believed was more sincere in his desire to do those things which he believed were in the best interest of all the people. He has always taken his obligations seriously, and while I have not always concurred in his views on matters of domestic policy, I have never doubted his sincerity in attempting to implement every promise and every pledge made in the platform of the Democratic Party. For after all, Harry Truman has always been a "party" man and I believe that he felt as keenly as any individual possibly could, his obligation as the leader of the Democratic Party.

Honest, sincere, loyal, courageous, firm, direct, frank, energetic, and indefatigable, are only some of the adjectives which might be used in characterizing this man, whose name will undoubtedly go down in history as one of the great leaders of this Nation. I will always believe that Harry Truman was a man of destiny.

Many are apt to judge a man who has been active in politics solely on his political record, and I have no apologies to make on the political record which has been made by this great man who on many occasions which have been enumerated countless times, has proven himself not only an astute politician, but a statesman of the first order.

However, I think it well to go behind that record, and look into the more intimate life of the man as he has traveled along life's highway. How does he measure up as a husband and as a father? Can you recollect any man in public life who has more clearly demonstrated by his every act his concern and devotion for every member of his family, than has Harry Truman?

Throughout the years, both before, during, and after having served as President of the United States, Harry Truman has demonstrated his reliance upon divine guidance. Church attendance has been a part of his life since childhood.

We, who are members of the Masonic fraternity appreciate his dedicated service throughout the year. Even those who are not entirely familiar with the Masonic order know that no man could have been selected by his brothers to serve as the grand master of the Grand Lodge of Missouri without having survived the closest scrutiny that is possible for man to undergo. Not only has he attained all of the honors that are conferred on Master Masons, including the coveted 33d degree, but he has served with distinction in the Masonic order since 1909.

Yes, to me, Harry Truman has measured up to every criteria that might be suggested. He is the kind of man that anyone can feel honored to call a friend in every sense of the word.

These are some of the reasons why I am most happy, for myself, and for his many other friends throughout the district which I am privileged to represent, to extend congratulations and felicitations on this day, and to wish for President Truman and his family all of God's blessings which they so richly deserve.

Water Diversion From the Great Lakes

EXTENSION OF REMARKS
OF
HON. DAVID S. DENNISON, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. DENNISON. Mr. Speaker, it is a great honor and privilege to represent the 11th District of Ohio, probably the fastest growing and most rapidly developing industrial area in the United States. Much of our growth and prosperity and the welfare of several million people in the 11th district and throughout the State of Ohio is closely identified with the Great Lakes, particularly Lake Erie. Any plan to alter or change the

water level of these lakes poses a distinct threat to Ohio and to all the States bordering on the Great Lakes. We must be concerned by any move by an individual State or community to divert the waters of the lakes for any purpose until such time as we can establish an overall authority to determine the rights and to protect the interests of all the States concerned with the Great Lakes. The attitude of the people of the 11th Ohio District is expressed in the following resolution passed by the council of the city of Ashtabula, Ohio, opposing additional diversion at this time of water from the Great Lakes and from Lake Erie:

Resolution 4467

Resolution opposing legislation for the additional diversion at this time of Lake Erie waters by upstream users

Whereas the Congress of the United States has legislation pending in the Senate and House of Representatives for the additional diversion of waters from the Great Lakes and Lake Erie; and

Whereas the proposed diversion is detrimental to the Great Lakes States and affects the sovereignty rights of all of the Great Lakes States, and threatens to deprive the Great Lakes States and their citizens of their property without due process of law: Now, therefore, be it

Resolved by the Council of the City of Ashtabula:

SECTION 1. That it opposes the additional diversion at this time of Lake Erie waters by upstream users, and urges the President of the United States, the Senate of the United States and the House of Representatives to oppose the passage of any legislation for additional diversion of Lake Erie and other Great Lakes waters for upstream users.

SEC. 2. That the clerk of council be and she is hereby directed to forward copies of this resolution to the President of the United States, and to Senator JOHN BRICKER, Senator FRANK J. LAUSCHE, DAVID S. DENNISON, Member of Congress, and MICHAEL KIRWAN, Member of Congress.

CLIFFORD R. KADON,
President of Council.

Adopted April 22, 1957.
Attest:

NELMA I. RINTO,
Clerk.

Approved:

NED V. COLLANDER,
City Manager.

I hereby certify that the foregoing is a true copy of Resolution 4467, adopted by the Council of the City of Ashtabula, Ohio, April 22, 1957.

NELMA I. RINTO,
Clerk of Council.

Manpower Crisis in Federal Labs

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. MATTHEWS. Mr. Speaker, I have recently received a letter from a friend and constituent of mine, Mr. Hugh B. Summers, Jr., of Lake City, Fla., who has called to my attention an interesting article entitled "Manpower Crisis in Federal Labs," by Joseph A. Grand, which was published in the April issue of Chemical and Engineering News.

This article is of such great importance that I am pleased to include it at this point in the RECORD, and I hope all my colleagues have an opportunity to read it thoroughly. This manpower crisis in the Federal labs of our country is so acute that Congress should certainly take remedial steps immediately. The complete article follows:

MANPOWER CRISIS IN FEDERAL LABS—LOW GOVERNMENT SALARIES TEMPT SCIENTISTS TO TAKE INDUSTRIAL JOBS, DISCOURAGE NEW SCIENCE GRADUATES FROM ENTERING FEDERAL SERVICE

(By Joseph A. Grand, chairman, professional relations and status committee, Washington section of the American Chemical Society)

Government laboratories are losing out in the keen competition for scarce scientific manpower. The critical situation now facing Government labs results from two things:

The Federal service is not obtaining its fair share of new science graduates.

It is unable to retain a considerable portion of its better scientific personnel.

How serious is the problem? As one official of a prominent Government laboratory put it, "We are withering on the vine, and if we don't get help soon, we will be dead." This is an extreme view, and the seriousness of the situation varies with the character of the employment. Defense Department laboratories, employing a higher percentage of physical scientists and engineers, undoubtedly feel the pinch more severely than other departmental laboratories.

Compared with industry figures, the hiring and separations statistics for Federal scientists do not indicate an alarming turnover rate. However, considerations of quality and source of employees tell a different story. Influx of new graduates into Government service, vital new blood in the lifeline of a laboratory, is a mere trickle. One recent survey shows that 75 percent of the industrial firms surveyed reported 25 percent acceptance of employment offers to scientific personnel. Another survey shows that 27 percent of the firms reported 50 percent acceptance. The Federal Government acceptance rate is only about 10 percent.

MORALE PROBLEMS

The prestige of many Government laboratories is built around a hard core of senior scientists hired on a highly selective basis in less inflationary years. In general, these men are devoted to their work, and salary has not been the predominant consideration. But, in recent years, with rapid inflation, their relative economic position has become painfully clear to them. Today, approximately one-third of the total separations of scientific employees from the Government are senior grade personnel.

The combination of high quality employees leaving and lack of young graduates generates a lower morale and lower productivity. The prestige and sense of dedication of the Federal scientist that held him to his job possibly more than anything else can be sensibly dulled. The obvious end point of this reaction is the loss of scientific leadership and prestige of the Government laboratory and its ultimate demoralization.

What has caused this aggravated condition? Fundamentally, the scientific manpower shortage is to blame. The immediate cause is the disparity of pay scales for professional employees in the Federal Government and in industry.

A recent Government study compares salaries for professional employees in industry with the corresponding civil service grade designations. (See table below:)

Industry pays scientists higher salaries than Government for comparable work

Government grade classification	Average salary in industry	Government salary	
		Minimum	Maximum
GS–5	$5,200	$3,670	$4,480
GS–7	6,000	4,525	5,335
GS–9	6,750	5,440	6,250
GS–11	8,400	6,390	7,467
GS–12	9,500	7,570	8,645
GS–13	11,200	8,990	10,065
GS–14	13,300	10,320	11,395
GS–15	15,500	11,610	12,690

The grade classification GS–5 corresponds to a junior chemist or chemical engineer, or other scientific designation (a bachelor of science degree and no professional experience); GS–7 corresponds to assistant chemist (master of science degree or equivalent in experience); GS–11 corresponds to chemist (doctor of philosophy degree or equivalent in experience).

The discrepancy in salaries between industry and Government is obvious on comparing the industry average with the Government maximum. Disregarding fringe benefits, Government salaries are approximately $700 to $3,000 per year lower.

These data very closely parallel those reported by the special survey committee of the engineers joint council. This report, Professional Income of Engineers, 1956, issued in January 1957, shows salaries of engineers by year of entry into the profession. In this study, comparison of median pay of engineers engaged in research and development with median pay of engineers in the Federal Government shows that the Government engineer makes $575 to $3,350 less per year.

FRINGE BENEFITS

Some contend that the fringe benefits of Federal service—retirement, insurance, liberal vacation, and sick leave—tend to lessen this differential in pay. In addition, the prestige of Federal service, stability of employment, association with senior scientists, excellence of equipment, and nature of work may be presented as "fringe-fringe" benefits tending to lower the differential.

To both the young graduate and the professional pondering separation from Government service, these benefits are not too difficult to evaluate. Many of today's industrial giants have fringe benefits similar to the Federal Government plus such extras as medical and health insurance and profit-sharing or stock-purchase plans. News of private industry's modern laboratories and equipment punctuates nearly every issue of C. & E. N. The ability of industrial scientists is well attested by their publications in scientific journals.

CIVIL SERVICE VIEWS

Philip Young, retired Chairman of the Civil Service Commission, recognized Government's present lethargy with respect to fringe benefits when he said before the Engineers Joint Council, "Whereas the Government was once considered a leader in this field, private industry has been moving ahead in recent years faster than we have."

In the concluding paragraph of his speech on January 17, Young said, "Now I agree heartily with the executive officer of the National Institutes of Health who recently said, 'I do not believe poverty is any more a necessary condition of dedication to science than it is of dedication to the sale of life insurance.' But the sense of dedication is a necessary condition to a fully satisfying career in the Federal service—and I know that is very widely felt. There is a special appeal in the nature and importance of the pressing scientific and technical problems before the Government, and in the contributions of Federal engineers

and scientists to the Nation's welfare and security that is its own reward. And this has never been as true as it is today, in this age of unprecedented scientific and technological progress."

These remarks are only too true. The difficulty is that the Government does not exercise a monopoly on this sense of dedication.

For the past 3 years, the Defense Department alone has passed out over $1.5 billion of research money annually to private companies. Many professional employees have left the Federal service for industrial employment in a similar capacity but with increased pay on projects financed with those funds. The growth of industrial laboratories, aided by Federal funds, and the attrition of Government laboratories is an important recruiting factor.

It should seem conclusive at this point that if Government laboratories are to compete with industry in recruitment and retention of professional personnel, they must compete with comparable pay.

WHAT'S BEING DONE

A problem with such an obvious solution would be expected to draw considerable attention and action. Action means legislation enacted by Congress and concurred in by the administration. The problem has drawn attention but no such action.

As a result of House Post Office and Civil Service Committee hearings in the past Congress on supergrade positions, Representative CHARLES S. GUBSER (Republican of California) and Representative JOHN E. MOSS (Democrat of California), saw the need for legislation. Bills introduced by these gentlemen in the 84th Congress (H. R. 12054 and H. R. 12055) died without hearings.

In the new Congress, Representatives GUBSER and MOSS introduced improved versions of their previous bills. These bills (H. R. 2803 and H. R. 2804) call for increased pay, and, in addition, would set up a separate scientific and professional Civil Service classification. In the Senate, Senator OLIN D. JOHNSTON, (Democrat of South Carolina) has introduced a similar bill, (S. 1326). All these bills have been referred to the respective Post Office and Civil Service Committees.

The executive branch of the Government has also initiated action. Last year President Eisenhower appointed the White House Committee on Engineers and Scientists for Federal Government programs to study the recruitment, retention, and use of scientists and engineers in the Government. Committee studies were to be pointed toward immediate executive and legislative action by Congress. So far, no public announcement of findings has been made.

The Defense Advisory Committee on Professional and Technical Compensation (the so-called Cordiner Committee), headed by Ralph J. Cordiner, president of General Electric, was appointed by Secretary Charles E. Wilson to study military and civilian pay problems in the Defense Department. The Washington press reports that the Cordiner Committee has recommended pay raises from $500 to $3,000 a year for all employees (not professionals alone) in Civil Service grades GS-7 and up. These newspaper accounts report that the administration is cool to the proposals and variously say that Secretary Wilson will order the report shelved or will refer the Cordiner suggestions to the Cabinet and to the President.

The Civil Service Commission opposes a separate scientific and professional classification act and also opposes a general pay raise. The Civil Service Commission desires further study of Federal pay policy that might result in a flexible wage system that could meet rapidly changing conditions in manpower shortage fields. This view was indicated by Commissioner Young in his speech before the Engineers Joint Council.

LEGISLATIVE OUTLOOK

The outlook for passage of legislation is bleak at the moment but could be changed to a rosier hue. In its efforts to fight inflation the administration has generally opposed pay raises. Faced by a lack of administration support or strong urgings from their voting constituents, Congress appears somewhat apathetic toward the bills already introduced. Representative TOM MURRAY, Democrat, of Tennessee, Chairman of the House Post Office and Civil Service Committee, has said that the appointment of two new Civil Service Commissioners will delay hearings by his group for several months.

Two slight rays of hope:

Senator JOHNSTON'S announcement that his committee will hold hearings in the next 4 months.

President Eisenhower's statement in his budget message to Congress that pay legislation for scientific employees should await completition of the Cordiner study.

WHAT SHOULD BE DONE

Immediate interim legislation is needed to remove the present pay inequities. This would call for hearings in Congress now. For long-range, permanent legislation a study group or subcommittee should be set up.

This problem of the growing discrepancy between Government salaries for scientists and those paid by private industry must be solved either by the Federal administration or Congress or both. Unless Members of Congress and top administration officials are made aware of the facts and the need to correct a situation leading to deterioration in the quality of research in Government agencies, nothing will be done. It is becoming evident that unless this situation is corrected, the welfare of our Nation can be jeopardized.

Information on the problem has been made readily available from time to time by the various scientific societies, including the American Chemical Society. Not only is it a privilege, but it is a duty of citizens to advise their representatives regarding their views, supported by as much factual evidence as possible. One of the marks of the professional man is a serious concern with such civic responsibilities.

The plight of Government scientists presents a compelling opportunity for members of the scientific professions to demonstrate their concern with professional responsibilities and the status of their professions. Rather than complain about the lack of status, each should now take some action to prove his sincerity.

Federal Spending

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 9, 1957

Mr. JENNER. I ask unanimous consent to have printed in the Appendix of the RECORD an article published in Human Events, of Washington, D. C., for March 16, 1957.

My purpose in writing the article was to point out that the spending oligarchy in Government uses foreign aid, as WPA used relief funds, to make a political machine or superparty, which operates in our congressional districts above both parties, to elect or defeat candidates for Congress in accordance with their support of Government spending, and in complete disregard of whether they truly represent their constituents.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW YOU CAN STOP BIG SPENDING—CONGRESSIONAL DISTRICT THE BASTION OF LIMITED GOVERNMENT

(By Senator WILLIAM E. JENNER, Republican, of Indiana)

The American Government served the interests of the people when it was limited government, operating within restraints set by the Constitution. But the American Government does not now need to serve the national interest. It is today an unrestrained oligarchy whose ability to ignore Congress and the Constitution comes from spending your money.

Our great mistake is our naive assumption that we have the same Government today that we had from 1789 to 1932. We do not have the same Government or anything remotely like it. The American Government of today bears almost no relationship to the one we knew from 1789 to 1932.

This new American Government has one objective—to keep itself in power by spending. Its objective is the same today as it was in the days of Harry Hopkins—tax and tax, spend and spend, elect and elect.

We canont understand the political crisis of today unless we understand how completely our Government has been transformed. The three-part Federal Government of the Constitution is still there, but something new has been added. A vast engine of political and police power has been built up, in and around and above the old Federal executive branch. The names of the old-line agencies are the familiar trusted facade behind which this new Leviathan can operate, almost invisible to Congress and the press.

The strength of this new governing machine can be measured by its resources. It controls at least one quarter of our entire national wealth. It converts at least one quarter of our earnings into political and police power over you and me. The primary aim of this monstrous growth is to secure its stream of tribute, and to keep the voters from protesting effectively.

We have wasted a great deal of precious time, denouncing Franklin Roosevelt, Harry Truman, and Dwight Eisenhower, for the growth of this Frankenstein's monster. We are not going to put an end to a political tidal wave, which has swept over five continents, merely by denouncing individuals. The trend to strong central government is worldwide, and it springs from two world wars and the lure of Socialist big government. I believe American political leaders could have resisted that trend and helped the rest of the world to erect bulkheads against the erosion of liberty. But it is not too late.

Let us now forget the reasons for bitterness and put our minds on the important question—how can Americans use their magnificent heritage of good government, and their long experience with liberty, to put their own house in order, and to offer once again a model to which the rest of the world will turn in hope?

We must start with our foreign policy.

Foreign policy has been, since the war, the most appealing way to continue big spending and to render the opposition helpless to resist the machine for which spending provides the fuel. Foreign policy is the postwar WPA of the Socialist planners, except that postwar spending is geared to the high levels we were conditioned to accept by the war propaganda.

Our foreign policy today is a series of outlets, sometimes called "ratholes," carefully planned to help the spenders keep on spending. The Republicans saw this clearly 13 years ago.

In June 1943, the State Department published the proposed text of the first gigantic postwar spending program—that for UNRRA. Senator Vandenberg read the proposal and found it was planned as an executive agreement, to bypass the Senate. He wrote to Senator McNary as follows:

"It seems to me that this draft agreement involves the broadest possible commitments for the future * * * and leaves us (as usual) to pay the bills without any adequate control over what the bills ought to be. I think this is clearly a preview of the method by which the President and the State Department intend to bypass Congress in general, and the Senate in particular, in settling every possible international war and postwar issue by the use of mere executive agreements."

A few days later Vandenberg wrote: "As it was originally drawn, this draft agreement pledged our total resources to whatever illimitable scheme for relief and rehabilitation all around the world our New Deal crystal gazers might desire to pursue * * *. The draft * * * clearly intended that there should be no interference with this worldwide prospectus as it might be conceived by Roosevelt, Lehman, Hopkins & Co., until that long last moment when Congress would be presented with a fait accompli. At that late hour it would be next to impossible for Congress to do anything except acquiesce."

Why did the spending continue if the design was so clear, nearly 14 years ago? It is all so simple. Every time one spending program became a little spotted and frayed at the edges it was closed out, and a glittering new spending program was brought forward.

These new models for waste of American money are not trotted out to impress Congress. They are trotted out to be put on the propaganda conveyor belts, leading out into every State, to the women's clubs, the churches, the colleges, the unions, the press and radio. This "show" is managed by experts in what is called "the engineering of consent," who know how to keep the viewers happy, and how to make taxpaying almost painless.

Obviously Members of Congress know their districts are being saturation-bombed by these flying squadrons. But they have no money or staff or patronage to counterattack.

The spenders in the executive branch know the Congressmen will be either converted or defeated by their mass propaganda. So why worry?

Now this adds up to one simple fact. We shall never rid ourselves of big spending or big Government by arguments that the money is wasted. The money is not wasted. Every dollar the spenders can get is spent to very good purpose from their point of view. Like WPA money, it buys political support for big spending. It builds up vested interests and the vested interests carry on the campaigns for more spending. What could be more logical than that?

Now, you will say that "foreign aid" cannot affect domestic elections. But that is where words fool you. Most of the foreign aid money is spent to buy products which are important politically—wheat, coal, radio, engineering, shipping and many others.

I have pointed out many times, that our hidden absolute Government operates independent of the legislative, executive or judicial branches set up in the Constitution.

To understand what we have to fight—we must add one more diagram showing the change in our political system.

Our two-party system has not been abolished. It has simply been enveloped by something much more powerful. The spending oligarchy in Government operates as a political superparty, by its ability to direct this constant stream of invisible propaganda into our political districts. The political parties try to operate as in the past, by vigorous local organization, all unaware of the hidden forces which pull down the constitutionalists, and push upward the men who have sold their birthright.

The only political power in the Nation stronger than this colossus on the Potomac with its $70 billion a year is the congressional district. The voters can end its power in their own congressional district any time they take the trouble.

The spenders will not cut spending of their own free will. It is your problem to organize so that no man can be nominated in your congressional district unless he has pledged himself to cut spending where it hurts—where the vested interests will punish him for taking away their easy money. But he must have protection against their wrath. Only you can give it to him.

Such an uprising will succeed if our angry people combine by congressional districts and State party organizations, to make sure party nominations go only to men who are truly devoted to the Constitution, and who are ready to fight spending in all the forms the spenders love to devise.

Members of Congress either have no power, or they have the greatest political power in the Nation. Senators and Representatives have no power of their own. Their only power is what they get from their active constituents.

When his constituents have been brainwashed by the spenders into believing foreign aid is an elixir guaranteed to cure all illnesses, a Senator or Congressman has no power and no influence. He is like an ambassador, all dressed up in uniform and gold braid, whose country has been taken over by subversion. He must go over to the enemy, or resign.

Congress is powerless, or very powerful. It will be very powerful only if the men sent to Washington as representatives are the front line of an angry, determined, well-organized, and devoted band of patriots, working together to make each district into a fortress fighting to the bitter end in defense of American liberty.

Award to Women in Radio and TV

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 8, 1957

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article in the May 1957 issue of McCall's magazine entitled "Seven Women in Radio and TV Win the McCall's Mike." One of the women honored by this magazine owns and operates the radio station in Pierre, S. Dak., which is the capital of our great State. She is Ida McNeil. Ida is an institution in Pierre, and her reports to her friends and neighbors in this ranching area of South Dakota are eagerly awaited. It is significant that only a couple of years ago a celebration was held at which hundreds of people turned out to honor this lady. I am happy to join with her many friends in rejoicing over this latest honor which has been bestowed upon her in being selected by McCall's as the "radio executive, service to the community in general."

I have been informed by the Public Printer that the article is estimated to make approximately 2¼ pages of the RECORD at a cost of $173.25. Notwithstanding the cost, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEVEN WOMEN IN RADIO AND TV WIN THE McCALL'S MIKE

The top award of McCall's seven annual presentations to American women in radio and television goes this year to a young woman whose untiring efforts, both on television and off, helped conquer one of the worst outbreaks of polio in our Nation's history—Miss Lee Phillip, of Chicago.

Last July when Chicago, almost overnight, found itself in the panic of a polio epidemic, Lee Phillip telephoned Dr. Herman Bundesen, president of the board of health. She was willing to turn over her television program on station WBBM–TV every day, full time if necessary, to fight the fear and ignorance that was keeping thousands of children from getting Salk vaccine.

At 5:30 that same afternoon Dr. Bundesen appeared on Miss Phillip's 15-minute program, explained the problem that faced the city, and to demonstrate the ease of the Salk inoculation gave Lee Phillip a vaccination in front of the TV camera.

Next day Lee joined a mobile unit of the board of health and traveled from neighborhood to neighborhood assisting with vaccinations. She personally helped inoculate more than 1,000 children. Every day her program kept people posted about the location of the mobile units and those sections of the city that most needed the vaccine.

By the end of August what had threatened to be Chicago's worst epidemic of polio had turned into what may very well be its last epidemic.

"To you belongs a great deal of the credit," Dr. Bundesen wrote Miss Phillip.

Seven years ago Lee Phillip, a bacteriology major at Northwestern University, even in her idlest moments did not dream of a television career. The summer of her graduation from college, however, her father asked her if she would help him out in one of a chain of florist shops he owns in the Chicago area. When the local florists needed someone to make a television appearance Mr. Phillip suggested his daughter. "I guess I was the only one he felt he could spare from the shop," Lee says.

The station, WBKB (now WBBM–TV), invited her back for more appearances and then offered her a job as an announcer. It was a strange life for the girl who had spent her previous 4 years looking through a microscope.

At 8:55 a. m. she signed the station on and said a short prayer. Through the morning at 15-minute intervals she read announcements, station breaks, and commercial. At noon she broadcast the news. At 2:00 she conducted a sewing circle. At 4:30 she interviewed guests. At 5:45 she took her women viewers "shopping." Then after a quick dinner she returned to the studio to broadcast a weather report.

When station WBKB became WBBM–TV Lee decided to concentrate on her shopping program, which by this time had thousands of followers. Shopping with Miss Lee, a pleasant chatty show for women, might have continued to be a pleasant chatty show without too much serious purpose if Lee Phillip had not been the kind of person she is. The granddaughter of a Quaker minister, she has a profound belief in people's desire and capacity to help one another. Soon she had

her busy housewives doing things they never dreamed they had time for. Just before Christmas, 1955, almost 4,000 of them made dolls for children in hospitals and orphanages. Chicago's Animal Welfare League, which often had a hard time placing its more unusual tenants, was invited to bring animals to Miss Lee's program. An abandoned sheep was promptly adopted by an orphanage, a deodorized skunk by a boy scout troop. Although a kitten and a boxer dog each disrupted the show (the kitten by getting lost, the dog by knocking down a wall of scenery), Chicago has fewer unwanted animals these days.

Thanks to Lee's enthusiastic efforts, finding homes for Negro orphans has become an important project for thousands of women who did not even know that the problem existed before. And through her efforts a small orphanage in Haiti receives vitally needed gifts each month.

Nobody was surprised when Lee Phillip made her extraordinary effort to fight the polio menace. It seemed only natural that this young woman should, in the words of McCall's judge, Mrs. John G. Lee, president of the League of Women Voters, offer her services for a critical need at a crucial moment and for a cause which had great educational as well as great human value."

Executive, service to the community in general:. The lives of most of the residents of the sparsely settled Dakota prairie—where telephones and mail deliveries are few—have been made more secure by the matter-of-fact voice of Mrs. Ida McNeil, owner of Radio Station KGFX in Pierre, S. Dak. The personal impact of her broadcasts is so great that her listeners, among them Governor Joe Foss and Mayor A. E. Munck of Pierre, refer to her affectionately as "Mrs. Pierre."

From a studio in her house Mrs. McNeil brings to her isolated listeners news of their friends, relatives, and neighbors on a program called Party Line. In 1923 a patient at St. Mary's Hospital said to her, "Mother hasn't a telephone. Won't you please broadcast news about me so she'll know I'm getting better?" Since then Mrs. McNeil has been announcing the condition of patients regularly four times a day on weekdays and once on Sundays. She tells who was admitted, who was discharged, who is doing nicely, and who isn't. She lists births and deaths, sends messages for patients ("Will Neighbor Brown please feed the cattle?"), appeals for blood donors when they are needed. The Benedictine Sisters, who operate the hospital, report that more than 96,000 patients have benefited from her broadcasts. "Our prayers and intentions are that when Mrs. McNeil reaches the gates of Heaven, she will be met by the Divine Master with open arms," wrote Sister Rose Marie. " 'For what you have done for the least of these, my brethren, you have done to Me.' "

Mrs. McNeil not only owns KGFX—she is the operator, business manager, announcer, newscaster, program director and advertising solicitor. Her only full-time paid employee is an engineer. She is on the air 8 hours a day and spends another 6 on paperwork and selling advertising. This schedule is tough, she admits, but she still finds time to bake an occasional cake.

She started in radio when she married a railway conductor who had been tinkering with radio since the days when it was just a novelty. Forty-one years ago he established an amateur station, the twelfth licensed by the Federal Government. When Dana McNeil was away on his run he would take a radio along, and his wife would broadcast to him news of the family and community.

There were eavesdroppers, and soon Mrs. McNeil was getting requests to broadcast announcements to isolated ranch families. As her audience grew, she began to include weather forecasts and hospital news. The hobby turned into a full-time job, and in 1932 Mrs. McNeil decided to make it pay by putting it on a commercial basis. Many a worried young husband would learn for the first time from Mrs. McNeil that he had become a father. "Bring a coat and an extra blanket for the baby," she'd advise him.

Clyde Donaldson, United Press correspondent in Pierre, describes Mrs. McNeil's operation as more than just a radio station. "In a ranchland where neighbors are few and distances are great," he says, "it is a social force."

Executive, service primarily for women: Fan mail is nothing new for a successful woman's television program, but the letters received by Mrs. Marian O'Brien of KETC, a small educational television station in St. Louis, Mo., would startle anyone not acquainted with her program, Ladies First.

A typical letter reads: "For the first time in my life I made perfect hollandaise sauce yesterday, thanks to you.

"I should love having the Ten Elements of a Confession Story that you spoke of this evening. I promise to send you another manuscript soon. Do you think people would be interested in blood banks?

"Your receipes are especially appealing to my husband."

Mrs. O'Brien's success story began on September 1, 1955, when she went on the air with a cookery show, A Pinch of Salt, aimed at Girl Scouts. She demonstrated the use of modern mixes and packaged foods in preparing traditional dishes. The response from unsuspected listeners was unbelievable.

"I feel that she's a friend whom I could depend upon for anything," wrote one woman. "She's the kind of person I would like to have for a neighbor," affirmed another.

Producer W. Robert Miller subsequently organized an hour's evening program (Thursday, 8:30 p. m.) for Mrs. O'Brien that incorporated not only her cooking hints but also a workshop for writers.

"Mrs. O'Brien had conducted a creative writing class at the YWCA and adult classes for a long time," Bob Miller explains. "We thought we'd find out if it's true that every woman wants to be a writer. We're ready to say now that they all do—as long as Marian O'Brien will direct them."

Mrs. O'Brien, besides being an expert cook, is a successful writer. Her articles and stories have appeared in many magazines. Her generous professional advice to her hopeful listeners through their television sets, as well as criticisms of manuscripts they submit to her, have resulted in many sold manuscripts. This particularly pleases Mrs. O'Brien.

"My real purpose," she says, "is to get the housewife away from the dishpan. Writing is a wonderful outlet, as well as a source of additional income, for the woman whose main energies are devoted to making a home and rearing a family."

On the air she is apt to prod the housewife into creative effort by saying: "Personally, I write from 9 to 12 * * * help or no help, dirty dishes in the sink or no, I'm at the typewriter * * * and somehow, oddly enough, the dishes always seem to get washed and most of the dust does eventually get picked up. You try it too."

Of the more than 170 listeners who began her writing course, only 1 dropped out—because of sickness in the family. The St. Louis area has seen fathers baby-sitting while the mothers meet at one another's houses to follow the show in groups.

Marian O'Brien has proved one thing to herself and the public: The country is filled with young housewives who not only want to improve their cooking but who have always wanted to write and need only the encouragement to try.

Executive, service primarily for youth: Over WRC–TV, Washington, D. C., not long ago, a teen-age Jewish boy, speaking earnestly into the microphone, charged the churches and schools with frequently playing at tolerance and understanding when social feeling has not kept them perfectly unbiased.

A teen-age girl, seated at the long polished table, agreed with him. "It is the subtle prejudice," she said with disarming candor, "that is displayed often by friends, teachers or [school] principals that you may come across."

"What's being said in the house at the dinner table * * * when the parents are * * * conversing," added a Negro high-school girl, "* * * will show their * * * prejudice clearly."

The four teen-agers, the moderator (Bette Jerome) and a special guest (Dr. Leonard P. Aries, executive director of the National Conference of Christians and Jews) were that week's panel members of Teen Talk, a lively and provocative discussion program that each Sunday at 12:30 to 1 p. m. offers to a large television audience the thoughtful, worthwhile and often surprising conversation of young people.

Teen Talk is the brain child of its producer, Sophie Altman, Washington housewife and the mother of four children. A graduate of Wellesley College and Yale Law School, Mrs. Altman some time ago decided that trouble between parent and teen-ager stems from the lack of real communication. Parents, she felt, do not take their children's worries and rationalizations seriously enough, or else they dismiss the teen-ager as a rebellious, unreceptive member of society, difficult to control.

The teen-ager, on the other hand, thinks Mrs. Altman, too often considers his parents inflexible, old-fashioned, and unwilling to accept him on his true emotional level.

"Teen Talk," explains Mrs. Altman, "gives the teen-agers a chance to discuss problems important to themselves. Comparing their experiences with one another over television and evaluating those experiences emphasizes to them and to their parents that their problems are not unique but common to most families. There is comfort and security in knowing your difficulties are universal and that you are not being picked upon as the exclusive victim of family society."

In preparing the show Mrs. Altman arranges for prebroadcast discussions with the panel and supplies the moderator with questions and material to insure against any sags in interest or good topics during the broadcast.

Subjects that have received frank handling by the young panelists of late have touched on problems arising from broken homes, careers, marriages, driving, the selection of friends and dates, health, politics, popularity, school grievances, clothes, discipline, allowances, friendships, manners, interfaith dating, delinquency, the need for faith, and the extremely explosive issue in the District of Columbia—school integration.

Broadcaster, service to the community in general: When city councilmen of Baltimore, Md., burn the midnight oil over figures and facts it doesn't necessarily mean they're planning a new ordinance. There is a good chance they are simply boning up for an appearance on WMAR–TV's program, City Council Report.

Mrs. Elise Kemper, the program moderator, is always more than a match for the councilmen. An officer of the Women's Civic League, she and her colleagues attend council hearings on proposed measures (these proposed ordinances become her program topics), check back newspaper files for councilmen's past points of view, unearth parallel situations in other cities and, when they can, make sure that councilmen directly con-

cerned with issues under discussion are among her three guests every Tuesday, 5 to 5:15 p. m. Guest rotation permits every councilman to appear on the show at least once during the series.

"The people who elected these men should see them in action," says Mrs. Kemper.

To arouse interest in city government, Mrs. Kemper also invites her listeners to attend council meetings and tells them what buses to take to get to the city hall. Her television summaries are masterpieces in terms of how proposals under discussion affect the public and what the people can and should do in order that their opinions be considered by the council.

Elise Kemper, Vassar graduate, had her own 1-woman radio show, "Sally at the Switchboard," which, beginning in 1934, she wrote, produced and acted in. In World War II she became Chairman of Radio Publicity for the Womanpower Commission of the Maryland Employment Bureau. Its purpose: to get women out of nonessential industry into war jobs. Personnel directors of the 250 large war plants around Baltimore reckon that she persuaded 81,000 women into war industry—including, adds Mrs. Kemper, not only the cooks of her friends but her own as well.

Mrs. Kemper has been credited by both the mayor and the city councilmen with stimulating public interest in the activities of Baltimore's lawmakers, which in turn, has made for more effective legislation for the benefit of the community. Her constant publicizing of the Baltimore Council meetings has resulted in a highly attentive and productive lawmaking body in the city, as well as an informed public.

As moderator, her handling of the councilmen is skillful and diplomatic, politely interrupting when one member attempts to dominate or begins to bore. Her pertinent questions hold the main subject on the track and also pack plenty of substantial material into her 15-minute program.

One grateful listener wrote: "We Americans, particularly in large cities, have almost completely lost personal contact with the people we elect to handle our affairs. Hardly anyone goes to a council meeting nowadays. * * * Your program has now brought the council and department heads into our homes; made them human beings, not mere names."

Broadcaster, service to women: Breaking through the sound barrier is no more dangerous than jumping a horse. This, at least, is the opinion of Del Vina Wheeldon, whose program, It's a Woman's World, is broadcast from 1:30 to 2 p. m. Monday through Friday on Cincinnati's radio station WCKY.

Just a year ago this month Del Vina (as she is known to her listeners) strapped herself into an Air Force jet and was flown at 630 miles an hour over Lake Erie at an altitude of 48,000 feet, then was dropped through the sonic barrier when the plane went into a dive. She was the first woman ever to have been a passenger on a flight of this type.

The trip was not just a stunt. For a long time it had disturbed Del Vina that Air Force enlistments and reenlistments were falling off because mothers thought jet flying was too dangerous for their sons. "It seems to me," she wrote the Continental Air Defense Command, "that with all the responsibilities the Air Force has for our national protection, it shouldn't have to worry about frightened mothers." She didn't know much about the problems of the Air Force herself, she continued, and she doubted that other housewives did either.

So she proposed a series of broadcasts in which she would dramatize for all women the safety factors, the degree of training and preparation of airmen, and she would start by flying through the sound barrier herself. "If this is done by a woman who is a housewife (in private life she is Mrs. R. G. Wheeldon), and I can explain all the details of how I was prepared for it," she said, "I don't see how women can fail to realize their fears are in error."

The Air Force took her up on her offer, and last May 12 she made her flight. "The only thing I was worried about," she said later, "was that I wouldn't get back in time for my hair appointment that afternoon."

In the broadcasts which followed, Del Vina attacked the doubts of Air Force men and their families. Day after day she pointed to the increased safety of jet flying, the importance of our Air Force as a means of staving off war, the pride with which young men can wear the Air Force uniform, the opportunities for future careers. And for the taxpayers, she noted that the failure of Air Force specialists to reenlist is costing us $2 billion a year.

The Air Force was so impressed with Del Vina's scripts that it had reprints made and circulated for recruiting purposes. Other women in radio and television were encouraged to follow Del Vina's lead. She was the only woman awarded the Air Force Association's citation of honor last year, and Gen. Nathan F. Twining, United States Air Force Chief of Staff, congratulated her on the reassurance she had given to American women.

"We are extremely proud of you," said Col. Barney Oldfield, Director of Information Services for the Continental Air Defense Command, "both for the lengths to which you were willing to go and for the series of constructive public-service broadcasts which resulted."

"If the Air Force can get the full understanding and support of the women of America," wrote Bernard M. Baruch, "both it and the country will be benefited. You are certainly doing your share." There were hundreds of letters, too, from mothers, pilots, and prospective draftees thanking her for the reassurance she had given them.

"She made Cincinnati women wake up and think," is the boast of her station. There are few in her tremendous daily audience who would not wholeheartedly agree.

Broadcaster, service primarily for youth: Few educators or child psychologists have entered the field of broadcasting with a more solid background, knowledge or intelligence than Miss Helen Parkhurst, who conducts the weekly half-hour program "Growing Pains" on the Westinghouse broadcasting stations. And few have won such enthusiastic recognition among both teachers and a constantly widening audience. Miss Parkhurst is genuinely an expert—a fact which is clearly reflected in her programs.

"Growing Pains" is a unique program by and about youth. It operates on the premise that there is more good than bad in the youth of America and that delinquency is but one of many youth problems. Miss Parkhurst spotlights the many hopes, ambitions, frustrations and exaltations of the millions of boys and girls groping through those perilous years before adulthood.

Each week 4 or 5 youngsters are brought before the microphone to engage in conversation on topics uppermost in their minds: What do teenagers really think about their parents, about sex, about juvenile delinquency? What do Negro boys and girls have to say about life in the United States? What do Jewish children say about the problems of minority groups? How does a girl from Indiana differ in her outlook from another girl in Boston, New York or Pittsburgh?

The teenagers are not rehearsed, nor are they even briefed beforehand on the subject under discussion. The result—frank and refreshing opinions. While directing the conversations Miss Parkhurst never editorializes or preaches; she merely leads the participants to their own conclusions. Through a better understanding of why, the listeners are able to come to their own conclusions too.

The reaction to "Growing Pains" has astounded even Miss Parkhurst. In Pittsburgh, for example, recordings of her programs have been taken to PTA's, women's clubs and other discussion groups. The Cleveland Board of Education has used them in classroom discussions. Kent State University, Kent, Ohio, uses them on a regular basis in its College of Education.

Miss Parkhurst's mail is an uninterrupted flow of praise. "I have never heard a dramatization of teen-age problems which was more effective," one of the letters reads. "It is good to hear young people act out of conviction and personal pride," says another. And a third: "A true source of absorbing information from original Americans."

Miss Parkhurst is no stranger to radio and television. She won 4 awards in 1949 and 1950 for her program Child's World. Her World of Sound program was named the year's best by the Grolier Society in 1953. In educational circles she is best known as the founder of the laboratory plan for elementary education—later known as the Dalton plan. Her book Education in the Dalton Plan, which was written in 1922, has been published in 14 languages, and only recently it was used in Italy as the basis for an educational reform. She was the founder and for 25 years the head of the Children's University School in New York, later to become the Dalton School. And she is the only American educator after whom a European school has been named—the Helen Parkhurst Dalton School in Rotterdam, the Netherlands.

Growing Pains is broadcast by stations WBZ–WBZA in Boston and Springfield, Mass.; KDKA in Pittsburgh; KYW in Cleveland; WOWO in Fort Wayne; and KEX in Portland, Oreg. Other stations carrying it are WNYC in New York, WPWT in Philadelphia, WXPN at the University of Pennsylvania, WOSU at Ohio State University, and WBAA at Purdue University.

THE JUDGES

Fairfax M. Cone, president, Foote, Cone & Belding.

Miss Bette Doolittle, chairman, National Public Relations Committee, American Women in Radio and Television, Inc.

Wendell H. Ford, president, United States Junior Chamber of Commerce.

Mrs. John G. Lee, president, League of Women Voters of the United States.

Otis Lee Wiese, editor and publisher, McCall's.

The Grand Manner

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Lancaster (S. C.) News of May 6, 1957:

THE GRAND MANNER

If a well-dressed gentleman began walking the streets of Lancaster soliciting funds to build swimming pools, badminton courts, beach houses, and all the other luxuries of civilization for personnel of the United States Information Agency in such farflung places as Moscow, Rangoon, Accra, and Laos, it would not be long before some member of the chamber of commerce called the police.

Yet, this is just a sample of what this overblown agency thinks the American taxpayer

should provide for employees living abroad and engaged in the arduous task of selling the American way of life to the citizens of other nations. Such foolishness cannot be justified unless it is the purpose of the USIA to convince other peoples that the taxpayer in the United States is, in fact, a millionaire and that the funds of Uncle Sam are truly inexhaustible.

Such a conception of this country is as dangerous as it is wrong. Pride of purse is just as offensive to citizens of other lands as were the regal trappings of empire in the old days of colonial expansion. If the USIA cannot find personnel willing to adapt themselves to conditions as they find them in foreign countries, then it is doubtful that the message this agency is trying to deliver will ever be effective.

Some doubt as to the usefulness of the USIA as presently constituted has already arisen in Congress. The House cut $35 million from the USIA budget requests and the Senate may lop off some more. Senator MIKE MANSFIELD thinks another $20 million or so can be pruned from what's left.

During a recent hearing before a subcommittee of the House Appropriations Committee, Representative ROONEY, of New York, went into details of a request by the USIA for $260,000 for recreational facilities. Said Representative ROONEY:

"We find such items as construction of a tennis court at Basra, Iraq, the construction of a hall for movies and indoor games and dancing and tennis in Rangoon, Burma—that one to the extent of $19,500—a rest center for our Moscow people, a swimming pool, two more tennis courts with floodlights, provision for dancing and cards at Vientiane, Laos, at a cost of $27,000.

"You want to build a clubhouse in Belgrade with a swimming pool at Kabul. At Warsaw you want to provide for such outdoor activities as badminton, basketball, baseball, volley ball, and softball. You want a swimming pool at Asuncion, Paraguay * * * you want a beachhouse at Accra on the Gold Coast * * * a swimming pool in Calcutta * * * a beach hut and cabanas at Madras * * * four tennis courts and sporting equipment at New Delhi * * * another tennis court at Kuwait * * * another swimming pool and tennis and volley ball and badminton courts at Monrovia.

"I am wondering," said Representative ROONEY to the USIA representative, "if this recreation could not be deferred."

"It could be, sir," replied the witness, "But I do not think it should be."

Well, we have news for the USIA. A lot of us taxpayers have deferred indefinitely any swimming pools, beachhouses, badminton courts and card rooms. We are living like natives here in America and finding life bearable.

More Soil-Bank Inequity

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. HARRISON of Virginia. Mr. Speaker, the report of the Department of Agriculture, dated May 7, 1957, summarizing contract commitments for the conservation reserve of the soil bank, estimates that the 1957 obligations of the Federal Government for annual and practice payments in the conservation reserve will total $108,317,000.

When we study the figures for individual States, we find that Texas, with a population of 7,700,000 in the 1950 census, stands to receive $27,277,000—more than the estimated payments to be due 37 other States having a total population of 121 million.

Texas is understandably proud of its right, acquired on admission to the Union, to divide itself into up to five separate States, at its discretion. On this basis, it might be that Texas would expect to receive as much in cash benefits as five other States. Can it be said, though that a program is economically sound and equitable when one State acquires claim to a greater payment than the combined amounts expected to be due 37 other States?

Here are the Department of Agriculture figures for the 37 States and for Texas:

Rhode Island	----------
Nevada	Less than $500
Connecticut	3,000
New Hampshire	14,000
Massachusetts	15,000
West Virginia	18,000
Delaware	35,000
Vermont	51,000
New Jersey	136,000
Virginia	144,000
Arizona	162,000
Louisiana	235,000
Maryland	307,000
Washington	352,000
Wyoming	371,000
Illinois	439,000
California	525,000
Idaho	608,000
Pennsylvania	626,000
Indiana	634,000
Maine	677,000
Kentucky	698,000
Ohio	699,000
North Carolina	779,000
Florida	968,000
Oregon	1,069,000
Mississippi	1,100,000
Iowa	1,168,000
Montana	1,179,000
Utah	1,208,000
Alabama	1,227,000
Arkansas	1,263,000
Tennessee	1,502,000
Nebraska	1,668,000
Michigan	1,866,000
South Carolina	1,892,000
New York	2,223,000
Total	25,861,000
Texas	27,277,000

Gregory Herman, Ukrainian Leader and Educator

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the Wilkes-Barre Times Leader-Evening News of May 6, 1957, relating to the death of Gregory Herman, one-time Wilkes-Barre educator and more recently an official of the Ukrainian National Association:

Gregory Herman, supreme secretary of Ukrainian National Association and former Coughlin and GAR High School teacher, died in Bergen Pines Hospital, Bergen County, N. J., Sunday afternoon, after suffering a stroke. He was 61.

Funeral will be held from the Jarema Funeral Home, 129 East Seventh Street, New York City, on Wednesday morning with a requiem mass at 10 at St. Gorge's Ukrainian Catholic Church, 22 East Seventh Street, New York City. Interment in Calvary Cemetery, New York City.

A former resident of 9 East Jackson Street, Mr. Herman had resided in New Jersey 8 years. Long active in fraternal, civic and education affairs, he resigned from the city school system in 1949 to accept the national presidency of the Ukrainian National Association, an international fraternal organization of more than 65,000 members with headquarters in Jersey City.

In 1950 he was elected supreme secretary and served in that capacity to the time of his death. For many years before moving to New Jersey, Mr. Herman was a vice president of the organization.

Born in the Ukraine, Mr. Herman was brought to Wilkes-Barre at the age of 12 by his parents. He attended Wilkes-Barre city schools and was a graduate of Coughlin High School. He received the bachelor of philosophy degree from Lafayette College and later pursued graduate work at Columbia University, where he received the degree of master of science in economics.

A veteran of World War I, Mr. Herman was for many years a member and officer of the Organized Reserves. Long an advocate of adult education, Mr. Herman served as instructor in languages and folklore in the Adult Education Center of Wilkes-Barre Y. M. C. A.

Surviving are his wife; three children, Ann Marie and Catherine, both graduates of College Misericordia and now teaching in the public schools of Lodi, N. J., and Gregory, Jr., Lakes Charles, La.; father, Peter Herman; sister, Mrs. Catherine Lukacz, and brother, Dmitro, all of Wilkes-Barre.

Postal Pay Poses Recruiting Problem

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Robert W. Morehead, Jr., which was published in the St. Louis Globe-Democrat on April 26, 1957:

POSTAL PAY POSES RECRUITING PROBLEM

To the EDITOR:

Bills have been introduced in the present Congress to give postal workers a much needed increase in salary. During the past salary campaigns the postal workers have been called "Treasury raiders" and other equally unjustified epithets.

Spokesmen of the powerful United States chambers of commerce have attacked the proposed increases as being unjustified and not in the public's interest. The threat has been broadcast that a raise in postal salaries would bring about devastating inflation.

The ridiculous charge has been made that postal increases would be the signal for all labor to seek like increases. High officials in government have used their positions of trust to create a wrong impression. The so-called deficit of the Post Office Department has been heralded far and wide as some extremely vicious monster, with the cloaked insinuation it is the fault of postal employees.

It is true the Post Office Department does not pay its full way. However, the question can be asked, what Government agency does operate in the "black"? It is my contention that the postal deficit is not related to the responsibility of the Congress and the Post Office Department to pay its skilled workers a fair and living wage. Why is it the Post Office Department and its employees are singled out for all this lambasting about the deficit?

Since 1939 post office clerks, carriers, and clerks in the Postal Transportation Service have received salary advances averaging less than 91 percent. Please compare the weekly percentage increase in other fields of employment for the same period of time: printing industry, 294 percent; petroleum and coal products, 329 percent; manufacturing, 282 percent; steel, 358 percent; automotive, 301 percent; machinery workers, 324 percent; and class 1 railroads, 278 percent. Does this comparison look as if postal workers are Treasury raiders? The postal workers, through their employee organizations, are only making a desperate effort to maintain a bare existence in these days of ever-rising costs.

The Heller committee of the University of California has made an intensive study of earnings required to provide a commonly accepted standard of living. The study shows it takes an income of $5,849.67 a year to maintain a home and provide a modest living for a family of 4. The entrance basic salary of postal clerks and carriers is $3,660 and after 7 years of satisfactory service advances to $4,410. The conclusion drawn from the committee report is that postal workers are some $1,400 short of being able to maintain a modest living. Can it be truthfully stated the postal workers are overpaid? Can it be said they are making unreasonable requests when they ask for an upward adjustment in salaries?

The Post Office Department is finding it increasingly difficult to recruit help, and, or to retain the services of those already on the payroll. The postmaster of St. Louis has recently found it necessary to circularize his postal area in an effort to secure recruits. Every day finds skilled, experienced employees leaving the postal service to return to private industry. They give as explanation the unsatisfactory working conditions in the Post Office Department and the necessity to obtain better wages. Business has long since realized that the organization and maintenance of a personnel staff trained to do the job efficiently, and given pay and working conditions adequate to maintain high morale and a low turnover rate, are economically sound.

ROBERT W. MOREHEAD, Jr.

What and Why of McCarthy Stop

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, George Todt in his column on May 7, makes some pertinent observations regarding the late Senator Joseph R. McCarthy.

Under leave to extend my remarks, I am including his article:

WHAT AND WHY OF MCCARTHY STOP

"Strange—is it not?—that of the myriads who
Before us passed the door of darkness through,
Not one returns to tell us of the road
Which to discover we must travel too."
—*Omar Khayyam, Rubaiyat.*

Brave Horatius is dead and who will arise now to defend the bridge which leads into the heart of Rome, itself? Who will keep the Red foe in play? Who will speak up again?

Whatever else his enemies and detractors may have said of him, none can deny that Senator Joseph R. McCarthy, of Wisconsin, was a fighter for American principles as he believed them to be according to his conscience. No pacifist, he. Here was a warrior. He will be missed.

Whether we agreed or disagreed with the stormy petrel of the Senate, we ought to recognize that the controversy and conflict of viewpoints he aroused was a very healthy thing for all of us. Until he came on the scene, we had heard the word from a little bird in the White House that any fears of Communist infiltration into our Government was only a red herring. Before the junior Senator from Wisconsin had finished with that red herring, however, the odor from it convinced most of us that there was something rotten several thousand miles due west from Denmark.

Senator McCarthy was going great guns in his battle against Communist influences inside Government until he stubbed his toe at Fort Monmouth, N. J., a United States Army Signal Corps center. At this point, the controversial Gallup poll—certainly no McCarthy supporter—was forced to admit that he commanded the approval of 70 percent of the Protestant and 85 percent of the Catholic population in the United States for his gallant fight against the Reds.

But his attempt to investigate the suspicious situation at Fort Monmouth proved his Waterloo. Powerful forces stirred themselves into frenzied action behind the scenes. What went on exactly has never been revealed. But in the end we learned that some mysterious powers convinced President Eisenhower that his executive authority was being challenged by Mr. McCarthy. The President seized the gantlet reputed to have been thrown down to him by the Senator. The war was on. McCarthy was charged with having attempted to get an easy berth in the Army for a former employee, Pvt. G. David Schine. The hunt for Reds was over.

McCarthy's strategic mistake—and it was one I pointed out repeatedly as a television commentator at the time—was permitting himself to go on trial for the better part of a year on such a silly charge in the first place. He was on the overwhelming offensive—the Nation was behind him in his efforts to ferret out the Reds in high places—and he ought never to have permitted his crusade to have been halted and himself to be placed on the defensive. In doing so, he permitted the opposition to turn the proceedings into a boring, even ludicrous, repetition of trivialities which finally wore out the patience of the nationwide audience, the public.

When the time was deemed ripe—when the public was at last so weary with calculated asininities that it no longer cared who was right or wrong in the case—the censure movement against Senator McCarthy was slipped over with ease. That was the quite obvious purpose of the tiresome marathon from the start.

What McCarthy should have done when the Army charges were revealed against him ought to have been simply to ignore them. Had he treated them with derision, had he gone right ahead with his offensive against the Communists, he might have won. The public, itself, might conceivably have come to his rescue, had he continued his crusade against the Nation's enemies instead of grinding to a halt to defend himself on know-nothing charges which were essentially stupid.

The most astonishing part of this whole silly mess centering around Fort Monmouth is that Senator McCarthy was apparently dead right in this instance. That there was espionage of the most serious nature going on there at the time—and for some years previously—can hardly be questioned any longer. Anyone in doubt ought to look at page 8449 of the United States CONGRESSIONAL RECORD, May 31, 1956, under the remarks of Representative CLARE HOFFMAN, Republican, of Michigan.

There we learn from a Russian translator of American documents in Moscow spy headquarters that thousands of important classified papers from Fort Monmouth had been handled by himself personally. More thousands came from the laboratories of the Radio Corporation of America we were told by the Russian "Andriyeve." All this was discussed in my column August 13, 14, and 15 last year. An investigation of Fort Monmouth seems to have been very much in order. But instead Senator McCarthy got censured. How about this?

Jury System, States Rights for Congress To Guard

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following editorial from the Nashville Banner of May 6, 1957. The editorial is one which warrants the attention of the entire membership since it deals with responsibility of the Congress in our system of government:

JEFFERSON ON FUNDAMENTALS: JURY SYSTEM, STATES RIGHTS FOR CONGRESS TO GUARD

Presumably even the liberals have heard of Thomas Jefferson—for periodically and variously they celebrate his birthday, usually in the name of raising campaign funds. They should find out more about Jefferson; could profitably study some of his writings as a man who knew considerable about government, and States rights whose sovereignty he urgently championed.

In his first annual message to Congress, as third President of the United States, he discussed among other things the judiciary. He said, speaking to Congress, remember:

"The judiciary system of the United States, and especially that portion of it recently erected, will of course present itself to the contemplation of Congress, and, that they may be able to judge of the proportion which the institution bears to the business it has to perform, I have caused to be procured from the several States and now lay before Congress an exact statement of all the causes decided since the first establishment of the courts.

"And while on the judiciary organization it will be worthy of your consideration whether the protection of the inestimable institution of juries has been extended to all the cases

involving the security of our persons and property."

Obviously Jefferson did not regard the inestimable institution of juries as something to be shunted—by administrative or legislative option—to a sidetrack. Government-by-injunction hadn't been invented yet. The Constitution was new; the Bill of Rights was newer, and Congress wasn't to learn for several generations that States rights were just a reactionary figment of Dixiecrat imagination.

He had more than that to say, partciularly about keeping the lines of Government within their respective areas. He warned against complication, burdensome encumbrance, and trespass, saying:

"When we consider that this Government is charged with the external and mutual relations only of these States; that the States themselves have principal care of our persons, our property, and our reputation, constituting the great field of human concerns, we may well doubt whether our organization is not too complicated, too expensive; whether offices and officers have not been multiplied unnecessarily and sometimes injuriously to the service they were meant to provide.

"Considering the general tendency to multiply offices and dependencies and to increase expense to the ultimate term of burden which the citizen can bear, it behooves us to avail ourselves of every occasion which presents itself for taking off the surcharge, that it never may be seen here that after leaving to labor the smallest portion of its earnings on which it can subsist, Government shall itself consume the whole residue of what it was instituted to guard."

Jefferson was known for his strict construction of the Constitution. His followers usually were called the Democratic-Republicans.

It is time the Democratic-Republicans started following his precepts again.

Senator Joe McCarthy

SPEECH
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks, I want to pay my tribute to Senator JOE MCCARTHY.

I have known the Senator, and his lovely and gallant wife, ever since I first came to Congress. I looked upon them as friends.

Whatever anyone may think of Senator MCCARTHY'S methods, no one can deny his patriotism or his courage. In an age of chiselers and opportunists, he had preserved and he used the power of righteous indignation. He alerted many to the dangers in our midst and saved our country from many traitors who, fearing him, slunk into the dark recesses from where they safely spewed their venom and filth on him, but did not dare attack our country openly.

Perhaps, Mr. Speaker, the ancients who told us that we could die of a broken heart were not so wrong. Perhaps hatred can break a heart, and evil thoughts may kill as easily as mere physical ills. Edmond Rostand, the French poet who wrote about Napoleon's son, makes his hero say this on his deathbed:

Too many people wanted my death, and I die by being killed in too many hearts.

JOE MCCARTHY is now before the Judge of us all. That Judge is just and He will understand.

The National Cowboy Hall of Fame

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. BERRY. Mr. Speaker, plans are well underway for construction of a National Cowboy Hall of Fame in Oklahoma City, Okla.

Young and old alike thrill with the excitement and romance of the early West. The American cowboy is not only a colorful part of American history, but he was an essential figure in the development of the frontier that has now become the heartland of this great Nation.

Rugged individualism, personal determination and initiative were qualities which, combined with good old-fashioned hard work, enabled men of vision to build the West.

The National Cowboy Hall of Fame will honor the great cattlemen and other outstanding pioneers who worked for the progress and created the tradition of the West. Honorees will include working cowboys, cattlemen, pioneers, rodeo cowboys, trailblazers, and others deemed worthy by the trustees of the national organization.

The standards established by the trustees are: Honorees must be outstanding Americans, prominent in the development of the West, or in perpetuating the traditions of the western country. They may be nominated by historical, livestock and rodeo associations and other groups, or by individuals, and must be recommended to the National Cowboy Hall of Fame and elected by its trustees.

The first five men chosen fulfill all these qualifications. They are:

Theodore Roosevelt—rancher in the Dakotas and later United States President.

Will Rogers—a man who never let the world forget that he was a cowboy.

Charles Russell—Montana artist known for his paintings of the frontier West.

Charles Goodnight—a real pioneer of Texas' range cattle industry and foremost traildriver.

Jake McClure—working cowboy of New Mexico, rodeo champion and judge.

The National Cowboy Hall of Fame has been chartered as a nonprofit corporation. National trustees have been appointed in each of the 17 Western States, including the governors as ex-officio trustees.

The site of the Hall of Fame and Museum is a triangular piece of land which combines prairie flatness and wooded hills. It is located along United States Highways 66 and 77 and is within easy reach of all traveling Americans.

A million dollars has already been subscribed so that construction of the project is assured. However, five times that amount is the goal of the trustees. The memorial must be properly symbolic of an era which has made our Nation great and provided our heritage of courage and freedom.

The inspiration of the early West must be preserved and perpetuated to coming generations of American youth. The Cowboy Hall of Fame and Museum has this very worthwhile objective. The prayer of Dr. G. Raymond Campbell, pastor, Westminster Presbyterian Church, Oklahoma City, Okla., at the site dedication on November 11, 1955, reflects the great value of this project. The prayer reads as follows:

Oh, Thou God of the open plains, who never made a man you didn't love, we pray that You will hallow this place in the memory of men of the saddle, that the best of the past can be carried into the future.

If sometimes, someone should imagine, up here on this hill, that he has caught just a whiff of the smell of bacon frying over an open fire, or the bubble of coffee boiling over onto coals of the fire, or the creak of a tired saddle, and the evening lowing of cattle off in the distance, we'll thank You, Lord.

And if some still night when the moon is full, someone should think that he hears again the soft breath of a harmonica, or the sound of a man quietly humming to himself, then we'll believe, like those men who were riding herd 2,000 years ago, that the angels have come mighty close to earth again.

It is in the memory of the men who built this West, we ask You to dedicate this place. And, Lord, up there on the high range where the grass is always green and a man's horse never gets tired, we pray that the boys are happy with what we are doing here. Amen.

The Public's Right To Know

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "The Public's Right To Know" which appeared in the Belleville (Ill.) News-Democrat on May 7, 1957. The editorial was written by the Honorable Robert L. Kern, publisher of the News-Democrat, and a zealous advocate of the public's right to know how public officials conduct public business:

THE PUBLIC'S RIGHT TO KNOW

The public has the right to know what public officials are doing with the public's business, when they do it.

Seldom has that right been more flagrantly abused than in the Civil Aeronautics Board's handling of the Northeast Airlines case, and seldom has the need for open decisions arrived at been more clearly demonstrated.

The CAB, a public agency established to serve the public interest in control of aviation, met in private last August 2 and voted 3 to 2 to grant Northeast Airlines a big juicy plum—the New York-Miami passenger route for which Delta Airlines also made application.

The decision was highly improper—not necessarily on its merit, but for the reason that it was adopted in the presence of a score of interested men and behind doors barred to the public and the public's representatives, the press.

To make matters worse, the secret decision was not immediately announced but held under covers for more than a week. It was finally made public on August 10.

In the meantime, through one device or another, some people were permitted to peek under the covers, arrogate themselves a proprietary interest in a public affair, and use it to their own pecuniary advantage.

On August 3 there was a flurry of trading in Northeast Airlines stock which brought quick, handsome profits to the privileged few. As the story is now unfolding before a Senate committee, it is a glaring example of an abuse of public office that should not be tolerated.

Private discussion may be necessary before a decision of this kind is arrived at. But when action is taken the public should be represented in order that it may be fully informed as soon as possible.

Bureaucrats frequently try to argue otherwise, and sometimes they invoke in all sincerity what they believe to be the best interests of the public. But in reality they are merely trying to rationalize their own private or bureaucratic interests.

The Northeast Airlines case makes it plain that public officials have no right to abridge the public's right to know. Congress should take whatever action is necessary to make this principle stick throughout the Federal Government.

Herbert Hoover, Senator Byrd, and Mr. People

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following editorial by Joseph R. Jahraus, of the Laguna Beach Lumber Co., which appeared in the Laguna Beach paper. In view of the fact that it is an open letter to Mr. Congressman, I would like to give all the Members of Congress an apportunity to read it:

HERBERT HOOVER, SENATOR BYRD, AND MR. PEOPLE

DEAR MR. CONGRESSMAN: You have of course heard of Herbert Hoover, Senator BYRD, and a family, 170 million strong named people? Yes? Then let's go on from there.

You say you are in favor of economy in Government and deplore deficit spending. Herbert Hoover, a former President, was assigned a big job by a Democratic administration to point out the way to a safe economy and a commonsense way of doing Government business. You applauded his findings with words. Whatever happened to his recommendations? If they had been adopted even in part this Nation would be on a sound financial basis.

You have also heard of Senator BYRD, of Virginia? Perhaps he carries the idea of thrift and commonsense in Government spending to the extreme. We would not know about that. But we do know this: His people, in his home State, keep on sending him back to Washington. Apparently his sound business ideas have lost him no votes. So what are you afraid of?

Last but not least, have you heard of Mr. and Mrs. United States? They live here, try to earn their living and have listened to political mouthings about a balanced budget, economy in Government, reduced taxes and a lot of other words. They were fine words.

But Mr. and Mrs. United States are sick of words. Sick of supporting a panhandling world on their backs in the name of freedom; sick and angered at the veiled blackmail of going Communist if such and such is not given them. Mr. and Mrs. United States are tired of having their purses rifled in the name of international harmony. They are tired of being taxed and taxed and taxed and spent and spent and spent into a worse and worse financial condition.

And do not tell us, Mr. Congressman, that it is not so. Try buying groceries, shoes, clothing, paying for a house and having more and more tax, open or concealed taken from one paycheck. And you will see, Mr. Congressman, why Mr. and Mrs. United States want no more words about reduced spending from you; nor do they want any more reasons why a reduction in the budget or taxes must be put off another year.

They want it now, Mr. Congressman. Listen to 170 million Mr. and Mrs. United States and forget about pressure groups, international or domestic.

Put that sensitive ear of yours to the ground Mr. Congressman and you will hear sounds that may inspire you to do exactly what your conscience has been telling you to do all along.

LAGUNA BEACH LUMBER CO.

Israel's Independence Day

SPEECH
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. BARRETT. Mr. Speaker, on this ninth anniversary of Israel's independence, I would like to congratulate her on the completion of another successful year.

Not only has Israel managed to maintain her frontiers intact and to repel hostile guerrilla raiders, but she has recently made great strides in the development of industry and agriculture, which are of greatest importance to her national existence. Of special interest is the continual progress Israel is making in developing her own lands.

Between 1948 and 1955 the cultivated area under irrigation has tripled. The Israeli Government has established a centralized national water authority which implements and supervises the execution of irrigation projects. Large sums from Israeli development funds and from foreign aid have been invested in irrigation projects all over Israel. The Lake Huleh power and irrigation project has opened thousands of acres for cultivation in northern Israel; the pipeline completed in 1955 to carry the waters of the Yarkon River near Tel Aviv to the arid tracts of the Negev is a great step forward. This pipeline will supply much of the Negev—a desert before the establishment of Israel—with sufficient water to enable Israeli pioneers in that region to be self-sufficient in food.

To assure most efficient use of the newly irrigated land, the Israeli Government has encouraged the growth of farmer's federations, agricultural cooperatives, producers' associations, and a citrus fruit control and marketing board. When Israel's agricultural plans are completed, she should once more merit the name of "a land of milk and honey," as it was known in Bible times.

To permit Israel to complete her agricultural planning, the United States must continue to give technical assistance to her, for economic self-sufficiency and high levels of food production will assure the survival of a brave new Middle East nation.

Racial Subsidy: An American Indian Problem

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. KRUEGER. Mr. Speaker, a curious situation has arisen as the result of measures pending before the Congress. It has been outlined in very clear terms in an article by Robert Cory, in the Minot (N. Dak.) Daily News of May 4, 1957. I might say S. 574 to which he refers in his article is a companion to my own H. R. 3634. Mr. Cory's article is deserving of study for it explains some of the problems which arise in considering legislation affecting the American Indian:

"TUMBLING AROUND THESE PRAIRIES

(By Robert Cory)

One finds it possible to sympathize with the predicament of professional friends of the Indians who say they are against racial subsidy.

A large segment of these professionals has been jockeyed into the position of attacking Senate bill 574, now in the United States Senate, on this ground. The situation is now embarrassing because it appears to put the group on record as opposing racial subsidy in one case, while advocating it in another.

S. 574 was introduced on behalf of the States of Minnesota, North Dakota, South Dakota, and Wisconsin. It has the backing of State welfare, educational, and health agencies in those States. It aims to write into law a principle of Federal reimbursement for which these States have been contending.

Whenever the Federal Government contracts with these States, or with their State agencies, institutions, and political subdivisions to furnish services to Indian people, this bill would require the Government to pay the actual cost. Payment would be made regardless of where the Indian people re-

side, and it would make the State agency or local political subdivision the judge of who is an Indian and who is not.

Most of the professional friends of the Indians who are opposing this bill, it seems, are expressing themselves as strongly in favor of a so-called point 4 program for Indian people and Indian communities to provide them with special economic assistance. Somehow it did not occur to them that if S. 574 is a racial subsidy measure, it will be hard to convince anyone that the point 4 program isn't.

Professional friends of the Indians, and I do not use the word "professional" in a derogatory sense, continually become enmeshed in the unrealism of their theories about what's good for Indian people.

Their involvement may be regarded as typical of what happens to some of the best social action groups when they become ideological rather than practical in their approach to human problems.

Everyone knows that for 150 years the Federal Government has acknowledged that it has a special, legally implemented obligation toward Indian people. Everyone knows that for a long, long time special subsidies of one kind or another have been an important part of Federal policy. Everyone also knows that this remains true today, inevitably, and that the Government's peculiar protective responsibility has not yet been discharged. The job remains unfinished. That being the case, the racial subsidy argument, as directed against the kind of legislation we are talking about, has a slightly humorous aspect.

Many professional friends of the Indians, if they do not live in ivory towers, nevertheless are so far away from the scene of operations in Indian affairs that they are dependent on channels for information. Frequently they obtain a mistaken view of what is happening in the field.

Professionals tend to depend on other professionals for news and interpretation, and the channels most accessible to them are, in the final analysis, fed by professional sources within the Bureau of Indian Affairs. The inevitable prejudice and one-sidedness of such sources affects the judgment of the Indian's friends.

For example, a worthy organization known as the American Association of Indian Affairs in New York has gained the mistaken impression that there is a "growing discontent among Western States over their obligation to provide services to Indians just as they do for other citizens." The AAIA thinks that S. 574 is an expression of that discontent.

Somehow, it is clear, the AAIA has been misinformed. Observers close to the situation inside Minnesota, the Dakotas, and Wisconsin know there is no growing discontent or resentment of that sort. Instead, there is a growing desire to see Indian people have equality of opportunity and equality of services. There is a desire to increase the incentive of young people to wade into the mainstream of American life.

This desire, it is evident, has been awakened by an intelligent observation of need. A considerable amount of heavy thinking has been done by welfare workers, educators, and health officers. With more realism and more humanitarian purpose than the professionals in the Indian Bureau have been able to see, or willing to acknowledge, they have wrestled with the Indian problem in all its local ramifications. These local ponderers-of-the-problem have come up with the conviction that the best practical answer is to be found in full Federal reimbursement for "actual cost" during the remainder of the transition period for Indians, and they have embodied this principle in S. 574.

The people of the Four-State Declaration see Indian incentive stifled by segregated services on reservations. They find the Federal Bureau too quick and too eager to unload responsibility for any Indian who has the courage to move. Usually the Indian relocatee has no other domicile of reference than the reservation. This is a great handicap to him when his condition becomes distressed in an outside community where he has not lived long enough to establish legal residence for welfare purposes. Usually he has no family doctor, no home school district, no home county where he belongs. Instead of being able to refer inquirers to a place in Michigan or West Virginia, where perchance another distressed newcomer might have relatives or friends to vouch for him, or a home county to acknowledge him as one of its own, the Indian has only the reservation for reference. To get help he has little choice but return there.

No, it just isn't so that S. 574 was drafted by a bunch of selfish, penny-pinching county and State officials who are promoting racial discrimination.

The bill had its origin in the thinking of a conscientious group of professional social-service workers, educators, and concerned State officials. Their objective was to devise a plan by which Indian people would have the greatest freedom of movement, the best chances of social acceptance, and access with no browbeating questions asked to the same welfare offices, hospitals, and schools to which other people go. These local professionals, who understand the problems involved as well as anybody, just got sick and tired of the redtape, the evasions, the quibbling—and lack of clear-cut contractual arrangements—encountered so frequently in giving service to Indian clients, and they are asking for a new approach.

By and large, we would say, the people who handle welfare, health, and educational services in the States of Minnesota, North Dakota, South Dakota, and Wisconsin are just as well trained, just as professional in their thinking, just as interested in Indian people, and just as free from race prejudice as the professionals in the Bureau, or the professional friends of Indians on the outside. They believe sincerely that the plan presented in S. 574 would work to the benefit of Indian people, as well as to the benefit of the public generally, and that it would minimize the racial factor involved in a very complex situation.

Unfortunately the social workers, educators, employment counselors and other public officials backing the four-State declaration and S. 574 do not maintain pipeline connections through which their thoughts, feelings, and observations are channeled to friends-of-the-Indian societies in New York and elsewhere. The channels of intergroup communication just do not run that way, and the understanding of friends of the Indians is the poorer because of it. These workers in the States—who have not set themselves up as being friends of the Indians publicly, though they are—constitute a professional group whose views have not been sought.

Yet it is these people, working at local and State levels of government, who will have to be taken into counsel, and whose help will be needed at every turn, if Indians really are to be assured all along the line of services on the same basis on which other citizens receive them.

The fact is overlooked that these people, in their daily work, already are leading their non-Indian constituents toward a more intelligent appreciation and acceptance of Indians at every level of community life. They can be, and to some extent already are, a functioning liaison between Indian citizens in transition and the off-the-reservation Indians.

A Bleak School on a Hillside Makes the Case of Federal Aid

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following article which appeared in the Courier-Journal, Louisville, Ky., April 24, 1957:

A BLEAK SCHOOL ON A HILLSIDE MAKES THE CASE OF FEDERAL AID

We can't feel a flicker of resentment at the verdict of a visiting Congressman on a school building he saw in Martin County. He called it a disgrace to the State of Kentucky.

In view of the circumstances under which the inspection was made, we would change this description only by saying that it is a disgrace to the United States.

For the point is that two Members of Congress—West Virginia's Representative CLEVELAND BAILEY, who made the remark, and Kentucky's Seventh District Representative CARL PERKINS—were in east Kentucky to gather evidence on the need of Federal aid for building public schools.

They found plenty. Much of it has a tragic tone. Even Mr. PERKINS, who naturally knows the eastern hill country, was touched by many a sight. The school in question, near the county seat of Inez, was the typical horror picture—an unsealed structure of rough boards, the cracks reinforced only by thin wooden strips.

It was like a neighboring school which brought the same sort of discouraging comment, with roofs and walls creviced to the winds and rains, cardboard replacing window panes and shutting out light, the interior a place of chill that defied the old stoves on bleak days.

Mr. BAILEY had a remark that goes to the heart of the problem. "Nothing short of a new structure would be adequate," he was quoted as saying.

TAX RESOURCES TOO SMALL

And this is the point. If Martin County called on all its resources, taxing beyond the limit, it could get but a small part of the money needed. Here is a county, 1 of 30 or more in Kentucky, which by dint of the utmost straining, could not begin to cope with its problem.

Yet people live there. They go out from the poor counties to make up the population and the level of productivity and of social and economic contribution elsewhere. They must needs be educated not only for a local destiny but for participation in America's future. Since 1950 Martin County has lost population steadily.

The county has but two small industries. Little more than 1 percent of its workers are in industrial employment. It has only 919 farms, of an average 74.2 acres, and no recorded urban population. The total value of land and buildings is listed in a gazetteer as $2,919,000. Ninety-eight percent of Martin's farms reported in 1949 an income of less than $600 each.

This is an extreme example, to be sure, but we insist that it illustrates the point of Federal aid in addition to State aid. Most of the east Kentucky counties visited Monday by the Congressmen could not get $50 a year per pupil even by raising tax assessment

to a full 100 percent and applying double the maximum tax rate..

Martin County's average per capita income in 1953, by calculation of the University of Kentucky's Bureau of Business Research, was $368. Around 90 of the 120 counties that year had per capita income of less than $1,000.

How else in these circumstances are the needs of children, which add up to the needs of the State and Nation—how else are they to be served than by direct aid?

THE STATE STRAINS, TOO

It is not to be forgotten that the State government, by tax raises and by grace of a general national prosperity, has been enabled recently to increase its contributions to public schools by more than $20 million a year. The new minimum foundation program increases State support. But there is in Kentucky a pressing need of 10,200 new or reconstructed classrooms, as State Superintendent Martin told Congress.

We are not picking on Martin County. We are only explaining, by the dramatic illustration provided by the single county, how the need of Federal aid for school building comes to pass.

We are not making out a case for subsidy for our people as a way of life, but only to show that Federal aid is a means to an end—and that this end is hope.

We believe that unless conditions are remedied, it will be as Representative CARL PERKINS said, a bar to any hope of industrialization or any other development of resources. What could be calculated more effectively to discourage developers than such schools?

The main resource of the area, the people, is sound. They have spirit, they have courage, they have strong community feeling. Kentuckians of Martin County recall most vividly how the high school at Inez (population 500), twice has won the State basketball championship, taking on all comers though lacking full replacement for the starting five. This means more than an athletic contest. It means basic stamina that deserves a better break from the Nation which we like to believe it typifies.

Matching Fund Lure

EXTENSION OF REMARKS
OF
HON. DAVID S. DENNISON, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. DENNISON. Mr. Speaker, if any real and lasting progress is to be made in cutting the budget it is up to all of us, the people at home, State officials, and Members of Congress, to take a long, hard look at local projects. We must begin to stop making commitments which have to be paid for later and force Federal expenditures. It is time the Federal Government stops tempting the States and local communities with "matching fund" bait. The following editorial from the Conneaut News-Herald, at Conneaut, Ohio, emphasizes what can be done in this direction:

MATCHING FUND LURE

Federal offers to bear half the expense of projects have a fatal fascination for State and local governments.

Even when local authorities know they only are getting their own money back, they find it almost impossible to resist a Federal proposal that the State match funds provided by the United States to build a road, or a schoolhouse, or to finance some welfare payment.

The result of this matching procedure is that the State frequently has to raise additional money it would not otherwise be spending in order to qualify as a recipient of the Federal aid.

And the poor taxpayer pays twice, once to the Federal Government to help provide its share of the fund-splitting project and once to the State or local government for its half.

What looks like a bargain, therefore, often results in a boosting of taxes on the State or local level.

One State finally has decided to do something about the situation in which the Federal Government constantly is dangling tempting offers before it to pay half the cost, if you'll match our contribution.

The Nebraska State Legislature, by a vote of 38 to 3, has adopted a resolution calling on the Federal Government to curtail grants-in-aid which call for matching State funds.

If a few more States would take similar action the custom of the Federal Government making contributions to State projects on a matching basis might be cut down materially.

The temptation of getting half of something paid for by the Federal Government is strong enough to tempt State legislature into appropriating money for projects they might otherwise turn down.

When you launch a project you wouldn't otherwise undertake just because the Federal Government will pay half the cost, you really aren't getting much of a bargain.

It took real courage for the Nebraska Legislature to take a stand against accepting Federal handouts. It is the kind of courage which will be necessary to cut State and Federal spending down to a reasonable level.

Henry Walser, of Hazleton, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Sunday Independent of May 5, 1957, on the passing of Henry Walser, outstanding civic leader, businessman, and publisher:

SPLENDID RECORD LEFT BY PUBLISHER WALSER

Another of that wonderful brand of publishers who came up through the ranks of the printing trade was taken from us last week.

That was in the death of Henry Walser, one of the owners and long a guiding hand of the Hazleton Plain Speaker and the Standard-Sentinel—the two newspapers of character and integrity which serve so well the lower end of Luzerne County.

On the credit side is the fact that Mr. Walser was permitted 81 fine years before he was taken and now also it is fortunate that his son, Frank, long trained and long active, is prepared to take over in his stead.

But the community will miss him for, in addition to his newspapers, Mr. Walser was active also as a banker and community leader.

He left a splendid record.

Union Favors Partnership Plan

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following editorial which appeared in the March 30 issue of the Chico Enterprise-Record:

UNION FAVORS PARTNERSHIP PLAN

Local 1245 of the International Brotherhood of Electrical Workers (AFL–CIO), which represents some 14,500 northern California electrical workers, this week joined the ranks of organizations and citizens in favor of President Eisenhower's "partnership plan" for development of the Trinity River project's electric power.

In a statement received by the Enterprise-Record from Business Manager Ronald T. Weakley at the local's Oakland headquarters, the union vigorously criticizes public power advocates and expresses grave concern over the welfare of utility workers and their families "each time governmental agencies invade the private power industry."

Demonstrating that the union is not in sympathy with the preference customers so favored lately by Republican Senator KUCHEL and Democratic Congressman CLAIR ENGLE, the union statement frankly indicates a preference for private industry as regards the factors of "wages, working conditions and safety." The union's statement said:

"Our members, who make their living by serving the public and are employed by the Pacific Gas & Electric Co., work under collective bargaining agreements covering wages, working conditions and other employee benefits.

"The services rendered by our members is taken for granted by the general public although these employees maintain 24-hour service under all sorts of weather conditions and hazards. We have never had a strike on these properties and our contract negotiations and industrial relations activities are not headline material for the press.

"We are seriously concerned over the possibility of the Federal Government building and operating the power facilities involved in the Trinity River project.

"Public power advocates seem to ignore the fact that the economic welfare of thousands of utility workers and their families is affected each time governmental agencies invade the private power industry.

"Public (governmental) agencies generally do not allow and usually prohibit the right of free organization for collective bargaining and the right of contract. These are guaranteed by law, however, in the case of the regulated private power industry.

"Our experience has shown that some preference customers (public-power cities, etc.) who distribute and sell power through public agencies have little regard for their employees when it comes to wages, working conditions, and safety.

"Should the Federal Government build and market the Trinity power facilities, there is no guaranty that the expansion of public power to more preference customers will carry with it the protection for employees now covered by contracts in private industry * * *.

"Private (partnership) development of the power facilities on the Trinity project will provide additional employment for our members and will protect their right to en-

gage in collective bargaining under legal contracts.

"Our examination of the partnership plan and existing State public utilities commission regulations leads us to believe that the welfare of the general public and thousands of workers engaged in public service in private industry will be best served by Congress adopting the partnership plan for the Trinity River project."

The electrical workers union is well aware that some other unions do not share its views against public power and its socialistic concepts. But the electrical workers are equally aware that, under similar circumstances in their own working fields, the other unions would doubtless react as the electrical union has reacted.

For example, let someone introduce legislation for socialization of the automobile-manufacturing industry and you would shortly hear Walter Reuther's union taking the stand against governmental encroachment * * * let Congress begin consideration of a plan for governmental operation of the construction industry and the union carpenters, bricklayers, plumbers, roofers, etc., would be among the stoutest opponents of socialization.

It is a simple matter of American economic philosophy and the principles of democracy. The progress and well-being of labor, business, industry, and the people as a whole have always been based on the concepts of free enterprise. And it shall ever be so.

Nobody gains but the so-called preference customers when the Government invades private industry.

We Need An Adequate Airlift

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks, I should like to insert in the RECORD the following editorial from the March 1957 Airborne Quarterly entitled "Good Strategy Needs Adequate Airlift," which points up one of the serious gaps in our national defense as conceived and carried out by the present Secretary of Defense.

Unless adequate strategic and tactical airlift is provided, we will not have an airborne Army able to put out small wars whenever they flare up in any part of the world and our own citizens and our allies will be greatly endangered.

GOOD STRATEGY NEEDS ADEQUATE AIRLIFT

With all due respect to the Secretary of Defense, we must conclude that he meant to use the words "concepts of strategy" in his ruling that tactical and strategic airlift are adequate in the light of currently approved strategic concepts.

A concept is an abstract general idea or notion. We hope that our current strategy is more than just a strategic abstract notion.

The joint chiefs of staff have a 3-inch-thick strategic war plan. Some say that it is based on a magic formula that one plane plus one nuclear bomb equals one enemy city. Those brilliant men know the definition of strategy, and know that destruction of cities does not win wars.

Strategy is the art of concentrating superior combat power in a theater of operations at the required time and place, and under conditions which will favor defeat or destruction of the enemy's armed forces in battle.

Strategy should not be confused with conduct of war or with tactics, because these are shaped by the strategy adopted to achieve a given end.

The given end, in our mind, is to guard our national security against every obvious threat; and against any other threat which is not presently manifest but which might develop in the next few years.

At the moment, the principal threat to our national security is general nuclear war. The corollary threat is the piecemeal loss of friendly nations of the free world to Soviet domination.

We have successfully deterred a general nuclear war these past 10 years by superiority in airpower and the quantity and quality of our great nuclear bombs.

Now, we are told by defense leaders that this superiority has either disappeared or is likely to disappear in the very near future. A general nuclear war between Russia and the free world could result in the virtual destruction of both, with China emerging as the dominant world power. That is extreemely distasteful to Russia.

Defense leaders seem to be veering toward a feeling that the air-plus-nuclear power of Russia and the free world acts as a mutual deterrent to general nuclear war for the time being.

The corollary threat to our national security is becoming increasingly dangerous. From the depths of the Kremlin, Russia is concentrating every effort toward absorbing the small nations of the free world by any means short of general war.

Russian strategy increases the likelihood of small wars. Therefore, our strategy should be directed toward deterring small wars; and toward suppressing small wars promptly if they do break out, lest they lead to the general war both Russia and the free world are trying to avoid.

Should a small war start, we must be able to concentrate superior combat power in any distant theater of operations chosen by the enemy. We must have the capability of delivering that concentration in time and under conditions which will insure defeat or destruction of the enemy's armed forces in battle.

The ability to do just that is what is meant by strategy. But, note particularly, successful strategy in this day of supersonic speed and missile marvels requires almost comparable speed in delivering adequate force to achieve defeat or destruction of the enemy's forces in battle. Anything less invites general nuclear war.

Speed is the essence of small-war deterrent strategy. We cannot maintain forces-in-being in every possible danger spot. The most we can do is to support forces such as those of NATO and SEATO to delay an enemy for a few days until we can reinforce them to a point of superiority.

Reinforcements must be delivered in a matter of hours—not days or weeks.

That calls for airlift—and brings us back to the dictum of the Secretary of Defense that tactical and strategic airlift are adequate in the light of currently approved concepts of strategy.

Strategic airlift in war is the capability of the Air Force to deliver men and materiel administratively to airfields reasonably close to the locale of a war.

Tactical airlift in war is the capability of the Air Force to deliver airborne units directly to the field of battle and drop them; and to transport air-transportable troops via assault-type aircraft to airheads in the battle area.

We have amassed tremendous resources in the strategic airlift category. They could be overwhelmingly superior with the inclusion of the giant Douglas C-132 turboprop transport capable of carrying 200,000 pounds a distance of 3,500 miles at 450 miles per hour. But there are rumors that C-132 production may be limited to only a few planes.

Strategic airlift adequacy is not sufficient in itself to make any strategy for small-war deterrence successful. It must be supplemented with adequate tactical airlift to deliver fighting men and their battle hardware quickly—ever so quickly—direct to the battleground.

The Secretary of Defense thinks that both tactical and strategic airlift are adequate. There are plenty of well-informed opinions that tactical airlift is definitely insufficient to counter speedily a small war in an area where the Air Force or the Navy could not be utilized effectively.

The Navy's 6th Fleet in the Mediterranean probably kept Russia from physically entering the recent Middle East fighting. Without the fleet, could our strategic and tactical airlift, combined, have delivered adequate men and materiel within 48 hours? If it could, all the people of the free world should know it. Think how that would have raised world morale.

But, if it couldn't, it's up to Congress to make certain that airlift is made adequate to deter small wars, or to suppress the next one within a matter of hours.

Hope

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. FOGARTY. Mr. Speaker, I was deeply moved by a letter which I received a short time ago from Mr. David Gimbel of Brooklyn, N. Y. Mr. Gimbel enclosed with his letter a poem entitled "Hope" which he had written and dedicated to me. Needless to say I deeply appreciate the kind sentiments he has expressed and am grateful for his thoughtfulness.

However, I would like to take this opportunity to once again state that the impetus for my interest in starting a program of assistance for mentally retarded children originated with a group of parents of such children in my own State of Rhode Island. Their discussions with me coupled with a speech by His Excellency Archbishop Richard J. Cushing of Boston, which I had read several years ago, caused me to explore the possibility of inaugurating Federal assistance for these exceptional children as Archbishop Cushing has called them. It is certainly heartwarming to know that this Federal action provided the spark which ignited the blaze of interest and action presently found throughout the country in this vital field. Mr. Speaker, under leave to extend my remarks, I include the letter and the poem from Mr. David Gimbel.

HON. JOHN E. FOGARTY,
Providence, R. I.

MY DEAR CONGRESSMAN: I wish to express my sincere thanks to you for your effort, devotion, and relentless courage in behalf of the mentally retarded children of America. It is people like you who are bringing hope into the lives of their parents who have all but given up to find a way out of their wilderness of confusion. For today we are witnessing the dawn of a new era of hope.

Only a short while ago, these unfortunate children were merely classed as the untouchables of this great country of ours. Yet, in spite of our great humanitarian endeavors for the peoples of the world we somehow by passed this most pressing problem. Consciously or unconsciously, until people like you, Mr. Congressman, and that great and wonderful man, His Excellency Archbishop Richard J. Cushing, began to push away the clouds so that the first rays of light could begin to penetrate this mass of darkness that these children and their parents have lived under since our Creator first put man upon this earth.

The hope that you have instilled into our hearts will give us parents the strength to bring a better and a more fruitful day into the lives of the most innocent children of God. We are all so deeply grateful to you.

With my sincere devotion,

DAVID GIMBEL.

DEDICATED TO CONGRESSMAN JOHN E. FOGARTY, A MAN WHO IS BRINGING HOPE INTO THE LIVES OF EVERY PARENT WHO HAS A CHILD WHO IS EITHER MENTALLY OR PHYSICALLY AFFLICTED

HOPE

(By David Gimbel)

Hope in thy heart is a heavenly peace
Hold on to it always, Oh, never do cease
For 'tis filled with the brilliance and soft as the light
And its magic can brighten thy darkest of night.

Hope will stand by you in moments of despair
And guide thee to safety when no one would dare,
It can open all doors even rusty and tight
And stop every wrong to make it a right.

Hope is a treasure that people are seeking
And sometimes t'is lost when tyrants are speaking,
Yet the hope in thy soul can rekindle that flame
Thy heart will cry out, for that is hope's game.

Hope is the rainbow in everyone's prayer
So search for it always, if you really care,
For without it, what's left, only emptiness and sorrow
So never give up that hope of tomorrow.

The Problem of Retarded Children

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1957

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I include four articles which appeared in the Fort Worth Star-Telegram as part of a series on the problem of retarded children. The author in these articles explains some of the things that are being done to cope with this problem:

THE TRAINABLE—XI: SOCIAL ADJUSTMENT AND USEFULNESS TWO MAIN OBJECTIVES OF RETARDED

(By Blair Justice)

Every weekday morning about 8:45 an attractive mother drives up to the Springdale Elementary School grounds in Riverside with 2 of her 3 children.

At the 2-story brick building on the front of the campus 13-year-old Ann Gilliland steps out.

At the 1-story frame structure at the rear of the grounds, the mother's 17-year-old son, Roger, Jr., leaves the car.

This routine is no different from that repeated at schools all over the city except for one thing: Roger and Ann have smaller heads than the rest of the children leaving mothers' care.

They are what mental retardation authorities call microcephalics (micro means small, cephalic pertains to the head).

Ann attends special education classes at Springdale Elementary for the educable mentally retarded (those whose retardation is believed to be mildest).

CLASS AT CENTER

Roger is in a class at the Children's Opportunity Center, which offers programs for the trainable mentally retarded (those whose retardation is believed to be between the mildest group—the educable—and the severest—the custodial).

Mr. and Mrs. Rogert I. Gilliland, Sr., of 4317 Beall also have a normal 14-year-old daughter, Bette Carol, who attends Meadowbrook Junior High School. Gilliland is district manager of a minerals and chemical firm.

It is not unknown for retardation of the microcephalic type to occur twice in a family.

"We didn't think it happened twice," said Mrs. Gilliland in discussing the couple's reaction to their second microcephalic child, "but it does."

Dr. George A. Jervis, director of Laboratories for Letchworth Village in Thiells, N. Y., states that there are two kinds of microcephaly. One kind can be due, he said, to exogenous factors such as fetal infection and other causes originating outside the human body, over which neither parent nor victim has control.

BOTH ARE HELPED

Regardless of the cause, the Gilliands faced the fact that they had two small-headed, retarded children and proceeded to see what they could do to help them.

Ann is helped by being taught all that school and mental retardation authorities believe the educable mentally retarded can learn (up to 5th or 6th grade subject matter).

Roger is being helped by the training offered the teen-age class of 10 at the Opportunity Center, which is financed by the United Fund, tuition from parents and direct contributions.

Since social adjustment and usefulness (to self and others) are two of the biggest objectives of this training, here are excerpts from Roger's case summary showing his accomplishments in those two areas:

"He came to us (in 1953) as a child who refused to participate in any classroom activity. He had what might be termed a completely negative attitude. * * * He seemed preoccupied, was hostile in his attitude when he was urged to participate. 'No' was the only response.

"The teacher knew Roger was capable of carrying out activities and completing tasks if only we could elicit his interest. All the known techniques of motivation were used and consistent, patient training was continued month after month."

ACCEPTED ONE AT TIME

Slowly, the report continues, Roger accepted "one and then another of his group. He sporadically joined in the classroom activities."

This year Roger has responded to work in arts and crafts (making of hotplate pads, potholders, ashtrays and other articles) and demonstrates growth in getting along with other people. * * *"

Roger can be financially useful to himself to the extent of mowing neighborhood lawns.

"He keeps his own money, is extremely cautious in lending it to anyone, buys such articles as interest him. * * * We feel Roger will accept vocational training that will enable him to contribute to his support when he is an adult," concludes the summary.

How do the teachers succeed in drawing the retarded from the shell they may be in; how are the teen-agers, the oldest and final group in training classes, taught usefulness and social adjustment?

Here is a glimpse at the routine at the Opportunity Center: Every morning each child removes his wraps and puts them in the proper place. Room care chores are performed. The teacher greets the pupils with "Good morning. How are you?"

Each pupil repeats the greeting to another. Two are given the task of walking around to every class member and shaking hands while saying the greeting.

HEALTH INSPECTION

After repeating a flag salute, a health inspection is held in which each pupil is given the chance the inspect the care of hair, face, hands, fingernails, and teeth of others.

Next comes practice in each pupil repeating his name and address (a help in case he gets lost), the days of the week, in recognizing "everyday words" (stop, go, danger, stay out, poison, wet paint, wait, bus stop, right, left, boys, girls, exit, up, down) and in counting.

Next comes a 30-minute physical activity period (basketball, volley ball on the outside or musical games, horseshoes, or bean bag inside). After that the pupils listen to a recorded story. Next, there is practice on the alphabet and workbooks (color and cutting).

A craft period follows, then table setting for lunch. After lunch and rest period comes such practical activities as homemaking for girls and woodwork for boys. The pupils leave at 2:30 p. m., assisting smaller children to cars.

Opportunity Center is a team effort. Its director, Mrs. B. E. Dowd, and other staff members are assisted by volunteers from eight groups. Forty-six volunteers serve regular hours.

There is also an opportunity center recently opened at Arlington.

THE TRAINABLE—XII: SEVERE SPEECH PROBLEMS BEING OVERCOME IN SPECIAL TCU CLINIC

(By Blair Justice)

When Donnie Biser, the mongoloid boy pictured with the first story in this series, entered the TCU Speech Clinic last year he could say from 20 to 30 words.

Not all of these words, which were simple nouns like "mama" and "daddy," were spoken clearly by the 6-year-old Donnie.

Without language a child has a hard time. He has trouble letting his mother know where he hurts when he has a stomachache. He has trouble expressing how much or how little he has in the way of mental resources and potential.

Not all the trainable, including Donnie, have such a severe speech problem. But many have one to the extent that the first thing a mother requests in improvement of her child is: "Give him speech." Mrs. LaVerne Biser was one of these mothers.

CLINIC IS UNIQUE

Donnie is now using phrases instead of relying on single words. Examples: "I'll do it." "What's that?" "Who's that?"

Mrs. Dorothy Bell, director of the clinic, and other speech therapists are specifically concerned with the development of language in the mentally retarded child.

The clinic's program for the mentally retarded is a joint project sponsored by the Hogg Foundation at the University of Texas, TCU, and the Fort Worth Council for Retarded Children.

"The clinic is conducting somewhat of a unique study. To our knowledge this is the first project of any magnitude to see if the lower I. Q. child can benefit from speech

therapy and be given language and speech," said Dr. E. L. Pross, head of speech-drama-radio in the fine arts department at TCU.

The clinic already knows that orthodox methods in speech therapy—those that help normal and educable mentally retarded children—do not give satisfactory results with the trainable mentally retarded and those with more severe retardation.

The therapists are attempting to find out which methods work best. Dr. Pross said it is hoped a manual or book can be published on the findings of the 2-year study.

One of the questions the study is concerned with is this: If a retarded child, a 7- or 8-year-old boy, has a mental age of 3 or 3½, then why isn't he talking more, since an average child of that age does have speech?

Authorities have found that there can be a diversity between mental age and speech age. That is, the age the child has speech may not coincide with how he ranks mentally in age (mental age is a figure based on IQ and how old the child is).

Here are some tentative findings of the clinic's study, according to Mrs. Bell, bearing on this question:

(1) Emotional problems play a large part in the development of speech and the lack of it in the retarded.

(2) Aphasia is more prevalent than believed. Aphasia is the loss or impairment of the power to use or understand speech.

It results most frequently from assumed lesions (damage or injury) in the brain that affect the areas supposedly responsible for those things necessary for speech—such as associating certain sounds and symbols (words) with objects and thoughts.

(3) Environmental deprivation can affect the rate at which the retarded child develops speech. An environment that is so lacking in material and emotional needs of the child can retard his speech, authorities believe.

TECHNIQUES EVALUATED

The TCU clinic is finding these techniques valuable in giving the trainable better speech: amplified sound, singing, choral reading, action games, role playing, creative dramatics, story telling, drama practice in "life experiences."

There are five monogoloids, including Donnie, in the TCU trainable class. Mrs. Biser says improvement in speech has helped her son in this way:

"He's happier now that he can say words and phrases than when he had to use motions and gestures. We can now understand just about all that he wants from what he says.

"His social relations also are better," said Mrs. Biser. "Other people can understand him easier. Interaction with his older sister and young brother is improved."

Since the retarded, like the normal, require recreation as well as work, a playroom has been established at the clinic. Also, Mrs. Pauline G. Martin, special program director of the Fort Worth City Recreation Department, has been working with Mrs. Bell in training the retarded children in activities involving rhythm, tumbling, baton twirling and singing.

The trainable from TCU performed at the opening session last week of the Southwest District Recreation Conference at Hotel Texas.

PROGRAM COOPERATIVE

This is another example of the joint and cooperative nature of the projects to develop the trainable.

Another, more recent, is the Occupational Training Center for the retarded at 1508 Hemphill. In this building, lent by the Amon G. Carter Foundation, is a vocational program designed to prepare for small jobs the retarded who can accept such training.

Many of these jobs will necessarily be under close supervision in a sheltered environment.

Financing the workshop are funds from an anonymous donor, from the Federal Office of Vocational Rehabilitation, Convair Contrib Club and the Fort Worth Council for Retarded Children.

Assisting in preparing the workshop are civic clubs and a TCU fraternity, under the supervision of Mrs. Beverly Bradbury, head of the workshop. The workshop is sponsored by the Retarded Children Council and integrated with the group's Children's Opportunity Center.

THE TRAINABLE—XIII: FAMILY OF RETARDED CHILD FACES FINANCIAL TROUBLES

(By Blair Justice)

"I am writing for some information about the State school," began the letter from the mother. "We have a retarded child of 13.

"She has been attending public school classes but has about reached her peak in these classes. We have been told that she should be placed in a home or training school and the sooner the better for her. There is a private school here but the cost is way above what we could afford to pay."

This is one of dozens of inquiring letters that arrive each week at the Austin State School, one of Texas' four residential centers for the mentally retarded. The Austin school is the admission unit for the other three.

FACTORS INVOLVED

Though an estimated 80 percent of all retarded persons remain in their community throughout their lives, the demand—and need—for institutional care is big enough to cause an 18-month waiting list at the Austin State School and a crowded condition there.

"Few children are placed in institutions just because they are mentally retarded," said Raymond W. Vowell, superintendent, in a speech here before the Fort Worth Council for Retarded Children.

"In each case there are additional complications we call 'plus factors.' These include: mental retardation plus breakdown in health of the mother, mental retardation plus mother having to work to support the family, M. R. plus delinquent tendencies, M. R. plus dependency, M. R. plus broken home, M. R. plus conflict between siblings, M. R. plus no training opportunities in the community * * *."

Here was the M. R.-plus case of the mother writing for information:

"We also have another child that is 6," she stated. "I have been taking the older child to and from school and as we have one car it is so hard on me to take my husband to work, my little girl to school, go after her and then back for my husband."

MOTHER PUZZLED

"It is almost more than I can do as I had a major operation in December. * * *

"Things are so now I cannot get a job, not even a part-time one, as there is no bus service for the retarded child."

And from another mother, with the "plus factor" of marital trouble:

"I am writing you about my child Michael who is now 7 years old and is retarded. * * * His daddy deserted us about 3 years ago and I remarried and have been a year but this marriage is also ending. * * *

"I love Michael so much and I want to do what is best for him. I have another child 4 who is normal in every way * * * my nerves are about shot * * * I can't trust him to walk to school alone and I know I will have to go to work and there's hardly anyone I can get to keep him as he just won't mind. * * *

"Could you advise me in any way * * * I am so confused I don't know where to turn."

For those parents who conceive of the State residential centers as frightening places, let one statement from Vowell's speech be heard:

"The modern State institution is better than is popularly supposed. In some ways it offers more than the average home can give. Medical and nursing services provide for illness. Specialized training and education are designed to develop whatever capacities the child possesses. There is a planned recreation program. The child has plenty of companions with the same handicap, which encourages socialization. He does not have to compete with brighter children. He develops a sense of belonging. He becomes a part of the group and not apart from it. He can be successful in competition."

FAMILY MUST DECIDE

But this is not a sales talk for State schools. As Vowell said in his speech, "each child and each family are different" and no one can say what is best for all. The decision is the family's.

"Parents who send their child to an institution," he said, "love him as much as parents who keep their children at home. It is not a question of love or duty, but of expediency. What is best for all concerned"—for the child, the family, society?

Vowell mentioned specialized training and education. The State school does not take children, lock them in dormitories, and offer them only custodial care. There are no locked doors and the institution is what its name says—a school. Admittedly, there are those whose retardation is so severe they cannot profit from classes, but these are a minority.

On the campus of the State school—and it does look like a campus—are two brick buildings used strictly for classes. Academic school is provided for the least retarded, the educable. A training school is available to children in the middle retardation group, the trainable.

Just as in the West Van Zandt Elementary School class for the trainable and the Opportunity Center here, there are certain criteria for admission. For the trainable program the child must be ambulatory, toilet trained, and have a mental age of at least 2 years and 5 months.

Classes for the trainable resemble in nature those offered in Fort Worth. Objectives are similar: To enrich the child's life by training him in the area of social adjustment, self-care, economic usefulness, language development, physical training, and arts and crafts. Mrs. Margaret Oliver, who is working on her doctorate in education, is school principal.

Every week the pupil sends a letter home to his parents telling them what he has been doing in class. If the child can't write or adequately express himself, the teacher does it, putting down what the pupil asks her to.

This is a letter from one of the trainable pupils, Charlie Phillip Bennett, 17, son of Mr. and Mrs. C. P. Bennett of Seminole:

"DEAR MOTHER AND DAD AND TERRY: We were so glad to get your valentines. I gave each of the boys one. Mrs. Pate (the teacher) asked if I had rather give them to girls. I told her, no, I did not like girls. But we drew names of the girls and they did for us, so I had to get a valentine from a girl after all * * * We had a real dress up party. We have so many things for parties * * *

"Right now I am cleaning out the top of the piano. We hid some of the stuff left over in the top * * * We have not fried the new popcorn yet, but we will this week. Mrs. Pate said if we were real nice she would not wait until Friday for our party this week." (The class has snacks on Fridays to train the pupils in chores and for entertainment.)

Charlie entered the State school 2 years ago Friday.

THE TRAINABLE—XIV: STATE SCHOOL FOUND BEST FOR RETARDED PAIR

(By Blair Justice)

Jack Holland, dean of men at the University of Texas, and his wife have two mentally retarded children. And like most parents of the retarded, they have a story to tell of how they searched for what was best for their children.

Their story is one of parents who finally decided that it was best for both family and the retarded son and daughter to have the retarded pair live at the Austin State School and attend classes for the trainable there.

The Hollands have a normal 7-year-old son, Jeffrey.

The decision to place Barbara, nearly 15, and Darwin 11, in the State school did not come quickly. The couple tried a number of things for both before enrolling them as residential pupils at the school.

CENTERS STILL NEEDED

Their story is told because authorities do not want parents of retarded children to feel that public-school classes for the trainable will be a panacea if the bill before the legislature passes. They want parents to realize that it won't be in the best interest of all the trainable to attend special school classes in their own community.

There will still be the need for State residential centers. Some authorities feel that regional centers across Texas would come closer to answering the needs of the biggest number of trainable than would special public-school classes.

State Senator Willis, of Fort Worth, one of the authors of the bill for special classes, is also pushing efforts to get a residential school built in the Fort Worth-Dallas area.

Holland feels the regional school system is best if there must be a choice as to which the State is to invest in. His feeling is based on long and painful experience in searching for what he and his wife now believe is best for their two retarded children. They know that what is best for their children may not be best for all others.

TRUTH FINALLY TOLD

Fifteen years ago when Barbara was born not much was being said—or was known—about mental retardation. No doctor told the Hollands, or probably had any way of knowing, that the little girl's cortex (part of the brain) apparently was damaged.

When she wasn't talking by the time she was 3, the parents were concerned, but their doctor wasn't prepared to say the child was retarded.

As is so often the case, Barbara's coordination was poor and this also was alarming. Finally Holland was told he and his wife had a retarded child.

But to the young, hopeful, well-educated couple this was hard to accept. They tried Barbara in regular public schools when she came of age. This, of course, failed.

All the time people were advising the Hollands on ways to improve the child's coordination and to improve the child (a teacher, Holland said, told the couple: "Your child is just spoiled and stubborn"). Someone said glutanic acid was good for a retarded child, so that was tried. Art and sewing lessons were tried. Even a bicycle was rigged up in a stationary position in attempt to improve Barbara's footwork.

IT CAN HAPPEN TWICE

But by then the Hollands had their second child, Darwin. They didn't think it could happen again in a thousand years, but it did; Darwin, too, was retarded. Holland said he was told the boy's occipital lobe was damaged.

Darwin was born in Fort Worth, Holland's birthplace. Holland was with Convair from 1943 to 1946.

The boy didn't walk until he was 20 months old. Like Barbara before him, the parents tried him in private kindergartens. Barbara was enrolled in the public schools special education program after a bill was passed including the educable mentally retarded among handicapped children eligible for classes supported by Gilmer-Aiken funds.

She remained 4 years. Finally, Holland said, he realized she was not going to profit from the educable classes (although her I. Q. at one time, the father said, was tested at 60—in the educable range).

"It was hard—oh, how hard—to accept that at most our little girl was only trainable * * * to accept she would never read or write. She'd love to do both. I'd go in and find her sitting cross-legged on her bed pretending to read one of her little books. But she could only look at the pictures."

A SIMILAR STORY

Darwin also was tried in classes for the educable (his I. Q. was believed to be around 50), but it was a similar story.

"He began to regress. He liked to succeed but he couldn't. He couldn't compete successfully. His chief asset was his pleasant disposition. He began to lose it," said the dean.

It could be said that perhaps the Holland children never belonged among the educable. Holland himself realized that what they needed were the simple mechanics of living—self-care, learning to live with some grace and usefulness. The educable retarded are taught elementary academic subjects.

Barbara and Darwin next were tried in the trainable program at the Austin State School on a day basis. They lived at home.

But there was a problem with the normal child, Jeffrey, who shared a bedroom with Darwin. The two retarded children loved their brother so much they wanted to watch everything he did, Holland said.

NORMAL CHILD AFFECTED

Jeffrey, who wanted privacy occasionally, began asking permission to go and visit friends whenever he arrived home in the afternoon from school. He developed a tic in his eye, Holland said, and this was interpreted as a sign of stress.

On October 25, 1955, a memorable day for the Hollands, both Barbara and Darwin were enrolled as residential students at the State school. No longer did they come home at night. The two do come home on weekends, holidays, and summers.

The 45-year-old dean and his wife hope that with the training there, some day Barbara can come home to live and make herself useful to her mother in housework and Darwin can tend a garden and care for the lawn.

Roger Williams and Rhode Island's Contribution to Democracy

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include a speech delivered by Dr. Carl R. Woodward, president of the University of Rhode Island on May 2, 1957. The occasion for this speech was a celebration commemorating the anniversary of Rhode Island Independence Day which was jointly sponsored by the Washington alumni of Brown University, Providence College, and the University of Rhode Island. The commemorative exercises were held before the statue of Roger Williams in Statuary Hall here in the Nation's Capitol.

Rhode Islanders living in the Washington area were deeply honored by having such an illustrious educator as Dr. Woodward deliver the principal address. The subject of his talk, Roger Williams and Rhode Island's Contribution to Democracy, was particularly appropriate and I personally found his remarks to be both pointed and interesting. As all my colleagues must know, we Rhode Islanders take justifiable pride in the fact that our State declared its complete independence of England and the Crown on May 4, 1776—2 months before similar action was taken by the United States of America.

Dr. Woodward in his talk ties this world-shattering declaration of political freedom to the earlier establishment of religious freedom by Roger Williams over a century before. I know that many of my colleagues here in the House of Represenatives will find Dr. Woodward's remarks very informative, particularly his comparative analysis between Roger Williams and Thomas Jefferson. He has used a somewhat different approach in paying tribute to the memory of the founder of the State of Rhode Island and one which I thought to be very effective:

ROGER WILLIAMS AND RHODE ISLAND'S CONTRIBUTION TO DEMOCRACY

(Remarks of President Carl R. Woodward, University of Rhode Island, at the ceremony in Statuary Hall, Washington, D. C., May 2, 1957, in recognition of Rhode Island Independence Day)

This is an occasion of unique significance. The alumni of our Rhode Island colleges and universities are gathered with the representatives of our State in the National Congress to pay tribute to the memory of the founder of our State and to commemorate an event in the life of our State which marks a milestone in American history.

It is altogether appropriate that the alumni of Brown University, Providence College, and the University of Rhode Island who live and work in this vicinity should join in this observance. The State of Rhode Island has been described as "a body of water surrounded by educational institutions." Even as the campuses of our colleges at home fringe the shores of Narragansett Bay, here their sons and daughters surround the National Capitol, and an occasion like this makes us conscious of the role they are playing in the Nation's business. I think we can agree that the alumni of no group of institutions have a more notable cause for such an assembly. For it was no less an authority than the historian George Bancroft who wrote: "More ideas which have become national have emanated from the little colony of Rhode Island than from any other." In the formulation and development of these ideas, Roger Williams played a more vital part than any other of Rhode Island's heroes of peace or of war.

In the light of such a record and such a tribute, you will understand why I consider it a high privilege to be invited to participate in these ceremonies. I associate this gathering in my mind with a somewhat similar experience when, 13 years ago this month, I was asked to be spokesman for a group of scientists and educators at the grave of another pioneer of liberty—Thomas Jefferson, at

Monticello. And I am reminded that Roger Williams and Thomas Jefferson, who lived in different centuries, and were so widely different in background and temperament, nevertheless, had many points in common.

Roger Williams was born in England of Puritan parents about 1603. Soon after his graduation from Cambridge University in 1627, he took orders in the Church of England and went as chaplain to the house of an English nobleman. In that turbulent period of English history, it is not surprising that a young man reared in a Puritan atmosphere should have fretted under the discipline of the established order and protested the formality and the restrictions of the Anglican church. Soon after his marriage in 1629, he decided to separate from the Church of England, and 2 years later he came to the Massachusetts Bay Colony.

The crossing of the Atlantic didn't change his nonconformist nature. His revolt against the Anglican Church abroad was followed by his revolt against the discipline of the church-state he found in the new land, and in 1635 he was ordered by the Massachusetts general court to depart from the colony. With courageous adherence to principle, he accepted banishment into the wintry wilderness rather than submit to authority that denied freedom to the individual. A refugee from the very haven of liberty he had hopefully sought, he turned to the shores of Narragansett Bay. And in this accident of history (or was it the hand of Providence?), Rhode Island was born. And the name of Roger Williams, more than any other in the American tradition, has become the lasting symbol of religious and political liberty—twin freedoms given expression in two priceless documents—Rhode Island's Royal Charter of 1664 and Rhode Island's Declaration of Independence of May 4, 1776.

There are numerous things about our State House in Providence that intrigue me—its magnificent architectural design, its massive marble dome, the statue of the independent man, and Gilbert Stuart's portrait of Washington. But to me the feature which stands out above all others is the inscription carved in marble on the facade—the burning words from the royal charter secured through the joint efforts of Roger Williams and his friend, Dr. John Clarke:

"To hold forth a lively experiment—that a most flourishing civil state may stand and best be maintained with full liberty in religious concernments!"

Here was the declaration of religious liberty which found expression in the founding of Rhode Island and Providence Plantations.

Hand in hand with religious liberty is political liberty. In this instance the seeds of religious liberty a century later yielded, as their fruits, political liberty. On May 4, 1776, the General Assembly of the Colony of Rhode Island and Providence Plantations meeting in Newport adopted an act of separation from the British Government, declaring in part:

"Whereas in all States existing by compact protection and allegiance are reciprocal, the latter being only due in consequence of the former; And, whereas George the Third, King of Britain, forgetting his dignity, * * * and entirely departing from the duties and character of a good king—instead of protecting is endeavoring to destroy the good people of this colony, and of all the united colonies by sending fleets and armies to America to confiscate our property and spread fire, sword, and desolation throughout our country—in order to compel us to submit to the most debasing and detestable tyranny whereby we are obliged by necessity and it becomes our highest duty to use every means, with which God and nature have furnished us, in support of our invaluable rights, and privileges; to oppose that power which is exerted only for our destruction."

It is of special interest to us, here assembled today, that the person who drafted this great document and moved its adoption, was Jonathan Arnold, the great-great-grandfather of the senior United States Senator from our State, the Honorable THEODORE FRANCIS GREEN.

I think of the inscription on the front of our statehouse, and this passage from our Declaration of Independence as being in the same category with the words of Thomas Jefferson encircling the statue of that great patriot in the Jefferson Memorial here in Washington, "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man."

We think of both Williams and Jefferson, each in his own peculiar way, as pioneers in carrying the torch of liberty to the frontiers of the New World; each was an architect in building the structure of American democracy. Both were rebels against tyranny—Jefferson against tyranny over the mind of man; Williams against tyranny over man's spirit, his soul, and his conscience. Williams created a sensation when in 1644 he published his Bloudy Tenent of Persecution; Jefferson became an advocate basically of the same cause when, while serving in the Virginia Assembly during the Revolution, he drafted the Statute of Virginia for Religious Freedom. Historically, in the popular tradition, Jefferson is identified as the founder of democracy, spell it with or without a capital letter as you will. Williams, on the other hand, though living a century earlier, has been described as "the irrepressible Democrat."

Both were concerned with the welfare of the common man; both worked to raise the status of members of a less privileged race. Williams for months at a stretch chose to live with the Indians, enduring the hardship of the primitive wigwam, better to understand and to aid the red man toward a richer life. Jefferson, though heir to the institution of slavery, despised it, and all his life sought to ameliorate its vicious influence. In 1778 he introduced in the Virginia Assembly and secured the passage of an act to prohibit the importation of Negro slaves into Virginia.

Both Williams and Jefferson, in a sense, were educators. While living with the Indians, Williams made a special effort to learn their language, and his Key to the Language of America, printed in London in 1643, 7 years after the founding of Providence, was the first book on the Indian language to be published in English. Williams knew that literature is basically the story of life, and he knew that any education of the Indians would have to be done in terms of the common denominator of language. While apparently the major purpose of this classic work was to provide an avenue for reaching their souls, the book which became widely used as a manual, proved to be an effective instrument for the encouragement of trade. By this means also Williams sought to promote permanent peaceful relations between the Indian and the white man, but in this his hopes were only partly realized. Furthermore, as founder of the Baptist denomination, Roger Williams gave impetus to a religious movement which produced one of America's nine colonial colleges, the College of Rhode Island, now Brown University, chartered in 1764.

A century and a half later, Jefferson's contributions to education reflected some of the same elements but took a different form. His Notes on the State of Virginia published in 1785, was a classic which described the resources, both economic and human, of the Old Dominion, comparable in a way with Williams' Key. A graduate of the College of William and Mary, America's second oldest colonial college, Jefferson became the father of the University of Virginia, an achievement which he seems to have valued above that of the Presidency of the United States itself.

It is one of the unique coincidences of American history, but not surprising, that the colony founded by Roger Williams should have taken the lead in severing the ties with the crown, and that the Newport Declaration of Independence sponsored by Jonathan Arnold, should have antedated by 2 months the famous Declaration at Philadelphia penned by Thomas Jefferson.

To what extent Jefferson's career was influenced by the life of Roger Williams is not clear. I have been unable to find any record of Jefferson ever having referred specifically to Roger Williams. It is a fair surmise, however, that directly or indirectly the latter's writings and example may have played a major role in shaping Jefferson's philosophy.

Here and there one detects a striking similarity between some of Williams' writings and certain passages in the Declaration of Independence. For example, Williams asserted that "the sovereign, original, and foundation of civil power lies in the people"; "a people may erect and establish what form of government seems to them most meet for their civil condition"; and "such governments as are by them erected and established, have no more power, nor for no longer time, than * * * the people * * * shall betrust them with." Government thus was to Roger Williams the agent of the people, created by them to serve the common weal, and endowed only with such powers as by them granted.

"God requireth not an uniformity of religion," wrote Williams, and throughout his life he defended the right of all men to worship as they might please. Not the power of government, but only "the Sword of God's Spirit, the Word of God, could be used with any hope of success against error."

The parallel course of the two men's careers extends also into the realm of statesmanship. Williams served as President of the Colony of Rhode Island and Providence Plantations; Jefferson was Governor of Virginia before becoming President of the United States. Williams, the untiring advocate of democracy and undivided freedom, was also the practical statesman and man of affairs. He it was who, through peaceful negotiations, secured a generous grant of land from the Indians, then sought and obtained from the English Parliament a charter confirming to the inhabitants title to the land and the authority to form a government. During its early years the settlement at Providence managed its affairs on the basis of his proposals for government, and when the four settlements in Rhode Island organized a federal commonwealth in 1647 they did so under his guidance.

In thus bringing the four settlements into one colony, Williams demonstrated the principle that liberty and union go hand in hand—that liberty can be preserved and guaranteed only through the strength of concerted thought and united effort. Hence, in the example of colonial Rhode Island was the seed of the national motto "e pluribus unum." Herein also was demonstrated the great principle of "Liberty and Union" immortalized by Daniel Webster in this very hall, a principle which was put to its most crucial test nearly a century ago. Refined in the crucible of the War Between the States, it remains our surest rule of action in discharging our God-given responsibility of the present day to preserve, protect and defend the institutions of democracy for the sake of freedom-loving people everywhere.

In this mission the courage and the devotion of Roger Williams and of the Rhode Island patriots who followed him will ever be an inspiration to our highest endeavor.

Questionnaire Results From Michigan's Sixth District

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks I would like to include the results of a questionnaire sent to more than 12,000 families in Michigan's Sixth Congressional Disrict. A return of slightly more than 20 percent indicates, I believe, the intense interest of these citizens in their Government.

I further believe, Mr. Speaker, that Members will be interested in the response to these questions. While I recognize that this method of measuring public opinion is subject to some limitation, nevertheless, I would point out that agreement on six of the questions exceeded 70 percent.

Great interest in many of these questions was further indicated by a tremendous number of accompanying letters and comments. One of the most frequently mentioned items concerned postal rates. As the tabulation indicates, people support a general increase, but they are emphatic in their demand that third-class mail pay its proper share of postal expenses. In the area of foreign aid, though the vote is favorable to its continuance, people want intelligent and effective use of their money. Also, it was interesting to me to note the strong opposition to a tax cut that would unbalance the budget.

The general conclusion seems clear that people of Michigan's Sixth District continue to have great confidence in President Eisenhower and his administration's policies.

The results of the questionnaire are as follows:

Do you favor:

1. Reduction of the budget even if it means curtailing or eliminating worthy Federal services and projects? Yes, 58 percent; no, 38 percent; no opinion, 4 percent.
2. Reduced taxes for:
   (a) Small business. Yes, 32 percent.
   (b) Individuals. Yes, 31 percent.
   (c) Everyone across the board. Yes, 14 percent.
   (d) No one at this time. Yes, 41 percent.
3. Reduction of taxes even though it would unbalance the budget? Yes, 16 percent; no, 81 percent; no opinion, 3 percent.
4. Lowering the eligibility age for social-security benefits? Yes, 38 percent; no, 57 percent; no opinion, 5 percent.
5. Eligibility for social-security benefits regardless of income? Yes, 43 percent; no, 49 percent; no opinion, 8 percent.
6. Legislation to safeguard union welfare funds? Yes, 92 percent; no, 4 percent; no opinion, 4 percent.
7. Increasing postal rates for all classes of mail to reduce the postal deficit (now approximately $464 million annually)? Yes, 81 percent; no, 17 percent; no opinion, 2 percent.
8. Federal aid for school construction? Yes, 45 percent; no, 51 percent; no opinion, 4 percent.
9. Enactment of the President's proposed civil-rights legislation? Yes, 55 percent; no, 19 percent; no opinion, 25 percent.
10. The administration's farm policies in general? Yes, 52 percent; no, 15 percent; no opinion, 33 percent.
11. Liberalizing immigration laws? Yes, 21 percent; no, 66 percent; no opinion, 13 percent.
12. Conferences by the President with heads of unfriendly nations? Yes, 67 percent; no, 22 percent; no opinion, 11 percent.
13. Continued reliance on the U. N. in the Middle East crisis? Yes, 82 percent; no, 12 percent; no opinion, 6 percent.
14. Continuing foreign aid as a means of resisting communism? Yes, 58 percent; no, 35 percent; no opinion, 7 percent.
15. Do you approve of the manner in which the President has been handling our foreign affairs? Yes, 77 percent; no, 17 percent; no opinion, 6 percent.
16. Do you approve, in general, the domestic policies of President Eisenhower? Yes, 83 percent; no, 13 percent; no opinion, 4 percent.

Equalization of Retirement Benefits—Further Confirmation of the Congressional Intent

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. HUDDLESTON. Mr. Speaker, I should like once more briefly to refer to H. R. 689, a bill which I introduced on January 3, 1957, and which is entitled "A bill to clarify paragraph 4 of section 15 of the Pay Readjustment Act of 1942, 56th Statutes, page 368." On February 14, 1957, I gave the House a résumé of the bill, emphasizing its intent simply to clarify the intent of Congress as plainly expressed both in 1942 and again in 1949, an intent which has become both frustrated and confused by conflicting administrative and judicial interpretations. On April 8, 1957, I referred once more to the bill and, with the permission of the House, introduced into the RECORD a letter of March 30, 1957, from former Senator and former Governor of Colorado Edwin C. Johnson, supporting fully my aims in introducing this measure with the authority and prestige of the man who was Senate sponsor of the original act in 1942, and a member of the conference committee which wrote the final draft thereof. It is again my privilege, Mr. Speaker, with the consent of the House, to bring still another important evidence of the correctness of my stand on this matter to the attention of the Members.

Serving on that same conference committe in 1942 with Senator Johnson was another distinguished Member of the Congress, former Representative Dow W. Harter, of Ohio, presently an eminent lawyer in the national capital, and head of his law firm of Harter, Calhoun, Lishman, and Williams. Mr. Harter's comments are in the form of a letter to myself, dated May 6, 1957. They are particularly valuable to this House in view both of Mr. Harter's personal close association with the legislation under discussion in its formative stages, and of his careful review and study of the whole matter, done on his own initiative upon learning of the current effort to restore the original intent of the Congress as expressed in the 1942 act of which he was one of the authors. Mr. Harter has brought to this study the same thoroughness and conscientious attention which he is known to have devoted to the legislative tasks with which he was charged during his membership in the Congress. His review, as quoted in his letter, reaffirms the only real issue to be resolved in the area of Reserve retirement equalization; namely, the intent of Congress, so often stated in so many enactments, that there should be no discrimination between Regular officers and Reserve officers with comparable military service.

Mr. Harter's letter follows:

HARTER, CALHOUN, LISHMAN & WILLIAMS,
Washington, D. C., May 6, 1957.

Re equalization of retirement benefits, H. R. 689, 85th Congress, 1st session.

Hon. GEORGE HUDDLESTON, Jr.,
House Office Building,
Washington, D. C.

DEAR MR. HUDDLESTON: Since last talking with you about your bill, H. R. 689, I have devoted a considerable amount of time to a study of its background in the Pay Readjustment Act of 1942 and the Career Compensation Act of 1949. I have also read the three cases in which decisions were rendered on the same subject by the United States Court of Claims. Those cases are *Danielson* v. *United States* (decided February 5, 1952, 121 C. Cls. 533), *Berry* v. *United States* (decided October 7, 1952, 123 Ct. Cls. 530), and *Reynolds* v. *United States* (decided May 5, 1953, 125 Ct. Cls. 108).

It is difficult for me to reconcile the opinions in these cases, and the confusion is such that unquestionably there should be clarification of the Pay Readjustment Act of 1942, approved June 16, 1942, referred to as 56th Statutes, page 367, and also known as title 37, United States Code, section 115. Your bill, H. R. 689, introduced in the present session of the 85th Congress, evidently will accomplish that clarification.

I have read the conference reports on the 1942 act, one dated May 25, 1942, and the second, June 9, after the recommitment of the bill in the House on May 27. I was a member of both conferences and signed both reports. These conference agreements both contain paragraph 4 of section 15 of Public Law 607, 77th Congress, and in each report on page 15 thereof, the statement of the Managers on the part of the House say, as follows:

"Section 15 of the House amendment contained a provision providing that the retired pay of officers hereafter retired under any provision of law and who served in the military or naval forces prior to November 12, 1918, should be 75 percent of active duty pay. The Senate bill contained no similar provision. The conference agreement adopts the House provision."

When the 1942 act was under consideration in Congress, members thereof, particularly those who served on the Military Affairs Committee of the Senate and House, were extremely conscious of the lack of officer personnel to train and lead the tremendous Army that was being drafted and recruited. We well knew that the complement of Regular officers available, while in the main highly competent, was totally insufficient in numbers to officer the tremendous force the United States was called upon to put in the field. We were familiar with the training

program in the colleges and schools, of the ROTC officers and the other training activities dealing with giving Reserve officers adequate and worthwhile training.

I am confident all Members of Congress realized the vast majority of officers in World War II must come from civilian life and that because of the needs of the Nation in this behalf, all officers of the United States whether Regular, National Guard, or Reserve should be treated equally. There was much comment upon this among Members of Congress at the time of the enactment of this law in May and June 1942. After reviewing the passage of this legislation, it is definitely my opinion that it was the intent of the House of Representatives, the conferees, and the Congress itself that there should be no discrimination between Regular officers and Reserve officers with comparable military service.

It is to be hoped that your bill (H. R. 689), which would clarify this situation, will be promptly enacted by Congress.

Very truly yours,

DOW W. HARTER.

Address by Hon. Stuart Symington, of Missouri, at Wilkes-Barre, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address presented by the Honorable STUART SYMINGTON at the annual Greater Wilkes-Barre Chamber of Commerce dinner held in Wilkes-Barre on Tuesday evening, May 7, 1957:

It is clear where this administration can save billions of dollars annually in the Federal budget if it is really sincere in its desire to make these reductions.

In a talk on the floor of the House, last Thursday, the distinguished majority leader, the Honorable JOHN MCCORMACK, of Massachusetts, stated: "An analysis of the various stock fund statements in the 1958 budget (Department of Defense) shows great duplication and triplication and even quadruplication in the stock items covered by the funds."

Any true unification of the services would result in at least partial elimination of some of this triplication. It would, as Dr. Henry Kissinger wrote recently, reduce the claim of each service to have "capability for total war."

Let me repeat again that the amount of money this service rivalry is costing the taxpayer is almost unbelievable.

People indirectly connected with the administration believe that even under the present structural conditions of the Pentagon Building, billions can be saved by improvements in the manpower picture alone.

One of the Nation's great industrialists, Ralph Cordiner, president of the General Electric Co., who heads a Committee appointed more than a year ago to analyze the manpower problems of the Department of Defense, has announced that there would be ultimate savings of up to $5 billion a year, plus a 15 percent improvement in combat capability, if the manpower recommendations of his Committee were adopted.

Only recently those of us who believe great savings can be made in the Federal Budget received powerful support. Sunday before last, Chairman GEORGE MAHON, of the Military Affairs Subcommittee of the House Appropriations Committee, urged that President Eisenhower initiate a drive for real unification of the Armed Forces.

Representative MAHON said service rivalry "has now gotten out of hand. It's very unwholesome and very wasteful and I think something has got to be done about it."

MAHON added that legislation probably would be required and that President Eisenhower could provide the impetus, if he could find the time to take a personal interest in the problem.

I say "Amen" to this opinion from one of the most experienced and informed Members of Congress with respect to the military budget. Congressman MAHON has been on this Military Subcommittee for over 17 years.

First, on January 16, the President said, "this is a carefully balanced budget—well adapted to the needs of the present and the future."

On January 17, however, his own Secretary of the Treasury said, "There are a lot of places in this budget that can be cut."

On January 24, the President then shifted. He said: "Congress has the duty to cut the budget."

But later, on April 3, the President said there was no chance for a substantial cut such as $2 billion.

But the very same day, Assistant Secretary Burgess of the Treasury Department stated he believed the budget should be cut 2 to 3 billion dollars.

Later, the President was reported as saying the budget was right and he intended to fight for it.

But only this morning, on the radio, it was stated that a compromise was to be made; and that the administration would be willing to cut $500 million out of the foreign aid program.

Now I ask you: What is a Member of Congress to think?

Obviously the Congress is at sea as to where, and to just what extent, the President believes a particular department should be reduced.

But we do have some guidance from some of our Members. Based on Representative MCCORMACK's remarks, Congressman MAHON's position, and statements made on a telecast last night by Chairman RUSSELL, of the Senate Armed Services Committee, and above all, the conclusions of the administration's own Cordiner Manpower Committee, it is clear a tremendous amount can be saved for the American taxpayer annually if the administration will go through with those savings that can be made without any sacrifice whatever to national security.

According to one of our outstanding military associations, however, the Air Force Association, the Bureau of the Budget has turned back as unsatisfactory the Defense Departments' draft of legislation designed to put the Cordiner proposals into operation.

This action was taken, according to Mr. John P. Henebry, president of that association, in the face of assurances by Secretary Wilson that the proposed legislation would require no increase in the defense budget already submitted to Congress.

Further, the proposed legislation was rejected with the knowledge that it represented the unanimous opinion of the Secretary of Defense, the Secretaries of the three military departments, and the Joint Chiefs of Staff, as an essential contribution to the Nation's defense.

Let me emphasize that this is not a problem of the Air Force alone—but one which impacts equally upon the combat effectiveness of the Army, Navy, Air Force, and Marines.

I, for one, am not averse to manpower management suggestions from one of the world's greatest industrial experts, designed to save $5 billion, with no decrease whatever in our military strength; and at this session I intend to introduce legislation to that end. In fact, I already have such legislation in draft status.

We owe it to ourselves and to the Nation to countenance no further delays in carrying out a program for maximum utilization of military manpower at minimum cost.

Congressman Long's Fight for Food and Drug Administration's Appropriation

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. LONG. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

HOUSEWIVES UNITED,
Washington, D. C., April 28, 1957.

DEAR CONGRESSMAN LONG: If every housewife in your district could know of the splendid work you did in the House when you helped restore the funds to the Food and Drug Administration, you would reap a deserved harvest of thanks and votes.

This is to express the appreciation of our organization—strictly amateur, but so deadly in earnest you would scarcely believe—for what you did.

FLORENCE C. KERR,
Legislative Chairman.

HOUSEWIVES UNITED,
Washington, D. C., April 25, 1957.

The EDITOR,
The Alexandria Town Talk,
Alexandria, La.

DEAR SIR: Members of the Washington group of Housewives United (an unpaid lobby of housewives for housewives) would like, through your paper, to congratulate the housewives in the Eighth District of Louisiana on the fine work their Congressman, the Honorable GEORGE S. LONG, did for them recently in the House of Representatives in Washington, D. C.

It was during debate on the floor of the House: The question was whether or not to accept the amendment made by Representative CHARLES R. JONAS, of North Carolina, to cut the requested appropriation of the Food and Drug Administration by $1,327,000.

As wives and mothers who run our households on budgets, we are quite economy-minded ourselves. But we are not for economy at all costs. And we were not for economy then at the expense of the health and well-being of our families. There were other places where we felt the Federal budget might be cut, but not in the Food and Drug Administration.

The FDA is, of course, the only Federal agency we have to protect us from filthy and contaminated food, dangerous drugs, quack apparatus, and economic cheats. Also, because of the terrific increase in the number of new drugs and powerful chemicals and new techniques of food processing, there has never been a time when there was so much for the FDA to do—or so many people to do it for.

And yet, although the volume and complexity of the job have increased tremendously, the FDA has been operating approximately on a prewar budget. Always mindful of the taxpayer, this agency has asked for small sums (as Government figures go), with no "padding."

But Congress, in the last 10 years, has cut even this small budget several times, so that the danger point was reached years

ago. In spite of valiant efforts by FDA personnel, the American people have not been getting the protection they should have. More scientists, more inspectors, better laboratories are desperately needed now.

Your Representative, Mr. LONG, knew these things. And on March 26 he made a fine speech in Congress in favor of giving the FDA the appropriation asked for (which had already been approved by the President's Bureau of the Budget and by the House Appropriations Committee).

In the end, your Congressman's point of view won out. The requested appropriation was granted.

We know that Mr. LONG's constituents must be very proud.

And housewives all over the country should be grateful to these constituents who sent him to Washington.

Yours sincerely,

Mrs. LOUIS B. WRIGHT,
President.
Mrs. ROBERT Y. KERR,
Legislative Chairman.

P. S.: The cost of this protection that the FDA wants to give us is less than 6 cents per person per year—less than the price of a comic book; less than the price of a Sunday newspaper.

The Evanston Meeting of the United Nations

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. HAYS of Arkansas. Mr. Speaker, I had the honor recently of attending as a guest speaker the mock assembly of the United Nations held in Evanston, Ill. This was the first adult mock proceedings held in the United States that I know of, and I found it to be a faithful reproduction of the actual operation of the General Assembly. This demonstration of the inner workings of the U. N. had the basic goal of self-education of the participants, rather than announcement of resolutions regarding international relations. This was a very significant contribution to public appreciation of the policies and programs of this world forum.

Under leave to extend my remarks I am including the following excerpts from the April 17 Christian Science Monitor article describing this meeting:

The results will almost certainly be studied, and probably duplicated, by communities elsewhere, for the "Evanston U. N.," as local participants described it, is considered a full success.

It has shown the community the nature of the United Nation's problems. It has presented an insight into the natural limitations of a world forum operating without its own military might. Moreover, it has acted as a spur to Evanstonians to search out and consider the viewpoints and backgrounds of distant lands.

To the Northwestern University professor who remarked that "this type of meeting could not have happened here 5 years ago," the "Evanston U. N." is also an important milestone. It is proof, he explained, that the United Nations, now has become an "American" institution.

To residents of this high-income, Republican, North Shore community, he observed, the United Nations once was a protégé of the Democrats. Then a Republican administration took office, accepted the U. N. and worked with it through crisis and calm.

* * * * *

No one knows the hours spent in gathering background data before the first plenary session opened in the vast Evanston Township High School March 22. This preparatory work even included several trips to New York. But everyone was in agreement concerning at least one thing—every minute had been worth the enjoyment obtained. They would have preferred to spend even more time.

* * * * *

When a mock U. N. meeting or political convention is set up by a university, there is a supervisory framework and a body of potential delegates ready at hand. Evanston had neither of these things.

Such project organizers as Mrs. Culler, Mrs. William Lems, Mrs. Franz Plunder, Eric Grimwade, and Emily Hollingsworth could only guess from suggestions or hints from their friends who would be enthusiastic about participating in a mock U. N. session. When, after hours on the phone, they found someone who would like to take part, they had no idea how effective a delegate he or she would be.

Business in Evanston and Chicago went on as usual. Delegates to the "Evanston U. N." could work as delegates only after hours and they received no credits or merit points for their efforts.

* * * * *

When Mrs. George B. Wendt, a delegate from Hungary, broke down while denouncing an Australian resolution on the Near East, denounced the Kadar Government, and asked for asylum in the United States, she did so with a realism that momentarily frightened the Assembly. They assumed, for a few seconds, that she was suffering from "mike-fright." Even as other Hungarian delegates seized a microphone to charge her with conspiring with the West, Mrs. Wendt returned smiling, to be interviewed by WNUR-FM, a student radio station.

But the electrifying potential that was tangible here throughout the weeks of deliberations arose not from Soviet-American tensions, but out of the emotions stirred by the issue over Gaza and Suez and Aqaba. Even before a set of U. N. flags were hunted down, borrowed (from International Harvester Co.), and set up for the first formal sessions in the Evanston gym, spokesmen for the opposing forces there had made it apparent that the "Evanston model U. N." would have overtones of the real thing.

* * * * *

Opinion is still sharply divided as to whether this insertion of reality into the meetings was a help or a hindrance. Those who favor it believe that it added to the impetus of a month-long probe of distant world happenings.

Those opposed argue that it forced one particular issue into an unnatural focus and diverted delegates from a reasoned appraisal of international problems. Both camps agree, however, that in a university town less than an hour away from consular offices of most of the large nations of the globe, it is unlikely that this type of meeting can avoid some involvement with the world of professional propaganda and diplomacy.

* * * * *

As adopted, the Evanston U. N. resolution on the Middle East requests the Secretary-General to call a conference to negotiate a permanent peace in the Middle East. Members of the conference would include Arab nations and Israel as well as the permanent members of the U. N. Security Council. Its aim would include free transit for goods and persons throughout the area, and a U. N.-led program of development of the economic resources of the region. The Arab nations, excluding Egypt which abstained, voted against the resolution.

In its resolution regarding a world police force, Evanston delegates urged the earmarking, by the contributing nations, of a security force of troops not in excess of 1 million men, plus the recruitment, as individuals, of a U. N. guard force of 2,500. No one nation would supply more than 4 percent of the security forces.

The Evanston resolution on financial aid to undeveloped lands is perhaps its most ambitious pronouncement. It calls for a commission to formulate a broad new plan of aid on a scale commensurate with the pressing needs of the world, giving particular attention to methods for obtaining increasing capital. It calls on member U. N. nations to make voluntary contributions for these purposes of one-twentieth of 1 percent of their national incomes and recommends that ways be opened for individuals to purchase bonds to finance development work.

Edgar F. Kaiser

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. BYRD. Mr. Speaker, I am pleased to call attention to the address of my colleague, the gentleman from West Virginia, the Honorable CLEVELAND M. BAILEY, on the occasion of his presentation of a plaque to Mr. Edgar F. Kaiser, the adopted son of West Virginia. The presentation was made on May 4, 1957, at the Son and Daughter Banquet of the West Virginia Society of the District of Columbia, which was held in the Sheraton Park Hotel, Washington, D. C. Representative BAILEY's address follows:

ADDRESS OF THE HONORABLE CLEVELAND M. BAILEY, VICE PRESIDENT OF THE WEST VIRGINIA SOCIETY OF THE DISTRICT OF COLUMBIA ON PRESENTATION OF A PLAQUE TO EDGAR F. KAISER, ADOPTED SON OF WEST VIRGINIA, ON MAY 4, 1957

Mr. President, my colleagues in the Congress, other honored guests, officers and members of the West Virginia Society of the District of Columbia, fellow West Virginians:

The task assigned me tonight is a distinct pleasure. Knowing, as I do, the vast potentials of my State in the way of natural and human resources and of its susceptibility to industrial development, I speak for every West Virginian when I say, "We welcome with open arms" the presence in our State of the world-wide Kaiser affiliated companies.

The decision of this great concern, with its farflung network of industries to locate one of their major operations at Ravenswood, W. Va., was indeed a godsend to the lagging economy of my State which at the time was staggering under the loss of markets for its vast producttion of bituminous coal. Others of its industries were menaced by foreign imports. The situation in 1954 was one of gloom and despair.

Today our major industry, coal, has picked up some export business and is getting back to normal. A smile has replaced the look of despair in the face of our industrial leaders. I attribute this to the realization on the part of giant industrial concerns like this one that there are great possibilities in West Virginia. Now that the Kaiser industries has, so to speak, "broken the ice", we may

well expect others to take advantage of our great resources and available labor supply.

The Kaiser aluminum organization is investing in Ravenswood, W. Va., $200 million for the construction of facilities which will include a fully integrated reduction plant, a sheet mill, and a foil rolling mill.

During the first phase of construction, they are employing 800 West Virginians. These three plants will be completed in 1958.

When the project is completed, they expect to have 6,000 West Virginia employees to operate the facility.

As of today, the total number of employees in the Kaiser aluminum is 18,000. When the 6,000 West Virginians are added next year, the total will be 24,000 persons. A fourth of their entire organization will be composed of West Virginia residents.

In 1947, when Kaiser first entered the aluminum field, their net sales were $45 million; their net earnings were $5 million. In 1956, their net sales were $300 million, with net earnings of $38 million.

When completed, this facility will burn 1,660,000 tons of West Virginia bituminous coal annually. This will greatly stabilize our coal industry, give us added purchasing power, and stimulate business generally.

The man our society seeks to honor tonight is Edgar F. Kaiser. The name, Henry J. Kaiser, is a household name throughout the Nation. Our honored guest is, as we quite often say in West Virginia, "a chip off the old block." He is one of the Nation's youngest major industrialists, possesses all of the business acumen, energy, and devotion to accomplishment that has characterized his famous father, Henry J. Kaiser.

At 48, he is responsible for the overall day-to-day operations of a billion-dollar industrial organization—the worldwide Kaiser affiliated companies.

Responsibility came to Edgar Kaiser at an early age. He was one of the "kids" of whom an Army engineer referred when he said, "Kaiser won at Bonneville because his kids were too green to know when they were licked."

The Kaiser organization, fresh from participation in the building of Hoover Dam, was warned that the raging waters of the Columbia were a different story. The native Indians had a legend that no man would ever walk across the Columbia. Government engineers were doubtful that a dam could be built. However, the "kids" plowed ahead. Twenty-five-year-old Edgar Kaiser was project manager for the construction of the main spillway. The river was diverted into half its channel in order that the dam could be built one-half at a time. Bonneville was completed in 4 years, 1 year ahead of schedule.

Edgar Kaiser's next giant step, at 34, was shipbuilding, through which the Kaiser organization gained further international renown by producing more vessels than any other shipbuilder in history—faster and cheaper than they had ever been built before. The Kaiser shipyards constructed 1,490 ships during World War II—approximately one-third of the entire United States merchant shipping—turning them out in as short a time as 4½ days from keel laying to launching. In the building of 819 Liberty ships alone, Kaiser saved more than one-third of the average time required by other Liberty shipbuilders.

The three Pacific Northwest yards in the Portland area, under the general managership of Edgar Kaiser, had the additional job of producing 50 small aircraft carriers to take the offensive against submarines and also carry the war to the Japanese-held islands in the Pacific. The carriers were launched at the phenomenal rate of one a week. Admiral Howard Vickery of the United States Maritime Commission called the Portland yard not only the finest in the United States, but in the entire world. Britain's Winston Churchill declared that the baby flattops were the most effective instrument in destroying the submarine menace.

When the Kaiser organization went into the automotive business in 1945, Edgar Kaiser, then 37, became general manager of the company's giant plant at Willow Run, Mich. He later assumed the presidency of the firm to become one of the youngest chief executives in the Nation's automobile industry.

The infant motorcar company found it virtually impossible to buy steel and other necessities on the open market and literally scoured the world for materials with which to make the 18,000 parts, which comprised their first passenger car, Mr. Kaiser recalls, and I quote:

"We pioneered the first extensive use of bartering in the auto business. For instance, a radiator firm could not obtain enough copper to supply us regularly; the copper producer was unable to increase output because he needed additional natural gas; the gas company could not deliver because it was unable to obtain steel pipe; and steel companies lacked pig iron to make the pipe because their blast furnaces were short on coke. So, we began a series of bartering transactions, first finding a supply of coke for the steel producers, then trading our way up the line, and eventually getting the radiators we needed."

In June 1955 Edgar Kaiser appeared before a Senate judiciary subcommittee investigating the vast share of the automobile industry held by General Motors, Ford, and Chrysler. Although a major producer of commercial vehicles and sole manufacturer of the world-famous Jeep, Kaiser-Willys had produced only a small percentage of the passenger cars sold in 1954. Despite this, Mr. Kaiser said, "So long as you have the competition that exists today, there is no need to limit the size of automobile manufacturing companies."

An editorial in the Times, of Toledo, Ohio, hometown of Willys Motors, commented: "* * * Mr. Kaiser was the industrial statesman, standing firmly on the American free-enterprise system, and did not cry for governmental restrictions on his competitors to give him a bigger place in the market."

Egdar Kaiser, the eldest of Henry Kaiser's 2 sons, was born July 29, 1908, at Spokane, Wash., 2 years after his father had come west. His first part-time job in the Kaiser organization, while he still was in high school at Oakland, Calif., was issuing material slips to trucks delivering sand and gravel on a paving project.

In July 1955 he returned to the sand and gravel plant at Radum, Calif., during its 25th anniversary. The local newspapers said editorially: "If the Kaiser organization needed an emissary to win friends, he was present in Edgar Kaiser. * * * His manner of speaking was earnest, sincere, with a naturalness, a magnetic power, which instantly won him acclaim, made people who had never seen him before feel they were lifelong friends. * * * It was the simplicity of his presentation which made his message so personal, so deeply convincing."

Edgar Kaiser attended the University of California, majoring in economics, but left college in 1930 just one-half year short of obtaining his degree in order to accept a position as superintendent for a natural-gas pipeline project linking Kansas to the Southwest oil fields, which was followed by a similar job on a pipeline from Cut Bank to Butte, Mont. When the Kaiser organization joined the Six Companies, Inc., in the mammoth joint venture of its time—Hoover Dam—he cut his teeth in dam building as boss of an excavation crew.

Today, among his major offices, he is president and director of Kaiser Industries Corp., Henry J. Kaiser Co. and its operating divisions—Kaiser Engineers and Sand & Gravel, Henry J. Kaiser Construction Co., Kaiser Engineers International, Inc., Henry J. Kaiser Co. (Canada), Ltd., and Willys Motors, Inc.; a vice president and director of Kaiser Aluminum & Chemical Corp. and Kaiser Steel Corp.; a vice president of Permanente Cement Co., Kaiser Gypsum Co., Inc., Glacier Sand & Gravel Co., Permanente Steamship Corp., and Kaiser Community Homes; vice chairman of the board of Kaiser Center, Inc.; a director of Industrias Kaiser Argentina, S. A., and Kaiser Aircraft & Electronics Corp.; and a trustee and president of Kaiser Foundation.

He is a director of the Automobile Manufacturers Association of Detroit, a life member of the Automobile Old Timers, New York, and the Washtenau Historical Society, Ann Arbor, Mich.; a trustee of the A. M. A. Automotive Safety Foundation, and the San Francisco Bay Area Council; the Toledo, Ohio, Museum of Art, and a member of the following clubs and associations: Arlington Club, Portland, Oreg.; American Society of Civil Engineers, New York; Big C. Society, University of California; Claremont Country Club, Oakland, Calif.; Chi Psi Fraternity; Commonwealth Club of California, San Francisco; Detroit Club, Detroit; the Recess Club, New York; the Newcomen Society of England, American branch, Automotive Engineers, New York; Society of Naval Architects and Marine Engineers, New York; and the Toledo, Ohio, Chamber of Commerce.

Mr. Kaiser was married to the former Sue Mead in Washington, D. C., in August 1932. They are the parents of six children: Carlyn (Mrs. Raymond D. Wehle, of Honolulu, T. H.); Becky Ann, a student at Stanford University, Palo Alto, Calif.; and Gretchen Fosburgh, Edgar F., Jr., Henry Mead, and Kim John, who reside at the Kaiser home at Lafayette, Calif.

The West Virginia Society of the District of Columbia wishes at this time to add just one more honor to the score or more you have already acquired in your eventful career. We wish to make you one of us. It is with this thought in mind that our society has asked me to welcome you as an adopted son of West Virginia by presenting you this plaque in appreciation of your personal achievements, and the accomplishments of the vast industrial empire you so ably administer.

May I assure you of our deep appreciation. Our thoughts and best wishes will always be for our adopted son.

A "Hard" Line

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. BOLAND. Mr. Speaker, I think that all of my colleagues should read the editorial comment in the Washington Post and Times Herald today on the administration's announced attitude toward pay increases for Government employees. Under leave to extend my remarks, I ask that the editorial be printed:

A "HARD" LINE

With consumer prices still creeping steadily upward, this is not a time for "soft" wage settlements which tend to feed the inflationary spiral. But this does not mean that employees should not be reasonably protected from the diminution of their buying power, nor does it suggest that the Federal Government or any other large employer

ought to ask one group of employees to man the gates against inflation alone.

The administration's announced determination to resist any move for a general pay increase for Federal classified and postal workers seems not to take into account some elementary considerations of justice and fair play, to say nothing of the requirements of a sound wage policy. Since the last basic salary increase for classified and postal employees 2 years ago, living costs have risen about 4 percent. Average manufacturing salaries have climbed more than 11 percent (and some of this rise doubtless augmented inflationary pressures and might well have been held to a more modest level).

The Government has been obliged to recognize these pressures in its pay scales for the so-called per diem workers, whose salaries are adjusted to the prevailing rates for similar work in private industry. In consequence, a number of inequities have crept into the Federal pay structure, including situations in which classified supervisors receive less than their per diem subordinates. In 10 years, average per diem salaries have risen 72 percent, classified salaries 54 percent, and postal salaries 57 percent. In general the per diem workers have thus fared much better and have been kept more in line, salarywise, with their brothers in private industry. Even so, as the administration concedes, some adjustments are required immediately to attract qualified technically trained persons in the present competitive market for certain skills.

The administration appears to be taking an unnecessarily hard line in rejecting out of hand any kind of general Federal pay adjustment. The cost could well be accommodated in the budget despite the thin surplus which is envisaged. Congress ought to exercise great caution, of course, and try to see that Federal wages at least follow—and do not lead—the price-wage parade. But if the Government is to follow President Eisenhower's oft-stated principle that Federal workers should be treated as well as the employees of progressive private industry, some increase for classified and postal employees appears to be in order.

Depletion Allowance Urged for Shale Oil

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. ASPINALL. Mr. Speaker, the Congress will, or at least it is my hope that the Congress will, be hearing a good deal in the days ahead about depletion allowance for shale oil; a depletion allowance like that now enjoyed by the petroleum industry for the conversion of shale into useful petroleum products and other hydrocarbon products as well.

The Governors of the Western States, meeting in convention in Reno, Nev., adopted a resolution favoring the granting of this depletion allowance. In addition, the dangerous and troubled conditions in the Mideast have given a heightened interest to domestic self-sufficiency in petroleum and petroleum by-products.

Another example might be the recent opening of a privately financed oil shale conversion pilot plant in western Colorado. This is a pilot plant which many hope will become the forerunner of a great new industry.

Thus, to provide a concise and competent guide for future reference in this area, I should like to include in my remarks an article on this subject, written by Roscoe Fleming, of Denver, Colo., for the Christian Science Monitor of May 7, 1957. I recommend this to the Members as a most helpful report on an important subject.

The article follows:

DEPLETION ALLOWANCE URGED FOR SHALE OIL

(By Roscoe Fleming)

DENVER.—The Western Conference of Governors, at the motion of Colorado's young Governor, Stephen L. R. McNicholas, has asked Congress to extend the depletion allowance tax privilege of the petroleum industry to oil made from shale.

Depletion allowance means that petroleum producers can set aside as tax-free 27.5 percent of gross income from their oil, not to exceed 50 percent of net, after charging off all exploration development and production costs. It is variously estimated to net oil producers up to $2 billion yearly, and it results in oil corporations paying about one-half the income tax, overall, that is paid by other corporations.

Under the present law it is not enjoyed by potential shale-oil producers, even though shale oil would compete for the same gasoline and other markets.

COST ESTIMATED

Shale producers generally enjoy a 5-percent depletion allowance. Under some interpretations of the law, shale-oil producers might enjoy a 15-percent one. But the margin is still great enough so that petroleum producers still enjoy a great advantage over their embryo competitor.

Some economists think this advantage is great enough so that if it were wiped out, the beginning date for a commercial United States shale-oil industry might be moved up as much as 5 years.

Even as things are now, it is variously estimated that a gallon of gasoline made from shale in a commercial-sized operation would cost only from 2 to 4 cents more than a gallon made from petroleum.

Governor McNichols is realistic enough to know that a Congress in which the oil industry is so evidently powerful is not about to reduce the oil industry's depletion allowance despite the battle put up to that end by Senator PAUL H. DOUGLAS, Democrat, of Illinois; JOHN A. CARROLL, Democrat, of Colorado; and JOHN J. WILLIAMS, Republican, of Delaware. So he put the motion instead to extend the oil industry's tax allowance to shale-oil production.

The ever-increasing estimates of the Nation's shale-oil reserves under 1,500 square miles of Colorado, Wyoming, and Utah, he said, now have reached the astronomical figure of 1¼ trillion barrels. This is enough to supply the Nation's anticipated oil requirements for 100 years; it is more than 60 times the United States petroleum reserves.

Economists estimate that a shale-oil industry supplying 2 million barrels daily in western Colorado would mean a new population there of 500,000 persons. This has proved a will-o'-the-wisp for a half century.

RESERVES DIVIDED UP

But under the Eisenhower administration and former Interior Secretary Douglas McKay, the $17 million Government research and pilot-plant project at Rifle, Colo., was closed last June 30 at the insistence of the private petroleum industry, which told the Government it was ready to take over.

A score of major oil companies or of interests affiliated with them have practically divided up the richest shale reserves, those which were in private ownership already before the Government retained the rest under the Minerals Leasing Act of 1920. Only one company, however, has made a major move in the direction of production.

This is Union Oil of California, which on May 18 will dedicate its $5 million research and pilot-plant retorting project at Grand Valley, Colo. The huge retort can process up to 480 tons of shale a day from the company's nearby mine in the "mahogany ledge" of richest shale. The company's reserves are estimated at 5 billion barrels of oil in this ledge alone, underlying about 40,000 acres.

The retort is of new design in which a "rock pump" forces the crushed shale up into a heated zone where the oil content is vaporized. The spent shale is still loaded with enough carbon to be burned to produce the heat which vaporizes the incoming shale, and so on.

The retort has already processed several thousand tons of shale with results which company experts say are satisfactory. However, the refining problem remains to be tackled, and this is the more complex because refining requires water, of which western Colorado is short.

SPOT REFINING

Some refining on the spot is required because crude shale oil is as viscid as molasses at ordinary temperatures and will not flow through a pipeline unless heated to nearly 100 degrees, which is clearly impracticable. It resembles a low-grade crude petroleum loaded with impurities. These are, however, potential chemical resources of great value.

For example, one estimate is that a shale-oil industry producing 2 million barrels of oil daily would also produce, as byproducts, 3,700 tons of ammonia daily, 1,700 tons of sulphur, 47,000 tons of coke, and a billion cubic feet of refinery gas.

Governor McNichols also maintains, however, that the Government's program to lead the way to a fuel supply derived from solid minerals such as coal and shale was instituted when Hitler's submarines were sinking tankers off the American coast and that the Suez crisis has shown that abandonment of the program was a dire mistake.

He says that the rapid beginning of a domestic fuel industry based on shale is in the national interest and that a tax amortization equal to that of oil is more than justified from the standpoint of national defense.

Another pioneer program financed by private industry is also operating now at the Denver Research Institute of the University of Denver, under Drs. Shirley Johnson and Charles Prien. This is financed by $250,000 from the Shale Oil Corp., of Los Angeles, which owns the American rights to the so-called Aspeco patents, held in Sweden, on a new method of retorting oil from shale. A pilot plant now in operation is capable of handling 24 tons of shale daily.

In this process, the crushed shale is tumbled in revolving steel drums such as the "classifiers" of the mining industry but in which ceramic balls heated to 1,000 degrees are tumbled with the shale. The oil comes off as vapor, and is cooled and reduced to liquid in another chamber alongside.

Meanwhile, the spent shale is routed back to keep the fires which heat the ceramic balls and also preheat the incoming shale. It still has enough carbon content to produce a high heat.

The economics of this process is described as advantageous enough to produce crude shale oil at the lowest cost yet.

Immigration Situation Cries for Action

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Hartford Courant of May 8 regarding the stagnant status of this Nation's immigration policy.

For many years I have been working for and advocating a more liberal immigration policy. As a member of the House Foreign Affairs Committee I have traveled throughout Europe and I have seen the damages of our stringent immigration regulaiton; damages to morale, damages to our international relations, damages to our prestige.

Recently I introduced legislation to admit some 50,000 more Hungarian refugees who are looking toward America for the freedom and opportunity which they lost at the hands of Communist terrorism in their homeland. The inequities in the McCarran-Walter law cry for correction. It is long past time that changes in our immigration policy were made. The following editorial forcefully supports this view:

LET'S HAVE SOME ACTION ON THE IMMIGRATION LAW

The visit of Italian Ambassador Manlio Brosio to Connecticut has spotlighted again the unfair and shortsighted provisions of the McCarran-Walter Immigration Act. Signor Brosio spoke to the General Assembly the day before the last shipload of some 1,042 refugees admitted under emergency regulations sailed past the Statue of Liberty into New York Harbor. The coincidence was not planned, for the Ambassador was more concerned with a continuing injustice—the effect of the national-origins quota system on immigration from Italy and other south European and Mediterranean countries.

He did not consider it as a political matter, of course. Italy's concern is her own problems, including a million and a half unemployed. But the nations that face the discrimination written into the immigration law are sensitive to it. And anyone who examines the provisions learns quickly that the law needs change. So President Eisenhower recommended in January, as he has in the past, that the law be corrected. He wants the present allowable annual intake of immigrants to be doubled—the economy can easily absorb that number—and he wants changes so that unused quotas can be shifted. Regrettably, it looks as if congressional roadblocks, including the formidable FRANCIS E. WALTER, Democratic House chairman of the legislative committee that has the proposals, are as strong as ever.

About two-thirds of the people of Connecticut stem from forebears who came 100 years ago or less from every section of the world. This State is conscious of the tremendous contributions they have made to our economy, to our culture. Today, when the State is in the grip of a tight labor market, it could use help, particularly skilled help. But it is denied skilled men from abroad by the McCarran-Walter Act.

Why should the national-origins quota system be changed? Put aside the suggestion that it is demeaning because it spreads the smell of racial theory. Note instead how senseless it is when we have a bulk quota of 154,000, of which some 60,000 numbers each year expire unused. Why aren't they used? Because they are reserved for West European countries where people are relatively content and don't want to emigrate. Elsewhere thousands clamor for a chance to come to this country. But they are blocked by the tiny quotas.

The episode of the Hungarian refugees who have become entangled in the hard set immigration policy is a stain on the American tradition. Thousands of Hungarian freedom fighters remain trapped in European camps, without much hope or promise. We have still to regularize the status of almost 25,000 Hungarians who were admitted. But these are fresh issues, still strong in popular support. We need also an awakening to the basically wrong national-origins system, and to the delaying tactics of Congressman WALTER. Pierce J. Gerety, former deputy administrator of the refugee program, recently warned here that American good will is being dissipated. The Italian immigration issue, fixed in circumstances that few Americans care to recall, is only one in which prompt and forthright correction is needed.

Our Share of Foreign Aid

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. MICHEL. Mr. Speaker, within the near future we are going to be called upon to consider here upon the floor of the House the foreign aid appropriation bill. It will call for something like $4 billion and must come from the pockets of the taxpayers of this country. We in Illinois have certainly been called upon to pay through the nose for not only this program, but the many other so-called Federal-aid programs. The Peoria Journal Star in their editorial of Tuesday, May 7, points up what our foreign-aid program to date has cost each one of the individual taxpayers of my own hometown, Peoria, which is confronted with all the multitude of problems faced by other local communities throughout the Nation. We would do well to take the time to add up this staggering cost as reflected in these figures and let our conscience be our guide when the time comes for us to cast our vote on the foreign aid bill.

The editorial follows:

OUR SHARE OF FOREIGN AID

Retiring Councilman Robert McCord, singing his swan song a week ago, said that lack of finances was the principal problem facing the city of Peoria.

Mr. McCord didn't say that Peorians weren't paying enough in the form of taxes. He simply expressed the wish that more of the taxes they paid might go for local projects instead of into Federal and State coffers.

One of the places where Peoria tax money goes is into the foreign-aid program of the United States. During the last 17 years residents of this city have paid something like $130 million into the foreign-aid program. That kind of money would have accomplished a lot of the projects which this community needs.

The $130 million figure is reached by multiplying the $865 which the Library of Congress estimates is the share of each Illinois man, woman, and child of the total foreign-aid cost of $130,350,032,000 by the estimated 115,000 population of the city of Peoria. Illinois residents have paid more than the national average into the foreign-aid pot because the average Federal tax payment of residents of this State is greater than that of the Nation as a whole.

No one will claim that the entire foreign-aid program has been wasted although the value of much of the result is debatable. Nor will Peoria claim that this city has not received direct benefit from the giving of assistance to foreign lands. Some of the money has come back to us in wages paid by industrial plants which have profited by orders received from countries which have been foreign-aid recipients.

The $130 billion foreign-aid total includes lend-lease during World War II and grants and loans to foreign nations since the end of that conflict. Illinois share of the total payment was $7,535,857,996, of which $3,027,065,996 came from downstate.

Following the 1-percent formula, which is about Peoria's share of the national total, the 1957 $4,400,000,000 foreign-aid budget being asked by President Eisenhower would cost this community approximately $44,000,000. That's enough money to make us want our representatives in Congress to take an extremely careful look at past results before casting their votes on the request.

More Scholars Express Views

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1957

Mr. UDALL. Mr. Speaker, today I am presenting the views of three students of American Government who responded to my survey of opinion on the wisdom of the 22d amendment.

In undertaking this survey I asked the American Historical Society and the American Political Science Association to provide me with a representative list of scholars whose opinions I could solicit. I am proud to report that one of our colleagues, Congressman GEORGE MCGOVERN, of South Dakota, was included in the list provided by the American Historical Society. Prior to his successful campaign for a seat in Congress last year Congressman MCGOVERN had a distinguished academic career. He graduated from Dakota Wesleyan University with bachelor of arts degree, and later received his master's and doctorate of philosophy degrees from Northwestern University. Subsequently he was a professor of history and government at Dakota Wesleyan University for 3 years.

We are fortunate, indeed, to have in our midst a person who is at once a profound student of American history and an adept in the arts of practical politics.

The other replies I am including today came from Dr. Carl B. Swisher, of the political science department of Johns Hopkins University, and Dr. Clarence A. Berdahl, of the University of Illinois department of political science. The three replies follow:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 11, 1957.

Hon. STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN UDALL: I am gratified to receive your letter of April 18 inviting me to submit a personal opinion as to your proposed repeal of the 22d amendment. Permit me to say at the outset that I was opposed to this restrictive amendment at the time it was offered, and I have not changed my evaluation.

My basic reason for opposing the two-term limitation of the Presidency is the very real practical danger that it could deprive us of needed leadership at a time when a shift in the Presidency would jeopardize our national security. Notwithstanding its commonplace usage, there is still a measure of truth in the warning against "trading horses in the middle of the stream." I believe, for example, that had President Lincoln been spared assassination and had he been elected for a third term, he might have steered the Nation away from some of the tragic excesses of the post-Civil War years. I believe with equal certainty that the election of President Roosevelt to a third term in 1940 was an essential part in the eventual victory of the allied powers over the Nazi scourge.

On a more theoretical plane, I favor the repeal of the two-term limitation of the Presidency because such a restriction weakens the operation of our democratic process. If the people are wise enough to elect a President, are they not also wise enough to know when a President should be voted out of power? If the voters do not have sufficient wisdom to recognize when a President has served his useful purposes, how can we trust the institution of free elections in any circumstance?

There is the further argument against the two-term limitation which you develop in your own statement that such a limitation weakens the political influence of a President in his second term. Several able observers have already noted a decline in President Eisenhower's "hold" on his own party Members in the Congress which may be attributed in part to the feeling that the President will not be a factor in the next Presidential election.

I wish you every success in your efforts to bring about the repeal of the 22d amendment.

Sincerely yours,
GEORGE MCGOVERN.

THE JOHNS HOPKINS UNIVERSITY,
DEPARTMENT OF POLITICAL SCIENCE,
Baltimore, Md., April 22, 1957.

The Honorable STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR MR. UDALL: This is in reply to your request for an opinion on the advisability of repealing the 22d amendment to the Constitution. I agree with the implication in House Joint Resolution 182 that during the past two decades we have handled badly the problem of time limits on the presidential term. I believe that the tradition limiting each President to two consecutive terms was a sound one and that it should have been disregarded only under the most extreme circumstances. From the point of view of hindsight I think we made a mistake in reelecting President Roosevelt to a third term in 1940, and that the country would have been better off with a new President who by one reelection might have been able to serve through the war and the war settlement down to 1949 without the awkward transition which came with President Roosevelt's illness and death. I think we made a countermistake in adoption of the 22d amendment forbidding under any circumstances the reelection to this killing office of any President for more than two consecutive terms, thereby to some unmeasured extent limiting the political power of each reelected President by partial sterilization during his second term.

However, in view of the fact that the 22d amendment is now a part of the Constitution and that the arguments against multiple terms are as sound now as ever before, I doubt the advisability of repealing the amendment without very careful consideration. Repeal would do more than obliterate the amendment itself. It would devitalize what remains of the tradition against service for more than two consecutive terms and carry with it an implication of approval of continued reelection of "indispensable" Presidents—an approval that ought to be given only under most unusual circumstances. Currently I see no man in either of our major parties whose genius for democratic leadership and capacity for survival under great pressure seem likely to make desirable a further departure from the principle that the period of presidential service shall be limited. While I think it unfortunate that the political power of President Eisenhower should be currently limited by the knowledge that he cannot constitutionally be reelected for a third term—if it is so limited, and the cause-and-effect evidence is less clear than I had expected it to be—the price is one that we may have to pay for the unwise abandonment of the third-term tradition in 1940 and the adoption of the 22d amendment in 1951.

Deeply involved in the problem here under consideration is the fact that our Constitution is in every sense a constitution and not merely a code of law subject to change according to the whims of the moment. It is for this reason that we have been able to function since 1789 with only 22 constitutional amendments. Only in the instance of the 18th amendment have we used the amending process to import statutory material, which in that instance we had to eliminate by still another amendment. Such mistakes should be kept at a minimum. Now that we have the 22d amendment, the repeal of which would imply much more in the way of approval of multiple terms than many of us would wish to give, I am inclined to believe that we should live with the amendment and make the best of it. If we were to hit a crisis so great that the services of an incumbent President became absolutely indispensable, we could move with phenomenal speed to get the amendment out of the way. But the theory of indispensability is always suspect, and I doubt the advisability of taking now a step that would be interpreted as giving far more than I believe the people want to give in the way of approval of reelection for multiple consecutive terms.

Very sincerely yours,
CARL B. SWISHER.

UNIVERSITY OF ILLINOIS,
DEPARTMENT OF POLITICAL SCIENCE,
Urbana, Ill., April 24, 1957.

Hon. STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN UDALL: I have noticed the views of a number of my political science colleagues on the third-term amendment, and I am pleased that most of them are against this amendment and in favor of its repeal. I should like to add a brief statement about the adoption of this amendment, which very few seem to notice, but which seems to me to be very important. The point is that on final passage in the House, on March 21, 1947, the recorded vote was 81–29. That vote of 81 in favor of the amendment was more than two-thirds of the vote cast, but was 65 less than two-thirds of a quorum, the very minimum required by the Constitution. In fact, the total vote cast in the House on that amendment (110) is 108 less than a quorum.

It seems to me, therefore, that the amendment was not constitutionally adopted at all, and that, had a case been brought soon after this action by the House, the Supreme Court would probably have held it unconstitutional. I am aware that the courts do not generally go behind the record, but in this case the record is clear. In fact, a member made the point of no quorum and then withdrew it, but gallery correspondents noticed and reported the obvious lack of a quorum. Now that ratification has been achieved, however, and everybody assumes the amendment to be a part of the Constitution, I suppose the courts might refuse to hold otherwise; but even so, there is surely good argument against the amendment in this rather high-handed procedure of its adoption.

Sincerely yours,
CLARENCE A. BERDAHL,
Professor of Political Science.

Cartoon Prize Is Little's Award

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. LOSER. Mr. Speaker, leave having been obtained, I insert in the CONGRESSIONAL RECORD an editorial appearing in the Nashville Tennessean May 7, 1957, relative to a local cartoonist having been selected as the Pulitzer prizewinner of 1956 for the best newspaper cartoon.

Mr. Tom Little, cartoonist for the Nashville Tennessean, has received many awards for his outstanding work in his field and it is indeed fitting that he was awarded the Pulitzer prize for the best newspaper cartoon in 1956.

In view of the fact that Mr. Little has drawn many political cartoons during the last 25 years which have received national attention, I deem it appropriate to call it to the attention of the Nation, and to the Members of Congress, through this medium that a distinguished southern cartoonist, the Honorable Tom Little, of the Nashville Tennessean, has received this outstanding award for 1956.

The editorial follows:

TOP CARTOON PRIZE IS LITTLE'S REWARD

That the best newspaper cartoon for 1956 was drawn by Tom Little, of this newspaper, is attested by his selection for the Pulitzer prize.

Many other honors have been bestowed upon this brilliant artist, but this is the most coveted one of them all. It is the hallmark of excellence in the national field, and in this case tribute to his public service as well as his rare skill at the drawing board.

When in the early part of last year, Tom Little sat down to use his crayon to stimulate the lagging Salk vaccine program he was moved only by the need to drive home a message that was all important. He was thinking in terms of children who were left unprotected from polio through no fault of their own. He felt the need of an appeal to thoughtless parents.

The cartoon he drew carried the title: "Wonder Why My Parents Didn't Give Me

Salk Shots?" It depicted a crippled child with braces on his legs watching other children at play. It opened the eyes of many persons, millions of them perhaps. For not only was this word-picture used to blanket Tennessee, with happy results, it was soon in nationwide demand.

For Tom Little this was a labor of love, for it dealt with something close to his heart. It proved again that the man who pulled no punches in political warfare had a soft spot in his heart for the unfortunate and underprivileged, and especially the children who are so dependent on the help and understanding of adults.

The message that was thus sent out by an artist's hand carried far indeed, and in this respect alone the rewards were gratifying even before the Pulitzer award was announced.

Looking back upon his beginnings, Mr. Little recalls his association, as a youth, with Carey Orr, who was then cartoonist of the Tennessean. He was quick to profit by Mr. Orr's instruction and guidance, and when he took over the editorial-page position he was equipped for his work.

For some 20 years his bold drawings have stamped him as one of the most effective and imaginative cartoonists in the land. And much of his success can be attributed to the firm foundations that were laid as a practical newspaperman who found the police round fascinating and later on, the busy city desk a challenge.

Evolving his own techniques after serious experimentation, he chose the lithograph crayon as the best medium for presenting an uncluttered cartoon which carried an impact. Many of his political cartoons, those including the Roosevelt era as well as the Eisenhower regime, have been classics. He originated, for instance, the idea of Governor Thomas Dewey of New York as the little man on the wedding cake, and was unimpressed when warned by Republican political leaders in New York that this was an affront to "the next President of the United States."

In the give-and-take of politics, he believes in calling a spade by that name and this he has done with forthrightness and courage.

Not only have the Little cartoons been among the most widely copied, he has been singled out for distinction on numerous occasions. There was the Headliners' Award for the best cartoon for 1947, two Freedom Foundation citations, three National Safety Council awards, and the Christopher award sponsored by a national organization of the Catholic Church.

For Tom Little's associates on this newspaper, there is pride and satisfaction over the distinction that has come to him and we are sure that feeling is shared by his friends in Tennessee and those over the Nation who know him personally or by his works. The sincerity of his endeavors and the scope of his unique artistry have given him his due niche in the cartoonists' hall of fame, where he has every reason to feel very much at home.

No One Is Better

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. ROGERS of Florida. Mr. Speaker, shortly before he died, the Honorable J. Mark Wilcox, a former distinguished Floridian and a Member of this body, wrote the following poem which I would like to have printed in the CONGRESSIONAL RECORD. Mrs. Wilcox, who is presently residing in my congressional district, was in my office not long ago, and it is through her thoughtfulness that I have this poem available for all to read.

The poem follows:

NO ONE IS BETTER
(By J. Mark Wilcox)

Why do we change our choice of friends as often as the weather?
Why don't we bury selfishness and try to get together?
Why don't we understand, at least, that we are here on earth—
Not to be better than the rest—but just of equal worth.
If we are more intelligent than somebody or the other—
It is only by the grace of God to help us help a brother.
And if we gather wealth and fame—much less is the excuse to keep—
Our talent to ourselves for our own selfish use
Because these talents are the gifts that come from our Creator
And our responsibility is ever so much greater.

The Will of Mr. Girard

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. ABBITT. Mr. Speaker, we have again witnessed just how far the so-called Justices of the Supreme Court of the United States will go in trying to bring about amalgamation of the races and the destruction of our way of life in this great country.

I refer to the decision in the so-called Girard case. This decision was commented on very forcefully in the editorials appearing on Friday, May 3, 1957, in the Richmond News-Leader, and on Sunday, May 5, 1957, in the Richmond Times-Dispatch.

The editors of these two papers are men of outstanding ability, and I commend to the Members of the House of Representatives these two editorials in the hope that they will be read and digested, and in the further hope that at least a majority of the Members will realize what is happening in this country and what will happen to the individuals in this country if the iniquitous civil-rights legislation is passed.

I planned to insert both of these editorials at this point in the RECORD, but the gentleman from Illinois [Mr. MASON] has already inserted the Times-Dispatch editorial entitled "The Law Is Stretched Again." I therefore include herewith the splendid editorial from the News-Leader:

THE WILL OF MR. GIRARD

On the day after Christmas of 1831, a man named Stephen Girard died in Philadelphia. He was a native of Bordeaux who had accumulated great wealth in the New World. Toward the end of his life, men remembered him as a lame, rather pathetic figure, blind in one eye, who stumbled about the streets of Philadelphia, the target of stones and jeers from urchins who mocked him.

But when he died—and this was in 1831—he left $6 million in trust for the establishment of a school (he termed it a college) for the education of "poor white male orphans." This was in 1831 (there is a purpose in repeating the date); it was 37 years before the 14th amendment became part of the Constitution, 126 years before the Supreme Court of the United States convened this past Monday.

And on this past Monday, the Supreme Court of the United States—by a unanimous opinion—reached back 126 years to thwart the will of Stephen Girard. It was his misfortune, ruled the Court, not to have read the works of Gunnar Myrdal; Mr. Girard could not know, in 1826, when he wrote his will, or in 1831, when he died, that he must not "turn back the clock to 1868 or 1896"; this frugal French immigrant was untutored in the new sociology. The clear provisions of his will—as presently administered—were ruled a violation of the 14th amendment, which Mr. Girard never saw.

After Stephen Girard's death, Girard College was in fact established, but the institution fell upon hard times. Ultimately, its administration was turned over to trustees appointed by the board of city trusts. It is today a thriving institution, not dependent in any way upon tax funds. In the words of the Philadelphia Bulletin, it is an institution that has been doing "outstanding work for more than a century."

But the misfortune of Girard College was that downtown Philadelphia began to deteriorate around it. The neighborhood declined, and a year or so ago two Negro youths sought, by compulsory court process, to force their way in. The Pennsylvania Supreme Court, by a 5 to 1 decision last November, refused to void the will of Stephen Girard. The Pennsylvania court said this:

"It is one of our most fundamental legal principles that an individual has a right to dispose of his property by gift or will as he sees fit. This right is so much protected that a testator's directions will be enforced even though contrary to the general views of society. * * *

"The question narrows down, then, to the contention that the trust is not a private trust but that it comes under the State-action rule because the city of Philadelphia administers the trust. But * * * the fact is that the school is solely responsible for its own policies and management. Its employees are not employees of the city, but of the trust estate. All provisions of the will show that this was not intended to be a public school. Therefore, the situation is not to be confused with the United States Supreme Court's segregation cases."

But on Monday, the Supreme Court thus confused the situation. On Monday, the Supreme Court ruthlessly jettisoned this most fundamental legal principle that a man may dispose of his own property as he sees fit. On Monday, the high court coolly asserted that "the board which operates Girard College is an agency of the State of Pennsylvania," and therefore, "even though the board was acting as trustee, its refusal to admit Foust and Felder to the college because they were Negroes was discrimination by the State." And racial separation, though never prohibited to the States by the Constitution, has been prohibited to the States by the Supreme Court since May 17, 1954. See *Brown* v. *Board of Education*, said the Court, 347 U. S. 483.

This bland decree of the Court, in some respects, goes farther than the Court ever has gone before. It violates some of the most sacred principles of chancery law and State-Federal jurisprudence. It intrudes upon long-established rules by which the States alone fix their laws of descent and distribution. It imposes upon a will probated in

1831 a constitutional amendment ratified in 1868 as amended by the Supreme Court in 1954.

It is possible, of course, though it is not likely for political reasons, that the Philadelphia Board of Trusts will render the Court's opinion moot simply by abandoning its trusteeship. But if this should happen, and new trustees should be appointed, the far-reaching damage done by the Court's decision on Monday will remain. What the Court ruled is that not even the dead are safe from the social dicta of an integrationist high tribunal; not even the most sacred obligations of trustee or fiduciary may rise above the whims of judges determined to forsake old law for a new sociology.

Farm Bureau Favors Trinity Partnership

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following editorial which appeared in the April 25 issue of the Chico Enterprise-Record.

FARM BUREAU FAVORS TRINITY PARTNERSHIP

The California Farm Bureau—presenting the case of "the man with the shovel"—has taken a firm stand in favor of use of President Eisenhower's partnership plan as regards the power aspects of the Trinity River project.

The "man with the shovel" is the irrigating farmer. The farm bureau says the farmer is primarily interested in two things: "The first is sufficient water at a reasonable price for the operation of his farm. The second is sufficient power, also at a reasonable cost, to operate his pumps."

On behalf of those farmers—of which there are many thousands in California—the farm bureau offers well-founded facts and opinions which should carry considerable weight with Representative CLAIR ENGLE and Senator THOMAS H. KUCHEL, who thus far have opposed Secretary of Interior Seaton's recommendation for use of Ike's partnership plan on Trinity.

In a policy statement in the April issue of California Farm Bureau Monthly, the farm bureau says:

"Cooperative construction and operation of the Trinity River project (P. G. & E. and Federal Government using the partnership plan) would accomplish several beneficial results. It would firm up the generation of Central Valley power and make better use of available water. It would place a more solid foundation under the generation of power and use of water in irrigation toward the encouragement of long-range planning of agricultural progress. It would create the basis for unified production of electrical power and make available constant supplies at lowest possible prices.

"In the sale of Federal power, it is a well-known fact that such power is first offered to preference customers at substantially lower rates than are charged users buying from private utilities. There appears to be a feeling that, because power is sold by the Government, it is less expensive to produce. This is a misapprehension. Power-production costs are substantially the same, no matter what organization or agency produces it. The difference lies in the fact that the Government pays no taxes. As a matter of fact, Government powerplants are built with tax money. Actually, general taxpayers in California and the entire Nation foot the bill for the difference in price. This amounts to a subsidized electrical service to certain buyers which resell the power to individual users at a cost lower than they could buy it from private industry. Consequently, the difference in the cost of the so-called cheap Government power and the cost of production of that power is paid for by the taxpayers of the State and the Nation.

"Among those taxpayers are farmers, using the power purchased at established rates, to pump their irrigation water and operate their equipment. They are bearing a portion of the tax load which rightfully belongs to the 'preferred' customers.

"It may be recalled that the Federal Government is at present serving certain preference customers. This situation is acceptable as long as these customers are United States Government installations. The situation becomes unacceptable, however, when municipalities resell Government power to private customers at rates cheaper than it could have been purchased from the power industry. This creates a condition of competition between private industry and the Federal Government.

"The situation becomes additionally unacceptable when the Government seeks to add to its power facilities, through the construction and operation of installations such as the proposed facility at Trinity River, and then further enters the competitive power field by seeking to find additional preference customers for Federal power. This practice is not in keeping with American principles and is adverse to the best interests of the people.

"Preference practices give special advantages to a very small minority at the expense of the majority. This is unjustifiable discrimination. Since public power is produced with taxpayers' money, and since public-power installations are not taxed, taxpayers themselves become the losers in the operation of public powerplants.

"Under partnership proposals made in connection with the Trinity River project, the Federal Government would make an immediate saving of $55 million in construction costs alone. This could be made available for the further development of irrigation in the Central Valley. In addition, $3,500,000 yearly paid by the private utility for falling water, plus $2,700,000 each year on the Trinity power facilities would greatly reduce the need for Government money in the construction and operation of the project and would represent a saving to the taxpayers."

We believe those statements by the farm bureau admirably point up the basic point that the farmers of California are not in favor of paying taxes to provide special power price benefits for the so-called "preference" customers. The farmers have their own electrical bills to pay, so they are not eager to pay part of another man's bill, even though the other man may, in the eyes of Representative ENGLE and Senator KUCHEL, be considered a "preference" customer.

President Eisenhower's "partnership" plan operates on the basis of economy in Federal spending and fair treatment of all taxpayers.

Letter From Dr. Francis B. Sayre, Jr.

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. DURHAM. Mr. Speaker, under permission to extend my remarks in the RECORD, I should like to insert a letter which I have received from Dr. Francis B. Sayre, Jr., dean of Washington Cathedral:

WASHINGTON CATHEDRAL,
May 2, 1957.

The Honorable CARL T. DURHAM,
Joint Committee on Atomic Energy,
United States House of Representatives, Washington, D. C.

DEAR MR. DURHAM: I have recently seen a copy of the letter which the Joint Committee on Atomic Energy wrote to the President urging the reappointment of Mr. Thomas E. Murray to the Atomic Energy Commission. I hope that the fact the President has taken no action means that he is giving careful and favorable consideration to the letter your committee has written. I would like to associate myself with the views expressed in your letter and to say that from my point of view Mr. Murray has brought a sense of moral responsibility and religious sensitivity to the exercise of his duties in a remarkable way. Although he is not a member of the church I have the honor to represent I have come to have the highest respect for his public utterances and his service to the American people.

It is my hope, too, that the President will see fit to reappoint Mr. Murray.

Faithfully yours,

FRANCIS B. SAYRE, Jr.,
Dean.

Decision on Nashville VA Hospital of National Concern

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. LOSER. Mr. Speaker, leave having been granted to extend my remarks in the CONGRESSIONAL RECORD, I include herein an editorial appearing in the Nashville Tennessean under date of May 7, 1957, relative to the construction of a Veterans' Administration hospital at Nashville to cost in the neighborhood of $10,500,000.

The location of this hospital is being debated in Nashville by a number of interested parties. The present Veterans' Administrator, the Honorable A. V. Higley, has stated that the hospital should be located on property presently owned by the Veterans' Administration. Many members of the medical profession and the former Chief Medical Director for the Veterans' Administration, Dr. Paul B. Magnuson, has taken the position that this hospital should be located near the Vanderbilt University Hospital, located several miles distant from the site selected by Mr. Higley.

Dr. Magnuson suggests that the location of the hospital in the proximity of Vanderbilt University is of such broad import as to warrant national as well as regional concern. I believe that the question of locating this hospital is of national concern, and I, therefore, commend the reading of this editorial to the Members of the House and other officials in Washington charged with the responsibility of locating this hospital for the veterans in this area of the country.

The editorial follows:

DECISION ON NASHVILLE'S VA HOSPITAL OF NATIONAL CONCERN

Dr. Paul B. Magnuson, a former Chief Medical Director for the Veterans' Administration, has focused timely attention on a situation of the utmost importance to Davidson County by challenging a recent decision to construct a $10,500,000 permanent hospital for veterans at the hospital's present site on White Bridge Road.

Indeed, Dr. Magnuson's charge that "bureaucrats and professional veterans" are attempting to sabotage plans to locate the hospital in the proximity of Vanderbilt University is of such broad import as to warrant national, as well as regional, concern.

For the former VA Medical Chief declares this decision to be a breach of a policy developed more than 10 years ago for the express and sole purpose of rendering better medical service to veterans.

Thus, he sees the decision regarding the Nashville hospital as the beginning of a return to the conditions prevailing before 1947, when the veterans hospitals of this Nation not only left much to be desired, but were downright disgraceful to a Nation which ought to be concerned about the welfare of those who fought its battles.

And those conditions are too fresh on too many minds to be lightly regarded. Too many remember how Gen. Omar Bradley, then Veterans' Administrator, was maligned and abused by "bureaucrats and professional veterans" when he put the policies of which Dr. Magnuson speaks into effect.

General Bradley, shocked by the state of veterans hospitals, set about to upgrade them by entering into what became known as "deans committee" agreements with reputable medical schools. Under these agreements, faculty members of medical schools provide most of the medical services to the various VA hospitals. The veterans hospital in Nashville is one of these, and Vanderbilt University is the medical school providing the services.

But General Bradley did not place this progressive policy into effect without a fight. Standardized resolutions prepared by the national headquarters of veterans organizations—notable among them, the American Legion—heaped scorn upon an outstanding soldier who had served with distinction.

The new policy he instituted called for the location of veterans' hospitals, when new ones were to be constructed in the proximity of the medical schools providing the services. Until the recent decision, this policy has been followed as closely as is economically feasible.

And it is interesting to note that just before this latest decision, veterans' organizations in Nashville again bombarded Congressmen with standardized resolutions which, for all practical purposes, were identical in language. The decision was first made to locate Nashville's veterans hospital near Vanderbilt; the pressure went on, then suddenly the decision was reversed.

Mr. A. V. Higley, present Veterans' Administrator and himself a former American Legion big shot, has said the additional $1 million to $1,500,000 it will cost to construct the hospital near Vanderbilt was a major consideration in the policy change. Dr. Magnuson, though, says the decision was conceived in stupidity.

He insists that the additional amount can be recaptured through a multitude of savings which would be apparent with location of the hospital near Vanderbilt. To this, Mr. Higley blandly replies:

"I can't go to the Bureau of the Budget and ask for $1 million more on the basis that we would get it back in savings over a period of 30 to 40 years."

This, incidentally, would seem to be the crux of the whole affair. Mr. Higley is concerned more with the expedient of short-sighted economy which might satisfy a budget-cutting craze currently in vogue, than in true economy.

In any event, a thorough airing of Dr. Magnuson's charge is in order. It is important—not only to Nashville but to the Nation—that false economy not be used as a lever to justify turning our Veterans' Administration hospitals back to the political whims of bureaucrats and professional veterans.

Tampa Harbor Project

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 8, 1957

Mr. CRAMER. Mr. Speaker, it was my privilege today to represent the people of the First District and the State of Florida before the Subcommittee on Public Works of the House Appropriations Committee. Continuation of the great Tampa Harbor development project was the purpose of this appearance. I was happy to be joined by two representatives of the Hillsborough County Port Authority, Mr. Norman S. Brown, attorney, and Mr. J. B. Colbert, member of the board. It was my contention that, above all, this project had demonstrated the wise action of the committee and the Congress in first appropriations for the project. This has been ably demonstrated through growth of the harbor traffic upon beginning of the development; greatly increased local participation and investment of private capital; development by the port authority beyond commitments to this committee and a greatly increased ratio of benefit to cost over the last year. I would include my full remarks at this time for the information of the Members to be used when action is taken on the project.

The remarks follow:

REMARKS OF HON. WILLIAM C. CRAMER BEFORE THE SUBCOMMITTEE ON PUBLIC WORKS, APPROPRIATIONS COMMITTEE, HOUSE OF REPRESENTATIVES, WASHINGTON, D. C., MAY 8, 1957

Mr. Chairman, it is a pleasure to come before this committee again and represent the people of the First District of Florida. Together with Representatives of the area it is my pleasure to both report on the progress made in the development of the Tampa Harbor project and to request your continued interest in this valuable improvement and approval of the appropriation for work during fiscal 1958.

This harbor project serves a very substantial portion of the entire State of Florida. The port of Tampa is a port of increasing commercial importance. This committee evidenced its awareness of this fact last year when it appropriated in the 1957 budget $4 million for the continuation of work on this project. This amount was $1½ million more than that recommended by the President.

When I appeared with representatives of the Tampa Port Authority before the Bureau of the Budget in the fall of 1956 we requested $3½ million to be included in the 1958 budget for the continuance of work on this project. That request was founded upon advice from the Office of the Chief of Engineers, Department of the Army, that this sum could be economically utilized in fiscal year 1958 to continue work on the project at the same rate of completion as was being done in fiscal 1957. From a total economic viewpoint there would be sound reasons for confining this plea to your committee in that amount. This sum, if included in fiscal 1958, would permit the completion of a usable segment of the project and would provide the necessary deep water for well over half of the volume of tonnage entering the port of Tampa. The Tampa Port Authority has estimated that if this sum were appropriated the direct annual savings which would become reality in the latter part of fiscal 1958 would exceed $1½ million per year. Estimates of the engineers do not vary substantially from this estimate of the port authority. However, local interests share with me the belief that requests for funds this year should be moderate in amount to the end that all of the pressing appropriation problems confronting this committee may be better solved. I, for one, have insisted every reasonable economy should be exercised in consideration of all budget items, from the national viewpoint. For that reason I am requesting this committee to include in fiscal 1958 appropriations only the sum of $2¼ million. This will permit completion during fiscal 1958 of a usable segment of the channel up to the Hooker's Point Terminal in Tampa and substantial economic benefits will be immediately realized. I am informed by the Chief of Engineers work can continue on the project without interruption during the entire fiscal year and be performed in the most economic manner.

I particularly invite the attention of the committee to the schedule of completion of the various segments of the entire project. The sum of $2,225,000 which has been requested will permit work to continue so that Hillsboro Bay channels will be completed at a total estimated cost of $1,670,000 and Egmont Bar and Mullet Key channels will be completed at a total estimated cost of $340,000. Contracts have been let and could be broken only at financial loss on this segment. Present scheduling of the Government Hopper Dredge also calls for this time schedule. Work will be commenced in the latter part of fiscal 1958 on Ybor and Sparkman channels. These latter two channels are the channels serving the upper part of the city of Tampa proper.

The development of Tampa harbor and benefits to the community are entirely dependent upon the growth of trade and the growth of the community itself. In both cases the figures of activity over the past few years have far exceeded the conservative estimates presented to you and earlier to the Bureau of the Budget. It is a matter of pride to point out the successful growth resultant, in great part, from the interest and appropriation granted by your committee and the Congress.

The port of Tampa is showing a continual steady increase in port tonnage. All previous estimates of this increase have been shown to be too conservative to accurately show the future use of the port. In 1954, the port of Tampa had a total tonnage of 9,813,000 tons. In 1955, this tonnage had increased to 10,656,000 tons. In 1956, it will be evidenced that the port tonnage has increased over 13 percent over 1955 to approximately 12,250,000 tons (exact figures have not yet been compiled). These increases are considerably in excess of the 7.6 percent annual increase upon which port tonnage was projected by the Port Authority and is far in excess of the Army Engineers' estimate made in 1948. The increase 1955 over 1954, is in excess of 8½ percent; and the increase, 1956 over 1955, is in excess of 13 percent. Using 8½ percent, although already known to be too conservative, as the annual rate of increase, the estimated port tonnage in 1959 will be 15 million tons solely from normal growth of the State of Florida and the 5

congressional districts served by Tampa harbor.

However, at the beginning of 1956 it was known that within the next 3 years, that is, 1956–1959, there would be additional port tonnage from new industries of a total of approximately 3,500,000 tons. This would consist of approximately 2,500,000 tons of petroleum products; coal of 750,000 tons for a new electric generating plant using coal for fuel; and other products of 250,000 tons. The 1956 figures have already begun to reflect a small part of these new industries as is apparent in the increase to 13 percent over 1955. It is therefore not at all speculative to revise upward the old figures and estimate that port tonnage in 1959 may well reach 18 million to 19 million tons.

All this is indicative of the fact that the phenomenal growth of the port of Tampa shows that what at one time may have been considered unrealistic is in fact becoming a reality. Even a cursory consideration of evidence this growth is steadily increasing and that new and important industries are moving into the area served by the port of Tampa show that the estimated port tonnage in 1959 is still most conservative.

Each year the facts are substantiating this anticipated and expected growth. For example, the port of Tampa is the fifth-ranking port in the United States in coastal car unloadings (based on information compiled and furnished by the port division of the American Association of Railroads). In 1956, car unloading totaled 62,614. This was a 22-percent increase over 1955 or 11,148 cars. It is significant that this is a greater increase than the four ports having more car unloadings. Not only is the port of Tampa increasing nationally, the total car unloadings for Tampa totaled more than the combined total for Mobile, Pensacola, Miami, Port Everglades, Jacksonville, Savannah and Charleston.

The continual and steady growth of the port of Tampa is an anticipated certainty. Since the start of the harbor project in January 1955 over $9 million in new and improved port facilities, including piers, wharves, bulkheads, privately dredged channels and turning basins, bulk cargo loading, unloading and storage facilities for oil and other petroleum products, phosphate and chemical products, grain and other commodities have been developed. And, since January 1955 over $95 million in new deep water industrial construction has been started or definitely committed.

Specific industries that have taken advantage of the many growing trade and facilities features offered by port development includes:

Schlitz Brewing Co., Export Brewery under construction with a capacity of 1 million barrels per year.

Southland Petroleum Co., 30,000-barrel gasoline refinery.

Tampa Electric Co., 125,000-kilowatt generating plant.

Florida Power Corp., 125,000-kilowatt generating plant.

American Cable Co., a $5 million plant completed in 1956 now announcing a 60-percent expansion program.

New terminal facilities of the Texas Co., Pure Oil Co., Ingram Oil Co., Tampa Terminals, Inc., Illinois Grain Corp., and the Tampa Molasses Co.

Petroleum tonnage has been increasing at approximately 10 percent each year and in 1955 totaled 4,945,000 tons. Since 1950 the phosphate tonnage (and over 75 percent of phosphate produced in the world is produced within the radius of 80 miles of this port) that passed through the Port of Tampa has increased 38 percent and in 1955 totaled 3,339,000 tons. Already it has been shown that the Tampa Port tonnage for 1955 increased over 8½ percent over 1954 and the 1956 tonnage increased over 13 percent over 1955. Coupled with the increasing industrial growth and demand for products is the steadily increasing population served by the Port of Tampa.

The usage of the Port of Tampa by coastwise trade is also increasing rapidly. In the 5-year period, 1949–1954, the average annual increase in tonnage was 9.1 percent. Projecting a growth of 5 percent per year over the 1954 tonnage of 5,477,000 tons shows that there would be coastwise trade in 1959 of over 7 million tons. This again is an entirely reasonable projection of growth, and as a matter of fact, it is obviously conservative when the factors of new industry and growing population alone are taken into account. I wish to call the Committee's attention again to the estimated annual port tonnage in 1959 of at least 15 million tons. The phenomenal growth of this area make this estimate really a near certainty. Using this basis of annual tonnage of 15 million, the direct economic benefits and annual savings resulting from completion of this harbor project will be approximately $2,880,000. Using the criteria used by the Corps of Engineers in their determination of benefit-cost ratio would give the project an unusually high benefit-cost ratio of 6 to 1. This is not a bold estimate. For example, the Army Engineers in 1954 estimated the benefit-cost ratio to be 2.25 to 1—in October 1956 this was increased by the Corps of Engineers to 3.2 to 1.

The Port of Tampa is one serving 25 counties in Florida and 5 congressional districts. The benefits of this service in this large area extend to a population estimated in excess of 1,520,000 as of July 11, 1956, an increase of 13 percent over the estimated population of July 1, 1954. The estimated population of the Tampa-St. Petersburg metropolitan area is in excess of 578,000.

At the time of authorization of this project and in previous appearances before this committee it has been pointed out that Tampa Harbor is the only sizeable port between Norfolk, Va., and New Orleans, La., having a channel less than 32 feet in depth. This handicap has existed and serves to bring out the vitally important fact that at the same time the port of Tampa has more tonnage than any harbor from Norfolk to Mobile.

I respectfully submit these facts to the committee and urge that you approve the budgetary request of $2,250,000. By this appropriation, which I again point out is the least amount that can economically be utilized for orderly programing of the work now underway, continued growth of a rapidly expanding area of our country will be assured. Through the high cost-benefit ratio of the project the national interest will be served in providing a channel of project depth and width to the city of Tampa and the State of Florida.

The American Assembly—Report on Foreign Aid

EXTENSION OF REMARKS

OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. VORYS. Mr. Speaker, the American Assembly, conceived by President Eisenhower when he was president of Columbia University, has conducted for 5 years a series of nonpartisan meetings of selected representatives from the professions, the universities, business, labor, agriculture, and government to discuss public questions. Meetings are held at Arden House, Harriman, N. Y., under the auspices of Columbia University. Dr. Henry M. Wriston is executive director. The 11th American Assembly met from May 2 to May 5. The subject was International Stability and Progress. I was honored to be among the six participants. At the end the following final report was issued. I believe it is an important and useful analysis of the problems and proposed solutions involved in our foreign aid program:

FINAL REPORT OF THE 11TH AMERICAN ASSEMBLY

(The participants in the 11th American Assembly reviewed as a group the following statement at the close of their discussions. Although there was general agreement on the final report, it is not the practice of the American Assembly for participants to affix their signatures; and it should not be assumed that every participant necessarily subscribes to every recommendation included in the statement.)

PREAMBLE

In the mid-20th century, the United States finds itself in a position of unprecedented prosperity and power. It is inescapably involved in a world of rapid change which tests our institutions and basic values, and threatens our survival.

The most pressing danger comes from Soviet power combined with Red China and the international Communist movement they dominate. This threat is backed by an increasingly powerful military apparatus, and by a combination of political, military, economic, and psychological instruments.

A major challenge arises from the emergence into independent nationhood of hundreds of millions of people in Asia and Africa. These peoples have a passion for independence and self-respect and acutely resent remnants of colonialism; they are responsive to nationalism, in some cases extreme and irrational, and they seek ways of escaping conditions of dire poverty, often aggravated by population pressure. This challenge would be formidable by itself, but is intensified by Soviet efforts to subvert these nations.

In this situation, there is bipartisan support for the use of American resources and energies to back an affirmative foreign policy. That policy needs many instruments: diplomacy, the United Nations, military strength, alliances, international information programs, and economic measures. The actions of private business, religious and charitable organizations, universities, foundations, and individual citizens are also vitally important to the carrying out of foreign policy.

Among the instruments of foreign policy, programs of military, economic, and technical assistance have a major role. In the period since the war they have been effectively employed to meet many changing situations. They have proved a sound investment of American resources, contributing to increased strength for the free world and helping to reduce world tension.

This year a major reappraisal has been undertaken in order to modify policies and adapt methods to the altering situations in which the United States finds itself. There is need for fresh public understanding both of objectives and methods in the situation which now confronts us and is likely to confront us in the next few years.

FINDINGS AND RECOMMENDATIONS

A. The United States interest in foreign assistance

1. For the foreseeable future the United States must continue to employ military, economic, and technical assistance as instruments of foreign policy. In view of the continuing military threat of Soviet and Red Chinese imperialism, the most immediate na-

tional interest involved and the one responsible for the magnitude of the program is our security interest. Foreign assistance serves other major and enduring interests—political independence, stability, and economic progress, especially in the new nations of Asia and Africa. Such independence, stability, and progress will reduce the danger of international conflict and permit the evolution of these new nations as peaceful and constructive members of the world community. These programs will also serve to expand international trade and private investment and thus help our own Nation as well as others. It is thus clear that foreign assistance is based on the positive interests of the United States; at the same time it accords with the humanitarian impulses of the American people.

B. The role of military assistance

2. Military assistance accounts for the great bulk of our current foreign-aid expenditures. Arms alone constitute well over half the total. Other support for foreign military efforts, defense support, represents an additional one quarter. Yet military assistance altogether is less than one-tenth as large as our domestic defense expenditures.

3. The United States needs formal allies and prospective military associates to deal with the danger of general or of limited war. Notwithstanding weapons developments, collective arrangements will remain an indispensable part of the effort to deter and if necessary to defeat aggression. The maintenance of overseas bases is now one of the essential elements of this common defense.

4. Assistance both in arms and in defense support is well justified adding more to collective free world strength than could a similar additional expenditure for our national defense establishment.

5. In some less stable countries the support through American assistance of an adequate military force may be essential to the achievement of reasonable political stability as well as defense against external aggression. In addition, useful byproducts of military assistance and training may be the development of skills, both mechanical and administrative, and the improvement of basic facilities. At the same time, measures must be taken to meet situations where military forces divert so large a portion of local resources as to create serious political and social problems and retard economic development. Where the forces cannot safely be reduced, defense support assistance should be used to supplement the local resources, but the possibility of reducing force levels without jeopardizing security should also be carefully explored.

6. Apart from strengthening weak countries and providing an additional deterrent to limited and general war, military assistance can, in exceptional cases, be used in aid of other foreign policy objectives, such as forestalling Soviet infiltration or subversion. Care must be taken not to encourage local armaments races or to aggravate regional international tensions.

C. Governmental assistance for economic development

7. Expenditures designed directly to promote economic development now account for less than one-eighth of total foreign aid expenditures, apart from special agricultural-commodity programs.

8. Orderly economic progress in independent underdeveloped countries accords with the political, security, and economic interests of the United States. Such progress serves as a bulwark against international communism, and in the long run will help to assure that the role of the new nations in world affairs will be increasingly constructive. While no nation has an inherent right to assistance from the United States merely because it is underdeveloped, the promotion of sound economic development should be an accepted element of American foreign policy.

9. Development is a highly complex and necessarily slow process. Nations are at many different stages of political, social, and economic evolution, and the needs and opportunities for promoting their development vary accordingly. Ultimately, the success of a development program depends in large part upon the execution and administration by the government and institutions of the underdeveloped countries. In some cases, technical assistance in education, public health, agricultural, and industrial skills, or in publiv and private administration merits the top priority. In others, capital requirements are urgent and exceed the capacity of local savings or normal foreign borrowing. The development of a pool of skilled and professional manpower, however, tends to encourage the accumulation of local savings, even though perhaps inadequately at the start. In still others, the needs for financial capital are being adequately met from private sources. An effective program requires a general definition of objectives and criteria, but must then be built up in the light of the actual conditions in each country being considered for possible assistance.

10. Alliance with the United States should not be a prerequisite for development assistance; the important thing is the will of a nation to develop its resources and defend its independence. The present uncommitted countries include some of the most important nations of Asia, whose orderly evolution and long-run orientation are crucial to American interests. Hope in these countries for achieving economic and social progress in a reasonable time and within a constitutional framework is a dominant political objective. It would be folly for the United States to leave totalitarianism as their only apparent way out of poverty and hopelessness, or the Soviet bloc as their only source of assistance. The fact that a country has undertaken the additional obligations involved in the alliance system is a proper element to be taken into account in determining the amount and character of the assistance.

11. Any United States assistance program must be geared to the long run. It takes years to carry out an economic development program; it may take several years to complete individual projects. The prospect of continuing outside support may encourage leadership in the countries involved to make the difficult decisions required for an effective process of development. For these reasons, the legislative and administrative arrangements for development assistance should give assurance of continuity. The American Assembly strongly favors the establishment of some kind of development loan fund, with an authorization covering several years. On condition that arrangements are made to insure that such a fund is managed as an integral part of our foreign-assistance program, there are several alternative possibilities for its fiscal administration. These could include existing institutions like the Export-Import Bank or new institutions of corporate character. At the very minimum, there should be a clear declaration of congressional intent on continuity, coupled with authority to make commitments covering several years on individual projects.

12. Since successful economic development is wealth-producing, assistance for such development should, over a period of time, create the ability to repay. It should normally be on a loan basis. On the other hand, many underdeveloped countries are unable to anticipate with assurance the ability to repay on usual terms. Development assistance should, therefore, be sufficiently flexible to permit loans on long terms or with repayment in local currency. While such repayment poses some problems, the loan technique has some advantage in encouraging the use of economic standards in planning development projects. The terms of development assistance should complement and strengthen the possibilities for loans on normal terms and for private investment, and not compete with or undermine them.

13. If the United States continues to generate agricultural supplies beyond the demands of normal markets, they should be used in conjunction with other assistance for promoting foreign economic development, with continued care to avoid disrupting normal markets.

14. Formal declarations of political alinement should not be made a condition of receiving development assistance. On the other hand, it is both proper and necessary to negotiate conditions concerning the soundness of individual development projects or economic policies required for the success of the program.

15. Presently available evidence suggests that the magnitude of development assistance should certainly be no lower and probably higher than present expenditure levels for this purpose (now roughly $500 million per annum including the estimated share of defense support contributing to these objectives). More reliable estimates of the needs would have to be based on a country-by-country review. The United States should be prepared to provide a substantially higher amount in future years if it can be effectively used for these purposes.

16. It is likewise not possible to set in advance a fixed duration for development assistance, but it will certainly be necessary in some form for many years to come. No country should be led to expect development assistance in perpetuity. Certain countries are now at a stage where little beyond technical assistance could be usefully employed, and conditions permitting true development programs may evolve only after several years. In other cases development has already sufficiently progressed so that a rapid reduction of such assistance can be envisaged in the near future. In each case the planning should look to the earliest possible tapering off of such assistance through the creation of conditions conducive to broadly based domestic saving and investment and normal foreign capital financing.

D. Economic assistance for special purposes

17. Apart from defense support and development assistance, economic assistance in limited amounts is also justifiable for other purposes—for example, to secure some specific advantage to the United States, to meet political crises, or to cope with natural disasters. Experience has shown that the timely provision of such assistance in adequate amounts can be critical to the continued independence of friendly nations. Requirements for such assistance cannot always be foreseen accurately; consequently considerable flexibility must be given the administration in the management of resources provided for such assistance.

18. In cases such as Yugoslavia and Poland the fact that the regimes are Communist should not preclude the giving of assistance where this might help increase the independence of such countries or the degree of human freedom within them.

E. Technical assistance

19. Technical assistance expenditures, both bilateral and through the United Nations, now amount to about $150 million per year. The value of a well-conducted technical assistance program has been fully demonstrated. Such programs should be continued and expanded, especially in the newly emerging nations. More satisfactory arrangements should be made in order to attract to these activities qualified administrative and technical manpower in sufficient numbers, with suitable personal qualities

and training and aptitudes for working in various environments as effective representatives of the United States. The United States should be prepared to employ suitably qualified foreign nationals in these programs. Technical assistance through the United Nations and its specialized agencies has several advantages, notably the ability to draw on a larger manpower base. We should encourage the gradual expansion of these United Nations programs and be prepared to continue sharing in their cost and seeking improvements in their administration.

F. Countering Soviet initiatives

20. In the last few years, the Soviets have sought to counter our programs by themselves using trade, loans, and military and technical assistance as important instruments of their foreign policy. The best general means of minimizing the effectiveness of these moves is a constructive program of our own. It would be unwise to invite blackmail or attempts to induce the United States to bid against the Soviet Union. The United States should, however, have the ability to deal with such moves by countermeasures in particular cases.

G. The role of private enterprise

21. Private enterprise already plays a major part in promoting foreign economic development and strengthening the international economic order through trade, investment, patent licensing, management contracts, and other means. The United States Government is also making substantial use of private business and educational and other institutions in the aid program. These trends should be encouraged. With respect to foreign investment, tax incentives and guaranty arrangements are of real value. One possibility in connection with a developmental fund lies in further expanding joint public and private financing arrangements, both in the United States and in the recipient countries; this should be carefully explored. Moreover, while not making revision of foreign governmental attitudes toward private enterprise a condition of economic assistance, much greater efforts should be made, both by Government and by private organizations to encourage an appreciation that progressive private enterprise methods offer the best long-range prospects of sound economic development, while strengthening the democratic foundations of societies.

H. Organization and administration

22. Proposals now being put forward by the administration seek a sharper distinction between military and economic assistance, in order to clarify at home and abroad the objectives of the program. This purpose is sound. At the same time, it must be recognized that in underdeveloped countries receiving military assistance, any line drawn between defense support and development assistance is necessarily arbitrary. More important, it must be recognized that political, military, and economic developments in any country are interrelated and that American policy and programs must be an integrated whole. It is therefore essential to strengthen the decisionmaking and coordinating arrangements within the United States Government, especially if military assistance and defense support are transferred to the defense budget, and to ensure that all aspects of foreign assistance, both in programing and in execution, conform to a consistent line of foreign policy.

23. Efforts should be made to ensure maximum participation by other advanced countries in promoting economic development in underdeveloped countries. Where circumstances make it desirable, regional coordinating arrangements involving both supplying and recipient countries should be encouraged.

24. The administration of the assistance programs in the United States Government requires a new sense of purpose and a new spirit of drive, energy, and imagination as well as clarification of objectives and methods. No fresh approach will be meaningful without this spirit in its administration. Only thus can persons of exceptional qualifications be attracted to the program. Nor can its administration be successful over the long term without a corps of properly trained personnel with real career opportunities, including status in the Foreign Service.

I. United States costs and benefits

25. Foreign assistance as a whole accounts for only about 1 percent of our gross national product today, as compared with over 2 percent in the peak year of 1949. Moreover, three-fourths of the total is for military purposes and must be appraised in terms similar to our domestic defense program. The program as a whole does not impose unreasonable strains on our total resources or on any important segment of the American economy. The contribution of foreign assistance to export markets, to increasing raw-material supplies, and to the general strengthening of the world economy constitutes at least a partial offset to the direct economic costs.

26. At the same time, national security costs as a whole, including foreign assistance, are mainly responsible for a total national budget and corresponding tax burden which bear heavily on the American people. The main hope of lightening these burdens lies in promoting world conditions which would permit a reduction of military expenditures, and foreign assistance is one of the most important means of bringing about such conditions. Meanwhile, no unnecessary expenditure can be permitted and no opportunity should be lost for tightening up methods of program making and administration to eliminate any avoidable waste. The objectives and methods of foreign assistance can be clarified and competent administration assured. The benefits of these programs to American interests greatly outweigh their cost. That cost is part of the inescapable price of an American foreign policy calculated to promote our deepest interest as a nation.

The Romance of Remembering

EXTENSION OF REMARKS
OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 2, 1957

Mr. DORN of New York. Mr. Speaker, I should like to call to the attention of my colleagues an address by George E. Stringfellow, imperial chief rabban, AAONMS before the Feast of the Paschal Lamb Ceremonial, Rose Croix Chapter of New York City, AASR, Valley of New York, Sheraton-Astor Hotel, New York, April 18, 1957.

THE ROMANCE OF REMEMBERING

We commemorate tonight the important events of that other memorable Thursday when Jesus and his disciples were gathered at the last supper.

"This do in remembrance of me," said Jesus, as he offered the bread and the wine to those who were gathered around him. Through 2,000 years of history we have remembered the sacrifice that is symbolized by that simple ceremony.

We are here to remember God and to pay tribute to our brethren who have departed from our midst. Through the solemn ritual we have observed here, we have brought to our remembrance their contributions and the part they took in perpetuating the spiritual beliefs and high principles for which our fraternity stands. With ceremony and mysticism we have emphasized their importance and idealized the meaning of this occasion.

Memory by nature is romantic. Unpleasant and sorrowful experiences have a way of being softened by the passage of time. While the happy occurrences are enhanced and stand out clearly in our thoughts. Time seems to give a glamor to past events, whether they are within our own experience or in ancient history.

We remember Egypt for its wealth and its kings. The pyramids are a symbol of a once fabulous civilization.

We remember ancient Greece as devoted to wisdom and beauty. The temples and the statues are left to remind us that it too was once a great civilization.

We remember Rome for its leaders and its lawmakers who contributed much to the art of government. But its glory too is gone. There remain only the ruins to give clue to its far-reaching influence.

Those are the things we remember—the romance and the beauty. Those civilizations had potentialities for greatness and indestructability. They attained great world influence. But, they reached a certain peak in their glory and crumbled because of despotism, slavery, greed, and corruption.

Our civilization, and I speak now of our country, has potentialities for lasting greatness as evidenced by its rapid development into a powerful leader among the nations of the world. However, remembering the fate of past civilizations, we might ask ourselves, Will our Nation also collapse after reaching a level beyond which it cannot rise? Will it, in the romantic imaginings of future generations, be only a memory of speed, machine, and production?

Because it was built on a spiritual foundation, I believe that our Nation will endure and will fulfill its responsibility of leadership.

We must ever remember that ours is a country founded upon the ideals of the Old and New Testaments, by people who took their Bible seriously. We must remember that the men and women who came to our shores in search of religious and economic freedom were bound together by a spiritual thread that no hardship could sever. That thread has been the warp on which the whole pattern of our Nation was built. It is no accident that on our Liberty Bell the words "Proclaim liberty throughout the land to all the inhabitants thereof" are to be found in the Old Testament Book of Leviticus.

It was that faith in God, as emphasized in our Bible, that gave our forefathers the courage to fight for independence and to win in spite of overwhelming odds.

From that faith came the almost divine wisdom that gave us our Constitution which for 170 years has assured us the right of "Life, liberty, and the pursuit of happiness."

That faith was the light which guided our leaders during the dark days of the Civil War.

That same faith today will help us overcome the danger of communism which is threatening the world. The Communists fear the power of belief in God and assert that it must be exterminated before communism can be safe. By their own admission we have in our possession a spiritual weapon which can be used against this ideology which denies God, enslaves man, creates hate, and brings about devastation in the human soul.

As Christians and Jews and as Masons we believe in the fatherhood of God and the brotherhood of man. This is a phrase we hear often in the rituals of our order. Its

simplest interpretation can be made in the words of Jesus when he said, "A new commandment I give unto you, that you love one another."

This is what gives significance to Maundy Thursday. This is why we are here tonight—to remember and to heed with renewed spirit the commandment to "Love one another."

If we should practice that admonition, it might well be the solution to the ills and problems of the modern world. That may sound vicionary, but it isn't impossible if we follow Jesus' teachings and his example.

His love inspired love in those around Him. There was little reason for a strict orthodox Jew like James to associate with a despised tax collector like Matthew. Yet, when they became friends of Jesus, they inevitably became friends of each other. A rought fisherman like Peter had little in common with a refined scholar like Nathaniel, but they were drawn together by their mutual friendship with Jesus. And so it was that the love one showed for another, touched someone else and like the ripples on the water reached unseen shores as a result of one point of contact.

To love one another is the motivating spirit of our brotherhood. Our example could be the pebble that could start the ripple of friendship spreading among ourselves, our neighbors, our business associates, our Government officials, and finally, through the leaders of other nations, touch foreign shores.

If the spirit of brotherhood were practiced in the affairs of individuals and of nations, the unrest which now disturbs the world would disappear.

It would create a better understanding. It would protect the weak from the strong. It would eliminate selfishness and greed. We would have peace and goodwill in national and international affairs. The world would thus be a better place in which to live.

And so I say unto you, "Love one another."

Patriots' Day

EXTENSION OF REMARKS
OF
HON. THOMAS P. O'NEILL, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, I am happy to be accorded the privilege of inserting in the CONGRESSIONAL RECORD two addresses which were made on Cambridge Common, in that Massachusetts city, on Patriots' Day, April 20, 1957.

The first address was delivered by Charles N. Collatos, a former commander of the Massachusetts Department of the American Legion, who is now a national executive committeeman of that organization. Following his remarks, a scroll from the mayor of Boston was delivered from horseback to the Honorable Edward J. Sullivan, mayor of Cambridge, by an equestrian representing William Dawes. The second address contains the comments of Mayor Sullivan at the time of the presentation of the scroll. It is my thought that the activities of this most recent celebration of a day of deep meaning for all Americans will be or interest to my colleagues in the United States House of Representatives.

The addresses follow:

PATRIOTS' DAY

(Address by Charles N. Collatos)

It is indeed an honor for me to appear at the hallowed birthplace of America, the Cambridge Common, to accompany you in retrospect on this historic occasion.

We are not chauvinists, but it is incumbent upon us to reacquaint ourselves from time to time with our glorious heritage, lest in the haste of our existence we forget not only our station in life, but where we are headed.

In the course of the 182 years from the midnight ride of Paul Revere to the present day, the United States has grown from infancy to full maturity among nations. This growth has not been an easy one. We have had periods of prosperity, years of depression, turmoil, strife and war.

Fortunately for the United States, every age has produced great Americans, whether they were in the field of government, combat, literature or letters. These men, through their writings, their actions, and their ideals have served as guides in their respective eras.

During our humble beginning, God graced our land with many patriotic leaders. We cannot truly recite their achievements. They are written on every page of our history, and the monuments of our growth and advancement are all about us. Our churches, our schools, and universities, and our benevolent institutions, which beautify every town and hamlet, and look out from every hillside, testify to the value our people place upon religious teaching, upon advanced education, and upon deeds of charity.

The true glory of our Nation is not in the magnificence of its mansions, not in the beautiful creations of art lavished on its public buildings, not in costly libraries and galleries of pictures, not in the number or wealth of its cities, but a country where the crown and glory of the people are in common schools, where the voice of prayer goes heavenward, where the people have that most precious gift—faith in God.

This is our heritage—handed down to us through the blood, the tears, and the sweat of our ancestors—to keep our way of life we must work with the grim determination of the early patriots, so that America will continue to be a land of plenty, with equal rights to life, freedom, and the pursuit of happiness.

PEOPLE OF CAMBRIDGE

(Address by Edward J. Sullivan)

We have just witnessed a reproduction of a familiar scene—a scene that took place here close to 2 centuries ago—the arrival of William Dawes to warn the colonists of the approach of the British.

Today, on historic Cambridge common, we gather to participate in the annual Patriots' Day ceremonies, and as we do so we cannot help but realize the tremendous debt we owe that handful of gallant farmers who went forth to battle to protect the things they loved most dearly—their homes and their loved ones.

By their bravery and by their courage, they set the stage for the building of a great and glorious nation—and it is indeed a pity they could not be present today to gaze upon the fruits of their efforts.

Down through generation after generation the fortitude and heroism of the men of 1775 have been instilled into those who followed.

Many times since have the Stars and Stripes of Old Glory been carried into battle—never as an oppressor but always in defense—and just as many times they emerged victorious.

The example set by our heroes of yesteryear has been religiously followed.

For that example let us ever continue to pay undying tribute to their memory.

United States Prestige at New Low as Lodge Charts Foreign Policy Course in U. N.

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. GROSS. Mr. Speaker, one newspaper which has steadfastly refused to cover up for the failures and shortcomings of the United Nations is the Standard-Times, of New Bedford, Mass. This outstanding newspaper on numerous occasions has set the record straight concerning the U. N.

On May 3, the Standard-Times published a critical and revealing analysis on how American foreign policy has been entrusted to this international organization. Written by staff writer Edward B. Simmons, I commend the article to the attention of my colleagues:

UNITED NATIONS, N. Y., May 3.—To a degree never equaled by any nation, the United States has entrusted its foreign policy to an international organization, the United Nations.

Dependence on the U. N. has grown steadily. Last week, Secretary of State Dulles made it virtually complete when he turned over to the U. N. the United States-Egypt negotiations on the Suez Canal.

Today the problems in which American security is most vitally involved are in U. N. keeping—Eastern Europe, the Middle East, the Suez Canal, even trade with Communist China.

Three aspects of this gamble on the U. N. warrant particular emphasis:

The placing of America's stake in U. N. hands was a personal project of Henry Cabot Lodge, United States Ambassador to the U. N. Lodge is credited by associates with "the important achievement" of persuading the Eisenhower administration to "shape United States foreign policy more and more around the U. N."

As representative of the most powerful free Nation, Lodge has become, under the new policy, the No. 1 spokesman for the West in the cold war with Communist Russia.

The prestige and security of the free world have suffered greatly since United States policy was channeled through the U. N. Never were they at a lower point.

No one disputes Lodge's role in persuading President Eisenhower and, through him, the State Department to rely almost exclusively on the U. N.

What the United States Ambassador's associates say is in accord with the opinion of other observers and newspapermen closest to the Washington–U. N. pipeline. Lodge, himself, has replied to questions about the extent of his influence by pointing out that he has a direct telephone to the White House.

SALESMEN FOR U. N.

Lodge has been an all-out salesman for the U. N. since he acquired the unprecedented double title of ambassador and cabinet member 4 years ago. He has coined a number of Madison Avenue-type slogans to further his campaign.

"First and foremost, the U. N. has stood, and still stands—between us and world war III," has been his favorite for years.

Others are—"The U. N.-Peace for One Thin Dime.

"The U. N. Is Safe Because There Is Nothing to Spy On.

"The U. N.'s Heroic Use of Armed Forces in Korea."

Ambassador Lodge's influence on the President seems to have begun to take effect in October 1955, when he visited Eisenhower while the President was convalescing from his heart attack in Colorado. Lodge gave a "glowing report" on the U. N.

Within a few weeks, United States policy began taking a U. N. hue, particularly on the Israel-Egypt dispute, which had reached a critical stage by March 1956.

RIDING A WAVE

The trend to the U. N. and Lodge's part in it, became increasingly evident through 1956. By last December, Milt Freudenheim, U. N. correspondent of the Knight chain of newspapers published in Chicago, Detroit, Miami, and Akron, was writing:

"Lodge is riding a wave of history to a destination of great potential advantage for himself and perhaps for United States influence."

The first part of that statement has stood up.

Lodge has gained great personal publicity from his role as No. 1 spokesman for United States policy and hence the free world's, at the U. N.

Describing himself as a rough and tumble debater, he has increased the virulence of his hard-hitting speeches at U. N. deliberations.

A TOURIST ATTRACTION

Shortly before the revolt in Hungary, Lodge described how he used the U. N. loudspeaker again and again to nail Communist distortions on the spot * * * to expose to world opinion the brutal Red techniques, wartime atrocities, slave labor, and colossal lie.

As recently as last March he was referring to the Soviet as "assassin of human liberty * * * fantastic travesty on truth * * * blatantly false * * * conspirators by force and fraud."

This rough talk has not gone down well with other U. N. delegates, but it has made Lodge one of the biggest tourist attractions, as veteran AP correspondent Max Harrelson described it.

"He never fails to delight the public galleries, mostly American," wrote Harrelson.

While Lodge's own advantage has risen, that of the United States has sunk under the new policy of dependence on the U. N.

DEVELOPMENTS LISTED

Developments include the following:

Ambassador Lodge took instant action against Britain, France, and Israel in the invasion of Egypt but waited until too late for support of the freedom fighters in Hungary.

Britain, held up to scorn and stripped of prestige by U. N. indictment at United States request, has begun a drastic military cutback, adding immensely to the United States burden. France, likewise rebuffed, is reported ready to follow suit.

The double standard of the U. N. was emphasized as Lodge urged sanctions against Israel but not against the Soviet Union, aggressor in Hungary.

Lodge has called for giving a try to the Nasser plan for operation of the Suez Canal, which virtually ignores U. N. recommendations and is opposed by United States allies, Britain and France;

The Egypt-Israel border is again the scene of aggressive forays; the Middle East is in dangerous ferment;

The United States has backed down on a cardinal principle of free navigation after affirming it in the U. N. for the Gulf of Aqaba, through Lodge.

Lodge is not disturbed by the record.

BEGINNING TO PAY OFF

"I believe our reliance on the U. N. has begun to pay off," he said last month. "If the U. N. had not existed, we might well be at war today."

Although Lodge is not, nominally, the source of United States foreign policy, he has great leeway in interpreting and explaining it.

"Whoever represents the United States (at the U. N.) has a lot to do with making the U. N. succeed," he said.

It is pertinent, therefore, to contrast the United States Ambassador's reactions to two situations—the Anglo-French invasion of the Suez Canal Zone and the revolt in Hungary.

The canal crisis developed October 30, 1956. Lodge demanded, and got, action that same day in the U. N.

DELAYED ON HUNGARY

Fighting in the Hungary revolt broke out October 24.

Not until the night of November 4, 12 days later, did the United States Ambassador ask for and obtain passage of a resolve requesting withdrawal of Soviet troops and arranging to send U. N. observers.

During the procrastination, the Free Government of Hungary had come and gone—under a Soviet curtain of bullets.

The Free Government of Hungary, meantime, twice had requested aid from the U. N., not military aid, but condemnation of the Soviet, moral support, and observers.

Lodge, as the No. 1 spokesman for the free world in the U. N., followed this schedule:

October 27: "Urgent and important to examine the Hungary question.

October 28: "Urgent and important"; got U. N. to put issue on agenda; offered no plan, called for consideration "in the light of developments."

October 29: Security Council discussed other items.

November 1: Premier Nagy of Free Hungary cabled for help.

November 2: Nagy again cabled for help; Lodge said "use of armed might by Soviet is shocking"; called for ascertaining the facts; offered no plan. Delegate from Cuba said facts were clear, asked immediate action. None taken.

November 3: Lodge told Security Council there were "serious questions regarding the accuracy of Soviet assertions"; introduced a resolution but joined in voting for a 48-hour delay for negotiations.

November 4: Lodge resolution vetoed by Soviet in Security Council.

November 4 (night): Lodge resolution passed by General Assembly.

November 8: U. N. Secretary-General requested permission of puppet Hungary government to send observers. Denied permission. None sent.

GOT ORAL SYMPATHY

During the 12 days of delay in acting on Hungary's case, the Freedom Fighters of Hungary received considerable oral sympathy from Ambassador Lodge.

Two American correspondents who were on the scene in Hungary have described how stunned and embittered the Freedom Fighters were at the discrepancy between Lodge's remarks to the U. N. and his lack of action to support them.

Endre Marton, of the Associated Press, told the annual A. P. meeting last month that Hungarian patriots could not understand why the United States Ambassador to the U. N. was asking for more information when correspondents, as well as the United States Embassy, were cabling hour-by-hour reports.

John MacCormac, of the New York Times, wrote that patriots bitterly referred to Voice of America, and Radio Free Europe broadcasts quoting Lodge's sentiments on the "need to assist the brave people of Hungary."

RECORD A GOOD ONE

Lodge's handling of the Hungarian crisis brought a rebuke from Life magazine, which stated editorially that time was the critical factor, but the United States spokesman had not been prepared to do anything.

Lodge thought otherwise.

"The record is not a sorry one," he stated, retorting to Life's assertion that it had been. "The record is a good one."

Today, the United States 6th Fleet is on an emergency mission to the eastern Mediterranean to preserve order if possible.

Freedom-aspiring peoples of the Soviet satellite nations are embittered toward the United States and the U. N. because they feel they were abandoned.

Friendship, at untold cost to the American taxpayer, is being openly bought among Arab nations—$10 million for King Hussein, of Jordan, $50 million for King Saud, of Saudi Arabia.

The Suez Canal is at Nasser's disposal.

Britain and France, oldest of United States allies, have found themselves frustrated in the U. N. by a United States-Russian voting alliance.

An Afro-Asian bloc of nations with no diplomatic prestige and virtually no military power is dictating to the U. N.

This is the realistic record produced by Ambassador Lodge, with United States prestige at a new low and American foreign policy dictated by the U. N.

Wheat Price Cut Draws Fire

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an article which appeared in the Topeka Daily Capital under date of May 5, 1957. Since Secretary Benson's announcement of April 19, which cut our wheat acreage and dropped the price supports on wheat by 22 cents, I have continued to receive heavy mail in protest to this measure. I believe the following article further illuminates the very unhappy situation affecting the wheat producers of the High Plains area:

WHEAT PRICE CUT DRAWS FIRE

(By Jerry Fetterolf)

Three of Kansas' four major farm organizations this week protested strongly the 22-cent drop to $1.78 for the 1957 wheat price supports which was announced by Secretary of Agriculture Benson.

Presidents of the Kansas Farm Bureau, the Kansas Grange, the Kansas Farmers Union, and the Kansas Wheat Growers Association gave telephone and written statements to the capital during the week.

The majority reaction of opposition came as farmers in the heavy wheat-producing areas of western Kansas faced probability of a cropless year in 1957 because of drought in the fall of 1956.

Three of the four presidents commented that prices the farmer pays for his machinery, seed, and commodities apparently are rising, while his income is being lowered.

Harry C. Colglazier, of Larned, master of the State grange, said he believes decreasing the support level on wheat is a serious threat to the prosperity of agriculture in the Great Plains area.

"I think it is entirely uncalled for in the face of soil-bank reductions and as far as the farmer is concerned, everything else is going

up while his prices go down," Colglazier said.

Colglazier explained that this year many of the 1 million farmers in the United States who farm less than 15 acres will raise more wheat on that amount than a quarter section in the drought area will produce.

He referred to regulations which permit farmers to plant less than 15 acres without restrictions. He said that by intensive farming methods not feasible in western Kansas, more wheat can be raised per acre than is raised on the open western Kansas land.

"If Benson doesn't know rainfall made his soil bank work, someone should tell him," Colglazier said.

"The fact these farmers in the drought last fall were unable to get their wheat sowed leaves them with less this spring than they would have got under the old support price, now the support is dropped. If it had rained last fall, the soil bank would have been no help," he added.

R. L. Patterson, of Oxford, president of the Kansas Wheat Growers Association, commented that a short crop is in forecast since only half of the allotted acreage for Kansas actually was seeded because of drought conditions last fall. Some of the crop that was planted has been hurt percentagewise by the mosaic which came in the cool cloudy weather early this spring.

"This cut in support prices is the most disastrous thing we could have happen to us," he said.

"It will bankrupt the small farmer. The price actually should be going up in this kind of a situation rather than going down," he said.

Asked if he thought the short supply of wheat in forecast would help keep the price well above the support level, Patterson said he did not think it will. He believes the millers and bakers who want good quality wheat with the proper glutinous properties will pay the usual premium, but he thinks the premium still will be only a little more than the support price.

Average quality wheat will sell at support levels, Patterson believes.

"The philosophy being applied just won't work," he commented.

Farmers Union president Martin Byrne of Topeka issued a written statement blasting the support price drop and calling on President Eisenhower to rescind Secretary Benson's action. Byrne said economic factors affecting wheat are no different than when Benson set wheat supports at $2 a year ago.

"Benson's action to cut wheat farmer's income takes the top 11 percent of the wheat price way from him. This is the slice of wheat price that clothes and feeds the wheat farmers' families. It has the same effect on the farmer as it would have on the small-business man who would reduce his price tags by 11 percent without a corresponding cut in costs of wholesale price levels.

"We intend to fight this issue," he added.

W. I. Boone of Eureka, president of the Kansas Farm Bureau, issued the minority reaction among the farm spokesmen.

After commenting that the 1958 wheat crop as announced by Secretary Benson is based on law and the only basis on which the price could have been set, Boone noted that "if Congress had not intended that the level of supply should be the principal factor in determining loan price supports, it would have not so provided in the law."

"The $1.78 is a minimum. If the supply, or parity, on July 1, 1958, justifies a higher support price, it can be so announced at that time," he said.

He added:

"Maintaining the rate of payment for the 1958 wheat acreage reserve phase of the soil bank at the same level as in 1957, plus a vigorous export effort will result in a higher market price for quality wheat than the support price. That has been true this year. The fact that less than 20 percent of the 1956 crop is still under loan on the take-over date indicates that something other than the loan price has been the determining factor in the market value."

The Jenkins-Keogh Bill

EXTENSION OF REMARKS
OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an article appearing in the Massachusetts Law Quarterly for March of 1957, which was authored by my close friend and an outstanding member of the Boston bar, Joseph F. O'Connell, Jr.

I believe that the Congress could well profit by what Mr. O'Connell has to say on the Jenkins-Keogh bill now pending before the House Committee on Ways and Means:

THE JENKINS-KEOGH BILL—A BUSINESSLIKE APPROACH TO RETIREMENT BENEFITS FOR SELF-EMPLOYED LAWYERS PENDING IN CONGRESS

(By Joseph F. O'Connell, Jr.)

The American Bar Association, under the leadership of President David F. Maxwell, has made the support of this bill (H. R. 9 and 10—two identical bills) a major project of the association.

As a member of the house of delegates I urge all of the members of the bar to support it with letters or telegrams to the Ways and Means Committee and the Massachusetts delegation to Congress.

It is not merely a lawyer's bill but rather applies to the more than 10 million self-employed people in this country in every form of activity who are trying to support themselves and provide for their retirement.

Local groups of self-employed such as realtors, doctors, salesmen, etc., will shortly be formed and will be known as the American Thrift Assembly designed to cause the enactment of this bill, and this group will be spearheaded by the American Bar Association.

Lawyers were brought in under social security which benefits, while of questioned value, certainly are not adequate, and the Jenkins-Keogh bill would certainly provide the necessary retirement fund.

I insert below summary of the bill as issued by the Thrift Assembly and the ABA:

"The Jenkins-Keogh bill—as amended in the House Ways and Means Committee—allows a self-employed person to deduct from gross income each year a limited amount of earned income contributed by him by a restricted retirement fund or paid in as premiums to purchase a restricted retirement annuity contract. He can deduct annually up to $5,000 or 10 percent of earned income, whichever is less, but not more than a total of $100,000 during his lifetime. There is a 5-year carryover of unused exclusions.

"An individual who has reached age 55 before the effective date is allowed to deduct an additional amount, to help him build up an adequate interest in the fund or obtain more than a token annuity. In his case, the normal deduction limit is increased by the lesser of $500 or 1 percent of his earned income, multiplied by the number of years his age exceeds 55 (with a maximum average credit of 20 years).

"On attaining age 65, or earlier under certain conditions, he'll get back his contributions to the fund plus their accumulated earnings in one of three ways elected by him: (1) a lump sum; (2) annual, quarterly, or monthly installments over a period of years; or (3) one or more single premium life annuity contracts."

The income of a professional man usually rises slowly in early years, advances rapidly to a peak where it stays for a few years, then declines gradually. The problem we face in these days of steep income taxes is how to lay something aside from those peak earning years to provide for ourselves and our families.

For those of us who are self-employed there exist no ready-made retirement programs. Present tax laws render them unworkable. At the same time, millions of our fellow citizens find present income tax laws help them retire. Working for others rather than for themselves, they participate in employees' pension plans.

As you know, moneys paid into these trusteed or insured plans by an employer are deemed a business expense and constitute a tax deduction for the employer. More important to the employee is the fact that he does not have to pay any income tax on his company's contribution, or the increments thereto, until the benefits actually are paid out.

For instance, if Mr. A, an officer of corporation X, draws a salary of $20,000 a year and corporation X pays into its qualified employees' trust each year for Mr. A the sum of $3,000, the taxable income of Mr. A is not thereby increased to $23,000. Mr. A pays income taxes only upon $20,000. The $3,000 paid to the employees' trust for Mr. A's benefit is not a part of his taxable income until he actually receives it, plus interest earnings, from the trust some years later—usually after his days of high earned income are past. The same is true of a clerk in the office or a workman in the plant. These employed persons are having moneys paid into a trust for them and they do not currently pay taxes on such sums.

But 10 million self-employed taxpayers have no such tax-deferment right. When we work for ourselves, we are denied equivalent assistance toward retirement.

High taxes and high living costs make it difficult for the self-employed man or woman—you yourself—to create an old-age reitrement fund out of current income.

This is true of lawyers and doctors, farmers, small-business men, dentists, accountants—altogether some 1 million private citizens. For a long time now they and we have proposed legislation to amend the tax laws so that the self-employed might achieve a measure of equality to establish individual retirement programs similar to pension plans that grant tax deferment and retirement benefits to employees.

In the last Congress, the Jenkins-Keogh bill—the Individual Retirement Act of 1955—was introduced to help you and all self-employed people set aside a part of earnings for retirement. It sought to secure for you tax-deferment privileges long available to those who work for others but denied those who work for themselves.

Jenkins-Keogh had bipartisan backing. Leading spokesmen for both political parties publicly endorsed its underlying principle. The glaring inequity it seeks to adjust has not a single responsible apologist. (The Secretary of the Treasury grants that present revenue laws are unfair to the self-employed.) The house of delegates of the American Bar Association and many State and local bar associations were strongly behind it. Yet the bill died in the Ways and Means Committee.

As a member of the ABA house of delegates, I join Mr. O'Connell in his recommendation to all self-employed lawyers to communicate to the House Ways and Means

Committee and the Massachusetts Members of both Houses their support of the Jenkins-Keogh bill to provide them with the opportunity of an adequate voluntary retirement plan if they wish to take advantage of it.

At the meeting of the executive committee of the Massachusetts Bar Association on March 13, 1957, following an advance notice of the substance of the Jenkins-Keogh bill, it was considered, and the committee voted unanimously to support it.

FRANK W. GRINNELL,
Secretary.

What Did We Buy?

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. BOSCH. Mr. Speaker, what has happened to the good old-fashioned phrases of the past? I have in mind, particularly, the one "Charity begins at home." We are in the throes of discussions of the various supplemental, deficency, and new appropriations, and every day we are reminded by the people in our districts: "Cut, reduce, show some regard for financial stability of Government." Within the next few weeks there will be presented to us the "pork barrel" of them all—foreign aid. I trust that we will carefully consider the effect of the continuance of a program which to date has failed to produce appreciable results. It is our primary duty to give the American taxpayer a break.

Under leave to extend my remarks, I include an editorial from the New York Mirror of May 9, 1957:

WHAT DID WE BUY?

Senator JOHN KENNEDY is a delightful human being, an excellent orator, and a candidate for the Presidency and one would like to say, amen, to his highly humanitarian sentiments about giving the American taxpayers' money to Poland and other places.

But the thought comes that maybe we ought to keep some of that money right here at home.

Senator KENNEDY was talking before the Overseas Press Club at their annual shindig which has now become one of the outstanding events among journalists in this city, particularly those who specialize in foreign affairs.

Last Sunday, Senator WILLIAM KNOWLAND, speaking here before the American Jewish League Against Communism, said that he would give no more money to Tito.

The real problem is that we have poured $62 billion into this foreign-aid business and what have we got for it?

We have just given Jordan $10 million with no strings attached.

We have been offering the Arabs $200 million and sent a special emissary out there to beg them to take the dough and most of them refused to see him.

They would like to get our money, but secretly. They seem to be ashamed to be associated with us.

There is much sentiment in this country to help the revolutionists in Hungary and Poland. Then let us help the revolutionists, if we have to help anybody.

Why help the Communist governments of these countries?

Why help the so-called national Communists, who are Communists, nonetheless?

If Gomulka could oust Khrushchev, would Gomulka be less a Communist?

Would he reject the basic Marxist-Leninist doctrine that the capitalist countries must be destroyed, and the one that must surely be destroyed is the United States?

It would seem that our foreign-aid program needs rethinking and rethinking thoroughly.

Letter to the President

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial, which appeared in the Washington Daily News of May 9, 1957:

LETTER TO IKE

DEAR MR. PRESIDENT: We read on the front pages you are planning a couple of TV speeches to explain the $71,800,000,000 budget to us taxpayers.

It is a formidable undertaking, Mr. President, and we wish you luck.

And having, as always, a friendly feeling toward you, we offer a tip.

Which is: If you want to save some of the pieces of the United States Information Agency, talk to someone besides Arthur Larson when you write that section of your speech.

We know you picked Mr. Larson as Chief of the USIA but we don't know why. He is a personable and articulate gentleman, of fine poise and presence. He's a writer of books, a professor of law and his record as Assistant Secretary of Labor seemed good. We hear he's a whingding of a speech writer.

But really, Mr. President, what Mr. Larson doesn't know about the USIA is getting your administration into trouble.

He was before a Senate Appropriations Subcommittee yesterday and didn't look good.

He was asked how many USIA employees here in Washington were "engaged in gathering, reporting, editing, and processing news." Mr. Larson didn't know.

Apparently he thought he could bowl the Senators into the aisle by mentioning what a prodigious job the USIA did in correcting the Soviet propaganda distortions in the Autherine Lucy case. But when Senators asked exactly what did USIA do, Mr. Larson didn't know. Reminded them he hadn't been in the USIA at that time. Better he hadn't mentioned it.

Mr. Larson wrote a book titled "A Republican Looks at His Party." We hear tell you read it and liked it. It has become the bible of what is called modern Republicanism.

Know what we think, Mr. President? We think a lot of your budgetmakers were reading Mr. Larson's book when they should have been reading the election returns. Most of us who voted for you favor less Government spending, not more.

Arthur Larson's role as Mr. Modern Republican doesn't set well.

Did you read the news article in our paper the other day? The one which reported that Mr. Larson didn't vote in the last election? Hadn't voted in five primaries and general elections in which he had been eligible to vote since he registered in Pittsburgh in August 1954.

A modern Republican who doesn't know how to vote is on a par with a United States information chief who doesn't know how to inform.

Raises the blisters on the backs of precinct workers trying to get out the vote.

Recent Decision in the United States District Court for the District of Columbia Again Rules Congress Has Power To Investigate Communist Party and Those Who Are Members Thereof

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 29, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to place the full text of rulings of the court in the recently decided case of United States of America against Alden Whitman.

I believe that the distinguished judge of the United States District Court for the District of Columbia, Washington, D. C., makes some interesting and indicative comments in his rulings which I am sure will be of immediate interest to every Member of this great legislative body.

As a member of the House Un-American Activities Committee, I am pleased to be able to present the full text of this recent court decision to you and all my other colleagues:

MAY 3, 1957.

Hon. EDWARD M. CURRAN,
United States District Court,
Washington, D. C.

MY DEAR JUDGE CURRAN: I would very much appreciate receiving a copy of the decision, if possible, in the case wherein Alden Whitman was convicted of contempt of Congress.

If there is any charge, please advise me.

Thank you very much.

Sincerely yours,

CLYDE DOYLE,
Member of Congress.

UNITED STATES DISTRICT COURT,
FOR THE DISTRICT OF COLUMBIA,
Washington, May 8, 1957.

Hon. CLYDE DOYLE,
United States House of Representatives,
Washington, D. C.

MY DEAR MR. CONGRESSMAN: Pursuant to the request in your letter of May 3, 1957, there is transmitted herewith copy of the court's ruling in the case of *United States v. Alden Whitman.*

With windest regards and best wishes, I am,

Sincerely,

EDWARD M. CURRAN,
Judge.

IN THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLUMBIA—UNITED STATES OF AMERICA *v.* ALDEN WHITMAN, DEFENDANT—CRIMINAL ACTION NO. 1213–56

WASHINGTON, D. C., *April 9, 1957.*

The above-entitled cause came on for further trial before the Honorable Edward M. Curran, District court judge, at 10 a. m.

Appearance: William Hitz, Esq., assistant United States attorney, for the Government; Thurman Arnold, Esq. and Gerhard P. Van Arkel, Esq., for the defendant.

RULING OF THE COURT

The COURT. I am ready to rule now.

The resolution, Senate Resolution 366 of the 81st Congress, 2d session, provided that the Committee on the Judiciary, or any duly authorized subcommittee thereof, was authorized and directed to make a complete and continuing study and investigation of (1) the administration, operation, and enforcement of the Internal Security Act of 1950; (2) the administration, operation, and enforcement of other laws relating to espionage, sabotage, and the protection of the internal security of the United States, and (3) the extent, nature, and effect of subversive activities in the United States, its Territories and possessions, including but not limited to espionage, sabotage, and infiltration, by persons who are or who may be under the domination of the foreign government or organizations controlling the world Communist movement or any other movement seeking to overthrow the Government of the United States by force and violence.

The Congress of the United States has the power to investigate the history of the Communist Party, and in this connection it has the power to determine who are members of the Communist Party. The committee has the power to investigate the growth or the decline of the Communist Party and its numerical strength at various times as part of an inquiry into the extent of the activities of the Communist Party and the legislative means that might be appropriate for dealing with such activities.

Inquiry as to the number of persons who are Communists and who they were between 1935 and 1948 was pertinent to such investigation. If the committee of the Senate is denied the opportunity of ascertaining the present and past membership of the Communist Party, it might well be stymied in making the proper recommendations to the Congress of the United States. This court, therefore, holds that the resolution authorized the committee to ask the questions asked the defendant in the particular context in which the committee propounded them and the questions were pertinent to a valid legislative purpose. I, therefore, find the defendant guilty. The case will be referred to the probation officer for a report, but I will defer the imposition of sentence until the Watkins case is decided.

Mr. HITZ. Would Your Honor indicate how you rule on each count?

The COURT. Guilty on all counts.

(Whereupon, at 3 p. m., the matter was concluded.)

What Has Become of the Force and Effect of Article X of Our Constitution?

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. BOSCH. Mr. Speaker, I am deeply disturbed at the recent decision of our Supreme Court of the United States which has laid down the rule that no State may deny a person admission to the bar of that State merely because he or she refuses to answer questions as to their Communist affiliations. What has become of the force and effect of article X of our Constitution?

It seems to me that the character committee of the local State system should have full jurisdiction with respect to a determination as to the good moral character of the applicants for admission to the bar of their respective State. I cannot believe that the jurisdiction of the Supreme Court of the United States was ever intended to be more than the limits which statute has defined to it as a final arbiter.

Under leave to extend my remarks, I include the column of John O'Donnell dated May 8, 1957:

CAPITOL STUFF

(By John O'Donnell)

WASHINGTON, May 8.—Without getting the deep attention it deserved, our distinguished Supreme Court has handed down an important decision which prohibits the sovereign States (in this case California) from deciding whether Commies or former Commies shall be permitted to practice law in their courts.

In California, one Raphael Konigsberger was turned down by the State bar association and by the California State Supreme Court on his application for admission to the bar. The State's highest court ruled that Konigsberger, by refusing to answer questions about Communist affiliations, had failed to demonstrate that he was a person of good moral character and had failed to show that he did not advocate the overthrow of the Government by force and violence.

That ended it so far as the sovereign State of California was concerned, but the Supreme Court in Washington last Monday reversed the decision.

Now if this had happened 2 years ago, there would have been a violent flap in the Senate dovecote. The followers of the late Senator McCarthy would have roared against the coddling of admitted Commies. The southerners, to whom the sovereign rights of the States is precious, would have screamed their denunciation of this imposition of Federal powers to nullify a ruling by the highest court of a sovereign State. This is particularly true because the ruling was a judgment of the loyalty of members of the bar who would appear before the State courts.

In cold fact, this decision is as significant as the antisegregation ruling which still disturbs the Nation, politically and socially. Three Justices denounced it and their names and reasons are important.

THE JUSTICES WHO DISSENTED

The powerful dissenting opinion was written by Eisenhower-appointed Justice John Marshall Harlan, of New York. Truman-appointed Justice Tom Clark, of Texas, went along with Harlan. Roosevelt-appointed Justice Felix Frankfurter also dissented, but for reasons of his own. He held there was no constitutional issue involved.

Justice Frankfurter sharply rapped his associates with the admonition: "Due regard for the rightful independence of State governments, which should actuate Federal courts, requires that they scrupulously confine their own jurisdiction to the precise limits which the statute has defined." In other words, don't horn in where it is none of our business.

F. D. R.'s first appointee to the high bench, Justice Hugo Black, wrote the majority opinion in both the Californian Konigsberg appeal and its twin brother, the case of New Mexico's Rudolph Schware, another law student barred from admission to the bar by his State.

WHERE TO BE SLOW TO ENTER

Eisenhower's most recent appointee, Justice Charles Evans Whittaker, did not participate in either decision since he was not a member of the Court when the cases were argued. The important development was the difference in legal thinking between the four followers of Justice Black—Chief Justice Warren and Justices Douglas, Burton, and Brennan—and the opposing Harlan-Frankfurter-Clark school of thought.

Justice Harlan was sharp and direct in his dissent. He wrote:

"This case involves an area of Federal-State relations—the right of States to establish and administer standard of admissions to their bars—into which this Court should be especially slow and reluctant to enter. * * *

"In doing what it is doing here, this Court steps outside its proper role as the final arbiter and acts instead as if it were a super State court of appeals."

All the distinguished judges agreed that the facts of the case were that California law orders that no person be admitted to the practice of law who advocates the overthrow of the Government of the United States or the State of California by force or violence. The burden of proof is on the applicant to show that he is of good moral character and loyal.

THE SUMMING UP BY HARLAN

There was no question about Konigsberg's stubborn refusal to answer questions about his Commie tieups. The Supreme Court majority opinion, written by Justice Black, correctly (if not realistically) points out that there was no evidence to show that Konigsberg was not of a good moral character.

To my mind, Justice Harlan slashed the bleeding-heart reasoning of Justice Black to shreds in summing up the case:

"A State may refuse admission to its bar to an applicant, no matter how sincere, who refuses to answer questions which are reasonably relevant to his qualifications. The opinion of the Court does not question this; it solves the problem by denying that it exists. But what the Court has really done is to impose on California the Court's own notions of public policy and judgment. For me, today's decision represents an unacceptable intrusion into a matter of State concern. I dissent."

Passing of An Artist

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. MORANO. Mr. Speaker, one of the greatest bassos of all time passed away last night. The death of my friend, Ezio Pinza, of Stanford, Conn., is not only a great personal loss to me, it is a loss to the world of culture, to the millions he made happy by his thrilling voice, to the thousands who knew him and admired him, and most of all, a grievous loss to the devoted family who loved him.

Ezio Pinza was born an Italian. He was born with the sparkle and the fervor, the love of life and the penchant for song that so characterizes this nationality. In his singing it was easy to detect the strong character of the man. For it was not only God's gift of song that made Pinza great. Through his singing the man's whole being was expressed, his pride in his family and his adopted Nation; his strength of character and his love for humanity, especially the poor and the underprivileged.

Pinza gloried for many years as the Metropolitan Opera's leading basso. His

voice and performance was never paralleled. In later years, although his voice declined with age, it never lost its resonant quality and he was soon to adapt to a new art form, and his characterization of Emile D'Beque in South Pacific transformed him into the idol of millions.

Ezio Pinza is gone. But as long as music lives, he will be remembered.

Remarks of Hon. Sam Rayburn, of Texas, at the Jefferson-Jackson Dinner in Salem, Ohio, on May 4, 1957

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. HAYS of Ohio. Mr. Speaker, it was my very great honor to have you, the Speaker, in my district to speak to my constituents on Saturday night, May 4. I am proud and privileged to put the remarks you made at that time in the RECORD:

REMARKS OF HON. SAM RAYBURN AT JEFFERSON-JACKSON DINNER IN SALEM, OHIO, ON MAY 4, 1957

I am happy to be in the great State of Ohio again. It has been my privilege to visit Ohio many times, and I have found its people sane, sound, patriotic people. Many of the great names in our history have come out of Ohio. It is a State rich, not only in people, but in soil and industry.

I am immensely pleased that it is my privilege to be in the district represented by your very able and energetic Congressman, WAYNE HAYS. He has character, he has ability, he has industry. If the people of this district will reelect him many times in the future, he will not only be an honor to the district, but he will make such an outstanding record in the Congress that not only this district, but all of Ohio, will be proud of this son.

I am happy that you people are giving this dinner in honor of your Congressman, WAYNE HAYS. It is a testimonial richly deserved. I appointed him as a member of the United States Commission to NATO, and there he was honored by being made chairman of the conference. By word of mouth and by letter I received word of the great job he did as chairman of that most important conference. It is an honor that comes to few men, and to know that he did such a wonderful job makes me, along with you, happy to help do him this splendid honor.

We Democrats demonstrated for 20 years that we could have a program, and we knew how to put it into effect. In 20 years, under Roosevelt and Truman, we made a record of legislative accomplishments unequaled by any 20 years in American history. We demonstrated to the people of America that we were their friend and had their interests at heart.

As my friend, and the great Democratic leader in the House of Representatives, JOHN W. MCCORMACK, has so eloquently said, "The Democratic Party is the party with a heart." The Republican Party has not changed in 100 years; yea, it has not changed since Thomas Jefferson, the founder of the Democratic Party, and Alexander Hamilton, the founder of the Republican Party, struggled in the Cabinet of the great Washington.

The Jeffersonian theory was, and the Democratic theory and practice now is, that the way to make the country prosperous is to make the man at the base, the man who works with his brain and his brawn, in the stores, factories, on the farms and the marts of trade, more prosperous. If these people are reasonably prosperous and have a buying power, that prosperity goes from the bottom to the top.

We are witnessing an administration now that is true to their ancient faith. It is the day when bigness is promoted. It is the day of merger and consolidation, encouraged by everyone in the present Republican administration, from the President down.

I said that the Democratic Party is the party with a heart. To prove this, all you have to do is to look at what we have done for the aged and the poor. Social security was a Democratic product. Old-age assistance was a Democratic product. Under the expansions we have made in these laws, thousands upon thousands of American citizens are living in decency when they could not have had the bread of life if it had not been for the Democratic Party.

Let's look backward for a moment. In 1932, the last year of the Hoover administration, the total net income of all the farmers of the United States was $1,800,000,000. Under our laws, and our administrations, we raised the farm income to more than $15 billion. It has taken the Republicans 4 years to reduce the income of the farmers of the United States more than $4½ billion.

A great many Republicans want to make Ezra Taft Benson the scapegoat and not blame the head of the administration. Mr. Eisenhower appointed Mr. Benson as Secretary of Agriculture and has kept him in that place all this time, and the acts of this administration that have brought disaster, poverty, and bankruptcy to many of our farm families must be laid at the door of President Eisenhower.

During the campaign of 1952, Candidate Eisenhower pledged the American farmers 100 percent of parity in the market place, but after he became President he endorsed, advocated and pleaded for a flexible price support from 75 percent to 90 percent.

Millions were unemployed when we came into power in 1933, and before our administration closed 62½ million men and women were gainfully employed at reasonable wages and decent working conditions.

After 12 years under Harding, Coolidge and Hoover, the national income of the United States had sunk to $39 billion. We were accused of spending the country into bankruptcy, but in the 20 years we were in power, the national income rose to more than $280 billion.

Talk about spending, President Eisenhower has just presented the biggest budget ever presented in peacetime in the history of our country. There is too much fat in this budget, and I pledge you that the Democratic Congress is going to remove from it, in my opinion, somewhere from 3 to 5 billion dollars. We are not going to cut recklessly, but in a sane, sound way without hurting our country, and we are going to select carefully those parts of the budget which can be cut, and when we cut the budget these billions of dollars, we are not only going to take that load off the taxpayers of the country, but we are going to give that savings back to the people of the country in the form of tax reduction.

The Republicans went over the land railing at the foreign policy of the United States. They indicated they were going to rip the Truman-Acheson policy up by the roots and bring in a great imaginative foreign policy. They have conducted the foreign affairs of this Government in such a fashion that today, I am sad to say, I believe we have fewer friends in the world than we ever had before.

The world wanted us to be its leader. I fear that they believe now we have faltered and failed.

We cannot lay the failures of this foreign policy at the door of Mr. Dulles alone. The President of the United States, under the Constitution, is head of our foreign affairs, and any failure in this must be laid at the door of President Eisenhower.

We Democrats believe that those in places of responsibility should be able enough, and bold enough, to assume the responsibility for the acts of the Administration.

They said our program of 20 years was leading the country into socialism. They indicated they were going to rip our laws up by the roots and have a new dynamic program of their own. I have said this a great many times, and I am going to repeat it tonight. I challenge them to show where anybody in this Administration, from the President down, has advocated the repeal of a single law we passed in the 20 years we were in power. If the Democratic Party was socialistic in putting these laws on the statute books, then the Republican Administration is equally socialistic for letting them remain.

Mr. Eisenhower said that one of the reasons he was a candidate again was because the Republican Party needed rebuilding so badly. That is one statement that he had made in which, we, as Democrats, and a vast majority of the American people, are in accord.

The great phase has been coined by Mr. Eisenhower, and that is "Modern Republicanism." Modern Republicanism is such a phrase that it would sound like somebody was going to make modern antiques.

Rebuilding this Republican Party, and making it a party of the people will be a bigger undertaking than building the Aswan Dam. It will be a bigger project than damming all the streams and building the upper Colorado, Fryingpan, and Hells Canyon Dams all piled into one.

The Republican Party boasts of the prosperity of the country. When and where was the foundation laid? It was laid under a Democratic administration.

Let me repeat, we took this country in 1933, when it had a national income of $39 billion, and raised it to more than $280 billion. That is the foundation well laid by Democratic administrations, and the force and power that we gave it has carried the country on to even greater heights.

The Republican Party cannot claim the credit, therefore, for the prosperity that exists today.

So, I come back as I began. The Democratic Party is, has been, and will be, the party of the people and for all the people.

The Republican Party will remain what it is, and has been, the party of preferred privileged.

The American people are entitled to a leader in the White House who leads, and they do not want a Government administered by a staff that directs the President.

Republicans say they are the party of the future—well, if the Republican Party is to have a future they must in some way have the American people forget their past.

The Democratic Party fulfills its promises and carries out its pledges. The Republican Party makes promises and pledges and forgets them after elections.

Mr. Eisenhower carried the country by the biggest majority that any presidential candidate had ever carried it by, yet the Republican Party itself was so unpopular that they were defeated at the congressional elections, and the Democrats now control the Senate and the House of Representatives. I predict that, with the bungling and the ineptness being shown by this administration, the 1958 Congressional elections will return a bigger majority for the Democrats in the Senate and in the House of Representatives than we have at this time.

H. R. 6659, the Housing Act, and Home Building in the San Francisco Bay Area

---

EXTENSION OF REMARKS
OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. SHELLEY. Mr. Speaker, aside from the national importance of legislation to stimulate the home-building industry, which has been discussed at great length during the debate on H. R. 6659, I want to stress the critical situation the construction industry faces in the San Francisco Bay area right at this moment as a result of the tight-money market and the inability to obtain investment money at reasonable interest rates. I am sure that the San Francisco crisis is multiplied many times over throughout the Nation, but I want to cite the experience in my own area on which I have some depressing figures.

A recent San Francisco newspaper article gives a graphic picture of the situation in its opening paragraph, using a figure of speech particularly appropriate to the local area. The article says and I quote: "Bay area home building, a mainstay of the big boom, has begun to look like a tract house hit by an earthquake." I have been watching the local home building decline from month to month for some time now, and it begins to look to me as if the recent California earthquake would have been a blessing if it had hit Washington instead and shaken the administration loose from its complacent attachment to the disastrous tight money, high interest policy which it deliberately set in motion and which is directly responsible for the predicament home builders and buyers are now in.

March in California normally signals the beginning of a spring construction boom, even in a bad year. But this year bay area contractors started construction of fewer houses than in any March in the past decade, and this is in the face of an increasing demand for reasonably priced housing caused by our heavy population increase. According to the Department of Labor, "the normal spring upturn in the bay area was almost completely absent." As a matter of fact March 1957 building permits were 45 percent under those issued in the same month in 1956, and barely exceeded the February total which is a slow winter month.

The result of this is not only to deny new homes to people who are crying for a decent place to live, and to place contractors, particularly the smaller operators with small resources, into a very bad position financially, but to cause heavy unemployment among construction workers at a time when they normally expect to find steady work after the winter layoffs. As an example, of approximately 4,200 carpenters in the San Francisco Bay area, almost 25 percent are out of work. Unemployment insurance claims in the area for March rose 11 percent over the February total due almost entirely to the lack of home building. If we translate that from the cold figures into terms of what it means to individuals and to their families it is not a pretty story. What it amounts to is that the administration's tight money policy forces a tighten-the-belt policy on the man who cannot find work at his trade and on his wife and children. The bankers and investment interests do not complain, but then they are getting fat on high interest rates for every type of investment and don't have to depend on a weekly pay envelope for food and clothing.

I certainly favor the provisions of this proposed legislation which will liberalize down-payment requirements on FHA loans as a means of stimulating home building. I am also in favor of the provisions of the bill which will attempt to limit the outrageous discounts and service charges lenders are now demanding in order to boost their interest return far above the 5 percent permitted by the law. I am not certain, however, that H. R. 6659 as it now stands will loosen the money market sufficiently to provide the stimulation the home construction industry needs to bring the annual rate of new home building up to the 2 million per year level needed. The present rate of less than 900,000 per year is far from enough, and is directly traceable to the unwillingness of the money lenders to invest until they can force interest rates even higher than they now are. They are indulging in a form of blackmail and I strongly believe that Congress should be prepared to take action to break up the conspiracy. It seems to me that we should consider giving to the Federal Housing Authority and the Veterans' Administration increased authority to conduct a direct loan program in any area where private investment money is not made available in adequate amounts at the present legal interest rates and without excessive discounts, fees and charges. I do not believe it would be necessary to actually use this authority to any great extent, since the mere fact that it was there would, I am convinced, prove to the big banking and investment interests that we mean business. It would be accepted as evidence that the Congress does not condone nor intend to put up with the present administration's high interest tight money policies.

Mr. Speaker, such a proposal would bring back to the FHA and VA money markets the funds that are now being withheld by forcing prospective home buyers to borrow in the so-called free market where they must pay from 6 to 7 percent. It would serve effective notice on the money lenders and their policy-making friends in the administration that, although they may be in the saddle in the White House and the Treasury, we will not allow their profiteering to be saddled on the people of this country.

Under unanimous consent, I insert the article from the San Francisco Daily News of April 22, to which I have referred, in the RECORD following these remarks and submit it for that purpose:

BAY AREA'S BOOM IN HOME BUILDING NEARING COLLAPSE

(By Stephen Warshaw)

Bay area home building, a mainstay of the big boom, has begun to look like a tract house hit by an earthquake.

The housing industry has the highest unemployment and is suffering the sharpest declines of any major industry here or across the Nation.

Primary reason is shortage of mortgage money; but the bankers and other lenders blamed for tight money have begun to snap back: "It's not our fault. The market for new housing is crippled anyway. Demand is down."

Whatever the cause, the question is whether any economic force is able to put Humpty Dumpty together again. The effects of the shattered boom in housing have begun to slow up business generally:

Of the 4,200 bay area carpenters, almost 25 percent are unemployed, according to union officials.

Their contention is supported by the California Department of Employment. Bay area unemployment-insurance claims increased by 11 percent from February to March, rising to 30,300. The cause of the increase, in a month when employment normally rises, is the failing housing industry, said H. W. Stewart, department director.

Bay area contractors started fewer houses in March than in any other March of the past decade.

The number of building permits slumped to 2,261. That was 45 percent less than in 1956, and barely 3 percent higher than in February, although construction normally rises sharply when spring arrives.

"The normal spring upturn (in the bay area), said the United States Department of Labor, "was almost completely absent."

While some builders find themselves unable to build or finance houses at a rate high enough to stay in business, they're also finding it necessary to choke off a large portion of the present market; construction costs continue to rise.

The bay area council demonstrates this through a set of plans it sends out periodically for bidding. The plans are for a conventional rustic redwood house of 1,020 square feet. It has three bedrooms and one bath.

In 1951 the house could be built for $8.96 a square foot. By 1954 the price had risen to $9.27 a square foot and last year it was $9.99. Today the price has taken another big jump; it is $10.54 a square foot.

"We're not building for poorer people, without much money to put down on housing," said a top official of the District Council of Carpenters. "There isn't one tract going now. You can't get a house for less than $14,000."

At the same time, there is no end of rising production costs in sight. More than 35,000 northern California construction workers will find $7.20 more in their paychecks this week. The rise was won in a 5-year contract signed last week by the District Council of Laborers and the Associated General Contractors.

Then, too, the carpenters, among the most skilled and best-paid construction workers, will receive another increase in June. It'll come under a 3-year contract signed in 1956 and, with fringe benefits, will increase their payroll by about 10 percent.

"Not many of us are going bankrupt, if any at all," said a spokesman for the contractors.

"We just aren't building. We saved ourselves only because we all decided to lay low, beginning last fall."

The contractors say the bankers must release more mortgage money at lower interest rates, or the economy will begin its

feared decline. The bankers say they are not holding enough deposits to increase mortgages, that the free market has forced interest rates higher.

It is now almost impossible to get a GI loan, although Congress has refused to raise the 4½ percent interest rate. Most conventional loans are going for from 6 to 7 percent. In addition, as the News pointed out last winter, hidden discounts in mortgages raise the price of money far higher.

Nationally, the median price of a house has climbed relentlessly from $12,300 in 1954 to $13,700 in 1955 to a probable $15,500 in 1957, say the analysts.

The entire cutback has been in the middle to low income section of the market, largely supplied by the big builder who is dependent on FHA and VA financing.

By contrast, the market for conventionally financed housing has held steady. The proportion of starts for houses over $15,000 has climbed from 27 percent in 1954 to almost 60 percent this year.

Moreover, this State's struggle with its Cal-Vet loans—which go for a low 3 percent interest to California veterans only—proves that demand continues to ride high.

In February 16,000 veterans were waiting for the loans. Now 24,000, more than 11,000 of them in the bay area, are jamming Cal-Vet offices in the search for financing.

Memorial by Missouri Senate

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 29, 1957

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the RECORD I am including a resolution passed by the Senate of the General Assembly of the State of Missouri on May 2, 1957, as follows:

SENATE RESOLUTION 97

Whereas we, the elected representatives of the people of Missouri have carefully observed the effect of high Federal tax rates on individuals and business and we are deeply concerned over the obvious effects thereof; and

Whereas highly progressive income-tax rates have made the accumulation of personal-venture capital virtually impossible and have destroyed the incentive for individuals to invest in new and untried business ventures; and

Whereas high Federal taxes are the basic cause of many mergers which are slowly but surely absorbing the middle-sized company with its independent management, and concentrating business and economic power in the hands of large corporations; and

Whereas small corporations and small individual businessmen and women are finding it impossible to retain sufficient profits after payment of taxes, to permit reasonable and healthy growth; and

Whereas the Federal Government is dominating almost every field of taxation, and taking more and more away from our citizens and leaving State and local governments in a most difficult financial condition; and

Whereas the highly progressive income tax with rates ranging up to 91 percent is in fact confiscation of income and through high estate and gift taxes we have confiscation of property as well, which philosophy is repugnant to Americans, with the result that the equitable collection of taxes is impossible; and

Whereas to make available venture capital, to restore the incentive to engage in new job-creating enterprises, to give small business the opportunity to prosper and grow, to stop the trend toward concentration of industry, to restore the personal right to dispose of property by gift or at death without penalty, to enable the States to assume the responsibilities which are rightfully theirs is of utmost importance to all Americans: Now, therefore, be it

Resolved by the Senate of the General Assembly of the State of Missouri, That—

SECTION 1. We respectfully recommend for immediate consideration by Congres the following:

1. Substantial reduction of the combined normal and surtax rates on personal income.

2. Tax relief for small corporations to permit normal and healthy growth.

3. Reduction of Federal, estate, and gift taxes.

4. Reduction in the expenditures being made by the Federal Government.

SEC. 2. The secretary of the senate is hereby directed to forward copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives of the Congress of the United States, and to all the Members of Congress from the State of Missouri.

I, Joseph A. Bauer, secretary of the senate, do hereby certify the above and foregoing to be a full, true and complete copy of Senate Resolution No. 97, offered into and adopted by the senate on May 2, 1957, as fully as the same appears of record in my office.

In testimony whereof, I have hereunto set my hand and affixed the seal of the Senate of the State of Missouri this 2d day of May 1957.

JOSEPH A. BAUER,
Secretary of the Senate, 69th General Assembly.

American Labor and Industry Must Be Protected

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. PATTERSON. Mr. Speaker and my other distinguished colleagues, today I introduced in the Congress a revised import-quota bill based upon an entirely new formula that is designed to provide our domestic industries, at long last, with protection from low-priced, foreign-made products that undersell our own wares and hence inflict injury upon American labor and free enterprise. This bill, which I refer to as a self-liberalizing quota bill, is the result of months and months, and even years, of intensive study, and I believe that if this body enacts the measure into law it will provide a long-sought solution for our domestic industries and the great American labor force that constantly face injury from imports.

Mr. Speaker, this self-liberalizing quota idea is unique in certain respects, and I believe that a comprehensive explanation should be made of the measure here at the outset. Therefore, I have prepared the following justification statement:

JUSTIFICATION FOR A SELF-LIBERALIZING QUOTA BILL

As opposed to free trade there are various restrictive practices which are used to curtail imports especially if excessive imports of a special type tend to injure a domestic industry producing a like commodity.

Under the trade liberalization movement initiated by the United States in cutting tariffs under the various reciprocal trade agreements acts as well as by the progressive reduction of 15 percent of tariffs as of January 1, 1955, there are certain specific safeguards in the tariff law to protect American producers of commodities imported in excess or in quantities injurious to domestic producers of similar or competitive products. These consist of the escape and injury clauses as well as the newer appeal procedure to the Office of Defense Mobilization under section 7 of the Trade Agreements Act on the grounds of defense essentiality.

Opposition to excessive imports of various commodities has been crystallized in various proposed bills dealing with restrictions of imports. Generally these bills are of various types:

First. All products or a selected list of products are placed on an absolute quota of imports.

Second. An import is established as a percentage of United States consumption. This percentage changes according to the commodity.

Third. A variable quota is allowed, based on the relative productive cost in areas of so-called cheap labor. In other words, a quota or added tariff is added to offset the low labor cost of imports.

Fourth. Our current tariff law, with a few quota exceptions for agricultural commodities, allows for an additional tariff levy to be assessed if it can be proved that excessive imports tend to injure a domestic producer of a like or competitive product.

In general, these quota proposals go contrary to the concept of the progressive and expanding economy of the United States with its ever-increasing needs for imports. The growing gross national product here at home and abroad takes cognizance of the fact that increasing consumption and industrial expansion cause an increasing and progressive expansion of international trade. Certainly if we wish to export, and no one can gainsay that fact, we must also be prepared to import.

It is not in the area of raw materials but primarily in the field of manufactured items which we import, that injury results wherever imports of certain commodities in excess of our consuming needs tend to displace domestically produced goods of a similar or competitive nature.

In general, our import system has worked very well during the postwar years. Under the provisions of our tariff law certain specific procedures have been originated by which domestic producers can have a restriction put on imports by an increase in tariffs. Of the various appeals against injury, or applications for relief by the addition of increased tariffs, the Tariff Commission and the Office of Defense Mobilization have actu-

ally granted an increase in tariffs in a few notable cases—namely bicycles and Swiss watches. In many other cases these applications for relief have been disallowed after finding has been made, subsequent to hearings held on the subject, that imports have been such as not to injure domestic producers of like products.

The problems of excessive imports in some fields are gaining in intensity and many domestic producers are becoming alarmed at the continued tendency of imports increasing due to the progressive lowering of tariffs. Currently, quite a few of our industries are beginning to complain that excessive imports continue to injure their domestic industries. If the trend continues, the net result may be a permanent cessation of domestic production of such commodities. The continuing deleterious results are already very evident in those areas of our country producing textiles, fabricated rubber products, bicycle, woodscrews, ball bearings, firearms, watches, pins, needles, copper and brass mill products as well as wire mill products, and plywoods.

Singly, our industries are told that they are not being injured as badly as they imagine; that they should diversify or retrain their workers for other occupations. Most of this is wishful thinking. The mere fact that many qualified and trained workers leave one industry and find employment in another does not guarantee the survival of the industry driven to the wall by excessive imports. The time has come when relief must not be given when it is too late or when the factory has been closed, the workers dispersed, and the resultant blight has settled on a community. The time to give collective relief against excessive imports is when the applications for relief pour into the Tariff Commission so as to offset the continuing injury or to safeguard industry's future.

American businessmen can sense a trend long before the actual reality materializes. Our Government should be alive to these trends and actively assist our businessmen in keeping their businesses progressive and profitable by prohibiting excessive imports that could seriously dislocate domestic industry.

It seems to me that the time has come to reappraise the import situation and readjust imports not by cutting or raising tariffs, but by a realistic and positive approach, namely by studying the quantity and volume of imports over a period of years and then deciding on a definite procedure to be followed. This procedure should be one not merely to protect affected industries at present, but rather should it be a positive one that will also foresee possible injury in other areas and hence will eliminate injury or difficulties before they actually arise.

It has been proved time and again that raising tariffs is not the best method of curtailing imports. Foreign traders merely find ways of exporting either cheaper products or others on which profits can be made. The direct result is that there is a continuous round of United States industries being injured in some fashion or other by excessive imports. The trend seems to be toward a progressive increase in imports year by year with a resultant injury to an increasing list of our industries which cannot compete with commodities from so-called "low cost" areas.

In trade there is one concept which makes for stability, namely the ability to know beforehand what quantity can be imported or exported aside from considering the various imponderables of exchange difficulties, changeable tastes in commodities, labor costs and so forth. Stability is created when producers in our country can know definitely what percentage of their market can be assigned to imports. Whether this percentage of our market is large or small assist the foreign trader to lay his plans accordingly and at the same time allow the domestic producer enough time either to add new lines or to retrain workers who might be displaced by imports.

It is this aspect which is central to my bill concerning self-liberalizing quotas.

In this bill the pattern of imports is placed on the traditional basis; that is, an average is computed on a 5-year basis; this average takes into consideration the fluctuations inherent during such a period.

The recommendation of the bill is that the average for calendar years 1950, 1951, 1952, 1953, and 1954 shall be the import total for calendar year 1958; average for 1951, 1952, 1953, 1954, and 1955 shall be the import total for 1959; average for 1952, 1953, 1954, 1955, and 1956 shall be the import total for 1960. Since most imports have gradually increased over the years the import total for the new calendar year cannot be as small as the initial year or as large as the final year for which statistics are available—namely, 1956. Each year the import total rises.

Yet in every instance where a domestic producer has asked for relief from the Tariff Commission or the Office of Defense Mobilization by means of an increase in the tariff rate, so as to curtail imports, the result is achieved much more easily, because the yearly import average is now less than the total imports causing distress in our domestic production of that commodity.

Forward planning can take place because the published import figures can be used to figure import totals several years in advance. At the same time these totals show a small upward trend so that foreign trades can look forward to a slow expansion of trade.

The bill provides a method of relief in cases where shortages or sudden demand in case of a preparedness emergency create a need for additional imports or where domestic production is insufficient to take care of the increased needs.

The proof for stating that shortages actually exist is undoubtedly much easier to obtain for under this radical new procedure whenever there is an apparent need and hearings are called it will be much easier to establish whether unused productive capacity exists in this country or not. In other words, whenever an apparent need arises our businessmen will automatically be alerted or if such productive capacity does not exist either to take steps to expand or to import. Importations may be equally difficult to obtain, but certainly a much greater opportunity will be given to establish American subsidiaries or complementary industries in foreign countries.

Allow me to give a position or concrete example of the reason for this self-liberalizing quota bill, the procedural working out of its provisions and the possible end results.

Let us take a group of commodities such as brass-mill products in which categories there is currently an importation much to the detriment of American industry and out of all proportion to our needs.

In fact imports are creating havoc in many of our smaller fabricating plants, especially in seamless tubing. In this latter instance imports rose from 321,000 pounds of unalloyed tubing in 1950 to 21,374,000 pounds in 1956. In alloyed tubing the increase was from 1,629,000 pounds in 1950 to 23,884,000 pounds in 1956.

The position as it obtains for brass mill products since 1950 in 1,000 pounds is as follows:

Year	United States brass mill shipment	Imports	Percent
1950	2,553,500	30,680	1.20
1951	2,460,100	29,035	1.18
1952	2,552,197	56,099	2.19
1953	2,627,936	46,032	1.75
1954	2,067,754	50,633	2.44
1955	2,532,074	72,067	2.84
1956	2,219,800	86,513	3.89

No wonder there is alarm amongst brass mill fabricators when imports within a period of 6 years are more than 3 times the 1950 importation rate.

The ratio of imports to United States mill shipments should be carried further for the 2 major types—unalloyed and alloyed—in 1,000 pounds.

Total brass mill products—Unalloyed copper

[Copper content]

Year	United States mill shipments	Imports	Percent
1950	890,200	18,246	2.049
1951	782,100	14,946	1.911
1952	735,350	22,161	3.013
1953	719,986	12,213	1.696
1954	726,421	17,538	2.414
1955	888,309	32,840	3.696
1956	826,794	39,176	4.738

Total brass mill products—Alloyed copper

[Metal weight]

Year	United States mill shipments	Imports	Percent
1950	1,663,300	12,434	0.747
1951	1,678,000	14,089	.839
1952	1,816,617	33,938	1.867
1953	1,907,950	33,819	1.772
1954	1,341,333	33,095	2.467
1955	1,643,765	39,227	2.386
1956	1,393,668	47,327	3.398

Ordinarily, it might be said that when the overall consumption picture of cop-

per products in the United States is considered that domestic producers of brass mill products are not hurt by imports of similar or competitive products since imports constitute rather a small percentage of United States consumption totals.

It is when the breakdown of imports concerns the manufacturers of small fabricators that the trend or pattern of injury is very apparent.

Consider seamless tubing made of unalloyed copper—copper content. In a 6-year period imports increased by 73 times. An enormous increase of this nature is bound to have repercussions in the brass-fabricating industry.

Total seamless tubing—Unalloyed copper

[Copper content in thousands of pounds]

Year	United States mill shipments	Imports	Percent
1950	466,531	321	0.068
1951	361,698	921	.254
1952	319,761	5,122	1.601
1953	340,806	1,126	.330
1954	386,068	5,097	1.32
1955	461,489	10,315	2.235
1956	429,910	21,374	4.971

Consider the comparison to United States mill shipment of seamless tubing made of alloyed copper. During the 6-year period imports have increased 15-fold with the greatest increase in the last 3 years.

Total seamless tubing—Alloyed copper

[Metal weight in thousands of pounds]

Year	United States mill shipments	Imports	Percent
1950	175,100	1,629	0.930
1951	173,500	1,883	1,085
1952	196,260	881	.448
1953	210,371	7,277	3.460
1954	144,841	15,156	10.463
1955	168,110	20,707	12.317
1956	163,479	23,884	14.609

In copper wire mill products the picture is slightly different—imports have increased only threefold over the same period of time yet the increase is within the last 2 years. It may be that the trend is toward increased importations in this category of import commodities with the resultant detriment to United States fabricators of the same product.

Copper wire mill products

[Copper content in thousands of pounds]

Year	United States mill shipments	Imports	Percent
1950	1,426,600	6,066	0.425
1951	1,371,000	4,599	.335
1952	1,370,077	5,565	.406
1953	1,394,631	1,709	.122
1954	1,275,201	3,450	.270
1955	1,555,579	10,284	.661
1956	1,620,319	19,373	1.195

It seems evident that if the trend of importations of alloyed and unalloyed brass mill products is upward in such a substantial fashion, that it may be axiomatic to assume that imports of wire will also increase with injurious results to our domestic wire mills.

Furthermore, it has been evident in the many applications filed with the Tariff Commission or with the Office of Defense Mobilization for relief from excessive imports that when foreign exporters discover that their actions may have possible injurious repercussions on some segment of American industry that before relief has been granted to the injured domestic industry the trade emphasis has been rapidly shifted to some other industry where profits can be made rapidly. It may be stated categorically that foreign exporting industries have been able to shift production in profitable categories much more readily than have their counterparts in American productive industries. This capacity for shifting production should be assessed dispassionately because it can do irreparable harm to many unsuspecting segments of our industries.

It is this competitive shifting factor that will be obviated in my self-liberalizing quota bill. The injury caused by shifting from one profitable category to another cannot take place because obvious limits to excessive imports are automatically set by law.

The method of assessing the self-liberalizing quota for each commodity will work in the following fashion. Let us take the example of the commodity in which imports tend to injure a domestic industry—namely the two types of seamless tubing in brass mill products—alloyed and unalloyed, mentioned before.

Seamless tubing—Unalloyed—Copper content

[Thousands of pounds]

Imports were:	
1950	321
1951	921
1952	5,122
1953	1,126
1954	5,097
Total	12,587

Average yearly imports for the 5-year period amount to 2,517,400 pounds. The annual import quota for calendar 1958 should be 2,517,400 pounds—this compares with the import total of 21,374,000 pounds in 1956 or 11.77 percent.

The same method of computation is used to arrive at the 1959 quota:

Imports were:	
1951	921
1952	5,122
1953	1,126
1954	5,097
1955	10,315
Total	22,581

Average yearly imports for the 5-year period amount to 4,516,200 pounds. The annual import quota for calendar 1959 should be 4,516,200 pounds—this compares with the import total of 21,376,000 pounds in 1956 or 21.12 percent—the quota increases automatically.

Similarly the 1960 quota is as follows:

Imports were:	
1952	5,122
1953	1,126
1954	5,097
1955	10,315
1956	21,374
Total	43,034

Average annual imports for the 5-year period amount to 8,606,800 pounds.

Thus the annual import quota for calendar 1960 should be 8,606,800 pounds—this compares with the import total of 21,374,000 pounds in 1956 or 40.26 percent—again a sizable increase, but one that is foreseen and planned for.

Similarly the quotas for 1961 onward can be computed with a sliding or self-liberalizing scale coming into being. The percentage rises slowly but it is a planned increase and American industry has 3 years to plan ahead. It cannot be proved conclusively, but the percentage increase might just be enough to allow our imports of any commodity to comprise a fair share of our growing needs of our expanding economy.

In the alloyed type of seamless tubing of brass mill products—metal weight—the quotas will be:

1958: 5,365,200 pounds or 22.46 percent of 1956 imports of 23,884,000 pounds.

1959: 9,180,800 pounds or 38.43 percent of 1956 imports.

1960: 13,581,000 pounds or 56.86 percent of 1956 imports.

The percentage increases year by year yet relief is granted within the next 3 years so as to help our domestic industry to adjust itself without the deleterious effects so evident in uncontrolled imports resulting from our current free-trade concept.

Now before this revolutionary idea of a self-liberalizing quota is accepted there is bound to be a spate of opposition as to the impracticability of accounting procedures. the enormous addition of staff, the impossibility of assessing penalties against those countries deliberately exceeding their fair quota share, the tampering with American foreign economic policy set by the State Department, possible repercussion from foreign governments resulting in quotas against our exports, international difficulties created in the international balance of payments due to the inability of foreign governments to earn sufficient dollar exchange by exports to the United States, the vociferous battle cry that our present tariff system is the best in the world and works the most good for the greater majority of our people and so forth. One could take the opposing ideas 1 by 1 and disprove them but that is unnecessary since we are now establishing a more positive approach to imports. Hitherto we have had the negative accent by which injury has to be proved before our ponderous tariff administrative machinery can give relief to affected industries. Now the positive aspect will be stressed. Whenever a need for certain commodities shows that existing supplies in the United States are insufficient to satisfy demands, our domestic industry can either take care of that by adding productive capacity or a relaxation of the import quota can be announced. Administratively it is far easier to relax quotas than to make them more stringent by increasing tariffs.

As to international repercussions—most foreign countries exercise some sort of export control and could immediately enforce their own export share on their nationals without adding the burden to our Customs Bureau.

In any event the controls exercised by our Commerce Department can be worked out: they are not administratively infeasible. Surely our Tariff Commission should be able to come up with lists of import commodities that are directly competitive with domestically produced items so that the impact of this new idea and its relative effect on the economies of other nations can be assessed?

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Herbert Norman Case

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1957

Mr. REECE of Tennessee. Mr. Speaker, in view of the understandable and wide interest in the subject, I request permission to insert in the RECORD a series of articles dealing with the Norman case in order that this information might be made available to the Members.

The articles follow:

WANTED: THE WHOLE NORMAN STORY

(By Herbert A. Philbrick)

The tidal wave of hysteria now flooding the Cairo-Ottawa-Washington leftwing axis suggests that there are strong undercurrents in the case of the late Edgerton Herbert Norman, Canadian Ambassador to Egypt, whose suicide on April 4 created an international incident.

President Eisenhower, who has been thoroughly briefed about the case, firmly and wisely indicated that in the interest of good American-Canadian relations the matter should be dropped. But it is apparent from the frenzied demands made by irresponsible international leftwing factions that an attempt is being made to create a controversy involving our own Senate Internal Security Subcommittee, and to fan flames of ill will to white heat.

It is also clear that the target of the leftwing manufactured controversy is the Senate subcommittee's chief counsel, Judge Robert Morris, though his ability, integrity, and fairness have gained him widespread respect and admiration in legal and congressional circles, and with the public at large.

Stripped of hysterical leftwing propaganda, these are the essential facts:

There was nothing different or unusual in the press release issued by the Senate Subcommittee dealing with the testimony of John K. Emmerson, counselor of the United States Embassy and containing mention of Edgerton Herbert Norman. This release was like any other routine release made by the subcommittee since it began investigations of subversive activities several years ago. Furthermore, there was nothing unusual in the fact that the name of a Canadian happened to turn up in the course of a routine probe.

The Communist international conspiracy is truly international in character. It has no respect for national boundaries, as has already been shown in a number of previous cases revealed by the Senate Subcommittee wherein the names of British, Canadian, Chinese, Japanese and other foreigners have played a much more prominent part than did the name of Norman.

Edgerton Herbert Norman first came to senatorial attention in the 1951–52 investigation of the Institute of Pacific Relations and its allied publication Amerasia.

The Senate Judiciary Committee found that "the IPR (Institute of Pacific Relations) was a vehicle used by the Communists to orientate American Far Eastern policies toward Communist objectives," and also that "members of the small core of officials and staff members who controlled IPR were either Communists or pro-Communists."

The committee further found that the Communist Party of the United States and Soviet officials considered the IPR as "an instrument of Communist policy, propaganda, and military intelligence." The magazine Amerasia was cited as a Communist controlled publication which was "so closely linked with the IPR system that the IPR family ordinarily treated it as simply another of their own publications."

In the huge mass of documents, letters, and other material studied in the IPR-Amerasia probe, the name of E. Herbert Norman appeared a large number of times. He was also found to have been the executive secretary of the Canadian Friends of the Chinese People, an affiliate of the American Friends of the Chinese People, which organization was long before cited by the House Committee on Un-American Activities as a Communist front.

When Frederick Vanderbilt Field, who had served as a member of the editorial board of Amerasia, was called before the Senate Internal Security Subcommittee, he refused—on ground of possible self-incrimination—to reveal the nature of his dealings and relationships with Norman.

In the summer of 1951, Dr. Karl August Wittfogel, a former member of the Communist Party, testified under oath that he had known Norman personally as a fellow member of a Communist study group in 1938. Later it became known that in February 1940, the Royal Canadian Mounted Police had received information from an undercover agent that Norman was a member of the Communist Party. All of this information, and much more, has long been a matter of public record.

The odd thing about the Norman suicide is that it occurred after the testimony of John K. Emmerson was released by the Senate Subcommittee, although—as the State Department has emphasized—Emmerson's testimony contained "no adverse references to any Canadian official." There was nothing, in fact, in the subcommittee's press release that would cause any stable individual to commit suicide.

This situation is the cause of much puzzlement. A possible explanation is—as some reliable sources have indicated—that other investigative agencies of other governments were interested in Ambassador Norman's activities.

If the suicide had any connection with the current Senate Internal Security Subcommittee probe, it could be because Norman feared that there was still further, but as yet unpublicized, evidence concerning him. Some members of the Canadian Parliament seem to suspect that such information exists and that knowledge of it is a possible motive for Canadian Secretary for External Affairs Lester Pearson's threat to cut off Canada's transmittal of security information to the United States.

It is extremely important to note that thus far all information released by the Senate Subcommittee relating to Edgerton Herbert Norman was obtained in the United States because of his affiliation with Communist organizations and his attendance in Communist study groups here.

However, if the highly emotional international pink set are going to persist in their attacks on the United States Senate's efforts to uncover and publicize the nature and extent of Soviet and pro-Soviet activities in this country, then the whole Norman story should be told.

In addition, all facts known to the Canadian and British governments of the Communist associations and activities of any their citizens while in the United States should be disclosed to the proper American authorities, including the Senate Internal Security Subcommittee which has rendered invaluable services to our country and to the free world.

[From the Niagara Falls Gazette of April 18, 1957]

MANY QUESTIONS UNANSWERED IN CASE OF HERBERT NORMAN

(By Paul Martin)

WASHINGTON.—Undercover investigation is proceeding on three continents in the strange case of Herbert Norman, the Canadian Ambassador who committed suicide in Egypt.

A lot of circumstances have not been explained. There has been a great deal of emotional talk in this case, but few facts. Here are the facts, insofar as they are available for publication:

WHO WAS NORMAN?

First, who was Norman?

Records of the Canadian Embassy show that Edgerton Herbert Norman was born September 1, 1909, at Karuizawa, Japan, the son of a Canadian missionary of the United Church.

Norman obtained bachelor of arts degrees at the University of Toronto, 1933, and Cambridge, England, 1935. Then he went to Harvard for 3 years on a Rockefeller Foundation fellowship arranged by friends in the Institute of Pacific Relations. He got master of arts and doctor of philosophy degrees in 1938.

He worked in 1938–39 at the international secretariat of the IPR in New York City doing research and writing. He was regarded as an able writer and brilliant scholar.

Norman joined the External Affairs Department (foreign office) of the Canadian Government in July 1939. He was sent to Tokyo as a language officer. Interned in Japan during World War II, he was returned to Ottawa in the 1943 exchange of Axis and Allied diplomats.

After V–J Day Norman was sent back to Tokyo as chief of the Canadian mission attached to the SCAP headquarters of Gen. Douglas MacArthur, Supreme Allied Commander, Pacific.

Maj. Gen. Charles A. Willoughby, MacArthur's intelligence chief, says Norman was there as Canadian Minister in the period 1946 to 1950.

The Canadian Embassy says Norman was in Ottawa 1950–53. He served briefly in 1951 as Canadian delegate to the United Nations in New York.

REASSIGNED TO CAIRO

He was appointed High Commissioner to New Zealand in June 1953. During the Suez controversy, the Canadian Department of External Affairs reassigned Norman to be Canadian Ambassador to Egypt and Minister to Lebanon.

His assignment to the Middle East was made in August 1956. The Canadian Embassy says Norman did not arrive in Cairo

to present his credentials until after the British-French-Israeli invasion of Egypt, October 29–November 6.

Norman apparently was in Beirut, Lebanon, when the attack occurred. In Beirut he visited in the home of John K. Emmerson, deputy chief of the United States Embassy. Norman and Emmerson were friends in Japan both before and after World War II.

The Canadian Embassy says Norman was married on August 31, 1936, to the former Irene Clark, of Hamilton, Ontario. They had no children.

Norman killed himself April 4 by jumping from the roof of a nine-story apartment building on the banks of the Nile. Cairo police pronounced it suicide.

WHY DID HE DIE?

Why did Norman kill himself?

Insofar as the facts are publicly available, no one really knows.

The Canadian Secretary of State for External Affairs, Lester B. Pearson, told Parliament he died as a result of overwork and "a feeling of renewed persecution."

Pearson blamed it on the release March 14 and 21 of information by the Internal Security Subcommittee of the United States Senate indicating that Norman was a Communist.

Cairo police found two suicide notes in Norman's pockets. The notes are supposed to run to 14 or 15 lines each, but only a line or two have been released from each. Neither one makes any mention of the Senate committee.

One to his wife said: "I kiss your feet and I beg you to forgive me for what I am doing."

The other to his friend Brynolf Eng, Swedish Ambassador to Cairo, said: "I have no option. I must kill myself for I live without hope."

These notes are in the hands of the Egyptian police, who are said to have called in handwriting experts to examine them. If the rest of the notes could be released, they might shed some light on the case.

CONSIDERED KEYMAN

Norman had been in Egypt no longer than 5 months when he died. Before that, he had served 3 years in New Zealand, not regarded as a hardship post in the diplomatic service.

In the critical days following the Anglo-French invasion, Norman apparently was a key source of diplomatic intelligence to the British Commonwealth from Cairo.

British, Australians, New Zealanders, and the French had withdrawn their diplomats. Norman's reports on the situation in Egypt are said to have been furnished by the Canadian Government to certain other nations.

Why was Norman sent to Egypt at this particular time by the Canadian Secretary of State for External Affairs?

"We regarded him as a top man, and considered it a very difficult spot," said a Canadian Embassy spokesman.

HOW DID IT START?

How did the security charges against Norman originate?

His name came to public attention first during Senate investigations of the Institute of Pacific Relations in 1951–52.

The committee took public testimony from 66 witnesses. It examined 20,000 documents. The hearing record ran to more than 5,000 pages.

At the end, the committee stated in an official report on July 2, 1952:

"The IPR has been considered by the American Communist Party and by Soviet officials as an instrument of Communist policy, propaganda, and military intelligence. Members of the small core of officials and staff members who controlled IPR were either Communist or pro-Communist.

"Many of the persons active in and around the Institute of Pacific Relations and in part, though not exclusively, Owen Lattimore, Edward C. Carter, Frederick V. Field, T. A. Bisson, Lawrence K. Rosinger, and Maxwell Stewart, knowingly and deliberately used the language of books and articles which they wrote or edited in an attempt to influence the American public by means of pro-Communist or pro-Soviet content of such writings."

Louis Budenz, former editor of the Communist newspaper, the Daily Worker, called IPR the little red schoolhouse for teaching certain people in Washington how to think with the Soviet Union in the Far East.

IPR issued publications called Pacific Affairs and Far Eastern Survey. It had connections with the magazine Amerasia which was the subject of an FBI raid and Government security investigation in 1945.

An international organization, IPR had councils in 10 countries, including the United States, Canada, Britain, France, Australia, India, New Zealand, Japan, Pakistan, and the Philippines.

General Willoughby, MacArthur's intelligence chief in the postwar occupation of Japan, testified that the Japanese branch of IPR was a spy ring for Russian Communists.

Norman's name came up when Dr. Karl August Wittfogel, of New York, head of the Chinese history project at Columbia University, testified under oath at a hearing on August 7, 1951.

He was questioned by Robert Morris, chief counsel of the Senate subcommittee and a former New York judge.

Wittfogel said he had remained in Germany around World War I, and became a Socialist student. He joined the Communist Party in 1920, was a fee-paying member until Hitler came to power in 1933, when "I disagreed with the party."

Wittfogel said he had remained, psychologically speaking, on the periphery of the party since. He told about a Communist study group of students which he taught in 1938. He said Norman was a member.

The pleasant young man was a student in the Japanese department at Columbia. His name was Herbert Norman.

Morris: "To your knowledge, did he know it was a Communist study group?"

Wittfogel: "Yes, it was obvious."

Morris: "Was it obvious therefore that he was a Communist?"

Wittfogel: "Yes."

MENTIONED IN LETTERS

A letter to Owen Lattimore from Edward C. Carter dated May 30, 1940, was entered in the record.

Carter was secretary general of the international IPR. The committee identified Lattimore in its 1952 report as "a conscious, articulate instrument of the Soviet conspiracy."

The letter said:

"Herbert Norman was in the office about a fortnight ago on the eve of his sailing for Tokyo as a language officer in the Canadian Legation. He is very eager to continue active contact with the institute and in the field of Japanese political history."

A memo to Carter from William H. Holland, an executive officer of IPR, dated September 5, 1940. It said in part:

"Phil is leaving tonight. * * * Phil will be in Japan from about September 18 to October 6, and can be reached care of the Japanese IPR. Any very secret messages might be sent him care of Herbert Norman at the Canadian Legation."

These were the references to Norman which appeared in the published hearings of the Senate committee for the month of August 1951.

[From the Niagara Falls Gazette of April 19, 1957]

WAS NORMAN EXONERATED BY CANADA?

(By Paul Martin)

WASHINGTON.—The Herbert Norman case developed into an international affair after the United States Senate Internal Security Subcommittee released new documents March 14 and 21 indicating that he was a Communist.

Norman was the Canadian Ambassador who committed suicide in Egypt on April 4. The Senate documents concerned the interrogation of John K. Emmerson, a United States Foreign Service officer stationed in Beirut, Lebanon.

In the course of these hearings, Robert Morris, chief counsel of the subcommittee, told the Senators: "We have quite a few security reports which have a great deal of information to the effect that he [Norman] is a Communist."

Dispatches from Ottawa since have claimed that Norman was twice investigated and twice cleared of these same charges by the Canadian Government in 1951.

HOW WAS HE CLEARED?

Although the Canadians say their methods are superior to those in the United States, and that all security matters are kept confidential in Canada, the procedure is similar in at least one respect.

That is, the Royal Canadian Mounted Police (similar to the FBI) conduct an investigation and turn over unevaluated material to the head of the government department concerned.

It usually takes the FBI from 2 to 6 months to conduct a full field investigation and make a report of information on personnel security cases.

The cabinet officer of the department involved then makes the final decision on whether or not an individual is suitable for government employment in positions affecting the national security.

In the Norman case, the Canadian Embassy says, the decision to clear Norman was made by the Secretary of State for External Affairs, Lester B. Pearson, acting with his deputy and department security officer.

The deputy at the time was A. D. P. Heeney, who is now being recalled as Canadian Ambassador to the United States.

On August 9, 1951, 2 days after Prof. Karl August Wittfogel testified before the Senate committee that Norman was a Communist, the Department of External Affairs in Ottawa issued a press release to this effect:

"Mr. Norman was subject to the normal security investigation by the appropriation authorities of the Canadian Government * * *. As a result, Mr. Norman was given a clean bill of health, and he, therefore, remains a trusted and valuable official of the department."

One week later, after examining the transcript of the Senate hearings containing the Wittfogel testimony, Pearson issued a statement under his own name which said in part:

"We emphasized our complete confidence in Mr. Norman and requested that the congressional subcommittee be informed of this fact, and of our regret and annoyance that his name had been dragged into their hearings by their counsel on the basis of an unimpressive and unsubstantiated allegation by a former Communist."

WHO ASKED QUESTION?

When new allegations concerning Norman were released in the Emmerson hearings last month, Pearson said on March 15 they should be treated with the contempt they deserve. In a protest to the State Department, Heeney called them irresponsible.

Morris told the Senate committee on March 21:

"I have since spoken to Wittfogel, since last week, and he said that to this day no official of the Canadian Government has ever called him up or asked him whether or not any of his testimony was in fact accurate."

During the hearing, Morris asked Emmerson: "Did he ever say—that is, Mr. Norman—in connection with the conversation he had with you, did he say that he had been asked whether or not he had ever been a member of the Communits Party?"

Emmerson: "I do not recall that he said that. I think he spoke in very general terms about charges having been made against him * * * and that he had gone through a period of investigation and had been cleared."

Morris: "We asked the State Department if the decision of the Canadian Government ever was to the effect that Norman had been a Communist, and that he is no longer one. The Department informed us that has never been the effect of any advice given to them by the Canadian Government.

"It would be two entirely different things, Senator, if the answer was 'Yes, he was a Communist, but he has reformed.' That would be very different from saying, 'No, this was never true.'"

The Canadian Government previously called the charges "irresponsible." On April 12, Pearson made a partial acknowledgment to the House of Commons in Ottawa.

Pearson said that Norman had associated openly in his university days with persons believed to be Communists, that he made no secret of it, that the Government knew this when the Foreign Office hired Norman in 1939.

John Diefenbaker, leader of the Progressive-Conservative opposition, posed this question:

"Will the Minister say that the allegations before the subcommittee of the United States Senate on March 12 and 21 specifically were untrue, unjustified, and had no basis in fact?"

"I've made my statement," Pearson replied. "I will stand on that."

An editorial columnist in the Toronto Globe and Mail said on April 12:

"The Canadian Government has it within its power to lay out, point by point, the facts upon which it decided in 1951 that Norman's loyalty and integrity were in all respects beyond doubt. It has not only failed to do so, but it has refused to do so."

WHAT UNITED STATES INTEREST

While Pearson said the Canadian Government has "more than once complained about methods employed by that subcommittee in releasing names of Canadians," the United States Government has more than once had cause for misgivings about the security "clearances" of allies.

Dr. Allan Nunn May and Bruna Pontecorvo received Canadian clearances into the United States, and Dr. Klaus Fuchs had a British clearance. All subsequently were found to have engaged in atomic espionage for the Soviet Union.

Guy Burgess and Donald MacLean, the British diplomats who are now behind the Iron Curtain, also had security clearance. Burgess served as second secretary of the British Embassy in Washington; MacLean served in Washington and Cairo.

Both went to school at Cambridge, England. Investigation since they fled to Russia has shown that each had Communist sympathies in college.

[From the Niagara Falls Gazette of April 20, 1957]

NORMAN CASE PROBE SHEER COINCIDENCE

(By Paul Martin)

WASHINGTON.—Since the Canadian Government "cleared" Herbert Norman in 1951, why was the Norman case reopened this year by the United States Senate Internal Security Subcommittee?

The answer is sheer coincidence. The committee wasn't investigating Norman, the Canadian Ambassador who committed suicide in Egypt. It was looking into "suspicious activities" of certain American diplomats.

An investigator was going through the old Harry Dexter White papers at the Treasury. He came on an interesting dispatch to the State Department from Yenan, China, in 1944 signed by John K. Emmerson.

Yenan was headquarters for the Chinese Communists and their "Eighth Route Army" during World War II. Emmerson was an American Foreign Service officer who served there with a "United States observers' mission."

Emmerson joined the Foreign Service in 1936. He spent most of the next 10 years in the Far East, in Japan, and China. He was investigated by the State Department under Dean Acheson in 1952 on security charges and cleared.

One of the charges involved the disappearance of a secret document from the United States Embassy in Moscow at a time when Emmerson was stationed there in 1947–49, while Gen. Walter Bedell Smith was Ambassador.

FRIENDS IN JAPAN

Emmersan and Norman were friends in Japan before and after World War II. Norman furnished an affidavit which was used to help clear Emmerson in his security hearing at the State Department.

Chinese Communists at Yenan had an organization called the Japanese People's Emancipation League, headed by a Japanese Communist named Okano.

Emmerson urged in a report to the State Department dated November 7, 1944, that the United States Government make use of Okano and the Japanese Emancipation League in the war and subsequent occupation of Japan.

He said in his dispatch that the league was democratic and it is not identified with the Communist Party. He suggested that chapters be formed among Japanese prisoners or internees in the United States, Australia, India, and other countries.

Recently, when the Senate committee started looking for Emmerson, they found he was now assigned as deputy chief of the United States mission in Lebanon. They were looking for him because "it seemed to us," an investigator said, "there was a general drift of 'old China hands' to the Middle East."

This area had a new importance because the United States was proclaiming the Eisenhower doctrine to protect the oil-rich Middle East against already encroaching communism, by use of American troops if necessary.

Emmerson appeared as a witness before the Senate committee on March 12. He asked to come back on March 21 to amplify his testimony and make certain changes in the record.

OBSERVER MISSION

The witness told how the United States Government had established an observer mission at Yenan during the war.

Emmerson said this was following a trip which former Vice President Henry A. Wallace made to China in 1944. He also said the United States mission to the Chinese Communists was established with the consent of Chiang Kai-shek, head of the Chinese Government.

J. G. Sourwine, associate counsel, asked: "Do you know, Mr. Emmerson, that * * * Chiang Kai-shek sent for the American Ambassador to protest this mission to Yenan?"

Emmerson said he did not. Sourwine produced what he said was a classified State Department record which had been seized among the Amerasia papers in New York.

It showed that Chiang Kai-shek had told United States Ambassador Patrick Hurley:

"With regard to the domestic problem of Chinese Communists, our Government [United States] should fully sympathize with and support China. The attitude we assume may result very seriously for China. In urging the Chinese Government to resolve its differences with the Communists, we are only strengthening the Communists.

"When we ask that China agree to demands of the Communists, it is the same as asking China to surrender unconditionally to a group known to be under the influence of a foreign government [the Soviet Union]. * * * The Communists are growing arrogant and refuse to go on with negotiations since our observer group arrived in Yenan."

COMMUNIST GROUP

When questioned about his 1944 report that the Japanese Emancipation League was not identified with the Communist Party, Emmerson testified that the league "obviously was a Communist organization, and that was completely known to me at the time."

Robert Morris, chief counsel, pointed out: "But there was nowhere you say so in that document. * * * Do you think the Japanese Communists would dispense and propagate democratic ideas?"

Emmerson: "Certainly not basically. * * * There were many people at the time who spoke in favor of coalition governments. * * * I think there was a general feeling * * * that collaboration with the Communists was possible."

Morris: "Don't you think, in retrospect, at least, to have Japanese Communists work in American occupation with the military government would be a hazardous thing?"

Emmerson: "I do, indeed."

In his 1944 report, Emmerson said "preparations are being made to send agents directly to Japan from this [Yenan] area." He told the committee the "OSS had an operation in Yenan," and "they were engaged in activities of this kind."

The Office of Strategic Services, OSS, was a supersecret wartime espionage operation of the United States Government. Investigations since the war have shown it was heavily infiltrated by Communists. It was the predecessor of the present-day Central Intelligence Agency.

Emmerson returned to Washington in February 1945 on orders of the theater commander to present his ideas to the State-War-Navy Coordinating Committee.

OBTAINS DATA

He brought back a number of propaganda materials of the Japanese Emancipation League—charts, pamphlets, leaflets—plus some letters from the Japanese Communist leader Okano to a Japanese in America.

Morris. "Was that Fujii Shuji? He was a Communist."

Emmerson said he did not know Fujii was a Communist at the time. He found Fujii working for an OSS group in New York City. When called by the committee to answer Communist questions in 1956 Fujii, an American citizen, took the fifth amendment.

Japanese Communists in Yenan all got back to Japan after the war, Emmerson said. He wasn't sure how they got there. Their leader, Okano, may have been flown by United States Army plane to North China and Korea.

"Then he proceeded and arrived in Japan with a great fanfare and publicity," Emmerson related.

Morris: "The Japanese Communist Party today, the main blood, is supplied by Japanese prisoners who have been trained by the Communists in Siberia and sent back to Japan. * * * The NKVD man who recruited most of them has now been sent to Japan. * * * They are now making up the Communist underground."

The Emmerson hearing had gone on in this vein for some time before the name of Herbert Norman, the Canadian, ever came up.

[From the Niagara Falls Gazette of April 22, 1957]

FRIENDSHIP WITH NORMAN RECOUNTED

(By Paul Martin)

WASHINGTON.—John K. Emmerson told the Senate Internal Security Committee how he went to Japan immediately after the surrender in 1945 to work in the headquarters of Gen. Douglas MacArthur, supreme Allied commander.

Emmerson is the United States Foreign Service officer who recommended that the allies make use of Communists in their occupation of Japan. He was asked about the release of Japanese Communist leaders from a prison camp outside Tokyo.

Eugene H. Dooman, of Litchfield, Conn., who served during the war as chairman of the Far East Subcommittee of the State-War-Navy Coordinating Committee in Washington, testified previously about the affair.

SEEN AIDING REDS

Dooman said the effect of having Japanese Communist leaders driven through the streets of Tokyo in United States Army staff cars from supreme headquarters was to add 100,000 new members to the Japanese Communist Party.

Emmerson gave this account in his testimony on March 12 and 21:

"At the time, Mr. Herbert Norman, a Canadian diplomat, was working in Counter Intelligence Corps." He said Norman was in the research and analysis section. "We heard there were some Japanese Communists in a prison camp just outside Tokyo."

"Under orders from CIC, he and I together, in an Army vehicle, went to the prison camp to find out whether in fact these prisoners were there.

"We discovered * * * there were two very prominent Japanese Communists, Mr. Shiga and Tokuda. After talking briefly to these prisoners, we returned to headquarters and reported this * * * it was arranged that military cars from CIC should go out to prison.

"Again Mr. Norman and I went out, since we spoke Japanese * * * prisoners were placed in the cars and were brought to headquarters where they were interrogated."

A few days later the Japanese Communists were released from prison under a general amnesty order from MacArthur's headquarters.

NORMAN ENTERS CASE

This was the first reference in the proceeding to Herbert Norman, the Canadian Ambassador who committed suicide in Egypt on April 4.

Gen. Charles A. Willoughby, MacArthur's intelligence chief, identified Norman as chief of the Canadian mission attached to MacArthur's headquarters in Japan during the occupation 1946–50.

Robert Morris, chief counsel of the Senate committee, asked Emmerson: "Do you have any knowledge that Mr. Norman, the man you talked about, was a Communist?"

Emmerson: "I had no knowledge whatsoever."

Morris: "* * * we have quite a few security reports which have a great deal of information to the effect he is a Communist.

"A professor of his, a man who was a Communist teacher at the time, has testified that while he was teaching a study group at Columbia, one of his students in this Communist group was a Herbert Norman, the man we have been talking about. He was the man who made the trip with you at that time. You had, you say, no idea he was a Communist?"

Emmerson: "I had no reason to think he was a Communist either then or now. He is presently Canadian Ambassador to Egypt."

Emmerson said Norman also was accredited as Canadian Minister to Lebanon.

This is the first knowledge to the committee that the Canadian Department of External Affairs had shifted Noman from remote New Zealand, into the critical Middle East.

An investigator asked: "Do you happen to know if he was in Egypt when Donald Maclean was over there?"

Emmerson: "No, he just arrived in Egypt the end of October the past year."

Emmerson said Norman had been cleared by the Canadian Government in 1951. "I understand there was a press release to that effect."

Senator WATKINS: "I assume he had been cleared or else they do not know anything about these charges against him, if they send him over there now."

WATKINS: "Are you and he friends?"

Emmerson: "I have known him since about 1940."

HAD LEFTIST INTEREST

He described Norman as a "person of liberal ideas; he was interested in left-wing movements in Japan."

The committee wanted to know how Norman happened to get in touch with Emmerson in Beirut last fall. At the time, Emmerson was deputy chief of the United States mission in Lebanon.

In his March 12 testimony, Emmerson said he supposed it was through mutual friends. "We have never corresponded," he said. He met Norman very briefly in Beirut on October 27, 1956, the day he said Norman arrived there. "I was leaving the same day for the United States."

However, when he came back to testify on March 21, Emmerson said he had received a letter from Norman saying he was coming to Lebanon, and that Emmerson had replied to Norman in New Zealand.

It developed that Emmerson had recently been in Israel. He seemed quite anxious to get in touch with Norman. He sent word to that effect through the Canadian Chargé d'Affairs in Beirut.

Emmerson also sent a note to the Normans; he was on the telephone early the morning of October 27; his wife went down to meet the boat when it docked at 8 a. m.

The Normans came to their home. They spent around 2 hours over cocktails and lunch. Among other things, they discussed their mutual-security clearances.

Jenner: "Did he say anything about the reasons why he happened to be assigned to the Middle East at that particular time, whether or not he was pleased?"

Emmerson: "He was very pleased, extremely pleased * * * he was intensely interested in the situation in Egypt, in the Nasser regime and what was going to come out of all this."

Jenner: "Did he pass any opinion upon the problems confronting the world in the Middle East at that time?"

Emmerson: "He was extremely concerned about developments, about the danger of an explosion taking place * * * as a matter of fact, I believe the outbreak occurred while he was in Beirut."

Watkins: "Did you discuss the part that Russia was attempting to play in the Mideast?"

Emmerson: "I'm sure we did * * * that is the one thing in Beirut that concerned us most, the penetration of the Communists."

Morris: "You answered all questions fully?"

Emmerson: "Well, I answered them. I certainly did not divulge any classified information."

Sourwine: "Did you make any report to the State Department on your conference with Mr. Norman?"

Emmerson: "I did not make any report. I considered this was a social occasion."

[From the Niagara Falls Gazette of April 23, 1957]

WAS NORMAN COMMUNIST?—DATA GIVEN

(By Paul Martin)

WASHINGTON.—Was Herbert Norman, the Canadian Ambassador who committed suicide in Egypt, a Communist?

The United States Senate Internal Security Subcommittee says it received direct testimony and security reports to the effect that he was.

The Canadian Government, on the other hand, has furnished very little information on the subject.

The most that Lester B. Pearson, Canadian Foreign Minister, has been willing to say is that Norman associated during college days with persons believed to be Communists.

Pearson on April 10 threatened to cut off the exchange of all security information between appropriate agencies of the United States and Canada unless such information were kept from congressional committees.

When the case developed into an international incident, the Senate committee compiled a transcript of all references in its files to Herbert Norman.

These cover a period of 15 or more years from his marriage in 1935 through the time Norman served in General MacArthur's headquarters in Tokyo in the postwar occupation of Japan.

INTELLIGENCE AGENT

Robert Morris, committee counsel, put in the record of the Emmerson hearings what he called a United States Government executive agency security report.

He said this was prepared during World War II at a time when "there was an effort being made to have Norman given the assignment of being liaison between Canada and United States intelligence."

This would have made Norman liaison between the Office of Strategic Services, a supersecret United States Government wartime espionage and counterintelligence operation He was not appointed to the position.

Another effort along these lines, involving access to military information, was said to have occurred during the Korean war, 1950-53. The circumstances are not clear.

CANADIAN SPY RING

The record of the Emmerson hearings states:

"Counsel then read from a United States Government executive agency security report which indicated that Dr. E. Herbert Norman had been recalled from Japan when his Government discovered certain Communist connections, specifically with Israel Halperin, a Canadian citizen of Russian parentage, who was one of the principals implicated in the exposed Soviet military intelligence operation in Canada."

Morris: "You will remember, Senator JENNER, when you tried to have Gouzenko testify, that the Canadian authorities would not let you ask any questions whatever about anyone who was a Canadian personality."

Igor Gouzenko is the Russian code clerk who fled the Soviet Embassy in Ottawa, taking certain documents with him, which helped to expose the Soviet spy apparatus in North America.

Eleven Canadians were found guilty of espionage for Russia. Dr. Alan Nunn May, who had been cleared by the Canadians for atomic work in the United States, was convicted in a British court and sentenced to 10 years.

The 1946 report of the Royal Canadian Commission states:

"There exists in Canada a fifth column organized and directed by Russian agents in Canada and Russia; within the fifth column there are several spy rings.

"Membership in Communist organizations or a sympathy toward Communist ideologies

was the primary force which caused these agents to agree to do the acts referred to in their individual cases."

ADDITIONAL REFERENCES

There are additional references to Herbert Norman in the files of the Senate committee:

Norman went to school at Harvard and Columbia. He worked for the Institute of Pacific Relations in New York, 1938–39, until he joined the Canadian diplomatic service and was sent to Tokyo.

Reading from the executive agency report, Morris said:

"One of the witnesses at the marriage of Norman to Laura Irene Clark on August 31, 1935, was C. P. H. Holmes, who has been identified as Charles P. H. Holmes, born in Japan in 1910 and known as a Communist and active in the Communist underground in Ottawa."

Direct testimony by Dr. Karl August Wittfogel, head of the Chinese history project at Columbia University, that Norman "was a student of his in a Communist group" in 1938.

Morris: "When we looked into it we further learned that Herbert Norman was secretary of an organization called the American Friend of the Chinese People, which was also a Communist organization. They formed a Canadian affiliate called the Canadian Friends of the Chinese People, and Norman was the executive secretary.

"I thought that very significant because on these Communist-front organizations, Senator, generally the executive secretary is someone they can trust."

Another security reference: "The report further indicated that Norman was identified in February of 1940 as a member of the Communist Party."

WAR PERIOD

Norman was in Tokyo, was interned, and sent back to Ottawa.

The security report said that when Tsuru Shigato, a Japanese instructor at Harvard, was apprehended for repatriation purposes in 1942, the FBI was approached by Norman who represented himself as on "official and highly confidential business of the Canadian Government" in an effort to take custody of Tsuru's belongings.

Among the belongings was a complete record of the Nye munitions investigations, largely prepared by Alger Hiss. Also a letter relating to a series of studies being promoted at Harvard by Tsuru of American capitalist from "Marxist viewpoint." One of the papers was American Imperialism, by E. H. Norman.

"Norman later admitted to FBI agents that his was only a personal interest, and that he was not representing the Canadian Government as stated."

POSTWAR ERA, 1945–50

(Norman served in Tokyo as chief of the Canadian mission at General MacArthur's headquarters between V–J Day, 1945, and the Korean war in 1950.)

Thomas A. Bisson, of Berkeley, Calif., appeared as a witness before the Senate committee on March 31, 1952.

Bisson was associate editor of the IPR publication, Pacific Affairs. He was also connected with American magazine, which was the subject of Government security investigation in 1945. He was identified as a Communist by one or more duly sworn witnesses before the committee.

Bisson said he took a trip to Chinese Communist headquarters at Yenan, China, where he spoke at a mass meeting in 1946 along with Philip Jaffe and Owen Lattimore.

He met with Herbert Norman in Tokyo. Bisson read from a letter of August 21, 1946, in which he had said:

"I wrote Harold Quigley recently suggesting that he with Mariam Farley, Herbert Norman, and yourself might organize an informal study group in Toyko to meet occasionally with some of the Japanese who might take the lead in a new Japanese council of the IPR."

COMMUNIST INSTRUMENT

The Senate committee in its 1952 report said the IPR "has been considered by the American Communist Party and by Soviet officials as an instrument of Communist policy, propaganda, and military intelligence."

Maj. Gen. Charles A. Willoughby, MacArthur's intelligence chief, testified that the Japanese branch of IPR was a "spy ring for Russian Communists."

The committee identified Owen Lattimore as "a conscious articulate instrument of the Soviet conspiracy."

Exhibits showing Norman's contributions to Amerasia magazine and IPR publications Far Eastern Survey and Pacific Affairs. He had 4 articles in Amerasia in 1937–38, 6 articles in the Survey between 1939–45, and 6 in Pacific Affairs 1943–47.

Interrogation from the Emmerson testimony:

Morris: "Do you know a Dr. Chi?"

Emmerson said he did not.

Morris: "He and Herbert Norman, according to our records, were closely associated in Japan."

(The committee identified Dr. Ch'Ao-Ting Chi in its IPR report as an active staff member of IPR and a member of the comintern apparatus. Elizabeth Bentley named Chi as a Communist.)

Morris: "Did you meet Owen Lattimore in Japan?"

Emmerson: "I met Owen Lattimore."

Morris: "He was also close to Norman and Chi."

Testimony from Owen Lattimore as follows:

Morris: "When did you last see Mr. Norman?"

Lattimore: "In 1947, at a meeting of the Institute of Pacific Relations in Stratford, England."

Morris: "Did you meet Mr. Norman in Japan?"

Lattimore: "I met him in Japan in the winter of 1945–46."

Morris: "On how many occasions did you meet him in Japan?"

Lattimore: "Fairly frequently. I don't recall."

The Age in Which We Live

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1957

Mr. RAINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an outstanding speech by an outstanding public servant, the Honorable P. O. Davis, director, extension service, Alabama Polytechnic Institute, Auburn, Ala., which I commend to my colleagues as most interesting:

THE AGE IN WHICH WE LIVE

(Remarks by P. O. Davis, Director, API Extension Service, Auburn, at District IV meeting of Home Demonstration Club Women, Birmingham-Southern College, April 16, 1957)

In the United States (but not in the world) you and I are now living in the most wonderful age of mankind to date. It's an age of abundance for every individual and for every family that takes advantage of opportunities available, except for disaster or misfortune.

It's an age in which American people are living longer at a higher level and with less drudgery, with indications that our standard of living will continue upward, being limited only by our capacity to think and to do.

With machines and power each family represented here is now being served by the equivalent of 50 to 100 human slaves a century ago. These mechanical slaves are changing our habits, our thinking, our attitudes, our ways, our problems, and our opportunities. We have more time for leisure along with more materials.

We have all of these things because of change; and much of our change stems from our research in industry, in agriculture, and in home economics.

Because farmers have received and applied research in their operations production per farm worker in the United States is now double what it was 40 years ago. With about the same acreage in crops farmers are producing more than enough food and fiber for our needs at home plus all that we are able to export; and also troublesome surpluses.

It's also an age of problems. Farmers—your husbands and sons and brothers—are now confronted with very difficult problems. These problems are bigger in economics than they are in science and engineering, but they can be solved; and they will be solved.

Net income of United States farmers reached its peak of all years in 1948 with a total of $17.2 billion. Last year the net was down to $11.5 billion; and 81 percent of the decline was due to rising costs.

This, of course, is vital to you because as net farm income goes down so go your opportunities for doing what you want to do in your homes and for your children. Home demonstration work has a major challenge in this.

Farmers are being forced to change their types of farming. In Alabama the major change is from crops to animals with feed for them; and this shift calls for much more know-how, additional capital, more power, and more equipment.

Miss Lucile Mallette told me that you want me to talk more about changes in homes and in living as related to our cooperative program in home economics. Introductory to this I'll mention a few important factors.

First, we are a growing Nation. United States population 40 years ago was 100 million; 10 years ago it was 141 million. It is now 170 million. Our total population is now increasing daily by 7,000 people while our farm population declines each day by 1,500. The annual increase is about the Alabama total.

Obviously the trend to smaller families has been reversed. Young people who were in families of 3 children now expect 4 of their own.

People are marrying younger. The average marriage age in 1940 was 21.2 years for women and 24.6 years for men. It's now 20 years for women and 23 for men with indications that by 1965 it will be 19 for women and 22 for men.

People are living longer. The average span of life now is about 65 years for men and 70 for women. By 1965 it is expected to be 70 for men and 75 for women. We have many more young people and still more older people.

We have more children and young people in schools and colleges; and we'll have still more tomorrow if we can provide the facilities for them. One American in each 4 is in school today, the total being 41.5 million.

This rise in our educational level is in response to individual needs for training for the opportunities around us for earning a living and the best use of what is earned.

But we do not have enough trained people. We need in agriculture 15,000 new trained people each year, but only 8,500 received their degrees in agricultural sciences

last year. The problem in industry is much bigger and just as acute.

The need for trained personnel in home economics—particularly trained for home demonstration work—is acute in Alabama, and all over the Nation. They are needed, too, by the teaching profession and in industry.

A degree in home economics offers a double future—a profession or a wife and mother—building and maintaining an American family with true American ideals which, to me, is the choice opportunity of all.

More people are at work at higher wages. This total has tripled in 100 years, now being 66 million; and a third of them are women.

Farm people are earning more in nonfarm employment. The 1950 census showed that 2 families of each 5 had 1 or more members of the family fully employed off the farm. And many more nonfarm people are living in the country. Some of them live 30 miles or more from their work and commute daily.

We are living in a money economy. Commercial farming has largely replaced domestic farming. Money needs of farmers are big in capital, in operation, and in living.

Children have much bigger opportunities for travel and for learning by more contacts and by radio, TV, and other means. All family life is changed by these things.

We are in an age of tension and worries about nuclear weapons, about debts, about accidents due to machines on farms, on highways, in homes; and about other things.

All of our economic and material changes have their counterparts in farm homes. Both science and engineering have caused repercussions in farm kitchens equal to, or probably greater than, any other spot in our total economy.

Our grandmothers operated in scantily equipped kitchens separate from the main house; but look at our modern kitchens. Thirty years ago the average housewife spent 5 to 6 hours per day in her kitchen preparing food. It is now half as much.

Human servants are almost gone. Only 1 percent of all United States families now have full-time servants; and the portion with servants of any kind dropped by half the last 15 years.

Farm people are living in a bigger community and over a wider area. A trip 50 miles from home was an event for our grandmothers, but now 100 miles is commonplace with us.

Radio, television, and other engineering achievements are accepted as essentials to us in our way of life, but unknown to them.

All of these things are reflected in home-demonstration work—in each home, in each club, each county, and at the district and State levels.

Instead of having a very simple program based upon the necessities of life, as was true two generations ago, we now have a program in home-demonstration work based upon current and future needs of farm families living much more abundantly in a complicated age; and geared to attain a higher and better standard of living in every way.

Indeed we are going forward and on a rising plane.

No longer does the home-demonstration agent do all the planning and all of the activating. Officers and members of clubs are essential in wise planning and in efficient application of the plans with the valuable help of leaders and otherwise. Real teamwork is indispensable and mutually beneficial.

More of the members are becoming leaders in order that the program itself, in all of its parts, may be extended effectively into every home and to every family willing to take advantage of it and participate in it.

By retrospection I recall that home-demonstration work in Alabama began with tomato-canning clubs in two counties—Pike and Walker. They were little and the program was simple. They were engaged in producing and preserving food, realizing that the history of mankind has been that of a hungry animal searching for food—for more food and for better food.

Then came clothing because food and clothes are the first two essentials of civilized people. The third, housing, followed. This trio became the basis for the home-demonstration program as is now true in the main.

But the Nation grew and the economy expanded. Living is increasingly complicated. Government became more important; and now home-demonstration clubs are keenly interested in all laws and their administration.

As both a capitalist and a worker the farmer is vitally concerned with money matters, with economics, with industry, with banking, with labor, and with many other factors and forces.

We have become a nation of employees—people working largely for big industry and for big government. This has changed our thinking and our loyalties. Only farmers remain as a big group of independent thinkers.

Labor unions grew in numbers, in influence, and in power. They now have some 16 million or more members. As they succeed with their goal of higher wages, without an increase in production, farmers must pay more for what they buy which reduces their net income.

This continues to challenge farmers themselves for more organization of their own which they have in the farm bureau.

Yes, the home-demonstration program now includes the entire social and economic life relating to farm people and to all others. This is why the modern home-demonstration program must be broad and comprehensive with a clear understanding of it by all members—all thinking, all studying, and all working together for mutual good.

As we meet, think, study, and talk together about home-demonstration work we improve our plans and our structure for the future. To do this certain basic principles must guide us in our program of action. Among them:

1. It must be by local people and for local people to meet their needs and aspirations this year and in the future.

2. It must recognize the fact that all human activity is significant only for what it does for people; and, in particular, what it stimulates people to do for themselves.

3. It must be based on full use of facts before decisions because "He is well armed who is armed with facts."

4. It must recognize—and we must always believe—that the American farm is the finest place in the world to live, to work, and to rear a family of fine American citizens.

5. We must continue to believe that the great aim of the Extension Service is to: "Develop finer families; living in better homes; on more productive farms; in more progressive communities."

6. It must be with a firm determination to do these things under and in behalf of the American form of government—a true democracy based upon the principles of Christianity.

In all of our building we must not forget that "unless the Lord build the house those who toil thereon toil in vain."

The Destiny of Latin America

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

THE DESTINY OF LATIN AMERICA

(By Most Rev. Philip M. Hannan, J. C. D., D. D., auxiliary bishop of Washington, at the Washington general assembly, fourth degree, Knights of Columbus, Pan American dinner, April 25, 1957)

There is obviously a decisive destiny awaiting the great group of nations which is known, unlike any other group, under the name of a culture rather than a place, Latin America. The title indicates the supremacy of the spirit in the life of these peoples. The word "Latin" signifies their devotion to the ideals of faith and freedom which are the basis of what was called Latin, and latterly, western civilization. Latin America is more a spirit than a set of boundaries and divisions. One of the distinguished presidents of Latin America acknowledged this recently when he said, "All material efforts, all political activity are nothing without faith."

It was this spirit which has succeeded in blending the genius and cultures of so many national and racial groups into a common civilization. More than any other continent or large nation in the world, Latin America has incorporated the widely diverse strains of Europe, Africa, the Near East with those of its native peoples into a common life. This was an enormous achievement, never sufficiently recognized especially by those who pride themselves on a national order and homogeneity which was established by exterminating the native population. The extent of this achievement, I think, is best seen from the reverse side of the picture, from a Spanish writer lamenting the fall of the Spanish Empire, "And the (Spanish) Empire, born as a pomegranate bursting forth and dispersing its grains of life throughout a continent, died also as a pomegranate strewing the continent with its grains in helpless dispersion, to be pecked at will by the eagles of power."

But contrary to the lament of the Spanish writer, Latin America has developed a unity, a cohesion that is today better appreciated because better known. This unity has developed because of the principles of faith animating these diverse peoples. Although they had, understandably, pride in their national origin, they had greater pride in their loyalty to God; though they were proud of their conquests, they knew that the sword always deferred to the cross. For their proudest boast was not that they were the sons of Spaniards or Frenchmen or Basques or the Incas, but sons of God.

This spirit, born of faith and freedom, has evolved an organization, the Organization of American States, which could well serve as the pattern for a world organization. The OAS is the oldest and most successful international organization in existence today. By its direct and indirect influence it has achieved close cooperation in many fields of common interest such as health, defense, and culture which are as necessary as they are unspectacular.

But the most important achievements have been in regulating international relations. It has prevented wars, despite the international frictions spawned by the vast diversity of backgrounds and huge resources at stake. The Christ of the Andes and Christ on Corcovado are not simply monuments to the principles of international conduct by Chile, Argentina, and Brazil but of all Latin America.

Furthermore, it has fostered an impregnable defense against atheistic totalitarianism. In World War II while nations in northern Surope found ready reasons for not engaging in the war against the Nazis, the unendangered nations of South America sent large contingents of troops and volunteeers. In the war in Korea against the Red menace, again distant Latin America responded while the more instantly threatened lands were often laggard in their response. It was this same spirit which presented to the world the stirring spectacle of a small land, Guatemala, expelling its Red traitors while the older lands were still wringing their hands in futile indecision about the problem of red infiltration.

But above all, it was this spirit of allegiance to the principles of faith and freedom that have been most decisive in international bodies. Despite petty domestic quarrels that somehow burgeon among neighbors, the Latin American countries have shown at the United Nations an unyielding and resolute resistance to Red tyranny and infamy. Without any prearranged concurrence and without the contrivance of strategy, they have rallied to the cause of Christian civilization even more than those nations which once were considered the source of that civilization. They have been, with their corporate strength, the conscience of the U. N. and the inspiration of the newer lands of the world, which see in them, strong in spirit, their example of independence and moral responsibility. Although Latin America has the faults that are the common heritage of those born of Adam, it always prefers principles to prejudice and never lets rancor of past wrongs dictate a course of vengeance instead of virtue. Latin America has proven its right to its name, for whenever a principle has been at stake, it has voted on the side of God and not human passions.

I wish to emphasize that I am not stating that Latin America is to be congratulated because it agrees with the stand of North America or with the United States. Very generally it has. But this agreement does not thereby make it right or wrong. Latin America is to be congratulated for its contribution to the welfare of the world not simply because they have generally sided with us but because they have sided with God. We rejoice not simply because they were with us but because they were with God and we were proud to be with them.

There is need for a continuing fruitful partnership between Latin America and North America—a combination that recognizes the same principles and profits from the Latin philosophy, organizational ability and engineering prowess of all. As one of your Ambassadors stated succinctly, "You say that time is money. To us, time is life." May I suggest that both ideas can be combined. We can learn from each other, we can cooperate to build the Christian world that alone can survive if we maintain our trust and faith in God. That faith alone will give us the humility to learn and to profit from the wisdom of our neighbors. That faith alone will give us the spirit of forgiveness and sense of humor which comes from an appreciation of our shortcomings that will make us avoid the disasters of pride. That faith will enable both of us to see the wisdom as well as the duty of contributing what we have to the welfare of the other.

The United States, which owes so much to the spirit of friendliness and cooperation of its neighbors to the south should have the same regard for their economic health as they have for that of the rest of the world. Possibly, because we have felt so secure in the loyalty of our neighbors, we have failed to heed their need. But it is certainly a strange and baffling policy which contributes to practically every quarter of the world, including a billion dollars to Yugoslavia in the hope that it will not be used against us, but deals so parsimoniously and grudgingly with the nations that have dwelt in peace with us and have always been our stanch ally in times of trouble and common danger. Certainly the lives of 170 million good neighbors, possessing great stores of riches necessary for our welfare, should demand more financial help than half of what was given to Korea. And if we lack the charity to move us to action, at least we should follow the counsel of self-interest and nature; for nature has made us complementary, not competitive. We need the coffee, the sugar cane, the oil, the minerals of our neighbors. Our neighbors need our resources to help them develop, so that foreign help will not bring foreign ideologies.

In this day when the mechanical age has brought us not only closer together but brought dangerous ideas with commerce, we need a respect, on our part, of the modern implications of the Monroe Doctrine. That doctrine was proclaimed primarily for the defense of this country, and secondarily for the defense of our neighbors. It was based on trust of our neighbors, a trust that was well founded and kept, as well as a distrust of ideologies from outside the hemisphere. That danger is greater to us today than ever it was in the time of President Monroe when the fastest boat from Europe required 6 weeks to cross the ocean. And if we wish to continue to enjoy the security of this family of nations we should give more heed to the needs of the members. There is only one way to prove our right to this brotherhood under God—by sharing more of our resources; "For how can we say that we love God whom we do not see if we love not our neighbor whom we see."

If we are true to the ideals of our common faith, if we are true to the spirit of freedom that has been our heritage, we shall fulfill in our day the dreams of the great discoverer who labored to bring forth a new world. We can produce a dynamic newness of life, sprung from this Easter season that will invigorate the world. We we must remain steadfast to the inspiration of the discoverer who recorded his aspiration by calling the first land of the continent he touched, El Salvador, the only country in the world named after the Saviour. If we remain true to our Saviour, all the Americas shall complete the mission predicted by one of our great pioneering archbishops, Archbishop Ireland, "That mission is to prepare the world, by example and moral influence, for the universal reign of human liberty and human rights. America does not live for herself alone; the destinies of humanity are in her keeping."

The Late Senator Joseph R. McCarthy

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1957

Mr. VAN PELT. Mr. Speaker, under leave to extend my remarks, I insert in the Appendix of the CONGRESSIONAL RECORD an editorial about the late Senator Joseph R. McCarthy which appeared in the May 8 issue of the Fond du Lac, Wis., Commonwealth-Reporter:

WE ARE PECULIAR

Americans have a peculiar way of talking about people after they are dead and buried.

Joseph R. McCarthy had very many faults and they were emphasized because of the high position he occupied in the American system of government.

Had he been an ordinary citizen we might never have heard of him. He could have met his friends on the street and argued and charged just as he did in the United States Senate. None would have thought much about it. Mr. McCarthy would have been just an ordinary citizen.

That is why we feel sorry for Mr. McCarthy. We sincerely believe that he vigorously attempted to do what he thought was right. His tactics certainly were wrong. "Fighting Bob" La Follette was hated intensely during World War I, but today they have nominated him for the congressional hall of fame. He deserves that recognition along with other good Americans who at that time did not follow the hysteria of the common herd.

There is one thing that we liked about Joe McCarthy more than anything else—he was a self-dedicated human. He was dedicated to his church and to his country.

We liked the sermon that was delivered at Senator McCarthy's funeral in Appleton. "No man is perfect. Senator McCarthy had faults, and I am sure that he would be the first to admit it. May Almighty God be good to him."

It is easy to say things about a man after he is dead and buried. That is the trouble with Americans.

There were other things in the sermon which was delivered in Appleton:

"People expect that the honorable men directing our Government are infallible, which is far from the truth. Mistakes therefore can be made and are made. Instead of criticizing them. we should get down on our knees every day and pray God to direct and guide them. They need this help. Pray, do not condemn them."

There always is the argument that humans should be sufficiently strong. If they were, all would be living a perfect life.

Steps are underway in the United States Senate to expunge from the record a resolution censuring Senator McCarthy in connection with his self-promoted Communists-in-government investigation.

We hope the action never will be taken. It is sort of hypocritical to expunge from the record after death something you said about a man when he was alive.

American Mother of the Year in Europe

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1957

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

AMERICAN MOTHER OF THE YEAR IN EUROPE

RAMSTEIN, GERMANY. — The American Mother of the Year in Europe—chosen by popular vote of Americans and their families in Europe and the United Kingdom—is Mrs. Delia E. Stover, wife of an Air Force sergeant stationed here and mother of four adopted children—an Eskimo boy, a full-blooded Indian boy from the Yukon Reser-

vation in Alaska, and two twin German girls.

The American Weekend, family newspaper published for Americans overseas, made the selection today, after thousands of American families in Europe chose Mrs. Stover from among 300 contestants nominated by readers.

Mrs. Stover, wife of M. Sgt. Dalton B. Stover, who has 17 years of military service behind him, wins a trip back to her home in Jefferson City, Mo., where her father, Earl W. Jenkins, was once mayor, and over $5,000 in prizes.

She was chosen by American Weekend readers on the basis of being an outstanding service wife and mother.

In addition to being a leader in American community activities in Europe, Mrs. Stover, who holds a degree in commercial law, and who once worked with Vivian Truman, brother of the then Vice President of the United States, in 1952 adopted a little Eskimo boy while the Stovers lived in a trailer in Anchorage, Alaska. Two weeks later they adopted another son, a full-blooded Indian boy, from an orphanage in Palmer, Alaska.

The twin German girls were adopted by the Stovers last week. They'll all be home from Europe in about 18 months.

"Dee" Stover has a special word about hubby Dalton. "He's a wonderful guy. He's backed me up with his support and faith in everything I've tried to do. Without him, I could have done very little."

The Stovers are cookbook collectors and both love to cook. They bake their own bread and have a reputation as gourmets. Mrs. Stover has been working diligently on the committee which organized the Ramstein's (Germany) Day Nursery school and the newly opened Air Force base nursery. She stepped down last month from the presidency of the Ramstein Noncommissioned Officers' Wives' Club to devote more of her time to the two nursery projects.

Law of the Land in England

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mr. TEAGUE of California. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article appearing in the March 1957 issue of the Freeman, written by Edgar Bissantz:

"The poorest man may in his cottage bid defiance to all the forces of the Crown. It may be frail, its roof may shake; the wind may blow through it; the storms may enter; the rain may enter; but the King of England cannot enter; all his forces dare not cross the threshold of the ruined tenement." (William Pitt (Earl of Chatham), speech in the House of Commons, 1760.)

For the farmers of England, both owners and tenants, the proud old boast that an Englishman's home is his castle is as dead as Old Parr. It was killed by the drastic Agriculture Act of 1947.

In return for the beguiling promise of guaranteed prices and assured markets for farm products through price fixing, grants, and subsidies, the act saddled English and Welsh farmers with Government authority to pry into and direct every detail of their activities—all in the name of good estate management and good husbandry. Its enactment was, of course, a long step toward the Socialist dream of nationalized land and regimented farming; and, ultimately, the extension of the dangerous precedent to the control of every kind of business. It should have been repealed long ago.

By putting the English farmer in humiliating subjection to arbitrary controls from which there is no appeal to courts of British justice or to judge and jury, the act created opportunities for corruption, favoritism, and tyranny. It has produced an unhealthy climate of fear and suspicion that is making docile peasants of the farmers and bullying cads of men in government. Year by year the farmers become more dependent upon the paternalistic state and less disposed to stand up for their inherent rights as freemen. The spirit of healthy independence, high ambitions, faith in oneself declines. Discouraged farmers leave the land and the number of small holdings and farmworkers decreases.

Buried within the act's 118 pages of complex provisions are inordinate powers to control, direct, disgrace, and evict the English farmer, putting him effectively under the thumb of the Minister of Agriculture and his executive agents. The Ministry of Agriculture, with 10,000 employees spending 10 million pounds annually, is considered to be one of the most inefficient bureaus in Britain. A former Minister resigned after the disclosures of the scandalous Crichel Down land case.

FORMER HAS NO DEFENSE

Regardless of the intent of those who conceived such controls, the effect is to break the English farmers' will to manage their own affairs, and gradually to tighten a noose around them until one planned collective farming operation under a government werkbund is achieved.

Against these absolute powers—which should never be given to any man—the small farmer has no defense. Under the dictatorial provisions of the act, the farmer's only rights are the right to make representations to the Minister, and the right to have his case referred to the agricultural land tribunal comprised of three government appointees closely tied to the Ministry of Agriculture.

Few small farmers have the knowledge or enough capital to defend their farms properly against a bureaucratic runaround. Others are unwilling to endure the indignity of going before any smug tribunal humbly to beg for the right to occupy their own property. So, in its dealings with them, the Ministry of Agriculture is virtually invulnerable.

HOW POWER IS USED

The autocratic powers in the act are real, and they are used. During wartime the Ministry, through its county committees, evicted more than 10,000 farmers; it took over 6,684 farms; it held not less than 354,609 acres of land. Today the Ministry still holds about 230,000 acres in England and Wales. Since the war, over 4,000 farmers have been placed under supervision and 376 have been evicted.

There was no way of knowing how many others have been threatened, intimidated, or otherwise pushed around by arrogant agents, nor how much the act has been used to accomplish ends other than the pretext of good husbandry. Of this Lord Linlithgow observed: "One of the most informative criticisms I have heard is this: Before a man is dispossessed he must be guilty of two things. First, he must be guilty of bad farming; and secondly, he must be guilty of a lack of friends in the district." It takes little imagination to see the countless ways in which the absolute power of the county agricultural committees may be used for favoritism, spite, or personal gain.

Having no hope of aid, the victims simply fade away in a shroud of official silence. Sympathetic neighbors who would like to help them are afraid to express their indignation, for fear of attracting the ill will of a powerful committee, which could retaliate with ruinous supervision of their own farms. A number of the unfortunate farmers, broken by supervision and ejection from their homes, have committed suicide; others were thrown into prison for daring to refuse direction; farmer George Walden, of Hichen Stoke, Hampshire, was gassed and shot to death by the police when he resisted eviction.

AN ENTRENCHED BUREAUCRACY

An objective investigation of the farm situation seems to be virtually impossible in England, where the status quo is so strongly guarded by existing law and custom. The setup of such investigations as have been made from time to time always made certain that nothing more than superficial suggestions for patching up existing Government procedures might be offered. Furthermore, acceptance of any recommendations is left to the discretion of the Minister of Agriculture—proposals for reforms which do not suit the Ministry simply are ignored. Any chance that the power of direction and dispossession of farmers by the Minister of Agriculture might be called into question is ruled out in advance by directives given to the investigating committees.

One might imagine some wild-eyed Marxian to be the big brother who wields the whip of dispossession over the farmers of England. On the contrary, the present Minister of Agriculture is Mr. D. Heathcote Amory, a product of Eton and Oxford, and formerly a conservative M. P. Evidently he shares the common belief that it is somehow better for the "right" people to take responsible positions and administer the Socialists' program for them, than to let the Socialists do it themselves. Thus English Conservatives frequently lend their prestige to bureaucratic controls of which they really disapprove, thereby helping establish them almost beyond hope of revocation.

England has an enormous job to do in agriculture. It needs to scrap its tyrannous Agriculture Act; it needs to clean out a miserable swarm of Socialist-minded people who run Government bureaus with Conservative fronts for their collectivist schemes; it needs to get rid of costly committees and ubiquitous "experts" now plaguing the independent farmers; it needs to revive faith in the power of persuasion, not compulsion; it needs to restore the rights and property of those who have suffered dispossession under the Agriculture Act; it needs to realize that free farmers and the free operation of the law of demand and supply can regulate its agricultural production better and cheaper than "the man from Whitehall"; and it needs to understand that there can be no refuge of freedom for any of its people if the property rights of individuals are not respected.

Above all, England needs to revive the ability to see clear and present danger in small encroachments upon individual freedom. "Liberty is never safe except where the average man feels resentment toward every oppressive act of government, whether it affects him or not."

The 10th of May: Rumania's Independence Day

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mrs. BOLTON. Mr. Speaker, today, May 10, is the national holiday of the

Rumanian people. It is fitting that again this year we remember the three great events which are celebrated on that date, and pay tribute to the fortitude and courage of Rumanians everywhere.

After more than a thousand years of strife and sacrifice, national unity was attained, and freedom and independence secured. May 10 stands for that achievement, and is the day chosen for celebrating their national holiday. Today Rumanians at home are forcibly prevented from outward celebration, but their will remains unbroken.

During their long history Rumanians have always stood up against invaders and they have battled against hordes of barbarians pouring into Europe from the east. They have also fought against the forces of the Ottoman Empire.

Some 500 years ago the Turks succeeded in overcoming by their superior numbers the defenders of freedom. The same thing happened a few years ago when the dark forces of communism swallowed up the people of Rumania.

But the will of the Rumanian nation was not broken. In recognition of the people's drive for freedom, the Rumanian principalities received a special status—as autonomous states—in which the Turks could not interfere. Mircea the Elder, Vlad the Impaler, Stephen the Great, Michael the Brave, John the Fierce are names of brave Rumanian rulers who have fought in the past for independence and unity.

On May 10, 1866, the Rumanian dynasty was founded with the proclamation of Charles, Prince of Hohenzollern-Signaringen, as Prince of Rumania. This event marked the successful outcome of the nation's long struggle to acquire the right of electing as sovereign a member of one of the western nonneighboring reigning families, thus ending rivalries among native candidates to the throne. It was the beginning of a prosperous and glorious reign for Charles the First.

May 10, 1877, just 11 years later, the principality of Rumania proclaimed her independence by severing the outdated bonds which lined her with the Ottoman Empire. This independence had to be fought out on the battlefields south of the Danube, where the young Rumanian Army, as an ally of Russia, played a noteworthy part in the defeat of the Turkish forces. The Congress of Berlin of 1878 confirmed Rumania's independence and conferred Europe's official recognition, a bright page in the country's dreary history, though marred unfortunately by the loss of Bessarabia, cynically wrenched by Czar Alexander II and his Government from the ally who had helped them obtain the victory over the Turks.

And May 10, 1881, Charles I was crowned King of Rumania by the will of his people. Thus opened a prosperous era lasting over six decades for the Rumanian nation. Its apex was attained when national unity within the historical boundaries was reached after World War I. Rumania had now become a factor of peace and equilibrium in southeast Europe.

During these many years, Rumanians have cherished the 10th of May as their national holiday. This date remains the symbol of Rumanian permanence and perseverance through years of hardship to reach the end of freedom and well-being.

The consciousness of the Rumanian people, concerning their unity and independence, is the result of centuries of sacrifices. Today this consciousness remains intact. It cannot be destroyed by either brutality, lies, or oppression.

The Communist regime has attempted to tear this sacred day from Rumania's proud history. Today, in Rumania, any demonstration of independence is banned. Rumanians no longer can sing their national anthem, nor can they raise the flag on their independence day.

In order to try and alter the significance of this day, celebrations were shifted from the 10th to the 9th of May, the anniversary of a Soviet victory. Although flags are now raised on May 9, Rumanians celebrate in their hearts the following day, patiently awaiting the day when freedom is restored to them.

Through these dark years of Communist domination, the Rumanian people have kept alive their courage and their faith. They know that freedom cannot be destroyed.

The United States does not accept as permanent enslavement of eastern European peoples but looks forward with them to the day when they will again live in freedom and independence. On this historic day we join with Rumanians everywhere as we raise our hearts in prayer to Almighty God that He may hasten the day when the flag of freedom may once more fly over Rumania.

Rumanian National Day

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement made by me on the occasion of Rumanian National Day, which is being observed today, May 10:

RUMANIAN NATIONAL DAY

(Statement by the Honorable DANIEL J. FLOOD, of Pennsylvania)

Today, May 10, is an important day in Rumanian history, and the anniversary of Rumanian independence. It is a pleasure to record this anniversary of Rumanian independence and to hope for the speedy liberation of the Rumanian people from Soviet enslavement.

Rumanian history is a gloomy chronicle of oppression, lightened by short periods of freedom and progress. Unfortunately, Rumania is now passing through one of its darkest periods; the ordinary Rumanian citizen of the present time is suffering from as vicious tyranny as any which exploited his ancestors. One of the most oppressive and farreaching Soviet policies is that of high-speed industrialization.

Rumania has been transformed into a captive Soviet industrial colony. What this means is that individual citizens have been deprived of their capital—much of it saved with great effort over many years—by planned inflation and heavy taxation for reinvestment in industry—all for the benefit of the U. S. S. R. Such systematic tactics of pillaging one sector of the Rumanian economy have drawn off huge sums to be misused and wasted in others. The unemployment and underemployment of prewar days have been converted—with the aid of all the totalitarian techniques, and trapping—secret police, concentration camps, forced labor, daily production norms—into a specious full employment, where many work with a pistol at their heads to fulfill quotas, or attain production goals of demented 5-year plans which only result in economic dislocation or counterfeit industrial diversification. Any advantage which might be gained by employing huge numbers of serf-laborers and technicians is canceled by the financial demands of a huge party bureaucracy, with its press and propaganda apparatus, and its military and police auxiliaries with their disregard for human values and, indeed, human lives. Rumanian consumers find difficulty in purchasing the simplest needs of human existence—sufficient foodstuffs, warm clothing, and adequate shelter—all because the production of Rumanian industry is constantly diverted to the Soviet Union and because faulty and dogmatic Communist economic planning insists on determining in advance—in minute detail—the allocations and uses of thousands of products, a superhuman task which results in breakdowns, bottlenecks, and every sort of economic confusion. Poor planning, reliance on outmoded and disproved economic theory, is compounded by reparations payments to the U. S. S. R., forced adherence to Soviet trade agreements which drain off consumer goods, and bestow high salaries on useless and overpaid Russian "advisers." While Soviet soldiers hold the Rumanian sheep still, Soviet technicians and administrators fleece the unfortunate animal of all it has.

Americans everywhere hope for the rebirth of Rumanian freedom and happier days in the future for Rumanian workers, craftsmen, and businessmen. We hope for a more wholesome and better life for the Rumanian people.

Birmingham Is Taking Stock of Its Growth

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1957

Mr. HUDDLESTON. Mr. Speaker, for the past few days I have been inserting in the CONGRESSIONAL RECORD various news articles and editorial comment concerning Birmingham's Committee of One Hundred and the role of this great organization in the expansion of the industrial economy of Alabama.

The Committee of One Hundred is recognized throughout the State as playing a major role in the improvement of the life and welfare of our people. Although concerned primarily with the development of the Birmingham district, its effects are felt all over Alabama.

Under leave heretofore granted, it is my privilege to insert in the CONGRES-

SIONAL RECORD an editorial which appeared a few days ago in the Decatur Daily. Although Decatur is located in the Tennessee Valley, 100 miles north of Birmingham, its people readily recognize the importance of the Committee of One Hundred to the future growth of our State.

The editorial follows:

BIRMINGHAM IS TAKING STOCK OF ITS GROWTH

Back in 1949 the civic and industrial leaders of Birmingham took stock of themselves and of their city. After some soul searching, they formed a Committee of One Hundred, put up $500,000 given by 309 businesses and individuals for advertising the advantages of Birmingham to the Nation. They planned to spend $100,000 a year for 5 years.

In January 1957 they took stock and found that more than 200 plants, warehouses, home and district sales offices have been located in Birmingham or have expanded facilities, representing a $200 million investment, 18,000 new jobs, and payrolls have increased more than $18 million.

This is wonderful news to all of Alabama, for it means that our entire State has and will continue to benefit from this aggressive planning on the part of Birmingham's leaders.

Birmingham, we are sure, feels just like the cities in the Tennessee Valley who have their own aggressive plans and who think first of the valley and secondly of Alabama. If we can't locate an industrial plant, a warehouse, home or district sales office in the Tennessee Valley, then we heartily recommend some other location in Alabama. We know no dividing lines in this State. In the building of Alabama we build ourselves. We hope the next 5 years of life for the Committee of One Hundred will be even more brilliant, more productive, for not only Birmingham but the whole State is benefiting every day of every year from this aggressive sales promotion.

New VA Hospital Belongs Near Medical Center

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include an editorial from the Nashville Banner under date of May 7, 1957.

Subsequent to the decision of the Honorable H. V. Higley, Veterans' Administrator, and other authorities within the agency, to locate the new Veterans' Administration hospital on the site of the present regional office hospital, on Whites Bridge Road, near Nashville, members of the medical profession and others, including Dr. Paul B. Magnuson, former Medical Director for the Veterans' Administration, have expressed the opinion that the new medical facilities should be located near Vanderbilt University Hospital rather than the selected site.

I feel this is a matter of national concern and importance, involving the future medical care and treatment of many disabled former servicemen and servicewomen of our country.

It is my desire to bring this editorial to the attention of the entire membership:

PATIENTS' WELFARE UPPERMOST—NEW VA HOSPITAL BELONGS NEAR MEDICAL CENTER

Maximum benefits for patients at the proposed new veterans' hospital replacing Thayer were the considerations uppermost in the urgent suggestion to build it near this city's medical center. And for that a site has been available in the area of the Vanderbilt University School of Medicine. It still is available. As emphasized again by Dr. Paul Magnuson, former VA Medical Director, it still is the desirable and recommended location.

Notwithstanding these facts of manifest bearing on a logical site, Washington spokesmen again have indicated that VA Administrator Harvey Higley is adhering to his announced decision to build the new facility at the present White Bridge Road location, simply replacing old buildings with new. That would fail to correct one major disadvantage; and in the judgment of many qualified to evaluate the basic considerations, any ostensible saving thereby accomplished would be in the long run a very expensive economy.

It is not a matter to be decided by circumstances either of prejudice or pressure, but by the question, singularly, of what actually is better for the welfare of the patients themselves.

That consideration dictated the policy more than a decade ago adopted by the Veterans' Administration, of building these institutions adjacent to medical centers. As Dr. Magnuson has reminded, the purpose of that was for ready access to these, so that specialists could easily be called in as consultants on any case.

As the Banner observed from the outset, and reiterated 2 months ago: "That certainly is no innovation in Veterans' Administration thinking. It embodies no new idea of VA-community relationships bearing on maximum efficiency and benefits. It accords, indeed, with the policy established by Gen. Omar Bradley when he was Veterans' Administrator, and who recognized the importance of it as both practical and basic to the welfare of the veterans such an institution serves."

It is just as practical and basic now—yea, essential in the Nashville facility as elsewhere; simply to assure the best of care, for men who have offered their lives in the service of their country. The Banner repeats that is not a narrow consideration on which any bargain price can be put, or subject to dictates prejudicial to the utmost in lifesaving advantages sought in their behalf.

Why should the facility planned for middle Tennessee be the exception to a rule invoked for these institutions in general? The answer is, of course, it should not.

Ten Commandments for Parents and Children

EXTENSION OF REMARKS
OF
HON. JOSEPH F. HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. HOLT. Mr. Speaker, I should like to call to the attention of my colleagues an article, Ten Commandments for Parents and Children, written by constituents of mine, Rabbi and Mrs. William M. Kramer.

The article follows:

TEN COMMANDMENTS FOR PARENTS AND CHILDREN

(By Rabbi and Mrs. William M. Kramer)

TEN COMMANDMENTS FOR CHILDREN

I. Thou shalt not cause one parent to turn against the other.

II. Remember thy parents have the same rights as thou hast to enjoy life, secure rest, and to have the fruits of their labor.

III. Thou shalt not ignore thy parents' experience and wisdom.

IV. Thou shalt share in the responsibilities and labor of the family according to thy ability and according to the need.

V. Thy brother and thy sister shall be thy friend and not thy rival.

VI. Thy behavior before thy teacher and in the community shall not bring reproach upon thy family.

VII. Thou shalt respect the privacy of thy father and thy mother and thy sister and thy brother.

VIII. Thou shalt not reveal the secrets of thy household, nor shalt thou bring gossip within thy gates.

IX. Thou shalt observe the routine of thy household and need not to be reminded of thy daily tasks.

X. Thou shalt learn diligently thy faith, observe its commandments, and attend its worship that thou mayest be worthy of good marriage, be the doer of good deeds, merit love and give love generously.

TEN COMMANDMENTS FOR PARENTS

I. Thou shalt strive to banish fear and anxiety from thy gates and invite love and security within thy portals.

II. Thou shalt see thy child as a personality to be released, not as a possession to be retained, praising his accomplishments, judging them according to his youth and his gifts.

III. Thou shalt honor and cherish thy mate and thyself so that love permeates the household and adorns its inhabitants.

IV. Thou shalt train up thy child to respect himself but in so doing not feel rejected by thee.

V. Thou shalt not be cowardly or overindulgent lest thy child knows not the bounds of decency and good behavior.

VI. When thou art vexed with the ways of childhood remember, then, the days of thy youth.

VII. Thou shalt help thy child love beauty, uphold truth, walk in friendship, and serve his nation.

VIII. Thou shalt make thy home thy child's home wherein his friends are welcome guests.

IX. Thou shalt not exploit, nor compete with thy child for gain or for pride or for any selfish end, nor visit upon him thy parents' shortcomings toward thee.

X. Thou shalt teach thy child diligently thy faith, to observe its commandments and attend its worship, prepare him for marriage, and the doing of good deeds.

Polish Constitution Day

SPEECH
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 6, 1957

Mr. VANIK. Mr. Speaker, another year has passed, and while the people of Poland have again reiterated their plea for freedom during the Poznan uprisings, which occurred last year, they remain

substantially in subjugation by a government which seeks to suppress their liberties. However, due to their brave resistance, the Polish people have achieved a greater degree of self-government and freedom than they have since becoming a satellite country.

So on this anniversary of Poland's constitution, May 3, 1957, we not only commemorate the former independence of Poland, but we watch with interest the progress she has made in attaining a greater measure of freedom after so many years in which self-government was impossible.

We must hope that during the days ahead the spirit of the Polish people will restore a complete freedom which can only be achieved through a free government.

Southern Research Institute Grows

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mr. HUDDLESTON. Mr. Speaker, the people of the Ninth Congressional District are proud of the Southern Research Institute, one of our oustanding nonprofit scientific research organizations. We have watched it grow in the few years of its existence and have been pleased to note its continued expansion of services to the economy of the Southeast.

All of Alabama and, indeed, the Southland, has benefited from the foresightedness of Mr. Thomas W. Martin, chairman of the board of the Alabama Power Co., and the other founders of the Southern Research Institute. It has over the past years fulfilled a vital need in the rapidly expanding industrial economy of our section.

Under leave heretofore granted, I am pleased to insert in the CONGRESSIONAL RECORD an editorial which appeared in the Mobile Register a few days ago concerning the Southern Research Institute. Mobile is 250 miles from Birmingham, but its people recognize the value of this institution to scientific research in Alabama:

SOUTHERN RESEARCH INSTITUTE GROWS

In a current special issue of its bulletin, the Southern Research Institute located in Birmingham and operated on a nonprofit basis, reveals that 1956 was a year of notable growth for it.

Thomas W. Martin, chairman of its board of trustees, relates in a concise review of its progress that the institute is about to complete a new administration building on the site of its earliest operations in scientific research.

"With the completion of this unit (part of which will be used initially for engineering research), the institute will have some 90,000 square feet of laboratory space in modern, well-equipped buildings," Mr. Martin points out.

"We expect to begin construction on still another laboratory building in the first half of 1957."

Of the expansion in research activity and technical personnel, he says:

"The technical staff is now carrying on the largest volume of research in the institute's history. During 1956 the institute served 96 industrial research sponsors in 21 States, 13 agencies of the Federal Government and several philanthropic foundations. * * * There is every reason to believe that a substantial increase in sponsored research programs lies immediately ahead."

He pointed to an increase of more than 35 percent in the number of employees as impressive illustration of the institute's rapid growth during 1956.

The Southern Research Institute has served an important need from the time it was founded. Its valuable service in scientific research may be expected to expand consistently in the future. Alabama and the South are fortunate to be its home.

Henry Clay Wins Position of Honor

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Henry Clay Wins Position of Honor," which appeared in the May 6 issue of the Madisonville Messenger, of Madisonville, Ky.:

HENRY CLAY WINS POSITION OF HONOR

Kentuckians were pleased, naturally, at the selection of Henry Clay as 1 of the 5 outstanding Senators of all time. The selection was a chore of the first magnitude, as we said in previous comment, and it required a mountain of work and listening to another mountain of advice to arrive at a decision.

The other four Senators named by a special committee of which Senator KENNEDY was chairman: Daniel Webster, of Massachusetts; John C. Calhoun, of South Carolina; Robert M. La Follette, of Wisconsin; and Robert Taft, of Ohio.

The portraits of all five, as has been stated in the news columns, will be hung in the Senate reception room in Washington, with Kentucky's Henry Clay receiving the position of honor. Appearing in this editorial is a picture of the Henry Clay Statue in the Statuary Hall of the Capitol in Washington.

Henry Clay, born in Virginia in 1777 and a citizen of Kentucky 20 years later, was first elected to the United States Senate in 1806, before he reached his 30th birthday. He served as a Member in spite of a constitutional requirement that Members of the Senate should be 30 years of age. In the years to follow he served in both House and Senate, during most of his service in the House as Speaker.

Clay's record as Speaker of the House stood for many years and was broken only recently by the present Speaker, SAM RAYBURN, of Texas. As Senator MORTON, at the time a Member of the House, said in an address on the occasion:

"After holding the record for 100 years, Kentucky is obliged to yield to Texas."

We do not have the space here to recount the details of Henry Clay's career. He formulated and championed what was called the American system, based on a protective tariff for the Nation's infant industries. He was an advocate of aggression in the War of 1812 with England, and he was one of the commissioners who concluded the peace. Clay also was closely identified with the great compromise, a movement of 1850 which was the last important adjustment before the dispute between North and South erupted into war.

Clay, as students know, failed in his great ambition—a desire to reach the presidency, for which he was a candidate three times.

Henry Clay's memory is kept alive in many ways, among them the preservation of his home, Ashland, as one of the State's shines. College students from Hopkins and all other counties, in Lexington pursuing their education, visit Ashland and also read of Henry Clay and his times in the quiet of the public library.

The Clay family is one of the largest in Kentucky, and many members of the family have rendered outstanding service to Kentucky and the Nation over the years. All Kentuckians who are mindful of the honor which Senator KENNEDY and his associates have conferred upon the Clay name and upon the State chosen by Henry Clay for his home and career, will note with interest the news developments which will follow the announcement of the committee's selections.

The noted statesman and orator died in 1852, 105 years ago. To the many honors conferred upon him in his lifetime, this new one is added.

Secretary Benson Praised for Surplus Disposal Abroad

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. DIXON. Mr. Speaker, 2 years ago, I heard on the floor of the House accusations against officials of the Department of Agriculture for not having disposed of more of our surpluses abroad. In the light of evidence now available, nothing but praise should be given to Secretary Benson and his Department for the monumental surplus-disposal program they have carried out abroad.

This fiscal year our farm exports will be about $4½ billion—the highest year in history. This is almost $1 billion more than last year, representing the fourth successive year of increasing farm exports.

Yesterday, at the exhibit on moving surpluses and expanding foreign markets in the patio of the Department of Agriculture, Secretary Benson made the following comments which summarize some of these surplus-disposal accomplishments:

REMARKS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON AT EXHIBIT ON MOVING SURPLUSES AND EXPANDING FOREIGN MARKETS, IN PATIO, DEPARTMENT OF AGRICULTURE, MAY 9, 1957

It gives me great pleasure to welcome our distinguished guests and all of you to the opening of this exhibit. We are especially honored to have with us Members of the Congress and friends from the diplomatic corps of other countries.

We have an interesting and gratifying story to tell. I am sure that if you were to hear of an overstocked merchant in private business who, in an oversupplied market, nevertheless succeeded in reducing his inventory without crippling his business or jeopardizing the price structure—I am sure you would say this was an accomplishment of note. What the Department of Agricul-

ture has done in its surplus disposal operations over the past few years is equally noteworthy.

Before we tell that story, however, I want to take this opportunity to pay a warm and sincere tribute to the devoted men and women and organizations who have helped make the story possible—who have helped us distribute our excess abundance at home and abroad. To each and every one I express the appreciation of agriculture, of Government, and of a multitude of people—especially our farmers. I feel sure you have God's blessing in this noble work.

I think it is a noteworthy fact that we have moved out of storage and into use nearly $9 billion worth of farm surpluses through special programs in the past 4 years.

It is noteworthy that we have been able to hang up the "sold out" sign for a sizable list of commodities, including cottonseed oil, cottonseed meal, hay and pasture seeds, soybeans, linseed oil, and tung oil.

It is noteworthy that stocks of grain sorghums, rice, barley, butter, dried milk, and wool have been reduced to low levels.

It is noteworthy that United States farm exports have risen to the highest level in history. In this present fiscal year the total value of our farm exports will be about $4½ billion—almost $1 billion more than in 1955–56. This is the fourth successive year of increasing farm exports.

We have "swapped" a billion dollars worth of farm surpluses for strategic foreign materials and other defense needs.

We have sold agricultural exports for foreign currencies to 31 friendly nations—because they were short of dollars. New markets have thereby been opened. Many of these should later develop into dollar sales outlets because we have created a desire for our products abroad.

We are tooled up today to promote American agricultural exports much better than ever before. We have our agricultural attachés working in principal countries of the world. We have marketing specialists going out on special foreign assignments. We have special export programs. We have our export prices down to where they are competitive. World consumers are becoming increasingly prosperous and represent a better market—and we are making our farm products known to them through trade fairs and other promotions.

Yes, all this is indeed worthy of note.

In February 1956, the Commodity Credit Corporation had an investment in farm products of about $8.9 billion. By June 30, the CCC investment is expected to be down to about $7.5 billion. But this tells only part of the story. Without our successful disposal programs, the CCC investment might now be more than twice its present total.

This reduction in CCC surplus stocks is unique in that it is being accomplished in a world buyer's market. Twice before CCC inventories were greatly reduced—during World War II and during the Korean emergency—both wartime "seller's markets." In both these periods our surplus food and fiber were an important war resource. In both periods prices were rising and markets were expanding.

Today we are liquidating our stocks when there is no such emergency demand. Though it is true that Europe has been temporarily caught with short supplies of wheat and oil crops and the stoppage of traffic in the Sues has caused some shifts in import patterns, on the whole, this has been and remains a "buyer's market."

We increased CCC disposals of all kind from $520 million in fiscal 1953 to $2,723 million in fiscal 1956. In the current fiscal year disposals will reach the staggering total of nearly $4 billion—almost 8 times as much as in fiscal 1953.

How is the job being done? We have developed special distribution programs, such as the sales for foreign currencies and barter transactions I have mentioned. But, above all, we are emphasizing more and more exports for dollars. Our dollar sales now account for approximately two-thirds of all CCC disposals. Furthermore, the Corporation is recovering about 71 cents on the dollar from its dollar sales.

We are selling nearly all of our commodities on a competitive-bid basis. We have timed our programs so they will not interfere with agricultural seasons. We have coordinated the sales policy and operations of eight Commodity Stabilization Service offices throughout the country.

The result—and I am proud of it—is this: We are moving our inventory in an orderly manner and without adverse effect on domestic or world market prices.

This, obviously, is the best way to dispose of our surpluses. But where we are not able to sell or barter we feel strongly our responsibility to make constructive use of the abundance with which we have been blessed. Food is produced to go into stomachs, not into wasteful storage. So we have given away some of our surplus—donated foods to persons both in this country and abroad who don't get these foods, or who do not get enough of them. In the past year we've found good use in this way for nearly 3 billion pounds of our surplus foods.

We've initiated a special milk program to help reduce the surplus by making more milk available to our children.

I could bring you glownig accounts from teachers about what the milk program has meant. They have told us in some cases that the health of the children has improved, absenteeism has been cut down, and classroom accomplishment has been increased. More children are learning that milk tastes good. Today's program is helping to build tomorrow's market.

This is the same sound concept on which our national school-lunch program is so firmly founded. Every day nearly 11 million children take part in this program. It has become an important aid to their health and well-being. Every year it makes a market for nearly $500 million worth of farm products—a market which will continue into the future, continuing to grow.

I repeat, we in the Department and all of us interested in agriculurte owe our thanks to those who have helped make such a fine record for all these programs, the school-lunch supervisors and managers in this country, and the United States voluntary relief agencies for their magnificent work in distributing food to the needy abroad.

And surely I would be remiss if I did not pay a sincere tribute to the excellent performance of American industry in helping to expand markets for our agricultural abundance. The men and women of industry are the professional marketers of farm products. We in the Department of Agriculture have been happy to cooperate with industry. We have been glad to play the minor rather than the major role, to be the junior partner so to speak. We applaud American industry for what it has done. We say frankly that the improvement in the surplus situation is due largely to industry's accomplishments, and that the national economy is more secure because of the aggressive helpfulness with which industry has tackled its part of the job.

Finally, let me pay my sincere respects to the Members of Congress. They have provided legislation—the tools, you might say—for carrying out the great distribution job we are doing today. The surplus disposal legislation, the return of the agricultural attachés to this Department, the new opportunities being created for building bigger markets—these and the continuing programs that we administer represent the well-considered desires of Congress and the people.

By means of imaginative, bold market promotion, the foundation has been laid for larger outlets for United States farm products abroad and at home. We still have far to go. But I believe we have passed the peak of our surplus difficulties.

We look forward with hope—and with the knowledge that people in a large part of the world know better the products of our land.

School Aid—The Unfounded Argument

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial from the Wall Street Journal on the subject of Federal aid to education. It contains some interesting factual data.

The editorial follows:

THE UNFOUNDED ARGUMENT

Senator KNOWLAND, the Republican minority leader, had this to say about President Eisenhower's 4-year, $2 billion Federal aid to schools plan:

"My practical knowledge of Washington leads me to the conclusion that nothing terminates in 4 years. And I have never seen the Federal Government contribute money without wanting to exercise control."

There, in a nutshell, is the most cogent argument against the Federal aid school program.

It is, however, an argument that a great many people say can and should be discounted where a great need exists. And, proponents of Federal aid say, a great need for school construction does exist, and the burden of meeting the need is greater than the States and local communities can possibly bear without access to the Federal purse. Even Mr. Eisenhower, in his message to Congress on the school program, said: "It cannot now be said, realistically, that the States and communities will meet the need."

To meet this "need," Mr. Eisenhower proposed these steps, among others: Federal grants for school construction at the rate of $325 million for 4 years, or a total of $1.3 billion; authorization of $750 million over 4 years for Federal purchase of local school construction bonds when school districts cannot market them at reasonable interest rates.

We have no idea how Mr. Eisenhower's advisers arrived at these exact figures about what is needed if the Nation's public school system is not to fall part.

But we know that the figures are wrong, for we know that the starting point for the figures is wrong. And that point of departure is that the States and communities either will not or cannot meet their own responsibilities.

Realistically, it can be said—and proved—that the responsibility is being met. The Investment Bankers Association's statistical bulletin reports that for the 9-month period ending March 31 last, school bonds totaling $1,500,000,000 were sold by States and local communities, an alltime record.

Now, how does that compare to previous years? There are no exactly comparable figures, but the Federal Reserve Board's statistics on State and local government bonds sold for education purposes are close enough.

And for like 9-month periods, the picture looks like this: 1946–47, $136 million; 1949–50, $412 million; 1952–53, $778 million; 1955–56, $1.1 billion. These increasing expenditures for schools, as the IBA shows, on March 31 reached $1.5 billion.

Nor is that all; States, counties, municipalities, townships, and school districts all over the Nation were authorized by the voters in the first 3 months to spend $209 million for education, some of which bonds have not yet gone to market. And bond elections scheduled by taxpayers through November and already scheduled for yea or nay by the voters is another total of $429 million for education bond issues. Some will be rejected—and that is also a responsibility of the local taxpayers who know best what they need.

We hope somebody will put all these figures on the congressional blackboard where everybody can see them. For we think the figures will answer for a long time to come the unfounded argument about the need for Federal aid because the people back home are doing little or nothing to meet responsibilities that are theirs.

Ballistic Missiles

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 8, 1957

Mr. ANDERSON of Montana. Mr. Speaker, last night's paper quotes the President as being opposed to the Army development of intermediate range ballistic missiles because the Army would "have to request observation of the enemy situation" and "the only way the Army could find out is from the Air Force. This puts the Army squarely into the Air Force's business."

If you don't stop to think about it, this may seem plausible. If you do stop to think, you will realize that it doesn't make sense. I am sure the President realizes that our armed services integrate their efforts in many ways and that one of these has always been in the matter of intelligence and observation. Certainly, the President must know that the Air Force has responsibility for major air reconnaissance for the Army. The Air Force provides the air photos and reconnaissance for long-range artillery fire. Yet I have never seen where this has caused the Air Force to stake out any claim to develop, control, and operate the artillery. Reconnaissance and air photos of enemy front lines and bunkers are obtained for the Army by the Air Force, but I have never seen any of their personnel operating our mortars or putting a satchel or pole charge in a bunker embrasure. The Air Force is not automatically the monarch of all it surveys.

The Army has done a splendid job in the development of the missile, Jupiter, and should not be hamstrung in their efforts to continue its development and use. I think the Congress should go into the matter very thoroughly, checking on the charge that this is a move to turn the missile development over to General Motors as was done with tanks when Chrysler contracts were canceled and General Motors given the breaks. The Congress needs to determine whether the Air Force is seeking to take advantage of the fact that it has many of its spokesmen in high places in the administration. The Congress should determine whether or not a little competition between the services and a little more free enterprise might not be a good thing in developing the best missiles that can be had, at a time when the degree of success may determine the survival of our way of life.

This is too big a question to cover in this brief discussion, as there are many questions and the right answers are needed to insure survival of our country. I am asking that you reserve your decision until the facts can be brought out. Do not be swayed by a superficial off-the-cuff statement which begs the fundamental issues.

All Eyes Are Turning Down Pensacola Way

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 2, 1957

Mr. SIKES. Mr. Speaker, the Nation has reason to be proud of the fine historical background which is associated with Pensacola and northwest Florida. This recorded history dates from August 15, 1559, when Don Tristan de Luna landed his Spanish colonists in Florida at Pensacola in an attempt to establish a permanent settlement.

House Concurrent Resolution 117, which I introduced, commemorates this event, and has received the approval of the distinguished House Committee on the Judiciary, and will very soon be placed on the House Calendar. An identical resolution passed the House in the closing days of the last session, but was not acted on in the Senate.

Our pride in northwest Florida is not limited to historical background. Present developments are equally significant. A very fine editorial which effectively points out these facts was published recently in the Florida Times-Union from the pen of Caleb J. King, Jr., editorial page editor of that newspaper.

I take the liberty of including it in the RECORD at this point.

The editorial follows:

ALL EYES ARE TURNING DOWN PENSACOLA WAY

Federal participation in the 400th anniversary celebration to be staged in Pensacola 2 years hence would draw national attention to the project, and Representative BOB SIKES is sponsoring a resolution in the House of Representatives seeking such support from the Government in Washington.

The resolution says that on August 15, 1559, Don Tristan de Luna landed Spanish colonists at Pensacola. This feat of exploration and discovery often has been described as the first attempt to found a European settlement in Florida.

Federal participation in the event would not be difficult, inasmuch as there are a number of Government installations in northwest Florida from which personnel could be drawn to take part in the program. In Pensacola itself is the naval airbase, one of the first of its kind in the Nation. Nearby are Eglin Field and the Tyndall Airbase which have bulked large in the growth of that region.

In less than a quarter of a century, Fort Walton Beach, the center of much of the Air Force activity, has forged ahead from a mere recreation resort to a sizable city, an expansion which is also reflected in the growth of Panama City. Congressman SIKES' own Crestview also has felt the beneficial effects of this activity.

But if Pensacola is the capital of Armed Forces aerial expansion in that area, it is also the hub of an upsurge in industrial development. A day hardly passes that the Times-Union (on the stands at 6 a. m. in Chestview) doesn't announce that another industry has chosen Escambia County and its environs as the site for a new plant.

The national emblems which have flown over that city include the Spanish, French, Confederate, British, and American, but it is the latter flag, of course, under which Pensacola has prospered.

It is for the same reason that de Luna came in 1559 that industry is coming to Pensacola. Its land-locked harbor is described as the best on that section of the gulf coast, affording ready access to the world's trade routes. Santa Rosa Island, lying only a short distance off the mainland, adds to the value of this natural harbor.

As an outstanding testimony that such a thing as regionalism doesn't exist in Florida, the entire populace of the State should join in dynamic support of Federal participation in the celebration at Pensacola, a city which is a living symbol of the expression "New South." This would be a worthy means of declaring the leadership Florida is taking in a region of great potential growth.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 30, 1957

Mr. KEATING. Mr. Speaker, it is with pleasure and pride, touched with sadness, that I join in paying tribute to Rumanian Independence Day.

I join in this occasion with pleasure because it affords me the opportunity to express my admiration and esteem for the Rumanians who have contributed so much to the making of our world today, and those who remain firm in their love for freedom though imprisoned behind the Iron Curtain.

I join in this occasion with pride based on contacts in my home city of Rochester, N. Y., with many fine American citizens of Rumanian descent. They have contributed much to the progress of this city, as they have done in many cities across the country, enriching our national life with the particular traits and attributes which mark those of Rumanian extraction.

I join in this occasion with sadness because the people of Rumania, though

steadfastly clinging to their belief in liberty, are now denied any measure of that freedom which is the inherent right of every man. Yet, my confidence in the will of these people to be free is unbounded. The overlords of the international Communist conspiracy are learning this lesson well.

It is fitting, on the occasion of Rumanian Independence Day this year, that we in America look back on the many accomplishments of this Nation. But more than that, we in America are concerned with the present and future of these fine people.

To those behind the Iron Curtain we send our greetings and our fervent prayers for a brighter future. May the day be not too distant when these noble people will once more join with the United States and her friends in the family of free nations.

The Postal Service

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. BYRD. Mr. Speaker, the following article by Mr. W. C. Burton, which appeared in a recent issue of the Greensboro Daily News, is worthy of the attention of our colleagues:

PINCH THE POST OFFICE IF YOU DARE

(By W. C. Burton)

Let's open up the parcel-post window and the registered-mail window, along with the stamp and money-order windows, and ventilate this United States postal-service question. Let's permit some fresh air and reason, and some pretty strong feelings in the bargain, to play upon the subject for a while.

I don't know very much about the inner and intricate workings of the United States Post Office Department, so I can speak freely. And I can certainly speak with deep feeling. I have had my say about the post office once before, and what I said was, in essence, this: Don't mess around with the postal service; it's just about the best and most valuable and most important service that the Government has to offer.

I have such a mighty respect and such a powerful affection for the postal service that I always stand rigidly at attention and lick a stamp, as a sort of salute, a silent tribute, whenever its name is mentioned in my hearing.

It is my great daily adventure to go down to the post office every day; some days I go 2 or 3 times, to unlock my post-office box and see what the boys have stuffed into it. The novelty of this simple act never wears thin for me. What will be inside? A letter from some friend across the State or across the Nation? Will the box contain that tantalizing little rectangle of colored cardboard bearing the legend, "Call for package"? Will it hold an offer from someone who wants to send me, bless his generous heart, genuine hand-painted, wrinkleproof $5 neckties for a mere $1 apiece, 6 for $5? I am not immune even to those blandishments.

Each morning the daily paper is there, the tidings of all the known world wrapped in a few folds of newsprint and waiting for me in my post-office box, just because the post-office people are so nice and obliging that they place it there, without fail, early every day. At least once a week a check reposes in the box. The familiar envelope winks at me cordially through the numbered glass window long before I can insert and turn the key in the Yale lock. What a happy little cubicle the post-office box is on such occasions. Then I skip merrily from the post office to the bank, where I can make good most of the checks I wrote the week before.

And the magazines, the gay, colorful, fascinating magazines which sometimes seem to swell the box to bursting. And Christmas cards and Easter cards and birthday cards and all sorts of things, not to mention that most enthralling of all forms of literature, catalogs, all kinds of catalogs. Of course, it is true and it is only fair to mention it—the monthly bills are placed in my post-office box, too, but, then, nothing is perfect. We have to accept the bitter with the sweet.

Oh, I'll tell you, no man stands higher in my esteem than the fellow who invented the post office. He is a great hero in my private hall of fame, a tremendously large-hearted benefactor whose statue should grace every public park, public school, and pool-room.

Well, you can see how I feel about the United States postal service and you can understand how I blanch at the very thought that somebody is going to pinch the post office.

Now, Mr. Summerfield, I don't know you and I'm not taking up for you. What you did before you managed to wind up on the winning side and get this job you've got, I don't know. And, not meaning to be impertinent, I don't care. I guess you have done some good things and some bad ones. I like the new ballpoint pens. I like some of the new commonsense regulations on class matter. (When a dime-store label was regarded as a true voucher of a parcel's contents but the same assurance in a sender's own hand wouldn't do—boy, that was always ridiculous.)

I don't know what you did with all that money, Mr. Summerfield. Maybe you spent most of it wisely. I don't know. I doubt it, but I don't know. I know you must have spent several thousand dollars getting tacky little paper signs printed and put over the doors of your post offices—when the same wording "United States Post Office" was already emblazoned a block's length across the buildings, carved in granite or cast in bronze. Now that, in itself, Mr. Summerfield, is a prime example of a pretty silly way to run a post-office department.

The United States postal service has always been a superlative service, sometimes almost superhuman in its efficiency and persistence. I haven't noticed any spectacular changes that made me exclaim, "Boy, that little old Arthur Summerfield is really a crackerjack little old Postmaster General."

So, as I say, I'm not taking up for you, Mr. Summerfield. I'm taking up for the hundreds of thousands of post-office employees, the clerks, the carriers, the sorters, and fillers-out of forms; all the people who carry out this diverse and wonderful and far-reaching service so infallibly day after day, and will continue to do so though Summerfields may come and Summerfields may go with the winters of other times and terms.

I was in our post office here in our town the other day, and I noticed the glue in the old gluepot was mighty thin. I suspect that you are just watering the last administration's glue, Mr. Summerfield, and that kind of economy is not going to get you anywhere.

The boys in our post office have kept right on giving the same courteous, old faithful accommodations, economy or no economy. The other day I got a call-for-package card in my box. I presented it at the window. The clerk said "You haven't got a package—your wife phoned and said you'd better have the right front tire on the car checked; it's getting flat." That's the kind of service that no deficit can cut.

I don't think a stamp hike is the answer, either. We lost that bulwark of the American way of life, the penny post card. Must we surrender that engrained institution, the 3-cent stamp?

Look at it this way: The postal service is the Government's greatest, most amazing service to the greatest number of people. It pays much of its own way, besides giving free rent to the customs, internal revenue, 1 or 2 farm agencies, the Army, Navy, Air Force, and Marines.

Come on, Congress. With the very possible exception of Mr. Summerfield's salary, I am calling for pay raises and fresh glue all around.

Write It Off

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mr. VANIK. Mr. Speaker, it is about time that this country has taken a realistic approach to the real cost of the quick tax writeoff program haphazardly operated by the Office of Defense Mobilization to grant quick tax writeoffs to special friends of the administration.

In view of the current drive for a tax reduction for all taxpaying segments of the economy there is a very definite prospect that all tax writeoffs granted at this time will result in permanent tax loss to the Treasury of the United States.

Although Secretary of the Treasury George Humphrey has complained about the tax loss resulting from quick tax amortization and states that it has no fair or logical end, it was interesting to note in the insertion recently made in the CONGRESSIONAL RECORD by Senator WAYNE MORSE, of Oregon, that companies with which the Secretary's M. C. Hanna Co. is associated directly or by interlocking directorates, have received a bountiful share of quick tax writeoff certificates exceeding $1 billion. Although rumors persist that the Secretary will soon be leaving his public post, it is my guess that his departure from public life will not occur until adequate arrangements are established for an additional quota of so-called essential writeoff certificates to the steel industry, which apparently cannot do anything without getting a special tax benefit.

The following editorial in the Washington Post of today entitled "Write It Off," is directly on point:

WRITE IT OFF

The fast tax writeoff has no proper place in a peacetime economy. In a mixed economy like that at present, this special inducement should be available only where it is essential to support a specific defense production goal. This has been the general philosophy which has lately prevailed, for the most part, in the administration of the rapid aamortization program set up for the Korean emergency.

Senator BYRD proposes to reinforce the curtailment on the fast tax writeoff by law. President Eisenhower and Secretary of the Treasury Humphrey support the Byrd pro-

posal in principle. But Defense Mobilizer Gordon Gray would like to retain a fuller measure of administrative flexibility so that the quick writeoff would be available on standby to meet sudden defense needs.

Quite aside from the substantial cost to the Treasury of rapid amortization, which could be justified in an emergency, the evil of this program is that it cannot possibly be applied equitably and invites an unending series of pressures from various industries for tickets on the gravy train. The most determined administration of the present law is bound to break down under some of these pressures—as, seemingly, in the case of the Idaho Power Co. which has been granted fast writeoff certificates for its dams to be built in lieu of the Hells Canyon project, on the justification that the same benefits were earlier given to others.

Such a policy, as Secretary Humphrey notes, has no fair or logical end. For this reason, we think the temptations inherent in standby authority ought to be removed by law. If a real emergency arose, a new program could and would be quickly provided by Congress.

A Tribute to Rumanians

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mr. DINGELL. Mr. Speaker, for Rumanians May 10 is a great national holiday. On this day in the year 1866 Prince Charles arrived in Bucharest where he took the oath to the Constitution. Eleven years later on the same day Rumania proclaimed her complete independence from Turkey, and a short time thereafter heroically won that independence on the battlefield. And then, on the same date at the close of World War I, Bessarabia, Transylvania, and Bukovina were finally united with Rumania.

Americans of Rumanian origin have good reason, therefore, to commemorate the anniversary of these great landmarks in history. Unfortunately, not all Rumanians can celebrate this national holiday in freedom, for as you all know this once happy and prosperous people are now ruthlessly suppressed beneath the boot of the Communist tyrant. During this past decade, however, the Rumanians have had to adjust to this tyranny and live their lives as best they could under unnatural conditions. Recent reports from Bucharest indicate that the hardships visited upon Rumania by the Communists have been great, but nonetheless the people persist in survival.

Politically, Rumania continues to be dominated by the Soviet-imposed dictatorship of the Communist Party. Elections in February, staged in the Soviet manner, demonstrated the totality of Communist control. Dissent was impossible for the 10,800,000 voters who went to the polls.

Nor has Rumania's economy been spared the disastrous consequences of Soviet control. Fertile and oil-rich Rumania is being exhausted by her Communist masters. Savings by the people have been repeatedly wiped out by currency devaluations. Mounting inflation has put the cost of consumer goods beyond the reach of the workers. Food costs are high, and currency is evaluated at an unrealistic rate of exchange so that the meager earnings of the worker have no sensible relationship to actual purchasing power.

And yet, despite this continuing state of general depression, Rumanians have not succumbed to despair. A recent report from Bucharest by a skilled American correspondent related that the Rumanian capital was a joy after living in Moscow. Neither Communist trappings nor thinly concealed poverty could rob Bucharest, he said, of its cosmopolitan air. Resources of personal attire are shoddy and few, he wrote, but Rumanian women dress in taste and style unknown in Moscow. He reported also that residents of Bucharest, despite their present despondency, show an animation rarely seen in the stolid faces of Moscovites.

It is a hopeful sign that Rumanians are weathering the storm of Communist oppression. They are a hardy people, long used to oppression under the Turks. Our hopes and prayers go out to them that their national spirit shall never be broken. So long as they hold fast to this spirit, the soul of the nation will live. And so long as the nation lives, there is always hope for freedom and independence.

President Ngo Dinh Diem, of Vietnam

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. ZABLOCKI. Mr. Speaker, I want to express my personal pleasure over the visit to our Nation's Capital by President Ngo Dinh Diem, of Vietnam, and to join with my colleagues in paying tribute to the achievements of this outstanding democratic leader of southeast Asia.

In 1953 and again in 1955, I had the opportunity to study the situation in Vietnam as a member of special study missions to that country. I vividly recall the black outlook and the almost insurmountable problems which faced President Diem when he took his office.

Because I well realize the gravity of the crisis which he has weathered, I am particularly impressed by the remarkable progress achieved by Vietnam under his leadership.

Whereas just 3 years ago apathy, disorder, and depression prevailed in that land, today Vietnam is playing a vigorous and a vital role in stemming the tide of communism in southeast Asia. Inspired by the courageous leadership of President Diem, the people of Vietnam—with the constructive aid of their loyal friends in the United States—have not only managed to solve many of their pressing internal problems but they have in addition offered a brilliant example to the other peoples of Asia.

In recognizing the vital role which President Diem has played in these impressive developments, I also want to express my deep respect for President Diem whose modesty, stanch belief in the victory of the cause of truth and freedom, undaunted courage and tremendous effort have helped to write a new and a bright page in the history of his people and of his country.

The Weak Case of Alger Hiss

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, Alger Hiss is now offering excuses and they are weak ones for his conviction as a perjurer. Under leave to extend my remarks, I am including the following editorial entitled "Popular Emotional Aberrations":

POPULAR EMOTIONAL ABERRATIONS

Alger Hiss has written a book called "In the Court of Public Opinion" in which he lays his conviction for perjury to popular emotional aberrations—a $10 phrase meaning everybody was so mixed up they went off half-cocked and sent him to jail.

We suppose this could happen; but let's see how Mr. Hiss says it occurred:

First, there was a plot in 1948 by the Republicans on the House Un-American Activities Committee to strike at the Democrats by disgracing Mr. Hiss and thus discrediting the New Deal, the Yalta agreement, and the United Nations. The handful of Republicans aroused feeling against him by deliberately heightening an anti-Communist climate of public opinion. This, Mr. Hiss says, created such pressures that the Democrats tried and judged him, and some jurors were openly hostile and some lobbied with fellow jurors against him. Whittaker Chambers lied and the FBI gathered evidence and questioned people improperly. Thomas F. Murphy, a Democrat, prosecuted him unfairly and Judge Goddard, a Republican, prevented Mr. Hiss from having an unbiased trial. And the jury, Democrats and Republicans, convicted him.

Thus was began as a plot by some Republicans on a House committee to make trouble for a Democratic administration was so successful that the Democrats joined in the hue and cry, and the judicial system of the Nation—from the district court in New York through the appellate court and up to the Supreme Court—was so taken in by the GOP that Mr. Hiss became a sacrifice to the popular emotional aberrations of the time. It was just politics.

Well, we suppose all that could happen, too. But let's see what did happen. Mr. Hiss had a number of defense lawyers there to present his side; the judge and the jurors saw all the evidence in the case and Mr. Hiss was convicted. He appealed his case and a court of appeals (three Federal judges) upheld the conviction. And the United States Supreme Court twice found no grounds to review the second trial conviction and Mr. Hiss served his time for perjury for denying that he had engaged in Communist espionage.

Though he exercised every right that safeguards a man on trial and every appeal that safeguards a convicted man from judicial

error, Mr. Hiss has a right also to appeal to the court of public opinion.

We don't think that he has helped his case very much, though, by attacking a judicial system that protected him from both bias and error on the ground that emotion swayed both jurors and judges. In the last analysis, the misfortunes of Alger Hiss were caused only by Alger Hiss.

Budget Fight

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the New York Times of May 5 emphasizing the importance of not permitting the very necessary pursuit of economy in Government to impair the operation of the national-defense programs:

BUDGET FIGHT

The big fight over the 1958 budget is now well underway, and the big danger is that Congress will cut it in the wrong places and for the wrong reasons. The President, belatedly, to be sure, is showing increasing signs of concern that his budget will be unwisely slashed; and a few of the "Eisenhower Republicans" in the Senate—there are not many of them, at best—are rallying round to his defense.

That the $71.8 billion budget should have occasioned cries of anguish from conservatives in both parties is hardly a surprise, as it is the largest in peacetime history. But so is our gross national product, and so are the demands on Government.

Nevertheless, there unquestionably is water that can be squeezed out of this budget, and the President implicitly admits this even as he defends the budget as a whole with welcome vigor and new-found conviction. But it is essential for the welfare and the very security of this Nation that the cuts not be made haphazardly, thoughtlessly, or for political reasons, as too many Members of Congress are apparently inclined to do.

For instance, mutual aid provides a tempting target. As the President noted the other day in his talk to representatives of that most useful organization, the League of Women Voters, "foreign aid doesn't have any pressure group in any Congressman's district. It is something that has to depend on the intelligence of the American people, and not on selfish interest." Indiscriminate or across-the-board cuts in this $4.4 billion program would be the worst kind of economy, ultimately leading to larger expenditures than ever.

While similar caution should also be applied to the $38 billion allocated to the Defense Department, here it would seem that some effective squeezing might be done without harm to anything but the pride of one or another of the military services. It is difficult for laymen to pinpoint possible economies in anything so technical as a defense budget; but we note that even so careful a man as Representative MAHON, of Texas, chairman of the House Military Appropriations Subcommittee, declared a week ago that the unwholesome and very wasteful rivalry among Army, Navy, and Air Force had gotten out of hand and was leading to constant demands for more money, more programs, and more duplications, particularly in the missiles field. Here might be a good place to take a second, third, or even a fourth look with an eye to effecting economies without risking weakness.

As the President has said, Congress itself could through orderly legislative action curtail some large expenditures that are now required by law. We would suggest that unwise and uneconomic farm supports should be placed in this category. Whether budgeted or not large-scale capital improvements much better suited to a time of depression than to an era of ultraprosperity could be slashed without harm to the national economy, such as the pork-barrel omnibus rivers and harbors bill, amounting to $1.5 billion, that was recently passed by the Senate and is now in the House. We would also point to the gigantic Fryingpan-Arkansas reclamation project, just approved by the Senate Interior Committee, that would take water from one side of the Rocky Mountains and put it on the other for irrigation and other purposes at tremendous public cost. We have not noticed that Congress is in any hurry to adopt badly needed reform budgeting and accounting procedure as recommended by the Hoover Commission, though the suggested improvements would undoubtedly in the long run save hundreds of millions of dollars.

Economies could and should be made, but they ought to be made in areas where the Nation can afford to make them, and with sufficient care so that no essential national interest will be seriously impaired. This is a harder job to do than to make sweeping reductions for political effect; but it is a job that can be done.

Navigation and Use of the Suez Canal a Brilliant Legal Argument

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, considerable lipservice has been paid to our reliance upon international law as a rule of conduct between nations. Is it not strange therefore that we find our own Government and others, too, who have failed to challenge the legality of the Egyptian nationalization decree.

Mr. Speaker, as part of my remarks I am including a speech of Hon. George A. Finch, prominent member of the Washington bar and known throughout the United States for his knowledge of international law, delivered before the American Society of International Law in Washington on April 25. For the Members of this House who are lawyers, I am sure that they will find this presentation by Mr. Finch extremely interesting:

NAVIGATION AND USE OF THE SUEZ CANAL

(By George A. Finch, president of the Inter-American Academy of Comparative and International Law)

When the American Society of International Law was founded 51 years ago to promote the establishment and maintenance of international relations on the basis of law and justice there were many more skeptics than believers in that aspiration. Today world opinion is overwhelmingly opposed to the use of armed force to settle international disputes, certainly to the point that an offer of peaceful settlement should be made and refused before nations draw the sword in their legitimate right of self-defense. President Eisenhower's condemnation of the armed attack upon Egypt last fall represented an official expression of this generally accepted opinion; but the provocation for that attack continues to be the most imminent threat to the maintenance of peace on the basis of law and justice.

The aggression at the Suez Canal was triggered on July 26 last by the precipitate and legally unjustifiable act of the President of Egypt purporting to nationalize the Suez Canal Co. The decree transferred to the Egyptian Government all the company's assets, rights, and obligations and dissolved "all the organizations and committees that now operate its management" (art. I). The canal itself was, of course, the most valuable asset of the company. In plain language, the concession under which the canal was built and has been successfully operated for 88 out of a definitely agreed term of 99 years, to the mutual benefit and advantage of both parties to the concession contract, was arbitrarily abrogated, the company was dissolved, and its property confiscated by the Egyptian Government.

The offer of the Egyptian Government, if carried out in good faith, to indemnify the stockholders in accordance with the value of the shares shown in the closing quotations of the Paris Stock Exchange on the day preceding the confiscation was inadequate. It did not take into account the worth of the unexpired term of the concession, and no assurances were given as to the time or method of payment of the proposed compensation. The confiscation decree specified only that "the payment of said indemnity shall be effected after the nation has taken delivery of all the assets and properties of the nationalized company." An offer to indemnify the owners from the proceeds of their own property might properly be considered unjust enrichment of the expropriator according to our legal standards.

The concession provides that at its expiration, when the Egyptian Government might lawfully resume possession of the canal it would be the responsibility of the Government "to take over all materials and supplies used in the company's maritime service and in return to pay the company the value to be fixed, either by amicable agreement or on the basis of an opinion of experts" (art. XVI). The Egyptian Government cannot relieve itself of that responsibility by unlawfully terminating the concession.

There is no proper analogy of the so-called nationalization of the Suez Canal and the nationalization laws of other countries duly enacted incident to social and economic reforms. The Suez Canal is so impressed with an international public use that it was not subject to the exercise of the right of eminent domain for purely internal purposes by any party to the Convention of Constantinople of 1888. In a tripartite statement issued at London on August 2 the Governments of France, the United Kingdom, and the United States officially asserted that "the Universal Suez Canal Co. has always had an international character in terms of its shareholders, directors, and operating personnel, and in terms of its responsibility to assure the efficient functioning as an international waterway of the Suez Canal. In 1888 all the great powers then principally concerned with the international character of the canal and its free, open, and secure use without discrimination joined in the treaty and convention of Constantinople.

"This provided for the benefit of all the world that the international character of the canal would be perpetuated for all time, irrespective of the expiration of the concession of the Universal Suez Canal Company. As recently as October 1954," the statement continued, "Egypt recognized that the Suez Canal is 'a waterway economically, commercially, and strategically of international im-

portance,' and renewed its determination to uphold the Convention of 1888." [1]

The circumstances under which the canal was seized and the reasons given for its seizure fail to bring this so-called act of nationalization within the sphere of what may be considered justified governmental action to promote internal social and economic reform. The record shows that the Egyptian decree of July 26, 1956, was an act of retaliation against the Governments of Great Britain and the United States for their declination to extend financial help to Egypt to build the high dam on the Nile River at Aswan, and the seizure of the canal was for the purpose of providing Egypt with substitute finances to build the dam.

The concession stipulates that "disputes which arise between the Egyptian Government and the company will be placed before local courts and decided according to the laws of the country." The record is devoid of any evidence that the Egyptian Government took any action in its courts against the company as a preliminary step to the abrogation of the concession.

The impact of the arbitrary action of the Egyptian Government upon those who still believe in the validity of contracts made by sovereigns is sought to be minimized by arguing that the nationalization applied only to the company and not to the canal. No one has ever contended that the Suez Canal Company is of any nationality other than Egyptian. The decree of nationalization refers to the company as already being an "Egyptian stock company." Why, then, the decree of nationalization if it was to apply to the company alone?

The argument is likewise untenable in the light of President Nasser's speech at the time he announced his decree of July 26. "This canal is an Egyptian canal. * * * Today, citizens," he declared, "our rights in the Suez Canal have been restored to us after 100 years." Again, "The Suez Canal was built for the sake of Egypt and for its benefit; * * * today, our wealth has been restored to us." [2]

Communist admirers and supporters of President Nasser attempt to maintain that his action was no breach of international law on the ground that the treatment of the company was a purely internal Egyptian matter over which that Government had exclusive control as a sovereign nation. In the view of this speaker, that position is also inadmissible. It is not a rule of international law that sovereignty confers immunity to violate international obligations. Sovereignty imposes duties as well as rights, including the exercise of good faith in the fulfillment of contracts legally made by governments with private concessionaires, as well as in the observance of the obligations of solemn treaties.

"Every nation, on being received, at her own request, into the circle of civilized governments, must understand that she not only attains rights of sovereignty and the dignity of national character, but that she binds herself also to the strict and faithful observance of all those principles, laws, and usages which have obtained currency among civilized states. * * * No community can be allowed to enjoy the benefit of national character in modern times without submitting to all the duties which that character imposes." [3]

Germany relied upon the same argument to justify on the ground of sovereignty her refusal to allow the steamship *Wimbledon* to pass through the Kiel Canal. The Kiel Canal was built by Germany within German territory, and it was conceded before the Treaty of Versailles that the canal was an internal canal under the exclusive control of the territorial sovereign. On the application of several governments parties to the Treaty of Versailles, who invoked article 380 of that treaty, the Permanent Court of International Justice decided against Germany's contention, holding:

"The Court declines to see in the conclusion of any treaty by which a state undertakes to perform or refrain from performing a particular act an abandonment of its sovereignty. No doubt any convention of this kind places a restriction upon the exercise of the sovereign rights of the state, in the sense that it requires them to be exercised in a certain way. But the right of entering into international engagements is an attribute of state sovereignty." [4]

Notwithstanding the repeated disclaimers of the Egyptian Government that it has no intention to disregard the obligations of the Treaty of Constantinople of 1888, it is impossible to separate the legal issues raised by the cancellation of the company's concession, under the circumstances and for the reasons given for that act, from the relevant provisions of the convention.

The antecedents of that convention date back to the war between Russian and Turkey of 1877–78. At that time the Suez Canal was in Turkish—and therefore belligerent—territory. The Institute of International Law, at its session at Zurich on September 13, 1877, appointed a committee to study the methods by which the canal might regularly and finally be withdrawn from the jurisdiction of the common law of war. Following the recommendations of that committee, the institute, at its session at Brussels on September 4, 1879, adopted a resolution which declared: "It is of general interest to all nations that the maintenance and use of the Suez Canal for all kinds of communications shall be protected as much as possible by conventional international law." The resolution proposed "that States unite with a view to avoiding as much as possible any measure which may damage or put in danger the canal and its appendages even in case of war." [5]

The Convention of Constantinople, eventually concluded in 1888, follows closely the recommendations of the institute. The preamble states the intention of the signatories to establish, "by a conventional act, a definite system intended to guarantee, at all times and to all the powers, the free use of the Suez Maritime Canal, and thus to complete the system under which the navigation of this canal has been placed" by the firman of the Sultan, dated February 23, 1866. It refers to the convention as "sanctioning the concessions" of the khedive of Egypt. In addition to stipulating for the free use of the canal "in time of war as in time of peace, to every vessel of commerce or of war, without distinction of flag," the convention provides for the neutrality of the canal in time of war.

The convention requires the Egyptian Government, within the limits of its powers, to take the necessary measures for enforcing the execution of the treaty (art. IX), and charges the agents of the other signatory powers in Egypt "to see that it is carried out" (art. VIII). Oppenheim classifies the Treaty of Constantinople as "a pure law-making treaty," and he construes article VIII as establishing an international commission "for the supervision of the execution of that treaty." [6]

In flat contradiction of the pretensions of President Nasser that "the Suez Canal was built for the sake of Egypt and for its benefit," article XII of the Convention of Constantinople provides:

"The high contracting parties, by application of the principle of equality as regards free use of the canal, a principle which forms one of the bases of the present treaty, agree that none of them shall seek, with respect to the canal, territorial or commercial advantages or privileges in any international arrangements that may be concluded."

It is submitted that the Egyptian Government cannot within the accepted principles of international law applicable to the interpretation of the convention abrogate the international arrangements under which the canal was built and has been operated and protected for the last 88 years in order to subvert the canal to her own internal advantage. The motive of "territorial or commercial advantages or privileges," to repeat the words of article XII, for the abrogation of the international arrangements with the Suez Canal Co., sanctioned by the Treaty of Constantinople, is conclusively shown in President Nasser's speech announcing the so-called decree of nationalization. In addition to his braggadocio, already quoted, he linked the nationalization of the company with the building of "a strong and dignified Egypt, the Arab Egypt," industrialized and capable of competing with those who "used to suck our blood, our rights, and take them." "Citizens, today," he declared, "we are conscious of accomplishing glories and achieving true dignity. Sovereignty in Egypt will belong only to her sons."

The pretensions of President Nasser were answered by the three powers in their London statement of August 2, in which they said:

"They do not question the right of Egypt to enjoy and exercise all powers of a fully sovereign and independent nation, including the generally recognized right, under appropriate conditions, to nationalize assets, not impressed with an international interest, which are subject to its political authority. But the present action involves far more than a simple act of nationalization. It involves the arbitrary and unilateral seizure by one nation of an international agency which has the responsibility to maintain and to operate the Suez Canal so that all the signatories to, and beneficiaires of, the treaty of 1888 can effectively enjoy the use of an international waterway upon which the economy, commerce, and security of much of the world depends. This seizure is the more serious in its implications because it avowedly was made for the purpose of enabling the Government of Egypt to make the canal serve the purely national purposes of the Egyptian Government, rather than the international purpose established by the Convention of 1888." [7]

The Egyptian defiance of international obligations is violative of another longstanding principle of international law. The Declaration of London of January 17, 1871, states: "It is an essential principle of the law of nations that no power can liberate itself from the engagements of a treaty, nor modify the stipulation thereof, unless with the consent of the contracting powers by means of an amicable arrangement."

The United States is not a party to either the canal concession or the treaty of 1888, but both stipulate for the free and equal use of the canal by all nations. Under international law that stipulation enures to the benefit of nonsignatories. [8] On the day following the publication of the Egyptian nationalization decree the United States Department of State made public an announcement in which it was said that "the seizure of the installations of the Suez Canal Company carries far-reaching implications. It affects the nations whose economies depend upon the products which move through this international waterway and the maritime countries as well as the owners of the Company itself." [9]

There has been no direct challenge to the international legality of the Egyptian na-

tionalization decree as it affects the property rights of the Company. All steps taken have been directed toward a negotiated political settlement with Egypt. The provisions of the United Nations Charter for the settlement of legal questions have not been invoked. Are the governments of the West no longer able or willing to speak in defense of the rights of private property? The decline of western support of this fundamental human right was pointed out by the Chairman of the United Nations Human Rights Commission in 1952. Mr. Charles Malik, of Lebanon, the Chairman of the Commission for that year, wrote:

"The concept of property and its ownership is at the heart of the great ideological conflict of the present day. It was not only the Communist representatives who riddled this concept with questions and doubts, a goodly portion of the non-Communist world had itself succumbed to these doubts. A study of this particular debate will reveal the extent to which the non-Communist world has been communistically softened and frightened. It seems incredible that in these economic matters, which reflect, indeed, much more than mere economic divergencies, the Western World is so divided on itself as to be incapable of presenting a common front against communism." [10]

According to the Charter of the United Nations, the Security Council may recommend appropriate procedures or methods of adjustment of any dispute the continuance of which is likely to endanger the maintenance of international peace and security. It is specifically provided that in making recommendations the Security Council should "take into consideration that legal disputes should as a general rule be referred by the parties to the International Court of Justice" (art. 36). Legal disputes are defined by the corresponding provision of the Court's staute to include disputes concerning (a) the interpretation of a treaty, (b) any question of international law, (c) the existence of any fact which, if established, would constitute a breach of an international obligation, and (d) the nature or extent of the reparation to be made for such a breach (art. 36).

It is immaterial, in our view, when the Security Council recommends what it considers the appropriate method of peaceful settlement, that any or all of the members of the United Nations involved in the dispute should have accepted the so-called optional clause incorporated in article 36 of the statute of the Court. The first paragraph of that article reads: "The jurisdiction of the Court comprises all cases which the parties refer to it and all matters specially provided for in the Charter of the United Nations or in treaties and conventions in force."

President's Nasser's refusal to agree to a political settlement and the failure to bring him to the bar of international justice before the principal judicial organ of the United Nations permitted him to stand before the world as an innocent party. The ill-considered policy of the governments of Great Britain and France, in resorting to force and not to legal remedies after the peaceful political overtures to President Nasser were rejected, subjected them instead of Egypt to condemnation by the United Nations and the world at large.

It cannot be denied that the Suez Canal dispute in all of its elements falls squarely within the definition of justiciable disputes laid down in the United Nations Charter. A refusal by Egypt to comply with a recommendation of the Security Council to refer the dispute in its several aspects to judicial settlement by the International Court of Justice would have kept the stigma of aggression where it originated and properly belongs, namely, upon those who seized the Suez Canal in violation of the obligations of an international contract and treaty.

It is logical to ask, what might have happened if Egypt refused to appear before the International Court or to accept a decision of the Court adverse to her position? In such case, in my opinion, the complaining states would have met the requirements of world opinion for the maintenance of international relations on the basis of law and justice, the object to which this society is dedicated. The same force of public opinion could be relied upon to support such sanctions as might be deemed to be necessary by the United Nations to fulfill its most important function, that of removing threats to world peace.

Huge Tax Windfall for Idaho Power Co.

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 10, 1957

Mr. DINGELL. Mr. Speaker, I recently received a letter from the National Rural Electric Cooperative Association telling how the Idaho Power Co. is about to get a huge windfall from the Federal Government in the form of accelerated tax amortization conferring on that company an interest-free loan of about $30.5 million, and enabling it to collect a total subsidy of $329 million for the construction of the Brownlee and Oxbow Dams. That figure will, of course, be 3 times in excess of their total cost and far in excess of the $308 million which would be required for full Federal development.

It is interesting to note that the president of the Idaho Power Co. said that the dam was to be constructed with the money of Idaho Power and without a cent of cost to the taxpayers of the United States.

It now appears, however, that his words did not reflect the real situation at all. But rather, that the pure capitalistic enterprise of which he thought so much is to be diluted with the taxpayers' money. It is not necessary to say that it would be better that this pure capitalistic enterprise, if it must be carried out to the detriment of the people of the Northwest and of the United States, be carried out without dilution and not have one socialized cent of the money of the Government of the United States or its taxpayers in to corrupt its great capitalistic purpose. I insert a letter giving the full facts and hope that the people of the United States and the Congress of this great country will give some attention to a big steal which is going on in the Northwest.

The letter follows:

NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION,
Washington, D. C., April 29, 1957.

DEAR MEMBER OF CONGRESS: Attached is a copy of a small pamphlet which a number of organizations have had produced for the purpose of summarizing the issues and the facts in the struggle of our organizations to prevent the Idaho Power Co. from destroying almost half of the power potential and other major benefits to be had from Federal construction of Hells Canyon Dam.

Since this pamphlet was prepared two absolutely incredible developments have taken place, the developments in strange juxtaposition. (1) On April 24 the Federal Power Commission authorized the Idaho Power Co. to issue $40 million in short-term promissory notes to finance the construction of its dog-in-the-manger, run-of-the-river runt dams on the Snake River. (2) On April 25, the following day, the Office of Defense Mobilization issued accelerated tax amortization certificates to the power company, thereby granting to that company an interest-free loan of $30,500,000 and enabling it to collect a total subsidy of $329 million for the construction of Brownlee and Oxbow Dams, three times their total cost. This $329 million subsidy contrasts brutally with the $308 million investment required for full Federal development, an investment which is not a subsidy but repayable in full with interest.

Under oath, during the Federal Power Commission hearings, R. P. Parry, president of the Idaho Power Co. said: "The applicant is here before you asking the privilege of constructing solely with its own money and without one cent of cost to the taxpayers of the United States a great multipurpose project * * *."

In advertisements published all over America, the power companies boasted that they would save taxpayers $465 million and that "they (private power companies) don't have to wait for an act of Congress or for tax money from the Treasury." (See Saturday Evening Post, May 26, 1956, p. 16.)

That the Office of Defense Mobilization would approve this subsidy on the basis of applications pending since 1953, applications for two projects whose relationship to defense is so remote that it has never been used by the company as a justification for FPC licensing almost defies belief.

There is no justification in the world for destroying close to half the potential benefits of the middle Snake River with a $329 million public subsidy when by the investment of $308 million, repayable with interest, and without subsidy, we can have full development, low-cost power, maximum flood control, and development of low-cost phosphate fertilizers.

Nor is there any reason why the people, or, it seems to me, the Congress, should tolerate the kind of interagency collusion which has led to this revolting deal.

We urge you most strongly to press for quick committee action on the Morse-Pfost and other similar bills, get them to the floor, and by a vote of approval tear this black and infamous page from the history of this Nation.

Sincerely,

CLYDE T. ELLIS,
General Manager.

Rumanian National Independence Day

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 10, 1957

Mr. VANIK. Mr. Speaker, today Americans everywhere join with Americans of Rumanian descent in celebrating a significant date in the annnals of the history of the Rumanian people. In 3 separate years May 10 was the date on which major steps were taken to obtain greater measures of liberty for the Rumanian people. On May 10, 1866, a liberal constitution was adopted. On May 10, 1877, a convention was signed with Russia which recognized Rumania's desire for a greater degree of freedom and self-rule. On May 10, 1881, the complete sovereignty of the Rumanian people was finally established.

On this May 10, while American Rumanians may look back with justifiable pride at the freedom which their brothers in Rumania once fought for and won, they can only look ahead in the hope that freedom once attained may return to the Rumanian people now suffering oppression.

At this time it serves us well to reevaluate the plight of a people who yearn for liberty but who suffer the shackles of tyranny and to reexamine our resolve that the integrity and freedom of the Rumanian people will be returned.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Hon. William F. Knowland, of California, at American Legion Founders Day Luncheon

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech I delivered on last Saturday, in St. Louis, Mo., at the American Legion Founders Day luncheon, commemorating the founding of the American Legion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR WILLIAM F. KNOWLAND, AMERICAN LEGION FOUNDERS DAY LUNCHEON, ST. LOUIS, MO., MAY 11, 1957

Comrade Commander, today we commemorate the founding of American Legion in this city in 1919.

This organization of 3 million has made notable contributions to our Nation in both war and peace.

As Americans it is important that we take sufficient time to review the past, examine the present, and try to plan for the future.

It was Lincoln, in his house divided speech, who said:

"If we but knew where we are and whither we are tending we could better judge what to do and how to do it."

It is time for us to rededicate ourselves to a renewed faith in our free way of life.

We must not take our constitutional form of government or our free enterprise system for granted. Neither fall into the category of something that can be locked in a safe deposit box and kept forever secure. Each generation must be prepared to make the necessary sacrifices to maintain them that our Founding Fathers were prepared to make in the first instance.

Other nations have been or now are larger in land area, in population, and in natural resources. Yet they have not been able to give to their people the freedom and the standard of living Americans have enjoyed.

As important as is the productive capacity of our Nation and its military strength, these are not the factors which alone could preserve our freedom or enable us to maintain a free world of freemen. The inner strength of America has not been its great cities, its huge industrial plants, its extended transportation systems, or its variety of natural resources as important as these are.

The factor which made America an inspiration to the rest of the world grew out of our Declaration of Independence, the Constitution of the United States, and the spiritual values which the founders of our Republic recognized and by which they were guided.

We have recognized that there is a higher moral law to which governments are also accountable. We have humbly acknowledged the divine inspiration which has made and preserved us as a Nation.

We have read of and been inspired by the action of George Washington in kneeling in prayer during the dark days of Valley Forge and of Lincoln doing the same during his lonely vigil in the White House during the darkest days of the Civil War.

The priceless ingredient for our people has been our constitutional form of government which guarantees our religious, personal, and economic freedom.

We must never dilute our constitutional guaranties whereby human freedom would be compromised with totalitarian tyranny in any form of world government.

America is still the authentic revolution. The flame of freedom which was struck at Concord and Lexington still is an inspiration to the enslaved behind the Iron Curtain.

But it is also an ageless lesson that no outsiders can win independence for a people. They must be willing to pay the price in blood and resources to gain their own freedom.

We do recognize, however, that when freedom is destroyed anywhere a bit of freedom is destroyed everywhere.

Nations can die while delegates talk. Last year the General Assembly of the United Nations passed 10 resolutions in 76 days of debate. All that while freedom was being strangled to death in Hungary. With callous indifference the Soviet Union placed itself above the higher moral law of God as well as above its obligations under the United Nations Charter.

No international organization can long endure with a double standard of international morality.

Are the obligations and the mandates of the United Nations to be applicable to the democratic nations but not to the totalitarian powers? To the law-abiding but not to the outlaw nations? To the small and weak countries but not to the big and strong? What kind of justice is this? Are we building on quicksand? What kind of a foundation is this for constructing a system of international law and order based on justice?

We serve no useful purpose if we hide the facts. To the contrary by ignoring them and failing to seek remedies, we may endanger the safety of this Republic and freemen everywhere.

For many decades the men in the Kremlin have preached the doctrine that the free world contains the seeds of its own destruction. It is far more likely, I believe, that the Communist world contains the seeds of its own destruction.

Hungary was but the latest in the indications that, even under totalitarian police rule and the brainwashing of a whole generation, the spark of freedom still lived and was capable of lighting a fire that endangered the whole monolithic structure of Communist tyranny.

After the Hungarian experience, how much reliance can the Soviet Union place in the armed forces of the other captive nations if freedom is ever within their reach? How can they have faith in Communist indoctrination when young students were the leaders of the Hungarian rebellion?

Within the past several weeks the rulers in the Kremlin have sought to intimidate Norway, Denmark, Greece, and Iceland.

The Soviet Union has not changed its long-term strategic onbjective. The destruction of human freedom everywhere.

They will be relentless in seeking to destroy our institutions. Fortified by our faith in God, we must be determined that our way of life will be preserved.

Hungary has also taught the world that unless an independent government or revolutionary movement can function for several weeks or months it is difficult for outside friends to assist.

Had the British redcoats crushed the first American rebellion in a week and captured the leaders (as happened in Budapest), there would have been no time for France and our other friends abroad to come to our aid.

Sooner or later there will be another Hungary. Will the free world be better prepared to strike a blow for freedom? Will the United Nations be prepared to do more than talk and pass 10 resolutions?

It may come this year or next in Bulgaria, Rumania, Czechoslovakia, Eastern Germany, Albania, North Korea, China, Poland, or in Hungary again.

Indeed it may even come in the Soviet Union where the people of Russia were the first victims of the godless Communist tyranny.

During the week Nagy was the legal head of the Hungarian Government what a difference it would have made if the United Nations had sent in observers: If based on the first United Nations resolution the friends of freedom abroad had sent the freedom fighters bazookas and grenades rather than more resolutions of sympathy.

Or is the policy of the United Nations and the free world now to be that we will throw water on the embers of freedom and revolt against tyranny and that we will finance Communist economic and political systems so that the slaves will be more content with their masters?

I believe we are at one of the great crucial turning points of history.

International communism which 40 years ago imposed its will upon the people of Russia has in the meantime, by conquest, subversion, and international blackmail, extended its power to where over 900 million people are enslaved behind the Iron Curtain.

Probably not as much as 10 percent of that number can be considered hard-core Communist Party members.

Never before in history have so few imposed their ruthless totalitarian will upon so many human beings.

Since the fall of Dienbienphu in 1953 international communism has added no territory and no people to its monolithic structure.

Since 1953, within the Communist Empire cracks have beeen showing up which are of great significance.

1. The riots in East Germany and East Berlin.

2. Restlessness in Poland leading to the Poznan outbreak and the temporary attempt to placate the liberty-loving Poles with a "respectable Communist regime," as if in fact there could be such an unlikely monstrosity.

3. The Hungarian revolt with its lesson that unarmed people can rise up, seize arms, drive out a secret police control and can only be destroyed when divisions of a foreign power are used to crush a victory the Hungarian freedom fighters had already won.

4. The strains and stresses, economic and otherwise, within Communist China, some of which were reported last Sunday morning.

5. The repudiation of $65 billion worth of Soviet Union bonds which is not only indicative of fiscal problems within the U. S. S. R. but a reemphasis, if any is needed, that Soviet commitments are not worth the paper upon which they are written.

6. The failure of the established agricultural and industrial programs in the Soviet Union and in most of the captive states.

Responsible men and women, in and out of government, must ask themselves these questions:

Would the world be a better place in which to live if the godless international Communist tyranny should disintegrate? Can communism's political system endure if its economic base collapses? Can even a ruthless police state hold its people in subjugation if their economy cannot produce the minimum requirements of food, clothing, housing, and a modest number of consumer goods?

At such a time it does not make sense to me that the United States and our free allies would embark upon a program to rescue the Communist world from its own evil shortcomings.

While the communist world is reaching a crisis in its economic and political life it is now proposed:

1. That our allies open wider the doors of trade in both strategic and nonstrategic materials to Communist nations.

2. We assume the burden of supplying agricultural supplies to the Polish Communist regime so they can better concentrate on supplying strategic coal and uranium to the Soviet Union as well as other production which will strengthen the Soviet economy, and hence its totalitarian government.

It is proposed that we take $100 million of American assets and make them available to the Communist government of Gomulka while the government is making loans available to the Communist North Vietnamese of Ho Chi Minh and the Chinese Communist of Mao Tse-tung.

We have already contributed over $1,200,000,000 to sustain Tito-type communism in Yugoslavia. It is now about to be announced that we will send more jet fighting planes to Communist Yugoslavia.

We have many good and stout allies (Free China on Formosa, Korea, Turkey, Pakistan, Vietnam, Thailand, and the Philippine Republic) that need more jet planes. All of them should have a priority over Tito's Yugoslavia.

I do not favor taxing the American people to support Communist economic or political systems abroad.

It was Lincoln who said: "Fellow citizens, we cannot escape history * * * the fiery trial through which we pass will light us down to the latest generation. We, yes, even we here, have the power and bear the responsibility * * * in giving freedom to the slave we assure freedom to the free * * * we shall nobly save or meanly lose this last best hope on earth."

Rumania's Independence Day

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement commemorating the anniversary of Rumanian Independence Day.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

RUMANIA'S INDEPENDENCE DAY

On this 10th of May, Rumania's national unity and Independence Day, I should like to pay a warm tribute to the heroic and unfortunate Rumanian people, who for 12 years now have been bearing the criminal yoke of Soviet slavery.

After a long period in history during which the Rumanians, descendents of Roman colonists established by Emperor Trajan in the second century of our era, at the eastern gates of Europe, have performed a noble task as guardians of European freedom and Christianity, they achieved their political organization as independent principalities in the 13th century. Through their spirit of resistance and Christian faith they managed to survive long centuries of ruthless invasions from the east. At the moment of the Crusades this Latin outpost on the eastern borders of Europe made a steady contribution to the fight against the barbarians. This resistance of the Rumanian principalities against the advance of the Turks after the fall of Constantinople, succeeded in preserving to a certain extent their independence. Although forced to pay tribute to the Ottoman Empire, they were not occupied by the Turks and continued to be ruled by their own national Christian dynasties.

It was this role in the defense of Europe which was eventually recognized, in the full reestablishment of Rumania's independence, by the Treaties of Paris in 1856 and that of Berlin in 1878.

But the existence of a free Rumania has always meant a serious obstacle in the way of the Russian imperialist drive to the west. Indeed, since the 18th century, when Russia reached the borders of Europe, the greatest danger for the Rumanian national existence has been Russian aggression and invasion under changing guises, even under that of friendship. One should not forget that Rumania has been invaded 13 times by the Russians, who annexed the eastern part of the country, now constituting the Moldavian Soviet Republic. Today the entire nation of 20 million suffers under the Soviet imposed Communist tyranny. The ordeal of the Rumanian people under the ruthless foreign occupation of Soviet communism, their economic exploitation and deprivation of elemental human rights and liberties, are now a matter of record. On the other hand, through the Soviet political-military pressure Rumania has been transformed against the will of its people into a satellite base for the aggressive schemes of Moscow.

We cannot rest indifferent in the face of injustice and tyranny. We must proclaim our sympathy with the enslaved Rumanians and think of the best ways for helping them recover their liberty. It is both the honor and the enlightened interest of this nation which command us to follow such a course. We should not forget that destruction of freedom in other lands means ultimately a direct threat to our own freedom and security.

Tenth Anniversary of the National Student Association

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. WILEY. Mr. President, this year marks the 10th anniversary of the United States National Student Association, one of our most dynamic youth organizations. A brief look at the 10-year record of USNSA is proof enough of its expanded program of education and service to our educational community.

It was a great pleasure for me to contribute a special article to the association's student government bulletin, in its anniversary issue. My theme, Students Today—Statesmen Tomorrow, is particularly significant at a time when, more than ever before, student government is looked to for the molding of tomorrow's statesmen.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STUDENTS TODAY—STATESMEN TOMORROW

(By Hon. ALEXANDER WILEY, senior United States Senator from Wisconsin)

This, the 10th anniversary of the United States National Student Association, is a highly significant juncture in American life. It is a time when we see our student movement taking on new meanings and challenges.

We find ourselves in a constant state of flux here at home and abroad. We are witnessing and we welcome unparalleled advancements for the benefit of mankind.

Yet, we see in the dark background a brutal, hostile ideology dedicated to world domination. Against this backdrop, in an era of progress and development otherwise, we are striving to hold secure the previous values of our democratic society, and at the same time help other freedom-loving countries preserve these principles.

The future is, of course, uncertain. News breaks daily from the four corners of the world, news which in one way or another ultimately affects our Nation. Yet, in pondering what lies ahead for America, I am encouraged by a great faith in America. Part of that faith is the deep confidence that our rising young leaders will meet the test of shouldering tomorrow's burdens. I know that my great expectations for the younger generation will not be disappointed.

USNSA SETS THE PACE—ITS MANIFOLD CONTRIBUTION TO OUR NATIONAL WELFARE

The performance of our United States National Student Association helps sustain my faith in youth. The record of the association over the past decade speaks for itself, and is proof enough of the fine caliber of our young adults. Intellectually and spiritually, USNSA members deserve recognition as general spokesmen for American youth.

On the homefront, USNSA has spearheaded basic improvements in all aspects of campus life, promoting the cultural, social, and physical welfare of students. Member student bodies have joined together to tackle mutual problems and to stimulate democratic student government. Most important, USNSA brings us a dynamic, articulate student voice in national affairs. It exhibits a collective alertness to "what's going on" generally, as well as to the new horizons of American education. What better way of supplementing student civic responsibility and offering vast educational opportunities?

MEETING THE PROBLEMS OF EDUCATION

As we are all aware, the problems of American education itself are not becoming any simpler. These problems pose a real challenge to student leadership and to the USNSA.

The numbers of college eligibles are growing by leaps and bounds. How will we cope with the expected 4,500,000 college entrants of 1965? Furthermore, our more complex society requires an increase in the amount of knowledge. And this in turn demands a great expansion of our educational programs.

Student government, therefore, with USNSA carrying the ball, will have to take a new look at policy and programs. Such issues as student economic welfare, antidiscrimination, maintenance of high educational standards, academic freedom, balancing of liberal and specialized training—these are but a few of the areas demanding thoughtful reappraisal.

WORTHY WORLDWIDE ACTIVITIES

Internationally, USNSA has further proved invaluable in closing the ties among young peoples throughout the world—the ties that will help bind the confidence and good will of future foreign leaders. USNSA relations with other national student agencies offer one of the best organized means we have to promote youth fellowship and to foster a true understanding of other modes of life.

The free exchange of ideas and a spirit of "working together" on mutual youth problems are the ideals of international cooperation. USNSA work with the World University, the Foreign Student Leadership Project, International Student Relations Seminars, and student travel programs, all deserve the widest support toward this goal.

DEVELOPMENT OF THE STUDENT LEADER

I would like to underscore one function of USNSA, which in my mind warrants top priority at this time—development of youth leadership.

As a United States Senator, I have learned the so-called ingredients of a public servant. And speaking from experience, may I emphasize the tremendous importance of a taste of university leadership for anyone aspiring to a career in government or politics.

It has often occurred to me how fortunate our college folks, my prospective colleagues of the 90th or 100th Congress, are in the limitless opportunities to partake of student government. But are enough taking advantage of them?

In this day and age, when a year seems to pass like a minute, it is not a long hop from student government to its counterpart at the local, State or national level. And there are certain principles guiding the student body president, USNSA worker, Senator, and Congressman which remain relatively fixed.

What are such yardsticks? The power of factual expression, a give-and-take spirit in solving controversial questions, sound reasoning and constructive thinking, continuity of worthy purpose, underlined by strict adherence to democratic principles of self-government and by genuine dedication to what is best for the largest number, these all add up to the making of a statesman. To become a part of public life also requires a knowledge of the democratic philosophy and group process.

The extent to which our aspirant can fulfill this recipe and can achieve his or her fullest potential for effective leadership in adult life, may depend on his or her start up the Government rung during college.

VITAL ROLE OF USNSA

And this is where USNSA comes in, to serve as one of our best catalysts for responsible student leadership. Stimulating an awareness among youth as to their obligations in student government, and urging followup participation, these are challenging goals for USNSA.

Student government is a facet of American college life, which is probably relatively unique, in contrast to most foreign counterparts. In few, if any, other countries has so much freedom been given to students by school administrators, in handling their own affairs. And our young people have certainly lived up to the responsibilities given them.

But more remains to be accomplished. In the face of increasing enrollments, heightened scholastic competition, and struggle to make the top of the class, there may be a serious tendency to play down constructive extracurricular activity, or may I say co-curricular work (a much better reference for an important endeavor).

Scholastic pursuits are understandably intensified in an age when technical and scientific skills are constantly being improved upon and when technical achievement has become essential to our national security.

NEED FOR EXPERIENCE IN STUDENT GOVERNMENT

Yet, in trying to prepare students for society and shape the total young man or woman, we must be on guard against allowing extreme specialization to encroach on other basic educational needs. And student government is such a need—every bit related to the heart of the education process. All college life is a laboratory in individual development. Leadership responsibilities are as integral to forming the well-rounded person as success in his or her curriculum.

How effective is the engineer, physicist, or nuclear scientist, who cannot adequately express his theories, or who is not open to the ideas and suggestions of others?

Not only might society lose out here, but the individual might be cheated in reaching his or her optimum capacity. Higher education actually fails if it does not sufficiently train young people for the mature adult role in all phases of community life.

EXPERIMENTING IN HUMAN RELATIONS

Thus, the prestige and place of student government require a new emphasis. Earlier, I mentioned the development of statesmanlike qualities, associated with early experience in government. May I add that work on behalf of the campus and campus community is an experiment in practical human relations. Participation in student affairs can help deepen spiritual insight, sharpen perception, and strengthen habits of moral action. These qualities together with other teachings of the group process mark the finer-type American citizen.

Without encouragement of a new philosophy toward student government and campus affairs, student leadership can take on a wheels-for-wheels sake stigma. And this kind of attitude could easily breed apathy and disdain for all activities. This, coupled with an exclusive back-to-the-books movement, could seriously undermine the whole concept of democratic student government for which the Nation has long stood.

AVOIDING STALE, STATIC APPROACHES

I am sure that USNSA officers are also concerned about preventing the status quo germ from hitting local student body programs. In many instances, apathy for co-curricular affairs is due to a dire lack of new ideas and lack of some imagination in implementing programs. Simply going through the motions of static-type government is no fun, no matter what level it is on.

Every student group should evolve in purpose, policy, and program. There is something wrong if it drifts along in the same way, year after year. We in Congress likewise require new ways of approaching and solving the comparable problems that may come before us each year. Consequently, we must continually reappraise our policies.

KEY QUESTIONS TO ASK

Thus, student body cabinet officers and USNSA leaders should ask themselves these questions frequently: Are the real student problems being tackled? Is the leadership doing as much as it can on behalf of student welfare?

Such brainstorming sessions can be extremely helpful. And I can attest to the validity of experience in this technique by the Wisconsin Student Association, of the University of Wisconsin in my own State.

CONCLUSION

USNSA's capacity for democratic responsibility appears to be an almost limitless one. And the scope of its work and interest is helping to meet the demands on every front of American life.

I have here devoted some attention basically to only one aspect of the student movement—student government and the crucial need for leadership training. Yet, perhaps these factors constitute one of the cores of real student citizenship. And success in them will certainly help set the quality of tomorrow's American statesmen.

Hats off to USNSA as it looks ahead to the new challenges for young America.

British Labor Reports Finances

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an informative article from the Washington Sunday Star of April 14, 1957, entitled "British Labor Reports Finances." The author of the article is George W. Oakes, eminent American journalist and writer, who is presently residing temporarily in Great Britain, where he was educated.

This article is particularly pertinent today, because it describes the methods and laws regulating the manner in which British trade unions report their finances and funds for the benefit of their membership and the general public. Recent disclosures of alleged financial irregularities in some labor organizations in the United States have focused attention on this problem. While not necessarily endorsing all the regulatory measures provided for in England, I think it important that Members of Congress should have the facts on the reporting procedures which govern trade-union funds in a friendly nation allied with us and in which democratic and free government prevails.

I ask unanimous consent that the full text of the article by Mr. George W. Oakes appear in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PUBLICITY AND PARSIMONY—BRITISH LABOR REPORTS FINANCES

(The recent Senate disclosures of the financial operations in the Teamsters Union has stirred public interest in the possibility of Federal regulation of the handling of union funds. Here is a report on how union labor finances are publicized and spent in Great Britain.)

(By George W. Oakes)

LONDON.—British trade unions representing 90 percent of the 8.5 million organized workers register with the Government and publish, for the benefit of their own members and the public, a complete accounting of their finances.

Anyone can inspect the financial statement of any registered union at the offices of the Chief Registrar of Friendly Societies (a Government body) on payment of a 35-cent fee. Or a summary of this financial data as shown in the registrar's annual trade-union report can be obtained for 42 cents from Her Majesty's Stationery Office, the British equivalent

of the United States Government Printing Office.

The Trade Union Act of 1871 gave unions the right to register, and no subsequent legislation has made this provision obligatory. But the attractions of public registration, including the right to sue or to be sued and certain tax and trustee advantages are so important that registration has become almost universal. Once a union is registered, it must file a copy of its audited annual financial statement as a public record. In submitting its accounts to the Registrar of Friendly Societies, the union as a normal procedure calls attention to defalcations or misuse of funds, which occur frequently in small amounts. The registrar then decides what corrective action should be taken.

DUES AVERAGE 15 CENTS A WEEK

In 1955, trade union members, who contribute an average of 15 cents a week each to their unions, subscribed some $56 million to cover annual operating expenses.

What proportion of the annual expenses of a British union is paid out in salaries? The 1955 report of Britain's largest union—the Transport and General Workers with 1.3 million members—shows expenditures of £2,727,597, of which £670,334 were charged to salaries for 568 full-time officers. But of the total for staff salaries, less than 10 percent was paid to national officers and the central office staff.

British trade union leaders have always been paid modestly, even on the basis of the British wage scale and cost of living. Only 3 or 4 leaders in the entire British trade-union movement get more than $6,000 a year, the salary of the general secretary of the Trades Union Congress.

The secretaries (chief permanent officials) of most of the large unions would fall in the $2,800–$5,600-a-year bracket. It's estimated that the secretaries of Britain's two biggest unions with one-fifth of all union members—the Transport Workers and Engineering—probably receive saleries of about $5,000 and $2,800, respectively. And the Transport Workers' secretary is actually labor's No. 1 official. In fact the Mineworkers' leader gets only about a third more than the top earnings of a man in the pits.

There is a historic reason for the modest salaries of top union leaders. The British labor movement was voluntary in origin and strongly influenced by principles of religious nonconformism. For years labor organizers contributed their services for the welfare of their fellow workers.

Labor leaders still don't thing it right that they should earn much more or live much better than the rank and file. Nor would the workers be agreeable to high salaries paid out of their dues.

Expense accounts are closely controlled. While a national leader isn't expected to stay in a third-rate hotel, the members don't intend that he shall accustom himself to the same standard of comfort as the employers or even the government officials with whom he deals.

RAISES RECRUITING PROBLEMS

This traditional attitude has in the post-war years markedly reduced the appeal of union office to able young workingmen. Union organization has particularly suffered at the local level. Workers earning $36 to $39 a week aren't interested in local union salaries of $33 a week. It is widely believed that unless salaries and expense accounts are revised to meet the rising cost of living, the caliber of trade union leadership is likely to deteriorate, despite the impulse for service.

A start toward an upward revision may be implicit in the raising of union dues in line with the general inflation. For example, the Transport Workers this year increased their weekly contribution by 50 percent to 14 cents a week—just double the 1939 figure.

How are the funds of the unions invested? The Amalgamated Engineering Union, with the largest resources, had in 1955 assets of £11,586,146 of which nearly half consisted of government securities. Loan and mortgages on members' houses amounted to £3,352,212, and cash £2,014,489.

The financial statements of other big unions reveal an equally high proportion of funds invested in government and municipal bonds. There are no legal restrictions on union investments, however.

The major trade unions in Britain have since 1913 maintained separate funds for political purposes toward which those members who wish may contribute. Nearly 7 million union members contribute an average of about 20 cents a year. These resources are listed separately from the industrial funds in the publicly filed statements.

Fifth Amendment Mutes

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article by C. P. Ives, published in the Morning Sun of May 13, 1957, entitled "Monday Morning View."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONDAY MORNING VIEW
(By P. Ives)

FIFTH-AMENDMENT MUTES

One of my favorite fictional characters is the young matron of liberal leanings who was advertising for a babysitter. There were several applicants, and the young matron had trouble making a decision.

Then a day or two after her last interview, she happened to spot a familiar name in the news. A woman subpenaed to a congressional investigation of interstate kidnaping had declined to testify on the ground that the fifth amendment privileged her against incriminating herself. The woman was one of the babysitter applicants.

For many people this would have been the best reason in the world for immediately crossing this particular name off the list of possible babysitters. But it was not that easy for the young liberal matron.

First of all there was her long liberal indoctrination in the notion that a totally innocent person might take the fifth because, though aware of his innocence, he was afraid that a crooked or overzealous prosecutor might frame him.

Then there was the other liberal argument about the man who, though totally innocent, was afraid that if he testified he might have to bring in the names of others, and so become that abhorrent thing, an informer in the service of law and order.

Finally, there was the climaxing and conclusive liberal argument that to refuse employment to a fifth amendment mute was to punish a person for availing himself of a constitutional privilege, and so downright subversive in itself.

But somehow these propositions sounded less persuasive to the young matron with her own baby's safety at stake than they had sounded in liberal bull sessions and in the editorial discussion of the leftish weeklies. For the first time in her life, the young matron found herself doing some political thinking of her own.

She started with the timorous speculation that perhaps the Bill of Rights was intended to comfort the decent and the law-abiding as well as the uncandid, the criminal, the subversive. From that she went on to the somewhat more confident hypothesis that the life of her baby and her own pursuit of happiness were possibly as precious in the constitutional context as the liberty of the fifth amendment mute.

Little by little over a period of weeks the young matron in this way propelled herself out of the murky liberal side eddy and into the main stream of the race's wisdom in these matters as it had run deep and true for a thousand years. And she began to encounter the great formulations of the elemental law which the liberals had so largely excluded from their discussions of the fifth.

There was, for instance, Professor Wigmore's magisterial statement in his famous book on evidence: "It has now been recognized as a fundamental maxim that the public * * * has a right to every man's evidence. * * * Any exemptions which may exist are * * * so many derogations from a positive general rule. * * *

"Whoever is impelled to evade or resent [the duty to give evidence] should retire from the society of organized and civilized communities and become a hermit. He is not a desirable member of society. He who will live by society must let society live by him, when it requires to. * * *"

And then there was the United States Supreme Court dictum, no longer ago than 1937: "Justice * * * would not perish if the accused were subject to a duty to respond to orderly inquiry."

But though the Supreme Court (including its liberals) was talking that way only 20 years ago it did not actually advocate an end of the fifth amendment immunity. And since the immunity remains—and undoubtedly should remain—in the Constitution, wasn't our young matron under constitutional obligation to reject unfavorable inferences about the would-be baby-sitter who pleaded the fifth in the kidnaping inquiry?

Not at all, as the Supreme Court has also suggested in a leading fifth amendment case: "If [the witness] secure legal immunity from prosecution, the possible impairment of his good name is a penalty which it is reasonable he should be compelled to pay for the common good."

I like to think that the young matron, now a few years older and her baby safely in the hands of a nonfifth sitter, was an onlooker at last week's House Un-American Activities Committee hearings on communism in Maryland. During a recess, one of her friends rushes up in a passion over the fact that one of the fifth amendment witnesses is being discussed unfavorably by bystanders in the corridor.

"Don't you think it's just simply plain absolutely Fascist for people to draw bad conclusions from the claim of a constitutional privilege?" asks the young matron's friend.

"No," says the young matron.

Death of High Talking Chief Tuiasosopo Mariota

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. ASPINALL. Mr. Speaker, during my official visit to the central and western Pacific areas in 1954 I had the pleas-

ure of spending some 3 days on the island of Samoa. On this occasion I met many interesting personalities and some outstanding friends of the United States of America. Undoubtedly, one of our most influential friends was High Talking Chief Tuiasosopo Mariota who, at that time, was President of the Senate of American Samoa. During my visits with this outstanding leader of the Samoans, and friend of the United States of America, I was greatly impressed by his attributes of leadership and ability. I have met very few men in my lifetime who, in such a short time, have made such a profound impression upon me. His nobility of character, his understanding of the differences between our ways of life, and his personal desire that we should better understand each other and live together in close bonds of friendship and citizenship were most pleasing to me.

It is with sincere regret that I have learned of his passing on Samoa on March 3, 1957. He will be sorely missed by his people and by those public servants of the United States charged with the administration of governmental affairs in this distant flag area of our country.

I am pleased to place with my personal remarks, a well-written obituary of this outstanding citizen of the Pacific and copies of messages received by his family at the time of his death.

The matters follow:

THE DEATH OF HIGH TALKING CHIEF TUIASOSOPO MARIOTA

At 25 minutes after 12 noon of last Sunday, March 3, 1957, High Talking Chief Tuiasosopo Mariota died at the Samoan Hospital following an extended period of ill health which sent him with Mrs. Tuiasosopo to Honolulu in search of medical assistance.

Contrary to Samoan practices, funeral rites were postponed pending the arrival of the deceased's eldest son who was aboard the United States Coast Guard cutter which docked at Pago Pago Harbor the following Monday afternoon. At midday on Monday, March 4, 1957, the remains of the Honorable Tuiasosopo was removed to his residence at Fagatogo to await the arrival of his son. Throughout Monday night several choirs paid tribute by singing hymns of condolence for the bereaved according to the custom of the Samoan people.

At 9 o'clock Tuesday morning, March 5, 1957, the funeral services were held at the Fagatogo Chapel of the Congregational Church of Jesus in Samoa, with Elder Pene presiding. The service was attended by His Excellency the Governor and official party, the chief judge, president of the senate, speaker of the house of representatives, representatives of the council of paramount chiefs, high chiefs and talking chiefs, members of the clergy, members of the bereaved family, and friends which filled the chapel to overflowing. The principal speakers were His Excellency the Governor, his honor the chief judge, Senator Tufele, and Pastor Fa'asuka Lutu who delivered the sermon. The Governor, chief judge, and Senator Tufele spoke in tribute to the late Honorable Tuiasosopo who, with unceasing efforts and unbounded energy, gave of himself to his country and its government. Following are excerpts from the chief judge's speech:

"We are here gathered today to pay tribute to one of the most outstanding sons of Samoa. Tuisosopo is truly the founder of the third branch of the government—the legislative branch.

"American Samoa is indebted to the late Honorable Tuiasosopo for much of her political progress during his 16 years of service. He gave unstintingly for his country and his death is lamented by many."

Having concluded with the first portion of the service, the remains of the high talking chief was carried by pallbearers in the funeral procession to the site of his eternal resting place at Leivi Ifilos, where the last portion of the burial service was held. The late Honorable Tuiasosopo was laid to rest with full honors complete with a three volley salute fired by a police honor guard, taps, and the government flag at half-mast. At the completion of the funeral service, the flag was then flown again at full-mast.

HIS EDUCATION AND TRAINING

Tuiasosopo was born on March 16, 1905, at the village of Fagatogo and was christened Mariota. His parents were High Talking Chief Tuiasosopo-Samia-Motumotu, and Mere. At the age of 6 years, Mariota entered the Government school. Earlier in his school life, Mariota manifested those traits which later characterized the late Tuiasosopo—intelligence, industriousness, perseverance, courage, and friendliness.

Early manifestations of these traits together contributed to his superior performance at school, and he ranked at the top of his class throughout his entire school life. He graduated from the ninth grade at the tender age of 14 years—a remarkable feat when compared with the present-day ninth-grade graduates. At graduation Mariota was cited for outstanding good conduct, industriousness, general knowledge, his grasp and application of gardening principles and for his garden of flowering plants, planted on the school grounds: His interest in plant life and flowering plants in particular continued, for his home is surrounded by a variety of plants of varying hues and scents. Soon after graduation, the entire graduation class entered a competitive examination to fill a single vacant job with the customs office of the government. By elimination, only Mariota and one other classmate reached the final round. The final round proved difficult because both contestants were outstanding. The decision was reached shortly after an oral examination and Mariota was awarded the job which he held for many years prior to entering upon the next phase of his life, his political career.

A SAMOAN LEADER

On October 5, 1932, Mariota registered the title of Tuiasosopo Mariota with the registry of titles, and celebrated the initiation according to Samoan custom on the following December 25. Unlike the ordinary successor to a Matai title, he did not understudy the older chiefs nor serve a tour of apprenticeship. However, almost from the very outset of his career as a Matai, he gained the respect of the older chiefs and talking chiefs—an advantage which he later effectively utilized to put aright on an equitable basis some of the Samoan practices which the privileged few reluctantly gave up for the benefit of all concernted. As his reputation of being a Samoan leader grew, he commanded more and more the respect of a large segment of the Samoan populace in both local and general issues where the welfare of the Samoan people as a whole was at stake.

A CHURCH LEADER

Tuiasosopo was appointed a deacon of the Congregational Church of Jesus in Samoa in December of 1942 and was elected general treasurer of the Congregational Church in August of 1951 for a 2-year term. He was later reelected with an overwhelming vote of confidence for an additional 2 years. Being one of the fathers of the locally founded church, his knowledge of both local and world matters made him one of the strongest leaders of the church.

A POLITICAL LEADER

Until 1945 when a general convention of representatives of Tutuila and Manu'a convened at the Poyer School to consider the issue of whether or not a civil form of government should be adopted for American Samoa—then administered by the Navy Department through a Naval Governor residing at Pago Pago—Tuiasosopo did not actively enter the local political scene.

During and immediately following the convention, Tuiasosopo began to show promise of the stellar local political future before him. His interest in western civilization coupled with his profound concern for the welfare of his people and his concern about the effects of the imminent tide of western technology, compelled his to devour and learn in the shortest possible time all that there was to learn about governments from any and all available sources of information. His attitudes and activities in the role of a political leader stand as a testimonial to his concern for the welfare of his people.

Tuiasosopo was instrumental in founding the Legislature of American Samoa. In 1948 he was the first speaker of the first house of representatives and he continued to hold the chair during the second legislature. He relinquished the speaker's chair to assume the first presidency of the senate of the third legislature. Although he did not return to the senate presidency in the fourth and fifth legislatures, being the foremost local political leader of his time, he continued to give of himself without measure to the cause of his government and people.

He was twice selected as an American Samoan delegate to the First and Second South Pacific Conferences held at Suva, Fiji Islands, in 1950, and in Noumea, New Caledonia, in 1953. On both occasions he was recognized as one of the outstanding leaders of the indigenous peoples of the southern Pacific. As the sagacious leader of an indigenous people, he was accorded deference at the Second South Pacific Conference, the unofficial title of spokesman for all the peoples represented at the conference was conferred upon him. During plenary sessions, however, he served as the senior delegate of the delegations from all United States administered territories represented. He was a member of the conference steering committee, representing United States territories. In 1953 Tuiasosopo sponsored the legislative resolution requesting the appointment of a constitutional drafting committee to draft a territorial constitution. He presided over the sessions of the constitution committee until the expiration of his term as the senate president. During his tenure of office the draft bill of rights, which includes protective provision for Samoan lands, customs, and social organization, was completed.

A COMMERCIAL LEADER

In February 1946 Tuiasosopo was appointed as general manager of the Samoan Industries. He directed the affairs of the Samoan Industries until his untimely death. Under his management, the Samoan Industries developed into a recognized marketing agency for the products of the Samoan handicraft producers. He made several trips to Fiji and the Hawaiian Islands in search of marketing outlets for the products of the Samoan producers. While on business trips he simultaneously served very successfully in the dual capacities of good-will ambassador for the people of American Samoa. Through his astute management and diligent efforts, the ordinary stay-at-home Samoan artisan became an independent income earner through the efforts of the Samoan Industries.

A FAMILY HEAD

As a family head, he managed his family and its affairs on the principles of Christianity and good government. Labor and family responsibilities are divided amongst and delegated to family members according to capabilities. He administered the affairs of the family with kindliness and patience.

In the father's role, he taught his children to be courteous, honest, and diligent. In reprimanding the children for wrongs committed, he tells of some applicable incident, quotes the Bible, or cites one of the well-known world figures, but seldom used the rod to convey to the errant child that which is more desirable than the wrong committed. He taught his family to be frugal in money matters and to plan for the uncertain future.

THE MAN THAT HE WAS

Tuiasosopo will be long remembered by his many friends to be "the friend who enjoyed being with friends." He enjoyed singing old songs learned at school such as "B-i-n-g-o Bingo was his name," and his joy and laughter often became catching. He enjoyed doing things for his friends and often spent his own money for things he enjoyed and thought that his friends would also enjoy. He often went out of his way to lend a helping hand to a needy friend. He was always courteous, respectful, and dignified. He believed that outward manifestations tend to reveal the inner man. He feared no one for he always had a good word for everyone. He neither begrudged nor was jealous of another's fortune, attainments, or accomplishments, for he firmly believed that only a man with a weak mind would assume such characteristics.

HIS HEIRS

Tuiasosopo Mariota was married to Venise of Amanave on December 1931. They had six children—4 girls and 2 boys. He is survived by his spouse, Venise; daughter, Mere, aged 24, married, a graduate of Geneva College in Beaver Falls, Pa., who is currently teaching on the faculty of the high school of American Samoa; son Mariota, aged 22, now serving with the United States Army prior to re-entering college in the United States after his 2-year duty; son Palauni (Brown), aged 19, graduate of the high school of American Samoa and currently a freshman at the University of Oregon. Tuiasosopo Mariota has one brother who is the eldest, and two sisters now living.

MESSAGE OF SYMPATHY RECEIVED BY THE TUIASOSOPO FAMILY

MARCH 14, 1957.

Mrs. VENISE TUIASOSOPO and Family,
Fagatogo, American Samoa.

DEAR VENISE: The Director of the Office of Territories, Department of the Interior, has asked that I extend to you and family their deepest regret and sympathy on the death of Tuiasosopo. As you know, this Government shares in the sentiments expressed in the message, a copy of which is attached herewith.

Sincerely,

PETER TALI COLEMAN,
Governor.

GOVERNOR, AMERICAN SAMOA:

Please extend to members Tuiasosopos family our deepest regret and sympathy upon his death. He achieved for himself through hard work and ability a notable position of leadership in the government of American Samoa. His contribution to that government will stand as his memorial.

LAUSI,
Director, Interior Department, Office of Territories.

Hon. PETER TALI COLEMAN,
Governor of American Samoa,
Pago Pago, American Samoa:

My heartfelt condolences to Chief Tuiasosopos family and the people of Samoa. I am grived to learn of his death.

SAMUEL WILDER KING,
Governor of Hawaii.

Hon. PETER T. COLEMAN,
Governor of American Samoa,
Pago Pago, American Samoa:

Please pass to Tuiasosopo family: Mrs. Lowe joins me in sincerest sympathy to you all in the loss of husband, father, and leader of Samoa. His work in helping bring self-government to American Samoa will be remembered in the history of the Territory.

RICHARD BARRETT LOWE,
Governor of Guam.

The Budget

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. WILEY. Mr. President, is it not about time that we get down to business in our committees and get the President's program passed. The row over the budget has the American people very much upset. My own opinion is that if the people could get the facts, matters would calm down. There are certain folks, however, who make it their business to continually misrepresent the situation, and I do mean misrepresent, because they do not give all the facts. This Government of ours is indeed big business. The executive branch of the Government, after the Congress appropriates the funds, executes the affairs of the Government and, pursuant to the outline arrived at, the funds are disposed of. Will the Congress assume the responsibility of cutting anything out of the military or defense funds? Will the Congress assume the responsibility in its final act to cut any of the so-called mutual-security funds? Both of these particular factors go to the question of national security.

I know that every rational person realizes that we have a 50-cent dollar, but many of them do not realize that we have a national income of some $338 billion, and that national income in no small respect is the result of Government's spending in the national defense.

The President of the United States is shortly to make two national talks over the radio. He undoubtedly will bring out the significant facts that we have already stated, and others, that make this budget, in comparison with our national income, the smallest in years.

Folks have been comparing this income with times back when the dollar was a hundred-cent dollar, and before we had the tremendous interest charges, and veterans charges, which have resulted from the Second World War. The wealth of this Nation has increased enormously since that time, as has also our population, and we have become the mightiest power on earth, economically and militarily, and we have the largest per capita income by far, and our taxes, while high, are very much lower than the taxes in Britain and elsewhere.

I was very much interested in reading an article written by David Lawrence entitled "Facts—Not Distortions." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From U. S. News & World Report of May 17, 1957]

FACTS—NOT DISTORTIONS

(By David Lawrence)

Many people who have been talking about the Federal budget lately have been expressing views based on misinformation.

The public has been given the impression, for example, that there is something unprecedented about the budget submitted last January by the President.

What are the real facts and their true significance?

Fact No. 1: It was in the year 1953 that we had the biggest Federal budget since World War II ended—not in 1957. The amount was $74.3 billion for 1953. The budget prepared by President Eisenhower for the fiscal year 1958 is $71.8 billion.

Fact No. 2: Secretary of the Treasury Humphrey did not disavow the President's budget and say, as was reported in the press on January 16 last, that, if it were adopted, we would have "a depression that will curl your hair." What he did say was this:

"I think this budget as now drawn has been prepared with the very greatest care, and I think that it is the best that we can possibly do right now. * * * I don't think there is anything in sight at the moment that can be done better than is now proposed in this budget, but I think we ought to improve it as time goes on."

Later on, in the same press conference, Mr. Humphrey was asked whether "there is any hope anywhere in the world situation that you can do any cutting in defense spending in the next few years." Mr. Humphrey's answer was that he would "certainly deplore the day that we thought we couldn't ever reduce expenditures of this terrific amount." He then added that, if "over a long period of time" it wasn't done, he would predict "a depression that will curl your hair."

The foregoing did not imply in the slightest any criticism of the administraton or its competency in handling the budget. It was an answer to a specific question on armaments—something that has been giving concern to statesmen throughout the world as reflected recently in the comments of Prime Minister Macmillan, Premier Mollet, and Chancellor Adenauer.

Fact No. 3: The Soviet Government, in effect, regulates nowadays the size of our Federal budget by stirring up trouble all over the world and menacing our safety and that of our allies. Unless we are willing to appropriate money for adequate armament and yet at the same time spend what really are relatively small sums for insurance—through projects of the psychological-warfare type which can reach the hearts and minds of the peoples behind the Iron Curtain and the peoples of other countries that may become our allies—we shall not be moving toward a worldwide reduction of armament expense. We shall instead be placing ourselves at the mercy of the men in the Kremlin.

Fact No. 4: Spending has been rising in America not merely inside but outside the Federal Government. Total spending of all kinds in the United States—public and private—has gone up from $363 billion in 1953 to $412.4 billion in 1956. Much of this is due to the effect of inflation.

Fact No. 5: State and local governments—which spent a total of $24.9 billion in 1953—actually spent $32.8 billion in 1956. Certainly nobody in the Eisenhower administration can be blamed for this.

Fact No. 6: While many people have been talking glibly about waste and extravagance,

the real culprit, inflation, has been largely ignored. Thus, the Federal budget went from $64.6 billion in the fiscal year 1955 to $71.8 billion for fiscal year 1958. This is a jump of more than $7 billion in only 3 years, but the same budgets, in terms of the purchasing power of 1940 dollars, showed a rise from $30.1 billion to only $30.9 billion.

Fact No. 7: Comparing the actual 1953 budget with the one now proposed for 1958, we find that national security and defense expenditures have come down, due to the ending of the Korean war, from $52.6 billion to $45.8 billion. Foreign aid and military assistance abroad are included in this category, and there has been relatively little change in their amounts for several years. In fact, for 1958 they are less.

Fact No. 8: The nondefense expenses for 1953 amounted to $21.7 billion. This total now has risen to $26 billion for 1958. But the increase is due primarily to appropriations for farm aid, for veterans' benefits, higher interest rates on the public debt, health, and other programs enacted by Congress during the last 4 years by overwhelming votes of both parties. Congress must repeal these laws if it wants these expenditures eliminated. The President has to recognize their legal existence when he makes up a budget for the ensuing year.

The American people cannot afford the irresponsible tactics of those committees of Congress which are applying a meat-ax to the budget. There are always some economies that can be made, but the sooner the budget is taken out of politics and reviewed on its merits in a bipartisan way, the happier will be the result for our country. The sounder, too, will our national economy be in this dangerous era of international friction.

Address by Secretary of Agriculture Benson Before American Cotton Shippers Association

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most outstanding and able address delivered by Hon. Ezra Taft Benson, Secretary of Agriculture, before the American Cotton Shippers Association in New Orleands, La., April 26, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON BEFORE THE AMERICAN COTTON SHIPPERS ASSOCIATION, NEW ORLEANS, LA., APRIL 26, 1957

I am delighted to take part in this meeting. As one who has learned to love the South, I have a deep personal interest in the welfare of cotton producers and in the agriculture of this great region.

Recent developments in cotton have led to a degree of optimism regarding the future of your industry. Certainly there are readily visible signs of improvement. Exports this year may total 7 million bales or more, in contrast with last year's 2.2 million. The cotton carryover is expected to total around 12 million bales at the end of this season, down 2.5 million bales from a year ago. The soil bank is expected to reduce supplies further during the years ahead, and move us toward a more reasonable level of carryover.

I wish these developments were indicative of genuine long-range improved prospects for the cotton industry. I do not believe this to be the case so long as governing basic legislation is retained. The improvements we have seen are the results of costly, temporary programs such as surplus disposal and the acreage reserve part of the soil bank. First-aid programs are necessary. But the cotton program may require more than first aid; it may require surgery as well.

The basic intent of present cotton legislation is to provide price support at 90 percent of parity when supply is in reasonable balance with demand. Under present laws 90 percent of parity price support is not a mandatory requirement but is retained as a goal. The only reason that price supports for cotton are now less than 90 percent of parity is the heavy supply situation.

The special programs of surplus removal and the soil bank will, with the existing formulas in the law, have the effect of boosting the price of cotton back to 90 percent of parity as soon as surpluses are moved. Controls will continue in an effort to keep supports at that level. Evidence is that the high price supports will lose markets and that controls will be less than properly effective.

Is the cotton program, therefore, because of the price-support requirement in the basic law, committed to continuous production controls, loss of markets for cotton, and continuous surplus disposal operations? If this be true, would it not be well to reexamine the price-support objective? This is the question I wish to lay before you.

We are in the midst of great scientific changes. A technological explosion is occurring on American farms. Production per worker has doubled in the last 15 years. Cotton production per acre has increased 65 percent. This creates a new dimension in farm policy and makes it virtually impossible to curtail agricultural output with the type of controls acceptable in our society.

The agricultural revolution is the blind spot in present farm price-support policy.

Cotton farmers are being subjected to the forces generated by this technological revolution. They are adjusting from wartime to peacetime demands. Their markets are burdened by surpluses which result at least in part from past legislation. Obviously, cotton farmers must be protected from the harsh price effects which would result from their exposed economic position, their weak bargaining power and their abundant capacity to produce. This is a proper function of government. But our efforts should be such as to help our farmers rather than hinder them.

With the reduction of surpluses, cotton farmers will feel that acreage allotments should be increased, and will present that view with considerable logic and with increasing vigor. Under present law, however, increased allotments for cotton are unlikely despite surplus reduction. If the governing legislation is retained, even assuming no advance from present levels of technology, it is difficult to foresee the time when total acreage allotments for cotton will exceed the 1957 level. As you know, Congress has established minimum acreage allotments for cotton of 17.6 million acres for each of the years 1957 and 1958. Based on the present law, the 1959 acreage allotment could be in the neighborhood of 14 million acres. Hence, under present law, disappointment awaits many farm families.

Farmers have the established legal right to undertake programs which increase the price of cotton if they wish to do so. As much as any other group, they have the moral right to influence supply and price in what they deem to be their own interest. They are entitled to the sympathetic help of their Government in meeting their economic problems, the same as any other group. These rights have been fought for and have been won. I applaud and defend the victory.

My question is this: Is it wise to use these hard-won rights in behalf of a program which has the long-run effect of losing markets, restricting farmers' rights to make their own decisions, and reducing the income of cotton farmers?

Consider these stubborn facts:

Twenty-five years ago, before the acreage control program, cotton grew on more than 40 million acres of United States farmland. This year the allotment is 17.6 million acres. Three million acres of that allotment have gone into the soil bank. The actual acres of cotton produced this year seem likely to be about one-third as many as before the control program began.

Twenty-five years ago, before American cotton growers began to hold the price umbrella for foreign cotton producers, cotton production abroad totaled 11 million bales. This past year foreign cotton production was twice as great, 25 million bales.

World production of synthetic fibers has increased during the past 25 years from an insignificant quantity to an equivalent of more than 14 million bales, an amount larger than the 1956 United States cotton crop. Most of the growth in the world market, resulting from increased population and increased per capita consumption, has gone to foreign cotton and to manmade fibers. This growth has been marked. The worldwide per capita increase in consumption of all fibers during the past 20 years was from 8.2 pounds to 9.6 pounds. And the world population during this period increased by approximately 500 million persons.

Undoubtedly production of manmade fibers would have increased and foreign cotton production would have risen during the past 25 years even if there had been no program to restirct supplies and raise prices in the United States. But it is equally certain that the cotton program served to encourage our competition and speed its expansion.

For years it was claimed that cotton producers would accept the adjustment principle, and would keep supplies in line in order to receive the specified level of price support. Yet production has not been held in line. On an acreage calculated, in accordance with law, to produce 10 million bales, cotton production the last 2 years totaled 14.7 and 13.3 million bales, respectively. Carryover reached an all-time high, approximately a full year's needs.

For years it was claimed that the cotton program cost the Government nothing, since supplies were held in line with markets. But the Commodity Credit Corporation is now selling cotton for export at 6 to 7 cents below the domestic price. Net cost to the Corporation is greater than that because of storage costs and the fact that the cotton was acquired at higher than present prices. On 9,297,339 bales thus sold during the last 15 months, the Corporation experienced a net realized loss of $535 million, or close to $60 a bale. This coming year we shall have to charge against the cotton program not only the coming year's loss on exports but the cotton acreage reserve program which will cost approximately $150 million.

Costs are showing up now because we report realized losses when the cotton is disposed of, not when it was acquired. Much of the cotton we are now moving was acquired years ago. Costs are high because cotton production was much stimulated by a prolonged series of incentive prices—incentives supplied first by the market place and then by law. They are high because cotton has been priced out of the market and because

production continues heavy despite controls. Costs are high because we have been spared the wars which cut the cost of earlier liquidations.

The American people will gladly undertake costs of great magnitude in order to solve a problem, but not merely to carry it indefinitely. With formulas in governing legislation, costs seem likely to continue high with little progress toward a permanent solution.

While the growth in their markets has largely been captured by the competition, cotton farmers have been restricted in their decisions as to management of their farms.

Controls breed controls. Cotton production has been restrained from moving to the most efficient farms. Allotments to individual farms, whether based on history or on tillable cropland, depart to a considerable degree from considerations of equity. All these matters are irksome to farmers.

It is extremely difficult to fit nearly a million diverse cotton operations into a pattern based on a legal formula.

Cotton producers and agriculture in general should not sacrifice the efficient use of agricultural resources on the altar of price support. To do so would discredit price supports, which are a useful stabilizing stabilizing tool. As matters now stand, cotton growers are operating on a part capacity basis. Some producers have continued planting marginal acres to cotton for the main purpose of maintaining their historical acreage base.

With acreage controlled, producers have simply fed the land more fertilizer, used more insecticides, and used other devices to produce almost as much cotton as before on far fewer acres.

Not only have we kept marginal land in cotton, we have kept marginal producers in cotton, hurting both themselves and cotton-growers in general. The result is to push up the national average unit cost of production of cotton to a level which handicaps American cotton in competing effectively against foreign cotton and synthetics.

Some marginal producers, of course, have withdrawn from cotton production. Some took jobs in the expanding industries of the South. Others went into the production of meat animals, dairy products, poultry, eggs, and other commodities. By and large, those who got out of marginal cotton production have improved their situation.

The decline of cotton has had many secondary effects. Small towns and trade centers which once serviced 40 million acres of cotton now service 15 million. Some of our transportation facilities are no longer needed. Employment opportunities for local labor in the cotton industry have been reduced. The cottonseed industry has suffered.

Tradesmen have seen Government, in possession of practically the entire cotton carryover, forced to take over more and more of the marketing functions. We are deeply concerned about the effects of the present program on the cotton marketing system. One of our objectives is to avoid disrupting normal operations any more than absolutely necessary. I assure you that we will keep the entire situation under continuing review during the 1957–58 marketing year. Any long-range cotton program must be based on keeping the merchandising of cotton in the hands of the people who best know how to do that job—the private trade.

What has been the cause of the difficulties experienced by farmers, rural tradesmen, and the cotton trade generally?

The major cause is that for many years, agricultural legislation has focused on a single objective, a high level of price support.

The legislative goal of a high support price based on the so-called parity, a weak measuring rod, ignores the fact that cotton farmers are interested in net income, not just price per pound. And it is income that farmers spend, not price. Net income is the result of price times production minus costs.

Present legislation seeks to maintain the support price per pound through drastic restrictions on the right to produce and market. Inevitably this raises production costs per pound. The long-run result of reduced volume and higher unit costs of production is to reduce net income.

Back in 1929, before we embraced the single objective of high price supports, cotton lint brought in 13.4 percent of our farm income. Last year cotton brought in only 7.5 percent of our fram income.

Twice the cotton program has been rescued by war. Were it not for that fact, its shortcomings would have been highlighted long before now. Carryover built up to 13 million bales before World War II, and was substantially reduced following the end of the war. Carryover built up again prior to the Korean war, and the demands of war pulled down our stocks. From 1952 to 1956 we experienced the greatest inventory buildup of all time. This buildup is now being liquidated at tremendous cost, in a time of peace and abundance instead of a time of war and scarcity.

With the passage of time, the original concepts of the cotton program have been eroded away.

The original cotton program was developed in the depths of the depression. Heroic measures were needed in those days; I am not finding fault with the emergency programs developed to meet what was indeed a desperate situation. The Agricultural Adjustment Act of 1938 provided price support at 52 to 75 percent of parity. The adjustment principle, that is the idea that production should be held in line as a condition of receiving price support, was widely accepted by cotton producers.

But let us see what has happened since that time. The price support level was raised from 52 to 75 to 85 to 90 to 92.5 percent of parity. Now, under present law, as soon as sufficient stocks are moved, supports must be at 90 percent of parity, an incentive price which has lost us much of our historic and potential market and if retained would lose still more.

Not only has the law been written with a high price support requirement; special provisions have been enacted that result in overshooting the price target, with attendant stimulation of production and loss of markets. Here are some of cotton's fringe benefits which have proved to be disadvantageous rather than beneficial; I shall mention them only briefly:

The provision, restricted to cotton and peanuts, that the price support cannot be reduced below 90 percent of parity until supplies exceed 108 percent of normal. For other basic commodities the price drops below 90 percent of parity when supplies exceed 102 percent of normal.

The requirement that price support and parity be based on seven-eighths inch Middling grade, which results in support prices about 5 percent higher than would otherwise be the case if it were based on the average quality of the crop.

Set asides, which force higher supports than in the absence of such provisions.

Dual parity, which has in the past required the use of old or modernized parity, whichever was higher.

The provision that support prices must be announced before planting time and must be raised before harvest if parity and supply conditions warrant, but cannot be reduced even though parity might fall or the supply increase.

The effect of all these special provisions is to raise the support price for cotton. In the immediate short run, other things being equal, such increases would be expected to increase the incomes of cotton farmers. But other things are not equal. When a program has continued for as many years as the cotton program, then we are dealing with long-run, not short-run relationships.

We have all heard the argument that the price of raw cotton is so small a part of the finished product that the price of cotton could be increased sharply without reducing consumer purchases. One trouble with this argument is that often it is the spinner rather than the ultimate consumer who chooses the fiber going into a given product, and the spinner will shift to the most economical source of supply with a relatively small differential. For many products, the competition between cotton and man-made fibers is definitely on the basis of price.

The argument has been offered that cotton consumption bears no relationship to price. The refutation of this argument lies not in theory, not in highly refined statistical analysis, but in this simple hard fact: Over a period of years, operating with a high support requirement, we have lost markets and our competitors, by underbidding us, have gained them.

Laws now on the books were enacted with the intent of helping cotton farmers. My comments are aimed not at the intent but at the result.

I have mentioned how the provisions regarding cotton price supports have been sprung in the direction of higher price support requirements. Now let me enumerate the provisions by which the controls have been sprung in the direction of reduced effectiveness:

Minimum national allotments. For 1957 the cotton acreage allotment which would be required, by formula in the way, to adjust supplies to normal, is 3.9 million acres. Yet the law provides a minimum allotment of 17.6 million acres, 4½ times the level actually needed.

Minimum individual allotments. The law provides that 100,000 acres must be added to the national allotment for this purpose.

Checking compliance on the basis of harvested instead of planted acres.

Use of an out-of-date 5-year average, with no adjustment for trends, in determining yields for computing the acreage needed to produce a normal supply.

Permission to grow any other crop on acres diverted out of cotton, which shifts the burden to producers of other crops.

While these provisions give cotton farmers some immediate relief from the tight restrictions which would otherwise be necessary, they postpone the day when farmers can look for the surplus burden to be lifted.

We have all heard the argument that a reduction in the level of price support will result in increased cotton production by causing farmers to plant more acres as they strive to maintain income. I know of no competent research which supports this view. And I am impressed with the fact that when the Congress really wanted increased production, as during the war, supports were raised, not lowered. When reduced production really was wanted, as for potatoes some years ago, supports were reduced and then eliminated, not raised.

What the relaxation of production controls really means is this: Farmers will not accept, the Congress will not enact, and from a practical standpoint, the executive branch cannot enforce the kind of production controls which would be necessary to balance supply with demand at the price objective specified in law.

We have tried to legislate scarcity, and have found that this is extremely difficult to do. Might it not be well, then, to learn how to live with the blessings of abundance?

In the early years, the cotton program was an emergency measure, developed to meet a severe depression. This measure has gradually been replaced by a program with a high

price objective and weak controls. The original vehicle was gradually overhauled and given a more powerful motor but weaker brakes. No wonder it is hard to keep on the road!

Upland cotton, with a high support requirement, has experienced declining acreage. Extra long staple cotton, meanwhile, has adopted a low price objective and has been experiencing increased acreage. Growers of extra long staple cotton advocated legislation, which the Congress enacted, setting the level of price support at 75 percent of parity. Allotments for 1957 are about twice as great as in 1956.

There is a growing realization that the program for upland cotton is in deep trouble. There is much casting about for alternative remedies.

A two-price plan is sometimes suggested. Under such a plan domestic cotton would sell at a high price and cotton for export would sell at a lower price.

Technicians and authorities who study such plans raise a number of troublesome problems, among them this one: If domestic cotton continues high in price, manmade fibers are further encouraged in our big market—the market here at home.

Another proposed remedy is a production payment plan, with cotton selling at or near a competitive level and with a payment to cotton farmers, from the Treasury, making up the difference between the market price and the price objective. Authorities also raise a number of difficult problems about such proposals. Do cotton farmers want to be dependent upon the Congress, annually, for highly visible appropriations which might equal half or more of their net income? It would be well to recall some basic arithmetic. Farmers now total only 13 percent of the population and only 1 farmer out of 5 produces cotton.

Responsibility for enacting legislation lies with the Congress. The Department of Agriculture, as an agency of the executive branch, has responsibility to point out difficulties in administering the law, and to counsel with the Congress regarding their solution.

Certainly, when alternatives are considered, we should consider the possibility of permitting our cotton farmers more freedom to farm. Certainly we should consider the desirability of moving in the direction of being more competitive price-wise.

Cotton must be priced right if it is going to sell.

We might liken the cotton industry to a stool which needs three legs to stand upright—quality, merchandising and realistic pricing. It cannot stand permanently on just two legs no matter how strong they are built.

It won't be easy to win back our markets. Markets lost over a period of 25 years are not regained overnight. A quarter century of sheltered existence is poor conditioning for the rough-and-tumble of market competition.

But the markets are there if we go after them.

Our present per capita consumption of cotton here in the United States is about 26 pounds per year. In the free foreign world per capita consumption is only about 6 pounds. If foreign consumption could be increased by only 2 pounds—the equivalent of one bed sheet, or one pair of overalls—it would create a new market for about 7 million bales annually.

Rather than being lulled into complacency by the favorable developments of recent months—increased exports and reduced carryover—we should use this time to reexamine the basic law. We must not wait until, having disposed of surplus number one, we have built up surplus number two. We must not wait with making changes until they are forced upon us. We should make use of the next few years, while we have the soil bank and the surplus disposal programs, to make a transition to a program which is more in the interest of our cotton farmers.

The Agricultural Act of 1954 was a necessary forward step. It established a beachhead of rationality in setting of price support levels. No one ever maintained that it was an answer to all our farm problems. The Agricultural Act of 1956 successfully defended the ground gained in 1954 and in addition provided weapons for dealing directly with our heavy stocks.

We should now reexamine basic legislation regarding cotton and other basic crops. I applaud the wide review of this subject now being made throughout the South by the American Farm Bureau Federation in cooperation with the State Farm Bureaus.

My first speech on cotton after becoming Secretary of Agriculture was given at Cleveland, Miss., on May 21, 1953, before the Delta Council. At that time I had this to say:

"I have been rather critical of some of our present farm programs. But this is not because I think present programs give the farmer too much. No; my concern is that they give the farmer too little.

"They give the farmer too little because they do not build markets to put products into use at fair prices.

"They give the farmer too little because they do not permit desirable adjustments to take place in our farm economy which will place the farmer on a sounder footing.

"They give the farmer too little because they fail to provide adequate incentive for self-initiative and help-help upon the part of the grower, the handler, the processor, and the end distributors.

"They give the farmer too little because at times they price such commodities as wheat and cotton out of world markets.

"They give the farmer too little because they tend to hold a price umbrella over synthetic and substitute products which in turn take over our farm markets."

That was 4 years ago. I have said these things, many, many times. I reaffirm them before you today.

My purpose is to add to cotton markets, increase the net income of cotton farmers, liberalize their opportunity to make their own decisions and protect their hard-won rights for equality of bargaining power. I do not want to take anything away from cotton farmers; I merely want cotton farmers to ask themselves earnestly and honestly whether a program of restriction and scarcity can possibly mean as much to them in the long run as a program involving more freedom to plant and more freedom for market growth.

The future of the cotton industry depends on how that question is answered.

Importance of Delaware River

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. MARTIN of Pennsylvania. Mr. President, last week, on May 9, a fellow Member of Congress, the Honorable WILLARD S. CURTIN, who represents the Eighth Pennsylvania District, Bucks and Lehigh Counties, delivered a statement before the House Appropriations Committee with reference to the importance of the Delaware River in the economy of our Nation.

Representative CURTIN presented such a splendid statement that I should like to bring it to the attention of all of my colleagues in the Senate, and therefore ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and gentlemen of the committee, I appear before you today in reference to the appropriation to proceed with the deepening of the Delaware River channel between Philadelphia, Pa., and Trenton, N. J.

The amount requested for this work for the fiscal year 1958 was $16,500,000 but in the proposed budget estimate, this amount has been reduced by the Budget Director to $9 million.

I feel that this is a subject on which I am qualified to speak, since my Congressional District consists of Bucks and Lehigh Counties in Pennsylvania and I live in Morrisville, Pa., which is a borough directly across the Delaware River from Trenton, N. J. I, therefore, feel that I have some knowledge on this particular problem which may be of some benefit to the committee, since navigation on the Delaware River between Trenton and Philadelphia is on the portion of the said river which is on the boundary of Bucks County and is a subject in which I have been vitally interested for many years.

I have been very much in sympathy with the economy actions of your Appropriations Committee and have voted in favor of all of the appropriation bills wherein the appropriations have been reduced from the amounts requested by the Budget Director. My record will also show that I have voted in favor of many of the further cuts as proposed on the floor of the House, since I firmly believe that this Government should practice all economies which can be effected without jeopardizing fundamental governmental functions.

However, I do not think that my present appearance before you, with the request that the appropriation for the deepening of the Delaware River channel be restored to the original request of $16,500,000, rather than the $9 million as proposed by the Budget Director, is inconsistent with my position as to economy. This deepening of the Delaware River is a capital outlay for which the Government will get a return on its money, which is far different, in my opinion, from many of the other expenditures which have been authorized.

The Delaware is one of the world's great estuarial harbors. Already, it is the leading port of the United States in the handling of import tonnage, and it stands second only to New York in total waterborne commerce.

As a harbor, the Delaware reaches from the open sea from Cape May, N. J., Cape Henlopen Del., north to Morrisville, Pa., and Trenton, N. J.—a distance of 132 protected miles. But, as a first-class international seaport—capable of handling all types of cargo vessels—the harbor's vast potential has been only partly realized, because its 40-foot channel ends abruptly at the southern end of Philadedphia. This leaves 37 miles at the upper end of the harbor in urgent need of modernization and improvement.

During the fiscal year of 1956, the Federal Government collected approximately $75.1 billion in tax receipts. Of this amount the States of Pennsylvania, New Jersey, and Delaware—the States that surround the Delaware Port area—contributed $8.5 billion, or better than 11.3 percent of the total budget.

The tidal Delaware flows past more than 8,600 different manufacturing plants, most of which are located in the highly industrialized cities of Wilmington, Del., Camden and Trenton, N. J., and Philadelphia and

Chester, Pa. Deep water all the way to Trenwill make accessible for industrialization 58 miles of shoreline now available for industrialization along the upper Delaware, where a lack of deep-water access has prevented the maximum industrialization of this area.

The Congress of the United States in August 1954, recognized the urgency of this matter when it passed legislation authorizing the deepening of the upper Delaware, with a 40-foot channel.

Private industry has already invested its resources in an unprecedented expansion of the region on the strength of this authorization, and there is substantial evidence that the expansion is only in its initial stage. Several large industries have already located on the upper reaches of the Delaware, and more are in process of construction, or are planned. A multi-million-dollar plant of the National Gypsum Co. at Burlington, N. J., designed to handle 350,000 tons of raw materials annually, the Fairless Works of the United States Steel Co. at Morrisville, Pa., with its vast potential output possibility, and the Meenan Oil Co. at Levittown, Pa., making use of the Delaware River in the distribution of several million gallons of product annually, are all new industries will contribute to the economic welfare of the area. In addition thereto, Phoneix Iron & Steel Co. has acquired 1,000 acres of ground in the Burlington area, and the Wood Conversion Co. recently announced plans for the construction of a multi-million-dollar shoreside manufacturing plant in the same area. Many other industries are also canvassing the possibilities of the area, but their final decisions are awaiting the opening of the area to the full benefits of low-cost ocean transportation.

This area between Philadelphia and Trenton is attractive to industry, not only because of its location on a waterway, but also because of its availability to the markets in the area, the accessibility to railway lines, the abundance of skilled labor, and the availability of land. However, the development of this land and the improvement of the economy of the area, with its consequent increase in taxes to the Federal Treasury, is being held up because of the difficulty of navigation between Philadelphia and Trenton. Ships now bringing raw products to the plants are, in many cases, compelled to either partially unload in Philadelphia or to not initially load the vessel with maximum cargo. Because of the present depth of the channel, fully laden, large freighters cannot use the channel until it is made deeper and more safe. One of the dangers of navigation is located at the Delair Bridge, at Delair, N. J., which is an old-fashioned bridge having a span of but 110 feet, and, in addition thereto, the channel turns within the area of the said span. Some of the largest of the cargo ships presently using this channel have a 90-foot beam, and others are somewhat smaller. Consequently, the ships of this size going through this narrow span and having to make a turn in the process find it an extremely hazardous undertaking, and the shipowners will not permit their ships to use this channel of the upper Delaware at all after dark and, during daylight hours, only at such times as they can buck the tide in each direction. As a consequence, the use of the channel is materially restricted. A 40-foot channel with a modern bridge having a wider span at this point will eliminate this restriction.

In addition to the above, the size of cargo ships is increasing, so that a 40-foot channel is essential if such ships can use the channel, and such ships must use the channel if the industries located along the shoreline are to get economical rates. A survey by the National Federation of American Shipping shows that the trend is for larger and deeper draft vessels for economic reasons. Maj. Gen. Emerson C. Itschner, Chief of the Corps of Army Engineers, has said, "The move toward deeper draft, larger deep-sea supertankers and ore carriers, and the outlook for increased transportation of the commodities they carry, has created a pressing demand for correspondingly deeper and improved channels in major seaports."

Below Philadelphia, where a 40-foot-channel project has existed for many years, industries of all types and sizes have located at the water's edge, and the ratio of such industry above and below Philadelphia is convincing proof of the need for the same.

All of the above should indicate the need for the rapid completion of this work. The project is estimated to cost approximately $110 million and the hoped for construction period was 5 years. The monetary benefits after completion are estimated at $8,450,000 annually, as compared to annual charges of $4,000,370. The resultant benefit-to-cost ratio is 1.93 to 1, which certainly shows that the prompt completion of this project is just good business. The Philadelphia district engineer has stated that for the fiscal year of 1958, $16,500,000 could be economically utilized with the equipment on the site; the Bureau of the Budget has recommended an appropriation of $9 million, following an initial appropriation of $6 million authorized for expenditure during 1957. If the annual average appropriation for the first 2 years of construction will prevail, it will take 14 years to complete the project, rather than 5 years, and this slow rate of construction will correspondingly slow up the rate to which the revenue—the taxes from industries located and to be located along this stretch of the Delaware—can be realized. Of the money planned for expenditure from the 1958 fiscal year appropriation is the sum of $1,950,000 toward the improving of the Delair Bridge, which would leave $7,050,000 for other deepening expenses. (The entire cost for the work at this bridge will be $11 million.) The equipment is now in the river and available for use, and if appropriations are such that this equipment can be utilized to its upmost, the job will be finished in a less period and the return to the Government in the form of taxes will be sooner realized.

The channel to be dredged should be dredged to the full depth of 40 feet as the work is done. There is now some argument that an initial 35-foot channel be dredged to Trenton, to be followed by a 40-foot channel as commerce increases. This is not sound reasoning. There is much rock to be cut out of this channel, and cutting rock under water to a certain depth and then going back and cutting a few more feet from the same rock at a later date is just not economical.

With the modern trend in ship construction, a 40-foot channel is vitally necessary if this waterway is to be used to its full and best advantage. The two-step procedure only adds to the cost by postponing just that much longer the adequate and complete use of the channel.

Also, in terms of our national defense in this age of nuclear warfare, when every day brings forth a new international crisis, the Delaware River port area, because of its diversified industrial power and geographical location, is the keystone in the Nation's arsenal for defense.

In addition to the foregoing, the deeper channel would be beneficial in many supplemental respects.

1. It would decrease the pollution of the stream by causing a faster flow of more water;

2. It would be a factor in flood control by permitting faster runoff of high water;

3. The dredge material will help build up the shoreline.

In view of the foregoing, I would respectfully urge the committee to increase this appropriation for the fiscal year 1958 to $16,500,000.

News From the AFL–CIO

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered on April 27, 1957, by William F. Schnitzler before the District of Columbia Central Labor Union.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

TEXT OF A SPEECH BY AFL–CIO SECRETARY-TREASURER WILLIAM F. SCHNITZLER, DELIVERED ON THE OCCASION OF THE 60TH ANNIVERSARY DINNER OF THE DISTRICT OF COLUMBIA CENTRAL LABOR UNION

It gives me a great deal of personal pleasure to extend the warm best wishes of the officers and members of the AFL–CIO to the members of the Central Labor Union of the District of Columbia on your 60th anniversary.

Sixty years, as men reckon hours, is a long, long time. And in those 60 years' you, here in the capital of our Nation, have accomplished a tremendous amount. The status of the worker of 1957 and that of the worker 60 years ago is immeasurably different and immeasurably better.

I suppose there are some who say that the members of the District of Columbia Central Labor Union—that all of American labor—should be satisfied. Ours is the largest single trade union movement in the world; our contracts are the best in the world. The wage standards, the hours, the working conditions enjoyed by our members stand head and shoulders above any others.

But we are not satisfied. We know that so long as any worker is denied the benefits and the protection of a trade union, then our job is far from completed.

We know that so long as poverty exists, either in this country or anywhere in the world, then the American labor movement has its work cut out for it.

We know that want and misery and exploitation and injustice must be eliminated from the face of the globe. And we are dedicated to this tremendous job—a job that must, in time, be accomplished.

And in going about our tasks, the central labor bodies in our cities and States can play a tremendous role—can contribute immeasurably to our success; for success we must have, and success we will have.

I want to also add a word of praise of another trade union instrumentality, which is also 60 years old—The Trades Unionist, which was founded in 1896, and which has done a continually fine job of reporting the news and the position of the trade union movement.

A labor newspaper has a tremendously important role to play in our movement. It must fill the vacuum created by the commercial daily press which has today unfortunately concluded that only sensationalism is news. Once upon a time, you know, an American newspaper would consider that 50 years of wedded bliss was worth a story. Today, it is the sensational divorce case that grabs the headlines.

Once upon a time, Local Boy Makese Good was considered a news story. Today, Local Boy Goes Bad is what makes the headlines.

So, I suppose we should not be surprised when the daily press ignores the countless thousands of contract settlements, accomplished through the ordinary, everyday, smooth-working mechanics of collective

bargaining and concentrates on the isolated instances in which collective bargaining breaks down and labor resorts to its ancient, honorable, and only weapon—the strike.

So it is vitally necessary that we have, as an integrated part of the labor movement, the labor press which reports to the card-carrying union member the truth about the activities of his own union and of his brothers and sisters in the labor movement.

It is only fair to say that here in Washington, the daily newspapers are of a higher grade than in most of the metropolitan centers in the United States. I recall that, during the biggest work stoppage in the District in recent years—the streetcar and bus strike—the press did honestly and adequately report the union's position and the union's repeated offer to arbitrate the dispute and to keep the buses and streetcars running.

But even in the Washington newspapers, there seems too little room to report the kind of activities in which you are engaged on a day-by-day basis—the basic trade-union activities of bettering wages, hours, and working conditions, and the equally important activities in which you are engaged in your endeavors to make this a better and a stronger community.

It seems to me that just as soon as the merger of this central body and the Industrial Union Council is completed—and the deadline for merger is, as you know, December 5, 1957—that you will be in an even better and stronger position, that you will be able to do even more to improve the conditions of the workers you represent and of the general public.

There is much that needs to be done in this beautiful Capital City of the United States; much that can only be done when we achieve home rule in the District of Columbia.

I am well aware of the outstanding record achieved by certain Members of Congress, who have served with honor on the District of Columbia Committees of the House and Senate.

Your speaker tonight, Senator WAYNE MORSE, one of the greatest liberals who ever served in the Senate of the United States, has repeatedly advocated and fought for legislation which this community badly needs.

But with all due regard to Senator MORSE and to his colleagues, I say to you that the District of Columbia will not achieve the legislation it badly needs and badly wants until its citizens are taken out of the second-class category and are given the right and privilege which every American citizen must have—the ballot.

We cannot expect that Members of Congress, whose first interest and major duty is to the Nation as a whole, and their own constituency in particular, to devote the proper time, the proper interest, the proper enthusiasm to the affairs of the District. Certainly, officials elected by the residents of the District and responsible to the residents of the District, would be more responsive to the needs of the District.

The AFL–CIO considers home rule for the District of Columbia and a full voting franchise for its residents to be a vital legislative necessity. We know that you do too. I promise you that we shall continue our struggle to achieve that goal, until we reach that goal.

Some of the legislation which is now pending in Congress and which this area badly needs is languishing simply because the folks here and their neighbors are unable to vote and therefore unable to bring righteous pressure to bear on the lawmakers.

Take a look at the slums that lie almost in the shadow of the Capitol of the United States. Senator MORSE vividly brought this to the attention of the public just a few weeks ago.

But the slums have been here a long time, Senator, and so has the Congress.

But we still don't have any action. We still have the disease-breeding, crime-breeding slums that disgrace this fair city.

I know that the 15 million members of the AFL–CIO everywhere in America will continue to point with shame at these slums and at those throughout America until we get the action we need; until we get to the stage where America is building the 2 million new housing units a year that she really needs.

We won't get action, of course, so long as some on Capitol Hill believe that public statements about economy and secret votes in favor of their own pork-barrel projects will get them votes.

The unholy alliance of the ultraconservatives on both sides of the legislative aisle is endangering legislation which is vital to all America and they are doing it to the battle cry of economy at any cost.

The pennywise, pound-foolish Members of Congress should know—and I am sure they do know—that they can balance the budget with ease and still give America the legislative projects it needs by just plugging up the loopholes in our tax structure which have been especially created to aid the very wealthy and the very powerful. Equality of taxation, not foolish economies, is the answer to balancing the budget.

And during this period in which some of our legislators are taking very good care of the very few who already have much of this world's wealth, they are ignoring the plight of the underprivileged in our own country, those who live on substandard wages.

Today, 20 million Americans are denied the minimum protection provided by the Fair Labor Standards Act.

Why, the minimum wage law that now prevails in the District of Columbia is a crying shame. First of all, it only covers women and minors, and, secondly, the minimum wage it provides bears no realistic resemblance to the economic facts of life today.

I am sure that a united labor movement in the District of Columbia, whose members are informed of the facts through a responsible labor newspaper, can help tremendously in bringing a decent minimum wage level to this city and throughout America.

There are many, many topics I would like to discuss with you tonight but time will not permit. There are two matters which I do want to discuss, however—the question of corruption, which is occupying so much of our time these days, and the question of civil rights—the great moral issue of our time.

I am proud—justifiably proud—of the civil rights record of the American labor movement. We have done much to open the doors to equality of opportunity to men and women of all races.

But I am not blind. I know that the civil rights record of the trade union movement is not all good. I know that there are some places in this land of ours where the prejudices of our members are no better than the prejudices of the general public.

We in the AFL–CIO have said in our constitution that all workers, regardless of race, creed, color, or national origin, are entitled to the full rights of trade union membership and of equality of trade union representation.

That is not an idle statement. So long as I am an official of the American labor movement, it will never be a dead letter statement.

We shall continue our unceasing efforts, in calmness and in reasonableness, to wipe out the twin evils of segregation and discrimination which blot the banner of democracy in the United States.

We expect that every union of the AFL–CIO and every local of every union will examine its own record and eliminate from its own area of activity any vestige of undemocratic acts.

We shall be successful, for right and morality and decency are on our side.

I also want to speak to you for a few moments about the problems of corruption. It is in many ways similar to the problem of communism which the trade union movement met and conquered through democratic means and through an aroused membership.

Today, the labor movement is beset by another parasite—the racketeer—who has also infiltrated our ranks. We are meeting this problem with diligence, with practical commonsense, with stern action and without panic.

We know that the number of corrupt individuals in the American labor movement is indeed tiny. We know as well that even one rotten apple is one too many.

There are some, of course, who will seek to seize upon the current investigations by Government agencies of these racketeers—who have infiltrated management as well as labor—and upon the continuing efforts of the trade union movement to keep its ranks clean as an excuse for legislation, designed to destroy the labor movement itself.

We shall not be destroyed.

We know that the labor movement is of such monumental benefit to workers and their families, and the Nation as a whole, that we will not allow it to become the victim of either misguided zealots, who would cure cancer by amputating every limb upon which a pimple grows, nor will we allow the labor movement to be destroyed by its enemies who seize upon any provocation to restore the "open shop" through which employers are able to bring wages down to the starvation point.

But we shall wipe out corruption in our own ranks as we believe industry should do in their ranks.

I am sure in the months ahead, as you learn of the continuing actions of the trade-union movement to eliminate this bad element while at the very same moment protecting the rights of workers to decent, clean unions which adequately and correctly represent their best interests, you will agree that our actions have been stern and thorough and have demonstrated due regard for the democratic rights of the individual.

And I suggest that you keep in mind, as you read these probe stories, an editorial which apepars in the February 26 issue of the New York Times. That editorial applauded the Senate committee's determination to get to the bottom of labor wrongdoing, and then sounded this word of caution:

"The day-by-day display of questionable conduct, without comparable evidence of commendable behavior, is bound to give an impression of union operations as a whole that is far removed from actuality. * * *

"The AFL–CIO's recently promulgated code of ethics and the forthright action it has already taken against affiliates charged with violations give additional evidence of labor's rectitude."

I suggest as well that you keep in mind President Eisenhower's observation of Thursday, when he said: "Corruption on the part of a few should not obscure the fact that the vast majority of those connected with organized labor are decent and honest Americans and that responsible labor leadership is moving speedily toward protecting their members from any such abuses, as far as their means permit. The American labor movement must be free to pursue efforts to achieve social and economic gains which in the past have benefited the Nation as a whole."

The President is right. Every decent and honest trade unionist—and they are the majority—resents deeply the insult ot trade

unionism which has been perpetrated by those few individuals who have proven themselves unworthy of the posts they hold.

The decent trade unionists, all over the country, are rising in righteous indignation against these few who have disgraced them.

For the AFL–CIO is determined to keep labor clean. It is a task we approach with a clear knowledge of the enormity of the problem but with just as clear a knowledge that this is a job that must—and will—be done.

It is because of our determination that the labor movement must be scrupulously clean that President Meany last Thursday immediately expressed our general agreement with President's Eisenhower's proposal for legislation in this field.

I think we should keep in mind, however, that the AFL–CIO has long favored legislation which is far more sweeping and would be far more effective than the pending administration bill for full disclosure of welfare fund operations.

And I think we also ought to remember that the very business interests which supported President Eisenhower in the last election are opposed to the kind of legislation we seek and which the President has just endorsed.

In fact, the delay and stalling which has to date blocked passage of the welfare disclosure law we seek, has been the work of the business and financial interests who do not want this kind of legislation.

In our opinion, the only reason for opposing this measure is corruption. Honest men want this kind of a law. We want it. We intend to get it.

Today, as you celebrate your 60th birthday, you stand on the threshold of great opportunity and challenge. I am sure as I review the record of your accomplishments during the last threescore years, that you will be worthy of the responsibility and capable of meeting the challenge.

I am sure of this because you have always been true to the motto of the trade union movement—that motto which is really our way of life—"What's good for America is good for organized labor."

Atomic Power Reactors

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the Honorable JAMES E. VAN ZANDT, of Pennsylvania, who is a member of the Joint Committee on Atomic Energy, recently gave some good advice to the Nation. This was mentioned in an editorial in the Washington (Pa.) Reporter of April 29, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO NEED FOR PANIC

Representative VAN ZANDT, of Pennsylvania, who is a member of the Joint Committee on Atomic Energy, recently gave Congress and the country some good advice.

He warned against being panicked into spending orgies for atomic-power reactors, and added that coal is likely to be the cheapest fuel for electric-power production for a very long time to come.

This makes sense for a number of reasons. For one thing, our reserves of coal are, to all practical purposes, virtually limitless. For another, our coal industry and its highly paid labor force are the most efficient in the world. For still another, the amount of coal needed to produce a given amount of power has steadily declined, due to research and engineering achievements by the industry itself and by the enterprises which produce and use coal-burning generators. For still another, many unanswered questions and unsolved problems remain in the new field of electrical generation from atomic energy, and these demand a vast amount of time, study, and experiment.

The atoms-for-peace program should and will go ahead. But maximum results at minimum expense will follow from an orderly program—not a never-mind-the-cost crash program at the expense of taxpayers.

Report on the 1957 Nuclear Congress

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a thorough and informative paper by John H. Davidson, of Portland, Oreg., entitled "Report on the 1957 Nuclear Congress."

Mr. Davidson, an outstanding researcher and economist, presented this discussion before the American Society of Civil Engineers in Portland on April 18, 1957. He is affiliated with Ivan Bloch & Associates, noted industrial engineers, and he and his firm have undertaken a complete study of manufacturing expansion possibilities in Oregon, at the request of Gov. Robert D. Holmes of our State.

In this paper Mr. Davidson analyzes the possibilities inherent in the vast and expanding field of nuclear energy. Because the length of the presentation precludes its entire content being included in the RECORD, I ask that certain cogent and significant excerpts be printed.

It is extremely important to note that Mr. Davidson specifies the cost of power from atomic sources to be as high as 34 mills per kilowatt-hour and presently not lower than 7 mills. He contrasts this with the economical Bonneville power rate from Columbia River dams of only 2 mills. Of course, Mr. Davidson also warns that nuclear energy may eventually be competitive with fossil fuels which must be transported long distances.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

REPORT ON THE 1957 NUCLEAR CONGRESS

(By John H. Davidson, of Ivan Bloch & Associates, for American Society of Civil Engineers, Portland, Oreg., April 18, 1957)

INTRODUCTORY

It would be extremely misleading for me to pose as an expert on nuclear physics so at the very beginning I will point out that my primary purpose this evening is to act as a reporter on the 1957 Nuclear Congress that I recently attended in Philadelphia, and to perhaps present a summary view of the nuclear energy field.

The 1957 Nuclear Congress included: Third International Atomic Exposition; Second Nuclear Engineering and Science Conference; Fifth Hot Laboratories and Equipment Conference; Fifth Atomic Energy in Industry Conference.

The latter meeting was my chief objective and notes from some of its sessions constitute part of the material that I have for presentation this evening.

I attended this meeting at the request of Governor Holmes as part of his industrial development program in which the firm of IBA is participating. Material collected at this congress is being used to provide orientation to Oregon's proposed industrial development program.

What I have to say can be conveniently divided into four sections:

1. A complete explanation of nuclear energy—in 5 minutes or less.
2. Prospects for nuclear power in Oregon and the Nation.
3. Other potentials in the nuclear field in Oregon and the Nation.
4. A long-range outlook.

I. NUCLEAR ENERGY REVIEW

Information sources seem to be divided in opinion when presenting descriptions of nuclear energy applications—the newspapers and similar media frequently oversimplify the problems, and yet many of the technical journals assume that we poor engineers have had time to study up on fundamentals. In case your reading has been restricted to the newspapers I will try to provide a 5-minute review of nuclear energy.

You might have noticed that up to now I haven't used the term "atomic energy" (unless I have lapsed into my old habits), but have always spoken in terms of "nuclear energy." This points up the first fundamental concept—that the nucleus of the atom is the source of the reaction.

As you will recall, atoms are composed of a nucleus circled by various numbers of electrons. Almost all of the atom's weight is contained in the nucleus. This nucleus is composed of both protons and neutrons. These two particles have almost the same weight, with the main difference between them being that the proton carries a positive electric charge and the neutron carries none.

The number of protons is balanced by the number of orbital electrons. Since the electrons carry a negative charge, the atom is electrically neutral.

The number of protons (or electrons) is the atomic number and is an indicator of the chemical characteristics of the atom. Hydrogen, for instance, has atomic No. 1 and uranium has atomic No. 92. Since the atomic weight is mostly in the nucleus, we must look to it to determine a particular atom's weight. In the case of hydrogen, the atomic weight is 1-plus a small fraction. Uranium has various atomic weights, such as U^{233}, U^{235}, and U^{238}.

Obviously, there are various numbers of neutrons in the nucleus of the uranium atom. This isn't peculiar to uranium, but even occurs in such lowly atoms as carbon. The significant factor about some types of uranium is that the weight bears such a relationship to the number of electrons and protons that it is unstable and will fission.

The process can be compared to a drop of water on an oily surface. If the drop of water is too big to be stable, you can tap the surface and it will split into two drops. You can tap the uranium atom by throwing a neutron at it. If it is U^{235}, it might split into barium and krypton, plus a couple of neutrons, plus some energy. It might split into a number of combinations, but the important point to observe is that the sum of the weights of the new atoms and neutrons is less than the previous total. The differ-

ence in weight has been converted to energy. It should also be noted that the fission gave off more neutrons than triggered it—on the average, each fission gives off 2.5 neutrons. If the first fission occurs in the center of a block of U^{235}, each of the neutrons given off will probably hit other nuclei and they will fission. Thus, the number of fissions will increase in a geometric progression, each adding energy, so that in microseconds you have an explosion.

This is the atom bomb. In describing it I have described uncontrolled nuclear energy and demonstrated the fission process. Several more concepts can be wrung from this description. First, you will note that the chain reaction would not have occurred unless more than one neutron had been captured by the block of uranium. Obviously, if the block is too small, the first neutrons released might have sneaked by the other atoms and escaped—and the bomb would have been a dud. This illustrates critical mass—a term that the experts bandy about.

A peculiarity of U^{235} is that it can most easily capture neutrons of a certain rather low speed. Since this speed is considerably less than the speed of emission from fission, some means of slowing down the neutrons is desirable. This is the function of a moderator. It provides a cushion for the neutrons to bounce against, thus slowing them down without capturing them. Water and carbon are both used as moderators.

* * * * *

Uranium 235 is the only naturally occurring material that is capable of fissioning upon neutron bombardment. This is unfortunate since it is only one one-hundred-and-fortieth as plentiful as uranium 238 and it is very difficult to separate the two. However, uranium 238 and in addition, thorium, can both be altered into atoms that are fissionable. The transmutation process for each is similar and consists of the original atom being supplied with a neutron, then decaying (by spontaneous emission of electrons) into an atom that will fission as readily as U–235. This process is called breeding and can be accomplished in a reactor while it is also being used to generate heat for power. The products of this breeding are U–233 from thorium, or plutonium from U–238. The breeding process was only recently determined to be possible and offers possibilities of greatly reduced fuel costs.

* * * * *

With this background we can now look at some of the nuclear energy possibilities in the Nation and in Oregon.

II. NUCLEAR POWER

Power from nuclear energy has captured the imagination of the world. Part of this feeling is probably due to the possible glamour surrounding the concept of a practically weightless fuel. Forward-thinking people, though, realize that on a statistical basis the tremendous increase of power requirements in the world will exhaust our supplies of more conventional energy in a comparatively short time.

To put the discussion of nuclear energy into perspective I think it is important to take a few minutes to look at the world energy situation.

The general picture is that per capita energy requirements will increase even more rapidly than world population—with the two combining to cause an almost explosive increase in energy requirements. In the last half of this century it is expected that the people of the world will use as much energy as they have since the year 1. In the United States it is expected that the energy requirements will more than triple their present value by the year 2000.

I have some statistics that indicate the relationship between various world fuel sources. Of the nonrenewable sources, fossil fuels have a rank of 30 compared to nuclear fuels with a rank of 575. The renewable sources, consisting of wood and organic materials, water power, and effective recovery from solar heat collectors, amounts to a rank of about .08 a year. In other words the renewable amounts to the total fossil fuels every 375 years. If we could collect all the solar energy falling on the earth's surface it would each year amount to six times the world's total supply of nuclear fuels.

There is little point in trying to estimate just when the world will run out of these fuels, but it has been estimated that the economically obtainable fossil fuels in the United States will be exhausted by the end of this century if we don't supplement them with nuclear fuels. In some parts of the world, and England is an example, it is already difficult to find economically attractive fossil fuels and it is necessary for the British to turn to rather primitive types of nuclear reactors because there just isn't time for them to develop better ones.

The English nuclear energy program probably received an undue amount of attention at the Philadelphia Nuclear Congress. Throughout the conference I heard the rather defensive statement that "We are not losing our leadership in nuclear energy just because we aren't outbuilding the British." Along with this was the comment that "technical and development costs are both much higher than were anticipated a few years ago."

Based on various lectures and speeches which I heard, our present nuclear energy situation might be further summed up in the following statements:

1. Reactors now on United States drafting boards will probably be much more economical to operate than the present English models.

2. We should cooperate with European nations whenever possible in order to exercise our technology (and also for humanitarian reasons).

3. We should continue and expand our present research and demonstration program to determine the best types of reactors.

4. Presently developed reactors cannot compete with fossil fuel plants in most areas of the United States.

5. Really economical operation of nuclear powerplants in the United States will not occur until we have better methods of processing spent fuel, and greater credit can be given to byproducts.

6. Reactor development will require a variety of new materials including special metals, instruments, and fuel materials. In addition, there will be a market for many conventional materials required in the processing of the new materials.

7. Widespread use of nucelar reactors in this country is still a number of years away and reactors won't be in great demand until present fuel costs increase, or reactor costs drastically decrease.

8. Propulsion of ships will be among the first economical uses to which nuclear energy might be put.

* * * * *

From these costs it is obvious why we don't want a reactor in Oregon for a while yet. As long as it is available, 2-mill hydro power looks mighty good. However, power agencies are even now looking at conventional thermal plants as a means of alleviating the foreseeable power shortages. As our power needs increase and our upstream storage sites are underdeveloped, the time when the area will need thermal power is rapidly approaching.

When this time does arrive, nuclear energy might be particularly desirable as our source of thermal energy because of its practically negligible transportation requirements. Because of this transportation factor its feasibility, as compared with fossil fuels, will be greatly enhanced.

In anticipation of a nuclear energy installation, the Pacific Power & Light Co. has recently purchased an extensive site near Hanford as a site for a future plant. Other PNW power companies, too, have been engaged in nuclear energy study groups.

III. OTHER POSSIBILITIES

Although I have restricted my discussion entirely to power up to this time, there is another whole field of nuclear development. This is the utilization of radioactivity. It is important in the field of radiation processing of food, chemicals, plastics, drugs, medical and surgical equipment. This processing will include sterilization and the altering of chemical structure or physical properties of materials. Radiation of plastics to improve their physical properties is one of the most likely immediate applications. Radioactive materials also have important uses as tracers and as a source of rays or particles for inspection and measurement purposes.

Additional opportunities in the nuclear field (we might call them satellite opportunities) include the production and supply of special metals, instruments, and fuel materials. The disposal of radioactive waste materials will also provide industrial opportunities in some areas.

Members of the nuclear congress expressed the view that radiation processing of food and chemicals has apparently suffered some setbacks during the last few years. It was pointed out that the side effects (such as creation of unpleasant odors or taste) produced in food by radiation have not been overcome.

The future of radiation processing of food was thought to depend upon controlling side effects, bringing the price down, and convincing the housewife that radiation processing is safe. This latter point was considered quite important because we now have good preservative methods, low costs and a wide variety of foods without radiation. Two avenues of approach that were indicated were the use of low-level radiation for pasteurization instead of sterilization, and high-level radiation deliberately to change flavor. The advantage of pasteurization would be to prolong the shelf-life of food. Meat, for instance, which can only be stored in a refrigerator for a few days, could be stored for weeks under ordinary home refrigeration after low-level radiation. Low-level radiation would not produce side effects and would entail an inexpensive process.

Mike Ready

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent broadcast by Tris Coffin on May 8, 1957.

There being no objection, the transcript of the broadcast was ordered to be printed in the RECORD, as follows:

A newspaper morgue is not a good place to hunt for greatness. You are misled by yellowed clippings and headlines. They are only the hollow echo of yesterday's noise.

By this test—how much space a newspaper gives each name in the hurried, frantic rush of news—Al Capone would be a greater man that Dr. Albert Schweitzer.

No, in this search for greatness, the seeker must go elsewhere. He must look into the small and forgotten lanes where his candidates have walked, and find what was left behind. Was it joy or tears? Was it ashes or flowers? Was it gentle, loving affection for other men, or was it the crude passions of power and hate?

Last Thursday, in the quietness of the night, a great man died. There was no splutter of bulletins at his passing, no roosting of reporters to dig up quotes. His name was Mike Ready, and he was a priest. That was the way he thought of himself, although he was a bishop.

The measure of his greatness was that Father Ready had a heart, a clear mind, and courage. He loved people. Their tears, their struggles were his. All the oppressed and unfortunate were his children.

He lived in a dangerous and confused age. In it were intolerance, depression, and mass killing; it was never quite free of fear and want.

Father Ready became secretary of the National Catholic Welfare Conference, his offices were here in Washington, when the stain of bigotry darkened America. The awful flames of fiery crosses, symbol of the Ku Klux Klan, burned on lawns and hillsides across the land. The white sheeted, masked cowards paraded the streets. Their members sat in Congress.

Mike Ready rallied men of all faiths to break this rotten grip on our society. Quietly, he helped turn America away in disgust from rule by demagogs and brutal mobs. This experience shaped a love of freedom and tolerance that guided his life.

Father Ready was one of the first to speak out against the obscene persecution of Jews by a strange little man named Hitler; against the crude and ugly stamping out of religious freedom in Russia. He attacked what he called the brutal denial of justice to millions by the new dictators of Europe.

But there was something else about him. Wherever you sit and talk to people who knew him, their faces light up. They use such words as "kindly, gentle, thoughtful." There was the aged Negress, a servant, who could neither read nor write. She would find excuses to come into his presence, for, as she said, "Father Ready is a good man." And there is the man I saw in the Capitol. He was not of Bishop Ready's faith. But his eyes filled with tears, and he said simply, "Mike Ready was a Dr. Schweitzer; perhaps an even greater man."

Part of Mike Ready's age was lost in the depression—the melancholy lines before soup kitchens, empty freight cars loaded with gaunt hoboes looking for jobs and a bite to eat. There was hunger and want in a land of plenty. Father Ready said this was not just or fair. He was a crusader for social justice in the pulpit, on Capitol Hill, and at the White House. He said: "Society has a responsibility to establish a social program of checks and balances so that man's dignity can be guarded and the common good best served. No man can be indifferent to the moral and economic conditions under which our citizens live."

He was an early friend of labor unions, saying: "Christ, the workman toiling in honorable labor at the humble carpenter's bench at Nazareth, established the dignity of man as a laborer. * * * The power of unionism to unite worker with worker in the battle for justice is based on spiritual brotherhood."

And he said: "Greed for material good degrades mankind." This was a part of his creed to "teach truth fearlessly."

Father Ready's hope for man was expressed simply at President Roosevelt's third inaugural: "Inspire him to persevere in promoting justice and halting iniquity. Deign mercifully to reward his strivings and desires for peace."

Mr. Roosevelt's four freedom's—of speech, of religion, from want, from fear—might have been written by Father Ready.

Long before the holocaust of war was ended, Father Ready said thoughtfully: "Our work is not over until the great human needs left in the ruins are met. There will be 10 million homeless, deserted refugees. We must find a useful life for them."

With an energy that seemed almost superhuman he aroused churchmen and statesmen, and through them the conscience of America. He told an assistant, "We'll stir every county in America." When others were tired and frustrated, he would say gently: "Don't be discouraged. We've got to keep pushing. This must be done."

And it was done. Gifts of clothing, food, money, jobs poured out from an aroused country. The Government accepted his recommendations for a displaced persons program.

Today there are literally millions scattered over the globe leading useful lives because of Mike Ready. This is true greatness.

This is Tris Coffin reporting from Washington.

Milk Prices

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. THYE. Mr. President, in the St. Paul, Minn., Pioneer Press of yesterday, May 12, there appeared a fine article written by Mr. Alfred D. Stedman. It deals with the dairy industry and the problems of the dairy producer. It is a very thought-provoking article, and I should like to call it to the attention of all Members of the Senate. Therefore, I ask that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GAP IN UNITED STATES PLAN

(By Alfred D. Stedman)

A gap is opened by a Federal contradiction on milk prices in the Washington plan of making further reductions in Government farm price supports.

Repeal of legal requirements for a specified minimum of farm price props would apply to milk going into manufactured dairy products, largely produced here in the Midwest. The Government's documentation of its costs in making supports stick includes a billion dollars spent since 1932 in buying butter and cheese, more than 380 million of it last year.

But as yet the Government is not changing policies that are reflected in great disparity in prices of fluid milk for the table as between the Midwest and the East and South. High prices in the latter discourage milk drinking, back up surpluses into manufacturing and kite United States buying costs.

The Government isn't backward about asking a lowering of grain price supports that would require Midwest agriculture to supply cheaper feed to high-price milk areas. But what is it doing about milk in those favored places?

Of course, what the Government can do will always be limited by transportation costs that give local producers a natural advantage in any market.

But within those limits, what is the Government doing? How far is it adapting its price policies to swift scientific advances in sanitary handling, refrigerating, transporting, concentrating, and packaging of milk? What is it doing to help move good milk into consumption?

The available evidence points to Government acts of commission or omission as a cause of much pain in the Dairy Belt. So far as good milk is concerned, the United States Department of Agriculture hasn't tried to breathe the breath of life into constitutional guaranties of freedom of interstate commerce. Federal meat inspection has been assuring such freedom to good meat for half a century. USDA inspection soon will be doing the same for good poultry. But a bill introduced years ago by Representative AUGUST H. ANDRESEN, of Minnesota, proposed to do this for milk by making the United States Public Health Service's voluntary standards compulsory. Now there is pending a more detailed bill by Representative LESTER R. JOHNSON, of Wisconson, to achieve that aim. But the Department hasn't seen fit to give its blessing to these bills.

Seizing advantage of that default, States and municipalities and the Washington, D. C., government itself are barring good milk by a maze of sanitary milk barriers.

Back of these walls, State authorities and the United States Government, through Federal milk orders, have run up monopoly prices of milk. These are raised far above levels that would be competitive with the Midwest as measured by our prices plus cost of hauling and merchandising.

A double standard of milk prices results—high within the milk barriers, low outside of them. In the Capital City of Washington, prices paid farmers for milk sold for drinking were in April $6.62 a hundred pounds—$2.75, or 70 percent, above Twin Cities prices. In New York City under Federal order, prices ranged up to $6.28, or 60 percent above ours. Behind State barriers, prices in Jacksonville were $7.19, or nearly 90 percent, in Savannah were nearly 80 percent, and in Erie and Hartford were over 60 percent higher than ours.

Under such pricing, only this West-North-Central region, a low-cost milk-producing area, shows a decline in milk output since 1940. The high-cost South Atlantic region shows the biggest increase of nearly 40 percent. Government pricing is helping to shift milk farming out of low-cost into high-cost areas at the consumers' expense.

If United States policy is to call for competitive pricing, why not apply it to milk? Our dairying withers under a double standard of low prices here and high ones elsewhere.

Construction of Brownlee Dam Is Pushed by Idaho Power Co.

EXTENSION OF REMARKS

OF

HON. HENRY DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. DWORSHAK. Mr. President, the New York Times on Sunday, May 12,

1957, published an article written by Mr. Lawrence E. Davies, reporting on the construction progress of Brownlee Dam, the first of 3 hydroelectric projects on the Snake River, which the Federal Power Commission has licensed the Idaho Power Co. to build. Mr. Davies, in my opinion, has been most objective in his dispatch.

To me, the significance of his on-the-spot observation is the disclosure that the construction of Browlee Dam is being pursued vigorously and with a determination to put much needed electrical energy on the line for the Pacific Northwest power pool by next year.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSTRUCTION OF BROWNLEE DAM IS PUSHED BY IDAHO POWER CO.—SENATE VOTE DUE ON HELLS CANYON—BILL FOR A FEDERAL HIGH DAM STILL MUST GET BY HOUSE AND PRESIDENTIAL VETO

(By Lawrence E. Davies)

HOMESTEAD, OREG., May 11.—The dice are about to be thrown in a multimillion-dollar gamble. It is for preferred position in a battle over natural resources.

The focal point is a few miles above this hamlet on the Snake River, on the Oregon-Idaho border. A $63 million hydroelectric power dam is being constructed by the Idaho Power Co. It has the blessing of the Federal Power Commission and the Eisenhower administration.

For 10 years, advocates of public power have been campaigning for Federal development of the Snake, a principal tributary of the Nation's champion power-producing river, the Columbia.

They are staking their final hopes on action by Congress. They expect the Senate to vote by the end of this month on a bill to authorize the building of a high dam by the Federal Government in Hells Canyon, downstream from this point.

Should the Senate reverse its stand of last year against a Federal dam and be followed by the House of Representatives, the measure still would have to hurdle a possible Presidential veto.

APPEALED TO PRESIDENT

Public power spokesmen have appealed to President Eisenhower to throw his support to a Federal Hells Canyon project.

The situation is complicated by several factors. Among them is a plan of the Army Corps of Engineers to restudy the resource program for the middle Snake area. Another is uncertainty over the Interior Department's attitude toward construction of other projects downstream from Hells Canyon. The building of some proposed dams would flood out others.

Democrats of the Pacific Northwest have labeled the situation as "chaotic." Some of them see a major problem in winning support from a group of Southern Democrats for a high dam. The South is not considered enthusiastic over voting large Federal sums to enable the Pacific Northwest to continue wooing industry with low-cost power.

The Idaho Power Co. began 18 months ago to gamble on defeat of this measure and all other efforts to block private development. It already assertedly has spent close to $25 million on construction of Brownlee, the first of three dams in its program approved by the Federal Power Commission. It is firmly committed, moreover, to an almost equal expenditure for powerhouse equipment, such as transformers and waterwheel.

The Supreme Court this spring gave Idaho Power reason for new assurance that its gamble would pay off. The court refused to review an Appellate Court decision that the company held a valid license to go ahead with its Hells Canyon program.

Since then the Senate Interior Committee has approved a Democratic bill introduced by Senators WAYNE MORSE and RICHARD L. NEUBERGER, of Oregon, with some two dozen cosigners, proposing a $320 million outlay for a high Federal dam at Hells Canyon. A similar bill was beaten in the Senate last year, 51 to 41. Public power adherents concede privately that if the measure loses again, the practical effect is the end of their long fight.

BROWNLEE DAM FIRST STEP

They view with anger the first fiscal manifestation of the prolonged controversy—the Brownlee Dam project, being gouged out of solid rock 15 miles upstream from Homestead. Just above this town, and 12½ miles below Brownlee, preliminary preparations are being made to start Oxbow, the second of the Idaho Power dams. It is expected to be under way late this fall or early next spring.

The third dam in the utility's series must be started by the late fall of 1961, under terms of the license granted by the Federal Power Commission. It is planned for a site 23 miles below Oxbow, at approximately the place where public power supporters want the high Federal dam placed. This is in the wilder part of the deepest river gorge on the North American Continent.

Cattle graze on mountains far above the Snake as a crew of 1,000 workmen, with drills, dynamite, earth-moving and steel-fabricating equipment, keeps the Brownlee project on schedule. It is designed to put 4 power generators with a rated capacity of 360,400 kilowatts "on the line" by November 1958.

Brownlee's ultimate capacity is put at 540,600 kilowatts, somewhat greater than that of Bonneville, the big Federal dam on the main stem of the Columbia above Portland.

At this time much of the Brownlee Dam is not in view. It lies under the surface of the river. Preliminary to the beginning of construction, cofferdams were put in above and below the dam site and a tunnel almost a half mile long was cut through the solid rock of a stream bank to divert the waters.

The Snake for a time flowed through this tunnel from above the upper cofferdam to a point just downstream from the lower blockade. This left the dam site itself free of water. It enabled workmen of the Morrison-Knudson Co., which holds the construction contract, to clean the silt from the river bed. They excavated to a point 115 feet below the stream bed to bedrock, then poured liquid cement under pressure to seal the bedrock floor.

On top of this was begun the construction of a clay core for the dam to prevent the seepage of water through the structure. This core will rise slopingly to the top of the dam, 395 feet high. On both sides of it, basalt rock, blasted out of the promontories banking the river and washed down by hydraulic pressure, will complete a dam a quarter of a mile thick at the base and narrowing to 30 feet at the crest.

Unseasonably high water in February forced a change in plans. The diversion tunnel, 40 feet high and 28 feet wide, could not handle the full flow of the river. Now a third of the water continues down the river channel, covering the dam site. The work of building up the dam from its base has been deferred until about July 1 to await a lower water period.

STEEL PLATES TO LINE TUNNEL

Meanwhile, boilermakers in a steel-fabricating plant are welding steel plates into sections 24 feet in diameter. These are to be inserted as linings in tunnels through which water will drop from above the dam into turbines below it.

A shelf has been hewn out of a mountain's face for the powerplant with its turbines and generators. Switchyards will occupy a three-level terraced site, likewise being cut out of rock. From these yards power will be transferred to transmission lines, which are under construction.

An experimental electrical fish barrier has been built to trap game and commercial, as well as "trash" fish as they head upstream through the diversion tunnel. This is part of a $300,000 facility the power company was directed to provide. It is in addition to a $250,000 contribution by the company for a study of fish spawning habits in the middle Snake by the Federal Fish and Wildlife Service and State Agencies.

Last month in this trap 608 miles from the Pacific Ocean, three steelhead were caught. The rest of the catch embraced 5 whitefish and 1 rainbow trout, plus 37 "trash" fish—suckers, chiselmouths, and squawfish. In 2 weeks last October, 2 chinook salmon, 7 steelhead, and 80 whitefish were trapped, along with 3,223 suckers and several other "trash" fish.

This has not been accepted, however, as conclusive evidence that salmon and steelhead do not swim this far upstream from the ocean to spawn. In the research the fish are taken out of the trap by an automatic device, lifted into tank trucks and carted several miles upstream, unless a load consists wholly of "trash" fish. In that event they are buried, by agreement with fishing interests.

The power company's licenses for its three dams also require it to contribute $60,000 for a study of recreation possibilities in the three-dam area by the National Park Service. It is to provide $12,000 for archeological excavation work in cooperation with the Smithsonian Institution.

There was a year of hearings and 20,000 pages of testimony prior to the granting of the 3-dam license to Idaho Power by the Federal Power Commission in August 1955. It gave the Nation a mixed idea of the relative merits of claims by the proponents and enemies of a high dam.

The National Hell's Canyon Association and its supporters called the 722-foot-high Federal dam a necessity if the Pacific Northwest was to achieve its highest ultimate economic development. It meant the continuance, they argued, of "cheap" power. This project, estimated to cost $400 million in contrast to $135 million for the three private enterprise dams, was branded "socialistic" and money-wasting by opponents. They pointed to the $10 million a year that Idaho Power Company would be paying in taxes.

The financial aspects have drawn attention and caused argument with the recent disclosure that the Office of Defense Mobilization had granted the utility a fast tax write-off for the Brownlee and Oxbow Dams.

This meant that during the first 5 years of construction of the two installations, while expenses were unusually heavy, the company could take larger than normal deductions for depreciation and make them up in tax returns in later years.

SAVINGS SAID TO TOP COST

According to critics of the company, this could mean a saving to it of hundreds of millions of dollars, or more than the dams would cost. Thomas E. Roach, president of the utility, called this merely an exercise in mathematics. He said that regardless of what amount could be saved the company was obligated under the law to take full advantage of whatever legitimate means of reducing expenses were available.

"We may find it will not be advantageous to us to use the accelerated tax amortization certificates," Mr. Roach asserted. "In the Revenue Act of 1954 Congress provided some additional formulas for figuring depreciation. We may choose one of these, under section 167 of the Revenue Code, instead of

working under the ODM certificates provided by the 1951 act."

The company has increased its own estimates of its three-dam capacity. Mr. Roach said that for $135 million, which is slightly above the earlier intended expenditures for the three dams, it would be possible to give the Oxbow powerplant a generating capacity at first of 190,000 kilowatts instead of 151,000, as scheduled. Ultimately, he asserted, the utility would have an installed capacity in the three plants of 1,350,000 to 1,500,000 kilowatts. At first it would be about 820,000 kilowatts.

This would be in the neighborhood of the initial estimated capacity of the proposed high Federal dam at Hells Canyon. The high dam proponents have contended, however, that a high dam would greatly firm up the power generation at downstream powerplants on the Snake and Columbia and would therefore be an indispensable key to the proper regulation of the whole Columbia River System.

TWO STATES SWITCH STANDS

Officially, both Oregon and Washington have switched positions on the high Hells Canyon project. Under Republican governors, the States officially opposed it. Since the election last fall of Robert D. Holmes, a Democrat, as Governor of Oregon, and Albert D. Rosellini, a Democrat, as Governor of Washington, the States have intervened in Washington hearings as proponents of a high dam.

Idaho, through Gov. Robert E. Smylie, a Republican, opposes the high dam on the ground it would take water needed by Idaho farmers for irrigation purposes upstream and would disrupt the economy of southern Idaho. Pacific Northwest Democrats interpreted the 1956 election results as a mandate against administration giveaway of natural resources and in favor of a high Federal dam. Republicans hotly challenge this conclusion.

Idaho Power spokesmen resent application of the term "low dam" to any of its three projects. Brownlee, for example, at a height of 395 feet, will exceed by 50 percent the height of either the the Dalles or Chief Joseph Dam, concrete structures on the main stem of the Columbia.

In the rock-fill dam category, according to Idaho Power, Brownlee officially will be 1 foot lower than Miboro Dam on the Sho River in Japan. Completed last year, Miboro has been called the world's highest rock-fill dam, although there is some dispute over nomenclature.

Oxbow, as planned, would rise 205 feet and the company's Hells Canyon Dam 320 feet, or nearly twice as high as Niagara Falls.

LEGAL OBSTACLE IN OREGON

In its gamble to push construction of its three-dam series, the Idaho Power Co. failed to surmount an obstacle, real or not, posed by the failure of the Oregon Hydroelectric Commission to grant it a State license. The Oregon State Supreme Court this week heard argument on the question whether the utility had violated Oregon law.

The company was indicted last August by a Baker County Grand Jury for ivolating the law by failing to get a license to block the Snake River. This indictment was dismissed by the Baker County Circuit Court, but the State appealed.

The utility contends that the Federal license is all it needs on a navigable stream. Before taking a gamble, Mr. Roach asserted, the company satisfied itself that its legal position was bulletproof.

Since the suit was filed, the situation has been further complicated by a move of the high-dam supporters to take the Oregon phase out of the hands of the hydroelectric commission and to give it to the State water resources board for determination. The board has set May 22 for a hearing.

An Accelerated Domestic Atomic Power Program

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 13, 1957

Mr. VAN ZANDT. Mr. Speaker, the Joint Committee on Atomic Energy has recently concluded hearings required by section 202 of the Atomic Energy Act of 1954, and also on bills calling for Federal indemnification for atomic energy users. We have listened with a great deal of interest to honest and sincere persons from the Atomic Energy Commission, industry, labor, universities, and many others, giving us their opinions concerning the development and state of the atomic art and possible ways to encourage greater utilization of this vast new energy for the betterment of all our fellowmen.

Throughout these hearings, there were many suggestions that we should further accelerate the development of atomic power demonstration facilities in the United States. Let us look briefly at these suggestions; but, while doing so we must keep the picture in proper focus and not lose perspective of the economics involved in reactor development. It must be emphasized and reemphasized that the United States, at the present time, is not in critical need of additional electric generating capacity.

There is no immediate shortage of conventional fuels to supply steam for electric generating equipment. This I know because I have the privilege of representing an important coal-producing area of the country. The situation could conceivably change in decades to come. It is possible that the chemical properties of fossil fuels may be so valuable that it will be relatively uneconomic to continue burning them up simply as a source of heat.

In spite of the fact our electric energy requirements have been doubling each decade for almost half a century, our Nation's electric companies have had no substantial difficulty in meeting this need. I might say, by way of parenthesis, it is interesting to note the only areas in this country where there has been a recurring shortage of power are those served primarily by a couple of well-known Federal power programs.

Atomic electric power is not yet competitive on an economic basis with conventional power in this country. In various other parts of the world, however, atomic power is already competitive, or very close to it because of the high cost of conventional fuels. One of my colleagues on the joint committee, the gentleman from New York [Mr. COLE], recently introduced H. R. 5694, part of which would encourage construction of reactors by American firms in these foreign areas. Such foreign construction would supply valuable information as to improvements in reactor concept and design that would more quickly lead to economically competitive atomic powerplants in this country.

As beneficial as this section of H. R. 5694 would be, there may b a need for reactors to be constructed in the United States. Domestic reactors would serve as large-scale laboratories to supply information as to our own particular technical requirements. They would also serve as training grounds for the future scientists and engineers which we so desperately need.

There should be little doubt that the atomic power demonstration program now being undertaken by the Atomic Energy Commission and the various private development activities will lead to our desired goal of economic atomic power on a time scale dictated by normal industrial needs.

On the other hand, for noneconomic reasons of national prestige in the eyes of the world there is a need for us to maintain and extend our world leadership in atomic affairs. Such leadership would not be particularly meaningful, though, if measured solely in terms of installed kilowatts. The leadership of this Nation should be measured in terms of broad and varied technological development and application. To use the kilowatt measurement would be like saying that, if Russia produced more model T Ford's today than the United States produces 1957 models, then America is falling behind in the automotive race.

We must not be stampeded into a crash program of Federal reactor construction to meet the grandiose claims of other nations. Rather, let us approach this question with the same foresight and considered determination which has proved so helpful in meeting other production problems in the past. The economic history of this country as compared with other countries of the world should be proof enough that the American system of free enterprise is the best method of getting the job done.

Let me site a graphic example of how another facet of the atomic business has benefited by the Government's encouragement of private enterprise. The exploration, discovery and mining of uranium ore has been accomplished by private enterprise with only minimum interference, but maximum encouragement by the Government. This progressive policy has resulted in a uranium mining and processing industry which is second to none in the world today. We can rightfully expect a similar program of encouraging the development of civilian atomic power reactors by private enterprise to produce the same beneficial results.

Mr. Speaker, for this reason, I introduced a bill designed to further encourage the development of civilian atomic power reactors by industrial firms, electric companies, and local agencies. This proposal will in no way conflict with H. R. 5694. I sincerely believe the gentleman from New York and I are in agreement on the methods which we feel should be utilized to meet the challenge which atomic energy represents. The challenge which is also stated in section 1 of the Atomic Energy Act of 1954 that the development, use and control of atomic energy shall be directed so as to promote world peace, improve the

general welfare, increase the standard of living, and strengthen free competition in private enterprise.

Last year the House considered a bill—H. R. 12061, 84th Congress—to accelerate the atomic-power program, and, after debate, and after certain amendments had been adopted, I introduced a motion to recommit the bill to committee, which carried. I stated then that I was not satisfied with the bill in its form at that time, and that I believed it needed further study.

Since then I have listened to considerable testimony on this subject, and have given the matter considerable thought and study. Today I introduced a bill which I believe provides the proper basis for authorizing an accelerated civilian atomic-power program.

I have prepared a digest of this bill which I would like to have printed in the RECORD at this point:

Section 1 states that the act may be cited as the "Accelerated Civilian Atomic Power Act of 1957."

Section 2 adds a new definition to the Atomic Energy Act of 1954. It defines the term "incremental cost" as the difference between the estimated capital cost of the construction of an electric-power-generating plant using fossil fuels and the estimated capital cost of one using atomic fuels of the same thermal capacity in the same locality.

Section 3 (a) amends the Atomic Energy Act by inserting a new chapter 19 entitled "Accelerated Civilian Atomic Power Program," which contains sections 241, 242, and 243, with appropriate redesignations of certain chapter and section numbers.

Section 241 states the purpose and policy of the chapter.

Subsection 242 (a) provides for research and development assistance to the civilian power-reactor program. This subsection gives additional statutory authorization for the Commission to enter into contracts with persons for the conduct of research and development activities required in the construction of prototype power-reactor facilities and is intended to accelerate Commission efforts and assistance under the AEC power demonstration reactor program. The bill provides for private ownership of such facilities, unless the expenditure of funds by the Commission for research and development activities on the facility exceeds the expenditure made by the contracting person.

Subsection 242 (b) provides that the expenditure of Commission funds for assistance to projects initiated under subsection (a) shall not exceed the incremental cost of the facility, as defined in section 2 of this bill.

Subsection 242 (c) authorizes the Commission to proceed with an advanced design and development program for construction of reactor facilities to be capable of producing not more than 50,000 kilowatts of electricity. The facilities authorized by this subsection shall be constructed at AEC production sites, and the electric energy generated shall be used by the Commission. The bill authorizes to be appropriated $100 million to carry out the provisions and purposes of this subsection.

Subsection 242 (d) authorizes the Commission to construct any supporting facilities, such as reprocessing facilities, necessary for the program.

Subsection 242 (e) provides that information as to the amount of financial assistance provided by the Commission for research and development activities under this program shall be disclosed and made public.

Section 243 (a) provides that this chapter shall not operate to impair or interfere with the atomic weapons production program or the AEC reactor demonstration program.

Section 243 (b) provides that the facilities authorized under section 242 (c) shall be sold to the highest responsible bidder after they have been in operation for a period of 15 years.

Section 3 (b) amends the table of contents to the Atomic Energy Act to reflect the amendments of section 3 (a) of the bill.

Section 4 amends the Internal Revenue Code to include atomic power reactor demonstration facilities constructed under section 104 or under this chapter in the definition of "emergency facilities" and thus eligible for possible tax amortization deductions. The Atomic Energy Commission is designated as the certifying authority, and the adjusted basis is limited to the amount certified by the Commission as being necessary to achieve the purposes and policies of this bill.

I would also like to add a few words about the philosophy and the purpose behind my bill.

This bill is intended to provide for a civilian atomic power acceleration program in a manner which will not discourage private enterprise and initiative in this field. The bill does not provide authorization for construction of large-scale power reactors, because I believe that this is the proper province for private enterprise. But the bill does provide for research and development assistance to the civilian power reactor program. This is intended to reinforce the Commission's authority to continue and accelerate its efforts under the AEC power demonstration program.

The bill also authorizes the Commission to proceed with an advanced reactor design and development program by constructing comparatively small-scale reactors capable of producing not more than 50,000 kilowatts of electricity, to be constructed at AEC production sites. The bill authorizes an appropriation of $100 million for this purpose.

Therefore, my bill is somewhat similar to the bill considered by the Congress during the last session—H. R. 12061, 84th Congress—providing for a civilian atomic power acceleration program with the following significant differences:

First. It authorizes construction only of advanced design and development facilities, and not large-scale facilities.

Second. It authorizes and encourages the Commission to continue and redouble its efforts under the power reactor demonstration program to assist private industry in the development of both small- and large-scale atomic power reactor facilities.

Third. It authorizes the appropriation of $100 million rather than $400 million. It is contemplated that the appropriations would be spread over a 5-year period, or at the average rate of $20 million per year.

Fourth. It contains certain protective amendments adopted by the House of Representatives during the debate on the bill last year. However, it does not require that the AEC obtain proposals from private industry before undertaking construction of advanced design and development facilities, because it is not contemplated that the Government-sponsored advanced design small-scale construction program will conflict with the private industry program, but rather will assist it by exploring new fields.

In addition, the bill provides for an amendment to the Internal Revenue Code to include atomic power reactor demonstration facilities in the definition of "emergency facilities" and thus eligible for possible tax amortization deductions. This amendment to the Internal Revenue Code is of a limited nature and applies only to the facilities qualifying under this program. Since the evidence before our committee has demonstrated conclusively that construction of atomic power reactors is unprofitable and uneconomical at this stage, and since the national interest requires accelerated effort in this field, it seems clear to me that this limited tax relief is justifiable and in the public interest.

In conclusion, I would like to emphasize again that my bill is intended to provide for acceleration of the atomic-power program without, at the same time, discouraging efforts by private enterprise in this field. It provides for increased assistance to private enterprise, and authorizes Government construction of reactor facilities of advanced design and their development.

The bill which I have introduced today meets, I believe, the objections to last year's bill and will, I hope, provide the basis for sound compromise in this field. It does not authorize a "crash" program involving expensive large-scale governmental construction which is not necessary in this country at this time, but it does provide for a more long-range program with a definite part to play by both private industry and Government. My bill is intended, as I stated earlier, to supplement the bill introduced by my colleague from New York [Mr. COLE], H. R. 5694, which provides assistance for construction of reactors for installation abroad. My bill provides for similar assistance and encouragement to an accelerated domestic atomic power program.

I hope that this bill will provide a basis for compromise and agreement among the many different views of the many distinguished Members of the Congress who have given thought and study to these problems. I believe it sufficiently protects the interests of the coal industry, the private and public utility groups, that it should aid the private reactor manufacturers, and that it is clearly in the national interest by authorizing a balanced, long-range program for the development of atomic power, with resulting benefits to all our citizens and the peoples of the free world.

June Meeting of the International Labor Organization in Geneva

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by C. L. Sulzberger, which appeared in the New York Times of Monday, April 22, concerning the June meeting of the In-

ternational Labor Organization in Geneva, which will consider problems arising out of forces of automation and atomic energy. I commend this article to the Members of the Congress in order to acquaint them with the important matters to be considered by the ILO this year.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS CIVILIZATION EXPLODING FROM WITHIN?

(By C. L. Sulzberger)

PARIS, April 21.—The dizzy speed with which mechanical techniques are now developing leads many serious thinkers to wonder if they may not soon exceed human capacity to absorb them. Quite apart from permanent threats of nuclear war there exists a fear that peacetime civilization is itself exploding from within.

The twin forces of automation and atomic energy are racing to revolutionize production. Unless these processes are carefully guided they may eventually strain the entire fabric of society. In such a case man will at last have produced a Frankenstein monster.

Such problems, still looming but dimly, are to be discussed next June when the 77 member nations of the International Labor Organization meet in Geneva. The purpose of their conference is to analyze the implications, socially, politically, economically, and industrially, of new productive methods.

David A. Morse, director general of ILO, has prepared a lengthy report on the subject. This gives some indication of how immense may be the ramifications as nuclear energy replaces traditional fuels and machines take over jobs hitherto held by men.

It has often been assumed atomic power will enable backward nations to jump rapidly into the 20th century by huge exploitation projects. But Morse points out the possibility that the gap between developed and underdeveloped lands may, on the contrary, be widened. How, for example, can teeming India handle automation? Says Morse: "Particularly where underemployment and unemployment are a chronic and serious problem, technological change seems to complicate the problems of development and to threaten the whole structure of social stability."

MECHANIZATION OF ALL LEVELS

Already mechanical devices have intruded into almost every aspect of wage-earning fro managerial and white-collar positions down to heavy labor. Fourteen glass-blowing machines, each operated by 1 worker, now produce 90 percent of the light bulbs used in the United States. In the Soviet Union a fully automatic plant makes aluminum pistons for heavy truck engines. No human hands intervene throughout the process. At one British refinery six men per shift can now distill 5½ million gallons of crude oil every day.

Morse warns that "as the pace of technological change quickens there is always a danger that the gap between the better-paid workers and the worst-paid workers within any one country will be widened." Some students have suggested that, as machines take over, men may drastically reduce their working hours. But, says Morse, "it can never be truly productive to have more people than necessary doing any job."

He ventures the frightening prediction that "with time there will be no unskilled workers." Furthermore, white collar employment is menaced. Morse forecasts: "The displacement of the routine clerical worker by the computer. The greatest potential for automation lies in office work." Another development is that "with atomic energy and automation together, the employer has increasing freedom in locating his plant.

What will men do with the leisure offered by machinery? What will be the effect on social security requirements? Says Morse: "New forms of protection may be needed for older workers in stranded communities who cannot find employment there and who cannot reasonably be expected to move elsewhere. New types of income maintenance may have to be provided for workers moving or undergoing retraining."

CHANGES IN LABOR'S STRUCTURE

Collective bargaining and union organization in the free world may ultimately be altered. Morse concedes: "Both union jurisdictions and internal union organization will be affected * * *. It may mean a smaller number of unions, each with larger membership and increasing emphasis on industry-wide bargaining. * * * The machinery of collective negotiation * * * may have to be overhauled."

The implications of these changes cannot yet be more than remotely understood. Morse himself argues it is probable overall employment will not decline but will actually increase as production races forward.

This is hopeful speculation. But how will the imbalance be righted between advanced, automated nations and those still steeped in feudalism?

And there exists a problem even more fundamental. Thomas Malthus, and 18th-century economist, conceived the disquieting theory that mankind must eventually starve because population augments in geometrical ratio whereas subsistence augments only in arithmetical ratio. So far Malthus seems to have been wrong.

But what will happen when we find ourselves faced with another Malthusian puzzle? Supposing production totally outstrips practical absorptive capacities, that increasing idle men are unable to use up the leisure or products machines make for them? If the atom doesn't destroy us first, can automation eventually produce us into a state of stultification?

The Desert Country

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Do You Live in a Desert?—That's What Texas Historian Declares in Article in Harper's Magazine."

The editorial was published in the Park County News, of Livingston, Mont., and was written by my good friend, Fred Martin. It deals with an article published in Harper's magazine, and written by a man from Texas by the name of Webb, who wrote something about the desert in the West and the effect the desert has had on the development of our section of the country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DO YOU LIVE IN A DESERT? THAT'S WHAT TEXAS HISTORIAN DECLARES IN ARTICLE IN HARPER'S MAGAZINE

Back in about 1927 Garett Garett in a Saturday Evening Post article described a portion of Montana as "A pain in the Northwest"; then in 1934 Tugwell said at Glasgow and Wolf Point that residents of northeastern Montana should either abandon their homes or resettle elsewhere.

But in 1941 when the Japs attacked Pearl Harbor and the Nation was in peril, Daniels County in northeastern Montana, Prairie County in southeast Montana and Judith Basin County in central Montana set the pace for the Nation in the sale of war bonds; yes, Montana, during World War II, had the highest per capita purchases, based on income, of any State in the Union.

Montana isn't perfect, and a loyal Montanan would be the first one to admit it, but it makes one's blood boil when some history professor, glutted with glittering generalities, pops off with an idea and wins acceptance of it to the point that sophisticated (should know better) editors of a New York magazine publish his generalization.

All of this steam developed after reading Walter Prescott Webb's The American West, Perpetual Mirage, in the May issue of Harper's magazine. This Webb, billed as "The West's leading historian," is distinguished professor of history at the University of Texas, author of The Great Frontier and The Story of the Texas Rangers and is writing a history of the American West for Harper & Bros.' New American Nation Series.

According to Webb the Intermountain States of Montana, Idaho, Wyoming, Nevada, Utah, Colorado, Arizona, and New Mexico, plus portions of North and South Dakota, Nebraska, Kansas, Oklahoma, Texas, California, Oregon, and a touch of Washington constitute "a desert, unqualified and absolute."

Now, Texas or Texans can brag to their heart's content, but one wonders if this pipe-dreaming historian who makes such reckless statements ever visited Yellowstone or Glacier Parks or, if he did, how he could so glibly state: "He (Uncle Sam) owns it (federally owned lands in the West) mainly because nobody wanted it. Here he established the national parks and forests."

We think Webb made one statement which he should apply to himself. Here it is: "Westerners have developed a talent for taking something small and blowing it up to giant size, as a photographer blows up a photograph."

The West is young. It hasn't had a chance to live down the vicious mistakes of mistreating Indians, ignoring the obvious and sensible conservation practices that go with scanty rainfall, failing to hold back the runoff which is its right and fighting the exploitation from outside, of which it has been the victim. But, the historians up to now, have sugarcoated the truth, just as this exaggerating Texas has distorted it.

We do not pretent to speak for the West—just the territory in which we live. The apex of that territory is the center of Yellowstone Park, from whence springs the rivers that flow north, south, east, and west. Webb, in our opinion, sells the people of the West and of this area short—he's just as wrong as was Tugwell 24 years ago and Garett Garett 30 years ago.

Postal Driving Course

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, May 13, 1957

Mr. BEALL. Mr. President, there has been considerable controversy recently concerning various operations of the Post Office Department, but there is one project which, it seems, ought to receive unanimous approval. This program,

which has been inaugurated in the Baltimore post office, where William F. Laukaitis is the acting postmaster, is designed to cut down the safety hazards and the costly expenses which can result from the handling of postal vehicles by inexperienced drivers. To make sure that efficient drivers are at the wheels of the Post Office Department's trucks and cars, the Baltimore office is conducting a driver-training program. This project was described in the May 10, 1957, edition of the Baltimore Sun, and I ask unanimous consent that a copy of the Sun article be printed in the Appendix of today's RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POSTAL DRIVING COURSE SLATED

Driver training for new employees of the Baltimore Post Office will begin today, acting Postmaster William F. Laukaitis announced yesterday.

The instruction will be given on the road around the lake in Clifton Park, runs to begin at 10 a. m. and continue until 4:30 o'clock.

The new drivers first will handle the vehicles on the open road, then will be drilled in parking, backing, and distance judging.

TESTS TO BE GIVEN

Later, with the trainer beside him, the new employee will try out his vehicle in traffic on the streets. Tests will be given before he is allowed to handle the car alone.

Mr. Laukaitis said that so far as he knows the Baltimore Post Office is the only one in the Nation to inaugurate such a training program.

He said he hoped the instruction would help cut the accident toll and added he believed it would benefit both the Post Office employees and other drivers and pedestrians.

Fred G. Taylor

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial from the Oregonian of May 5, 1957, describing the distinguished career in journalism of Fred G. Taylor, who died in Portland 10 days ago. Mr. Taylor was the labor editor of the Oregonian. In that controversial and difficult position, he established a standard for fairness and equity which was rarely challenged by either side to labor-management problems. Mr. Taylor was the kind of man who has given to American journalism some of its highest aims and most favorable traditions. I ask unanimous consent that the editorial tribute to him appear in full in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FRED G. TAYLOR

Fred G. Taylor, whose career of nearly half a century as a newspaperman has ended, spent a great part of his life as a chronicler of controversy. Yet he kept the full confidence of his news sources, on whatever side they might be, by following the simple formula of all good reporters: Get all the facts and present them fairly.

He was held in high esteem at city hall, where, for 20 years, he represented this newspaper—and where the unwary might fall into political traps—and by both labor and management, whose differences he covered for 13 years as labor editor. Everyone with whom he dealt soon learned to be frank with Fred, realizing that he would not swallow propaganda and would tell a true story honestly. Some of them had so much faith in him that they would talk to no one else if he were not in the office.

Mr. Taylor was a salty character whose gruff exterior and pungent comments covered a kind spirit of high good humor. Copy boys, at first slightly frightened of him, soon called him "Judge" and "Sarge" along with the rest of us. These terms of affection stemmed from his dignified appearance and his service in the Marine Corps in World War I.

Fred will be sadly missed by the staff of this newspaper which he served for 43 years. The greater tribute to him as a man and reporter, however, is that hundreds of others on all sides of the controversies he covered will mourn his death as sincerely as we do.

The Post Office

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. CLARK. Mr. President, today we plan to debate on the floor of the Senate the appropriation bill for the Treasury and Post Office Departments. In that connection I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Philadelphia Inquirer of May 9, 1957, entitled "Let House Kill Tax on First-Class Mail."

This editorial, from the leading Republican newspaper in southeastern Pennsylvania, reads briefly in part as follows:

It is time to repudiate the notion of Postmaster General Summerfield that the United States Post Office can be run like a "business." It cannot, any more than fire departments, police departments, and other essential government services can be made to "pay their way."

Mr. President, I think this editorial is a significant indication of attitude with respect to the Post Office Department and the Postmaster General from one of the leading newspapers, which has always supported President Eisenhower. I renew my request for unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET HOUSE KILL TAX ON FIRST-CLASS MAIL

If this Congress is sincere about cutting taxes—not boosting them—it will swiftly reject the proposal of the House Post Office Committee to levy a 1-cent tax on first-class mail.

It is time to repudiate the notion of Postmaster General Summerfield that the United States Post Office can be run like a business. It cannot, any more than fire departments, police departments, and other essential government services can be made to pay their way.

Let's face it. If the Post Office were to be run as a business, it would quickly cut out all its nonpaying services. That means it would have to abolish:

All third- and fourth-class post offices (they run at a loss), rural free delivery, star-route delivery, registry, post cards, money orders, post-office sales of United States savings bonds, and free registry for Government departments.

Because the Post Office has been primarily a service institution, as Benjamin Franklin believed it should be—and as other leading Postmasters General have felt over the years—it has been rendering other services which, on a business basis, lose money. For example:

It sells documentary stamps, migratory-bird tax stamps, provides services for the United States Civil Service, reports alien addresses, serves the Census Bureau, provides free mail for the blind, and even collects customs and parcel fees for the United States Customs Service.

Yet it is proposed, now, to tax first-class mail—which is the only class of mail which is showing a profit.

This, at a time when Congress is engaged in a search for ways to cut taxes, not increase them. Obviously, this tax will fall most heavily upon lower income brackets, and upon business users of first-class mail.

Even with projected rate increases for other classes of mail, it is not proposed to make them pay their way. Only the class of mail used by the vast majority of Americans is thus singled out.

We hope the entire House will reject the report of the Post Office Committee, and call its proposal by the right name: A tax increase.

Past Presidents' Day

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 13, 1957

Mr. FASCELL. Mr. Speaker, I have introduced a bill to designate April 30 of each year to be known as Past Presidents' Day and this measure is pending before the House Judiciary Committee. In this connection and to indicate the local public interest in this bill, I am inserting here in the RECORD a proclamation issued by the mayor of the city of Miami which adequately expresses the purpose of my resolution. The proclamation reads as follows:

Whereas the Presidents of the United States of America have been men of high integrity and ability, bringing to the post of Chief Executive the quality of leadership that has made our Nation admired and respected throughout the world; and

Whereas the accomplishments of each of our Presidents have accelerated the progress and development of our Nation, contributed to the general public welfare and have been of historic world importance; and

Whereas it is fitting that one day of each year be designated to honor those who have so ably led our Nation in peace and in war;

Now, therefore, I, Randall N. Christmas, mayor of the city of Miami, Fla., do hereby proclaim April 30, 1957, the anniversary of

the inauguration of our first President, George Washington, as Past Presidents' Day in Miami.

In observance thereof I urge all citizens of Miami to consider the heavy responsibilities borne by our past Presidents and the sacrifices they have made in guiding the Nation.

In witness whereof I hereunto set my hand and cause the seal of the city of Miami to be affixed.

Done in the office of the mayor of the city of Miami, Fla., this the 22d day of April, 1957.

[SEAL] RANDALL N. CHRISTMAS,
Mayor.

Summer Jobs and the Budget

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Mirror of today entitled "Looking for a Job?" which I think bears not only upon summer jobs but upon the budget, for it shows we shall have about 1.2 million new jobs this summer, with 68 million Americans gainfully employed.

I reemphasize, Mr. President, the fact that it is not alone what we spend which counts, but what we make. In order to make, we have to spend. All Americans know that. Our budget, even if allowed in full, is down to a point where it represents 16 percent of the gross national product, as compared to a budget representing 20 percent of the gross national product 2 short years ago. So, Mr. President, the doleful lamentations to the contrary, we are making real progress. It is high time we became realistic on the subject of the budget, and recognize that we get what we pay for.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LOOKING FOR A JOB?

This is the season when hundreds of thousands of young American girls and boys are thinking about and planning for summer jobs.

Secretary of Labor James P. Mitchell has some good news for them, and some advice, to which we'll add some of our own.

His glad tidings are that there will be a vast increase in the number of available jobs.

There'll be 700,000 more farm jobs. Following are the increases he figures in other endeavors—construction industries, 287,000; highways and streets, 45,000; resorts, 50,000; canning and preserving, 50,000; gas stations, 24,000; tobacco stemming and redrying, 30,000.

All told, in all fields, all ages, about 68 million Americans will be gainfully employed. They will be more efficient, and create more real wealth, than would be possible in any communistic workers' paradise.

They will be spurred by the incentive of personal gain, than which there is no greater. Despite our taxation, they'll be working largely for themselves, not for the intangible glory of the state. They'll be increasing, or getting for the first time, a share in a true people's capitalism.

Youngsters, students, first-job holders should begin right now to look for the work they want.

Your local office of the State Employment Service can help. (Consult your telephone book under "New York, State of —.") These offices also can supply you with a copy of the Labor Department's valuable Job Guide for Young Workers.

Many young people will face the problem of whether to continue their schooling or not.

Secretary Mitchell's sound advice to them is—keep hitting the books—whether in high school, college, junior college, or technical school.

"Today's economy," says Mitchell, "places a bigger premium than ever before on education, training, and adequate preparation for employment. This will be even more true in the years ahead as technological changes continue and our industries become increasingly complex."

Our 2 cents' worth of added advice is: Pursue the hard subjects—mathematics in all its branches, physics, chemistry.

Don't be repelled just by the idea of the precise and exact sciences. Find out about them. Talk with your teachers. Get one of the so-called popular books about mathematics. Learn what fun the subject can be, what new worlds it holds the key to, how it will make all your thinking more orderly.

And remember, the next many years are going to belong to the trained scientist, engineer, technician, researcher. You can be any one or combination of these—and still not neglect the all-important English, historical, social, and linguistic studies that go to make up a whole, well-rounded personality.

Just a few more observations, and we'll call this end of lecture. Whatever job you take, temporary or steady, study its possibilities carefully. Study its future. Consider where you'll be 10 or 20 years from now. Then, when you take the job give it the old try—both for your employer's good and your own. By all means, get the most you can for your skills and services, but give your employer an even break, or better than an even break.

Don't hate the boss, even if he seems to deserve it. Try to understand his problems. You'll be a boss yourself some day. If you see how something can be done better, don't hesitate to speak up. Maybe all your ideas won't be practical, but it will be remembered that you had ideas. In any job, ideas are more valuable than materials or power.

Honesty, hard work, and ambition are often scoffed at, but they endure long after the scoffers have faded away.

These virtues are targets of scorn in decadent societies. Ours is not a decadent society. It is vigorous, dynamic, growing. It is at the beginning of a new material age of discovery through nuclear power, electronics, automation, synthesization.

It's your privilege to be a part of it; your responsibility—to make sure that man's spiritual guideposts remain fast during an unfolding era of physical wonders.

The Plight of Civil Service Retirees

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Inequity of Time," which appeared in the St. Petersburg Times on May 6, 1957, pertaining to the plight in which our civil service retirees now find themselves due to the high cost of living.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN INEQUITY OF TIME

One of the most unfortunate facts about our Congress is that deserving legislation is frequently lost in the blizzard of bills.

At the last session, a most deserving group suffered from this fact—retired civil employees of the Federal Government, many of whom live in this area.

These public servants of the past have suffered because their pensions have been debilitated by the 51-cent dollar. Even more unjust, they paid 6 percent of their wages in sound dollars toward these pensions. These payments aided considerably in creating the civil service retirement fund, which now has assets of some $7 billion.

Many Congressmen seem to be aware—vaguely—that this country is doing an injustice to those who served it.

A measure to give them relief by increased annuity payments passed the Senate last session but never got to the floor of the House.

This year some 59 companion bills have been introduced in the House thus far, most providing for a general increase of 25 to 30 percent. (Such legislation would not affect those now in Government service, who have their own new pension plan.)

These elders of the Federal Government are not seeking undeserved gain; they simply want to live out their days with enough food and shelter and medical care to maintain human dignity, as do we all.

The House Post Office and Civil Service Committee should make sure this legislation gets to the voting stage. You, the average citizen, might help by writing the committee and demanding justice for this deserving, though lobbyless, group.

The Game of Politics

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 13, 1957

Mr. MUNDT. Mr. President, evidently those who paid $100 a plate to attend the Democratic dinner this year got short changed. Frank R. Kent, in his syndicated column in the Washington Sunday Star for May 12, points out that all the big guns gathered for that dinner failed to make much of a political explosion.

In this column Democratic Barrage Seen As Flop, Mr. Kent reports that, although the flow of criticism went on like a flooded creek, there was little of a constructive nature brought to light by Harry Truman, Adlai Stevenson, or Dean Acheson. It was, I thought, highly significant that a number of prominent Democrats in Congress failed to attend the dinner.

Because this column cogently points out the failure of the Democratic Party to inspire leadership, or to map constructive programs on major Government policy, I ask unanimous consent that it be printed in the Appendix of the CONGRESSIONAL RECORD, so that the people of

America can be reassured that the leadership of the Eisenhower administration continues strong and steady, and that Republican policies guide our country surely and safely.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GAME OF POLITICS

(By Frank R. Kent)

DEMOCRATIC BARRAGE SEEN AS FLOP

It is interesting to note that the recent effort of Democratic Chairman Paul Butler to discredit and deride President Eisenhower fell rather dismally flat. As the fair-minded and temperate Washington Star said of the whole performance, there were "no hits, no runs, and no errors." In brief, an exceedingly dull ball game, with the stars, such as ex-President Truman, ex-Secretary of State Acheson, and ex-candidate Adlai Stevenson, repetitious, unwitty, and unconstructive, with the exceedingly mediocre and labor-ridden Gov. "Soapy" Williams, of Michigan, making the best speech, which is not saying much.

Leaders LYNDON JOHNSON, of the Senate, and Speaker SAM RAYBURN, of the House, were conspicuously absent. There was considerable disappointment among the New Deal-Fair Deal journalistic and television commentators who had expected some pretty hot gunfire that would put administration spokesmen on the defensive and enable them to generate a really effective attack. The net result seems to be that this long-planned and concentrated Democratic attack has been singularly ineffective, and the administration reply will be more forceful than had the Democrats put on a better show. As it was, Mr. Acheson and Mr. Stevenson exhibited a personal bitterness hard to reconcile with their high character and Mr. Truman publicly admitted that Mrs. Truman had rebuked him for his petty references to the number of days Mr. Eisenhower had been absent from the White House.

Thus, it is true that the President's political enemies have utterly failed to make an effective assault upon either his foreign or domestic policies. On the contrary they have not presented a convincing case against him. They have exhibited both malice and bitterness but when called upon for constructive alternatives they have completely failed to respond. It is rare, indeed, in the political history of the country that the opposition party has been so destitute of alternatives on domestic policy or so devoid of a constructive suggestion in our foreign relations. There is, of course, criticism and denunciation but when asked, as Mr. Stevenson was on a Meet the Press television panel a few days ago, exactly what he would have done before or exactly what he would do now, his answer was vague to the point of incoherence.

And so were Mr. Truman and Mr. Acheson, and the gifted "Soapy" Williams, aided by the noble Walter Reuther, and all the rest. Unanimously they agreed that Mr. Eisenhower's fiscal policies were bad, that his budget was a mess, that he had alienated all of our allies abroad and generally botched everything up pretty badly. But, what to do about them now or what they would have done about them to start with they are, without exception, so muddy and murky that no sense can be made out of what they say at all. It is now almost officially announced that the President will take his case to the people, not in 1 long televised address but in 4 short ones. That seems a good idea, because regardless of the flatness of the Democratic attack he needs very much to explain his budget to the people and his attitude toward it. There are other things, too, which need explanation, such as the Middle East policy and our attitude toward Red China. No doubt they can be explained, but it is not wise to let the explanations lag or the misrepresentations stay too long in the public mind.
